THE ILLUSTRATED LONDON NEWS.

No. 722.—VOL. XXVI.] SATURDAY, JANUARY 6, 1855. [WITH A SUPPLEMENT, SIXPENCE.

THE ARMY, THE MINISTRY, AND THE PRESS.

WHILE our Army in the Crimea has been performing acts of heroism worthy of any age and of any nation, and earning for itself immortal renown, and the gratitude of every lover of Justice and Freedom, a state of feeling has been produced at home which, if unchecked, or allowed to extend, would serve to paralyse its efforts, and to turn victory and glory into defeat and humiliation. Englishmen would have cause to blush for themselves if the efforts of the writer, or writers, who have closed the old and opened the new year with their gloomy retrospect, and still gloomier predictions, could produce any permanent effect upon their minds. Happily the heart of the nation is sound. A sensation is created—all the greater in proportion to the magnitude of the bad taste, or of the unpatriotism, displayed by writers such as those to whom we have alluded; but it passes away, at the first moment of cool reflection, without other effect than loss of credit to those who prove themselves to be so unworthy of their countrymen. The blatant bullies of the press—if there be more than *one* journal deserving of such an epithet—bellow in vain. They do not represent the sentiments of the people. They speak for themselves alone, or for that small and sour section of disappointed men who act upon the principle of Satan—that it is "better to reign in hell than serve in heaven;" or who sacrifice truth upon the shrine of their wounded self-conceit or unreasoning vindictiveness.

Many mistakes have doubtless been made in the conduct of the war. It would have been extraordinary, indeed, if there had not; and the prescience of Ministers, and of all their functionaries—from the highest to the lowest grades, both military and civil, would have been something superhuman, if no club-room critic, no tap-room statesman, no General of Puddledock had been able to point out an error, a defect, or a failure. When the Arch-fiend is represented as rebuking Sin, the poet or the philosopher who puts words into his mouth, always shows us the infernal motive for so singular a display. The journal which for the last two weeks has been doing its utmost to sow disunion and produce discouragement, to prevent recruiting, and to disgust the nation with the war, should be judged in the same way. Before its rebuke be accepted as a thing of any value, we should look to its character and its antecedents.

If we do so, we shall find that it has been dishonest throughout; that it has striven, before and after the commencement of the war, to serve the cause of the enemy; that its correspondents have been injudicious, and its conductors malevolent. One day it has striven to disgust the bulk of the people by the unfounded statement that the war had increased the price of bread, and would increase it still more, until famine and all its horrors invaded the land. On another it has asserted that this great and mighty nation—allied with another nation as great and mighty as itself—had undertaken an enterprise beyond the limits of its power; that it tottered upon the pinnacle, and was ready to fall; and that the foe, reinforced at the rate of thirty thousand a day, would crush and overwhelm us. So powerfully, and with such unction, was the picture drawn, that every one imagined the writer would be rather pleased than otherwise at the realisation of his vision, and that shame and discomfiture would better suit his calculation than the victory of his countrymen. Though the misleading journal could not deny the undoubted heroism displayed at Alma, at Balaclava, and at Inkerman, it discovered dark spots on the sunlike brightness of the glory, and spoke of cowards and of deserters—of eight unwounded men seeking an excuse to get out of harm's way by carrying one wounded man to the rear—and of officers throwing up their commissions, not in disgust, but in fear. And, amid these and countless other misrepresentations, the strong under-tide of all its ruminations was to depict us in the eyes of the Emperor of Russia as a dispirited and divided people. When, on the very day that Parliament rose after its short session, the *Times*, knowing that there could be no Parliamentary reply to its attack until the 23rd of the present month, chose to assert that our army in the Crimea was drifting to destruction; that the General was "invisible," and not known by sight either to officers or private soldiers; that every department was grossly mismanaged; that there was no directing head, no energy, no authority, no supervision;—that the men were actually rotting away, and that a body of the finest and bravest soldiers in the world were ruthlessly and blindly sacrificed by incompetence and stupidity; the first impulse of its readers was to ask the motive of the publication? If the facts were wholly or partially true, it was asked why they had not been published on the Friday, when Parliament was sitting, instead of the Saturday morning, when it would be impossible to call its attention to the subject? Patriotism, if such a virtue had inspired the divulgement of a painful story, would have been glad to have given Parliament an opportunity of eliciting further and possibly more correct information, and of putting an immediate end to a state of affairs, of which every hour's continuance was a national disgrace as well as calamity. But it did not answer the purpose of the writer that Parliament should take up the question. The publication was, therefore, postponed until

THE EMPEROR OF RUSSIA ON HIS THRONE, IN THE IMPERIAL PALACE, ST. PETERSBURG.—(SEE NEXT PAGE.)

the business of Parliament was concluded. The question may well be asked—if Patriotism or even Honesty inspired such a writer.

But supposing the facts to be true, the nation will form its own opinion of the motives of those who chose such a time to publish statements which were sure to be telegraphed within a few hours to St. Petersburg, for the comfort and the guidance of the Emperor Nicholas. If, on the other hand, we suppose the story to be altogether untrue, or grossly exaggerated, what language can sufficiently designate the wickedness, if not the treason, of those who made themselves responsible for it? The liberty of the press is one of the noblest boons this country enjoys. It has laid the foundations of our greatness, and will help to complete, as it already adorns, the structure. But licentiousness of the press—an evil in times of peace which the ordinary tribunals can easily correct—becomes in times of war a dangerous nuisance. We hope the day will never come when sterner and prompter agencies may, for the public interests and safety, be found essential to control it.

Yet although the country owes no thanks to the motives of those who have made these melancholy statements, it is notorious that they are not altogether unfounded. The French army, more numerous than our own, has, it appears, been well supplied with every article which its necessities and its efficiency require. While our men are in rags, and are hutless, and almost foodless, the French are trim and tight, and in admirable order, have huts to cover them, and can spare from their superfluity to help the necessities of their allies. This we believe to have been true; but it should be borne in mind that much of this misery in the British Camp was caused by the fearful hurricane of the 14th of November, which wrecked our transports, and did incalculable damage in a thousand other ways; and that daily since that disastrous visitation reinforcements of men and supplies of stores have been landed in the Crimea; and that the complaints, however well founded, refer to a state of things which has passed away, and been remedied. It should also be borne in mind that we know our own afflictions, but not those of our opponents or of our allies. Prince Menschikoff is the only "Own Correspondent" in the Russian Camp; and General Canrobert will have no newspaper reporters within his lines. The world only knows a very little of what passes in the French army; while the proceedings and state of the British Camp are as plain and clear and minutely exposed to all the world—the Czar included—as if they were photographed.

The attacks upon the Ministry need excite no particular regret or animadversion, and, for our parts, we are not Ministerial apologists. In this free country, any one who consents to be a Minister of State makes up his mind to be attacked; and a large portion of the public enjoys the spectacle. So it always has been, and so it ever will be; and Ministers are none the worse, but, we believe, a good deal better, for the party jealousy or animosity that besets them. It is not of much, if of any, importance, that we are aware of, that the Duke of Newcastle should continue to be War Minister. If he be neither popular nor effective, the world can wag without him. If he have committed blunders, he and his colleagues, all equally guilty, can be made responsible for them: and if the Ministry itself stand in the way of a proper prosecution of the war, the nation has statesmen enough to supply the places of most, if not of all, of them. It would be an inconvenience at the present time to change them; but the inconvenience would after all be but slight; and the benefit of a Ministry thoroughly popular, and having the confidence of the great bulk of the nation, would far more than counterbalance any evil caused by the removal of any man, or set of men, who, whatever their abilities, might labour under the disadvantage of unpopularity.

The attacks upon Lord Raglan stand on a totally different footing. They are unjust and ungenerous in the extreme. To say that they display bad taste and presumptuous ignorance on the part of those who put them forward is not to characterise with sufficient force the pragmatic stolidity of those who, sitting comfortably at home, without any other experience than that of the pen, scribble away—in as far as lies in their power—the reputation of honourable men, who are risking their lives in defence of their country, and who are laden with the heaviest responsibilities that can be laid on the head or the heart of a human being. The Ministers can fight their own battle with hostile critics. Not so Lord Raglan. The only answer he can make is to conquer the enemy. That he will do so, even with the means already at his command, or on the way, or with those provided by our brave and true allies the French, there are very few persons in the country, competent to form an opinion, who have ever presumed to doubt. The true hero is always magnanimous; and Lord Raglan, strong in conscious rectitude, will let the little flies buzz in his ear, and do his duty unconscious of their existence.

THE EMPEROR OF RUSSIA UPON HIS THRONE.

THE scene of Imperial State represented upon the preceding page possesses the most significant interest at the present moment—more especially by those who join in the poet's creed—

> 'Tis the sunset of life gives the mystical lore,
> For coming events cast their shadows before.

Perchance those shadows may dim the brilliancy of the scene of Imperial splendour which our Artist has depicted mainly from the sketch-book of a tourist who lately visited St. Petersburg. The Emperor is seated upon his Throne, in a magnificent Chair of State; above are emblazoned the Imperial Eagle, and other insignia of the empire; the canopy is of crimson velvet, and deep gold fringe; and the Corinthian columns are of white enamel, with richly-gilt capitals. It is altogether a scene of impressive splendour.

EIGHTEEN HUNDRED AND FIFTY-FIVE.—By a strange coincidence which will not again occur for a long time, the new year commences on the same day as in 1849, and consequently all through the year the date will be on the same day. But what is more singular is, that all the moveable holidays, from Septuagesima to Advent, fall on the same dates and the same days. The almanacks of 1849 might therefore serve for the present year.

THE FREEHOLD LAND SOCIETY MOVEMENT.—A general meeting of the members of Freehold Land Societies was held at the Royal Hotel, Birmingham, on Wednesday night, for the purpose of presenting a testimonial to Mr. James Taylor, the founder of these institutions, and the secretary of the Birmingham Society from its commencement, but from the active duties of which office he is about retiring in consequence of declining health. The testimonial consisted of a tea and coffee service, handsomely wrought in silver, and a purse containing 500 guineas. Mr. Taylor, in returning thanks for the present thus made to him, gave a hasty sketch of the rise and progress of freehold land societies. In the last seven years 2000 allotments had been distributed in Birmingham alone, although on the first night the society met only twenty-eight shares were taken, and 28s. subscribed; whereas the subscriptions in that town alone now amounted to more than £10,000 per annum.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The receptions at the Tuileries on the occasion of the New Year have been very brilliantly attended, showing a marked difference in this respect to those of last year. On the 28th the Empress gave a small *soirée intime*. The same evening the Emperor received the Corps Législatif, their President at the head, in the Galerie de Diane; and, after hearing the substance of the vote of the Assembly and replying in a short speech, his Majesty invited the whole body to present themselves in the *salon* of the Empress, whither they proceeded through a double range of the Cent-Gardes. The unexpected addition of upwards of 260 persons to the number already collected in the apartment of the Empress (the party consisted chiefly of members of the Corps Diplomatique, with a sprinkling of Austrian officers, and some of the *élite* of Parisian society, among whom ranked not a few Legitimist names) caused at first considerable crowding; but by degrees space was cleared, and each of the deputies was enabled, in his turn, to salute her Majesty, who received them with her usual graciousness. The Emperor retired as early as ten o'clock—the Empress, an hour later.

It is said that the Duc de Montebello is likely to enter the Senate, and later to replace the Marquis de Turgot, whose health continues to be very precarious, as Ambassador to Spain.

The health of M. Bineau, Minister of Finance, which a short time since was so seriously impaired as to cause much apprehension, is so far restored as to enable him to resume his Ministerial functions.

The attempted assassination of the General de Rostolan is still a subject of much excitement here. The general being on horseback in the middle of his Staff, a man in a blouse approached and fired at him, but the ball, missing its object, struck Colonel Fornier de St. Lary, the principal Aide-de-Camp, in the leg, wounding him—happily not severely. The Colonel, with the aid of the Rostolan and the Staff, was conducted to the neighbouring military post. The intended assassin—who, it seems, was formerly one of the corps of Zouaves, who wished to serve as a substitute, but had been refused on account of the badness of his official notes—was seized by a dragoon. General Rostolan, who thus narrowly escaped falling a victim to the insensate rage of a miscreant whose vengeance he had done nothing whatever to provoke, is one of the most distinguished and respected veterans in the French army. He was formerly Commandant of the *élèves* of the Ecole Polytechnique; first organiser of the Tirailleurs de Vincennes; and, after Oudinot, Commander-in-Chief of the expedition to Rome. For the last year he has been incessantly employed in superintending with the utmost skill and activity the embarkation of the troops for the East; and, during the time when the cholera raged so fearfully and fatally at Marseilles, displayed a zeal, an attention, and devotion to the care of the inmates of the military hospitals that was beyond all commendation. Colonel Fornier, whose wound is not likely to produce any serious results, is well known and much esteemed in his civil as well as military character, having been a member of the Legislative Assembly, where he always remained among the partisans of order; and since then head of the Staff at Toulouse, and at Marseilles, his present post.

The inquiries respecting the late troubles at Dreux have led to various arrests—among others that of the Marquise de Jarsy, at her château of Seine-et-Marne, for the distribution of seditious papers, brought through Belgium. An examination took place at the domicile of M. Caylas, late editor of the *National*, but it is believed that nothing of a particularly suspicious nature has been discovered.

The Comédie Française and the Odéon have both, with the departure of the old year, experienced serious losses in the *personnel* of their companies: the former, in the death of a young, handsome, and attractive actress, Mdlle. Rimblot, who died suddenly of a disease of the membranes of the brain, at the age of six-and-twenty. Without possessing a remarkable talent, Mdlle. Rimblot had sufficient to fulfil more than satisfactorily the *rôles* confided to her: her beauty, her absence of pretension, and good sense, predisposed both her colleagues and the public in her favour, and she is universally regretted. Mdlle. Fernand was one of the principal supports of the Odéon: her distinguished air and manner, her pure and energetic diction, her grace and ease, peculiarly fitted her for the parts of *grande dame*, in which she never failed to obtain merited applause. Her success in the part of *Madame Vermuell*, in "Que dira le Monde?" was one of her latest and most brilliant successes. Madame Ugalde has returned to her post at the Opéra Comique, in the *rôle* of *Galathée*, one of her best. M. Achille Fould, Minister of State, has accorded the sum of 12,000 francs, to be divided among the five oldest *sociétaires* of the Théâtre Français—MM. Samson, Geffroy, Regnier, Beauvallet, and Provost. The last *sociétaire* received in this theatre is Mdlle. Emilie Dubois, whose first *rôle*—that of *Jeanne*, in "Lady Tartuffe"—placed her, at the age of fifteen, in the rank of *première ingénue*, and has already obtained her the position of *sociétaire*, which Mdlle. Rimblot, among others, had for years been vainly desiring to gain. The theatrical reports inform us that, during the course of the past year the different houses in Paris brought out 193 vaudevilles and other light pieces, 24 dramas, a single tragedy, 18 operas, 17 comedies, and two ballets—in all, 255 pieces. The "Trovatore," at the Italian Opera, has a great and popular, though disputed, success. Like all Verdi's music, it is loud, and often more remarkable for singularity than melody; and the poem is confused, and at times almost incomprehensible; the effect, however, is fine as a whole, and all the parts are remarkably well rendered.

AMERICA.

By the mail steamer *Union*, which arrived off Cowes, on Tuesday, *en route* to Havre, we have New York letters and newspapers to the 16th ult.

The proceedings in the Legislature are unimportant. In the Senate a memorial from the New York Chamber of Commerce, asking for an expedition to relieve Dr. Kane, was referred. A measure authorising the President to procure the erection of a lighthouse on Cape Race was introduced in the Lower House.

A telegraphic despatch from Washington, in the *New York Herald*, says:

> It is believed in well-informed circles, that a portion of the Cabinet are in favour of adopting hostile measures towards Spain, and incidentally having a brush with England. The theory of this policy would be the annexation of Cuba and Canada at the same time. Mr. Cushing is the masterspirit in this movement, and, if he succeeds in getting the President to adopt it, Marcy will have to leave the State department to make room for the fighting brigadier. The *Union* this morning, in an article apologising for the Greytown outrage, takes occasion to pitch into England savagely. The article is understood to be from the pen of General Cushing, and is in harmony with his views publicly expressed. General Cushing is smart enough to be convinced that nothing but saltpetre can save the Administration, and, as self-preservation is the first law of nature, he is willing to sacrifice the true interests of the country to further his selfish ends. The programme does not include the necessity of a war with France, for it is supposed the temporary and unnatural alliance now existing between England and that country will soon be abruptly terminated.

The *New York Herald* contains the following announcement respecting the intended establishment of a new line of ocean steamers between Europe and New York, on a route which has been so strangely neglected by British enterprise:—

> During the past year the steam-ship lines between Europe and this continent have been materially reduced. The Collins Company have lost the *Arctic*, the Havre Company have lost the *Humboldt* and *Franklin*, and several of the Cunard line to New York, and others of the British Northern Provincial and West India lines, have been drawn off for transportation purposes to Sebastopol. There is room for more Atlantic steam-ships, and, just in the nick of time, we have the man to step in and fill up the deficiency, as far as New York is concerned. We understand that Mr. C. Vanderbilt is now building two fine steamers, upon the general plan of the *North Star*, to ply from New York to Havre or Liverpool, and that they will be ready for sea in the course of the coming spring. We are also informed that the Commodore intends, within the course of sixteen or eighteen months, to have six or eight additional steamers put upon the Atlantic, to ply between this port and Havre or Liverpool.

THE WAR IN THE CRIMEA.

The *Ganges*, which left Constantinople on the 25th ult., arrived at Toulon on Tuesday with more encouraging news from the seat of war than those brought by the previous steamer. Nothing was yet known as to what Omer Pacha intended to do; but the transportation of the troops from Varna was going on. No less than eighteen Turkish battalions had already landed at Eupatoria. As soon as the 30,000 men were completed, it was expected that the Allies would resume their grand operations. The besiegers had in part reopened their fire. The weather had become better, and the communication by sea was regular.

According to one account, the fire was to open on Christmas-day, from 300 guns, with such a supply of ammunition as would enable them to continue, without stopping, for forty-eight hours, after which an assault, from both armies, would take place. If the weather has been favourable, we may, therefore, expect to hear some decisive news in a few days. On the 22nd there was a sharp frost at Sebastopol, accompanied with snow, and both sides were said to be preparing for a battle.

The Russian troops in the field were suffering very severely from the weather. Prince Menschikoff complained that he was sustaining great losses of men and horses from the severity of the weather, and a despatch from Odessa states that two companies of Russian soldiers and a considerable number of sick (conveyed in forty carriages) have perished from the extreme cold. Accounts received from Sebastopol at St. Petersburg mention that 7000 of the inhabitants of the former place had quitted it, in order to take refuge at Simpheropol, and that it resembled some vast barracks in ruin, rather than a city.

REINFORCEMENTS FOR THE CRIMEA.

A despatch from Admiral Hamelin, dated December 22, states that more than 4700 troops had arrived between the 13th and 18th; and that 2170 had reached Kamiesch on the 20th ult. Should supplies continue to arrive at this rate—1000 men per day—the French contingent will soon be strong enough to take Sebastopol without any help from either English or Turks. Nor is the supply likely to slacken for some time.

The French papers state that 5000 men were embarked for the East at Toulon and Marseilles in the course of last week, and that after the departure of the 9th Division, which is now nearly complete, the 10th will be organised. One of the regiments belonging to it has already arrived at Marseilles. The two war battalions of the 49th Regiment of the Line, in garrison at Nimes, have been ordered to the Crimea. The first left for Marseilles on the 20th, and the second on the 23rd. General Cœur, Commander of the 9th Division, sailed in the *Sinaï*, on the 29th, for Constantinople, with 10 officers and 400 rank and file.

As regards the strength of the English army in the Crimea, no accurate information on the subject has been allowed to transpire lately, but there can be no doubt that it has received considerable additions within the last month or two, as the Russians have found to their cost. The letters brought by the *Ganges*, which left Constantinople on the 25th, state that "the extension of the Allied lines has very much interrupted the communications and the transport of provisions between Sebastopol and the Russian corps near Balaclava."

In virtue of a French ministerial decision of the 28th ult., a detachment of 20,000 Marines has been sent to reinforce the expeditionary corps of that arm now before Sebastopol. Those men were supplied by the dépôts of the 1st and 2nd Regiments, quartered at Cherbourg and Brest, and are to sail directly for the Crimea in the steam corvette *Phlegeton*.

THE RUSSIAN ARMY IN THE CRIMEA.

If any faith can be placed in letters addressed to, and intelligence received by, German journals from Odessa, considerable bodies of infantry are being pushed down to the Crimea from the Bessarabian army, and their places will be filled up by reserve brigades and by divisions from General Paniutin's (Second) Corps, hitherto stationed in Volhynia; whilst the latter are relieved by divisions of the First Corps and Corps of Grenadiers. The Seventh, Eighth, and Ninth Divisions, forming the Third Corps, now commanded by General Read, in the place of General Osten-Sacken, removed to the Fourth Corps, are said to have marched through Odessa on their way to Perekop, in successive columns of brigades, whose movements are to be aided by waggons, principally furnished by the German colonists, in the spirited and intervening steppes, in the same manner that they aided with 2000 waggons in the transport of the Fourth Corps immediately previous to the battle of Inkerman. Taking the Russian returns at their value on paper, the three divisions, each of sixteen battalions, would give 48,000 bayonets, including the Third Battalion of Rifles. But the utmost average amount of effective combatants does not and cannot exceed 700 men, half of them being recruits of the last eighteen months' levies. The actual forces of the three divisions, when they reach Sebastopol, will therefore be about 24,000 bayonets, with 140 field-pieces; that is, if the fourteen batteries of the corps can keep up with the infantry.

To this corps is attached the Third Division of Light Cavalry, consisting of the 5th and 6th Lancers and 5th and 6th Hussars, each of eight squadrons, or about 2200 effectives. It has also fourteen field-batteries, of ten guns each, divided into three brigades, one of which is horse of two batteries. A position battery of 12 or 18 pounders is attached to each foot brigade. The corps has further a battalion of Sappers, and six battalions (or rather strong companies) of field-train; so that its total amount may be set down at 44,000 effectives. Supposing this corps to join the Crimean army, the following will be the general detail of infantry, according to *corps d'armée*:—

	Battalions.	Men.
Grenadier Corps: 2nd Carbineers (Moscow)	3	2,100
3rd Corps: Three Divisions, six brigades	49	33,000
4th Corps: Three Divisions, six brigades	49	28,000
5th Corps: One brigade	8	4,800
6th Corps: Two Divisions, four brigades	33	16,600
Black Sea Line Cossacks	4	2,400
Marines	8	4,000
Total	154	90,900

Thus, allowing 25,000 men for the service of the place and forts, Prince Menschikoff will have 65,000 bayonets disposable for outside work, with at least 12,000 horse, and 300 field-pieces. Of the Danube army, originally under Prince Gortschakoff, only the Second Brigade of the Fourteenth and the whole of the Fifteenth Division will remain in Bessarabia. Common reason shows, therefore, that the places of the six Divisions, moved or moving from thence to the Crimea within the last two months, will be filled up by troops from Volhynia and Podolia, so as to give at least 60,000 effectives to Prince Gortschakoff's force.

Having a knowledge that Prince Menschikoff will shortly be enabled to dispose of the above-mentioned force of 90,000 bayonets, of course the British and French Governments must be fully aware that it is for them to take such precautions as shall place the Allied Commanders in a position to attack or defend upon tolerably equal grounds.

THE BLACK SEA FLEET.

Kazatch Bay, the little inlet adjoining to the one containing the French ships, now holds the remnant of the Black Sea fleet. As an anchorage it is decidedly superior to the Katscha. No wind, except, perhaps, a westerly hurricane, such as there is little reason to anticipate, can disturb the ships which lie on its bosom. The *Vengeance* and *Rodney*, in tow of the *Agamemnon* and *Algiers*, joined the Commander-in-Chief, from the Katscha, on the 11th ult. These, with the *Hannibal*, compose our whole force of line-of-battle ships at present watching Sebastopol. The French retain but four. The gunnlet that is again thrown down to the enemy to engage upon equal terms; for our superiority in screw-ships may be fairly supposed to be counterbalanced by the superior strength of their three-deckers. The *Bellerophon*, at Eupatoria, and the *Sanspareil*, at Balaclava, would be unable to partake in the conflict. No one expects, however, to see a Russian, either by sea or land, dare to engage on equal terms. A report that they were preparing for sea caused much joyous excitement a short time ago, but according to the latest accounts the grim hulls were lying as listlessly as ever beneath their batteries and behind their sunken ships. The passage through this breakwater appears, from the course of the *Vesuvius* on the day of her attack on the French lines, to be on the southern side, and not to be a straight one, as the ship made a considerable angle. In her gallant fight on that day the *Valorous* was struck five times, and so near did she approach the batteries that Minié balls were used by the enemy. Fort Constantine fired very little, and from one of the tiers of guns being almost wholly removed, and many guns from the other tiers, it is inferred that it is no longer in a state to afford much resistance to a brisk cannonade.

Admiral Hamelin, to whom Count de Lastie presented the insignia of his new dignity, was to resign on the 23rd the command of the French fleet to Vice-Admiral Bruat, and was expected at Constantinople on the 26th. Admiral Dundas had arrived at Constantinople on his way to England, having left Rear-Admiral Lyons at the head of the English squadron.

THE WAR IN ASIA.

The *Courrier de Marseilles* has letters from Trebizond to the 5th of December, from which it appears that the Russian army had advanced to Bayandur-Kalé, by the routes of Diadin and Utch-Kliseeh. The greatest consternation prevailed at Erzeroum, though the garrison of that city had been reinforced by 8000 Turks; but these forces were scarcely organised, and their good conduct in the field was a matter of doubt.

The Russians have organised a native militia in various parts of Circassia, officered by Muscovites. Columns of this militia had made their appearance several points, and strong detachments had attacked Redoubt-Kalé on 3rd of December. The Turkish garrison, animated by the presence of an English officer, had repulsed the enemy with complete success; and the artillery of the fortress, particularly under the direction of these officers, had caused the assailants very considerable loss. Notwithstanding the failure of this attack, the situation of Redoubt-Kalé was held to be precarious, should the Russians return in sufficient strength, obstinately bent on carrying the place.

Reinforcements had been demanded from Batoum, and were impatiently awaited. At noon on the 8th the intelligence reached Trebizond, the military governor set out for Tchoureuk-sou, to concert measures with Mustapha Pasha, the General commanding in Anatolia.

THE SULTAN'S VISIT TO THE DUKE OF CAMBRIDGE.

The *Journal de Constantinople* of the 24th December contains the following account of the visit paid by the Sultan to his Royal Highness the Duke of Cambridge:

His Royal Highness the Duke of Cambridge, whose health is better, left the village of Therapia yesterday morning, to take up his residence at the Palace of the British Embassy at Pera.

On Friday last his Imperial Majesty the Sultan, accompanied by his ordinary suite, proceeded to the Palace of the Embassy to visit His Royal Highness. The visit was received at the entrance of the Palace by Lord Stratford de Redcliffe, the whole *personnel* of the British Legation in full uniform, and by the Duke of Cambridge, who waited at the head of the grand staircase.

His Excellency the chief saloon, the Sultan entered most affably into conversation with the Duke. Lord Stratford de Redcliffe, and M. Etienne Pasini, First Dragoman of the Embassy, served as interpreters; and, as the noble Duke evidently increased in a great part of the empire; and a recent ukase order for the suppression of the revenue from the monopoly of tobacco.

Minister of the Interior, Count Panin is his part, animated with the same martial zeal, excites by different measures, and especially by the example of the Government functionaries and the clergy, the patriotic enthusiasm of the people, so as to cause them to make voluntary donations. Thus, for example, when in a province a contractor for the sale of liquors, which is a Government monopoly, does not make a voluntary sacrifice of three hundred quarts of spirits of wine for the troops on the march, it is certain that the contract will not be prolonged. The fanaticism of the Russian serfs is excited by different means: but a great many people are already learning to make a distinction between the interests of the Czar and those of Czardom. It is from the Government that fears the less misery and famine that it lessens the rigour of its fiscal measures. Thus, in Finland, it has not dared yet to prohibit the exportation of hemp, pitch, and timber, as it has prohibited the export of the raw material from the south of Russia.

The Admirals of the Russian Baltic fleet and the Generals having command in the large towns on the shores of the Gulf of Finland have been summoned to the Ministry of War at St. Petersburg, where a number of councils have been held. It has been decided that the fortifications of the city of Towns must be strengthened, and that intrenched camps, each large enough to receive an infantry division, must be formed near them. A system of strongly-intrenched camps, which is forthwith to be carried into execution, will extend from Cronstadt to most of the strategetic points in Finland.

A private letter from St. Petersburg, dated Dec. 26th, mentions that these important changes have taken place, and more were expected, with the full effects of the army. The one looked upon as the most important is the nomination of General de Berg, who distinguished himself above all by the measures he adopted for the defence of that place against the Allied fleets. He has been appointed Commandant-in-Chief of Finland, in the place of General Rokeesewski, who commanded there when Sweden was attacked by the Allies. This nomination is considered the more significant that Finland is fully expected to become the theatre, either one of the theatres, of war next spring. Political persons at St. Petersburg fully believe that the King of Sweden is determined to abandon all idea of neutrality, and whenever hostilities recommence in the north to take an active part with the Allies. A similar resolve is expected from the King of Denmark, particularly since the fall of the Swedish Cabinet, which was favourable to the Russians.

An Imperial manifesto has been issued. It contains the following passages:

"In our duty as a Christian forbids us to desire a further shedding of blood, and mainly we will not reject any propositions and conditions of peace, provided they be compatible with the dignity of our empire and the welfare of our subjects.

"But another and a no less sacred duty binds us, in this obstinate struggle, to call for energy and prepare for every sacrifice which the greatness of the cause of attack brought against us demands.

"We will all, if necessary, show a bold front to our enemies, with sword in hand, and the cross in our hearts."

The Grand Dukes Michael and Nicholas, who left Sebastopol on the 8th ult., at the urgent request of the Empress, are to return to the Crimea on the 7th inst.

THE CONFERENCE AT VIENNA.

The final decision of Austria, which was to be made on the 1st of January, has been postponed for another fortnight, at the request of Prince Gortschakoff. He not being authorised, he alleges, to give a categorical answer to the Note agreed upon by the Three Powers, explanatory of the four Points which are to form the basis of negotiations. The most contradictory statements are given regarding the probable result of this attempt to bring Russia to reason. One account represents the Czar as having declared his willingness to accept "the principle of the four points in their integrity, and without reserve," which declaration is said to have been satisfactory by Austria. On the other hand, a letter from Vienna, of the 26th ult., affirms that Russia will not enter into negotiations on the basis of the Four Points unless hostilities are instantly suspended, and the Allied army withdrawn from the Crimea. A more recent communication from Vienna, in the *Frankfort Journal*, says—

"It only has no reply arrived from St. Petersburg to the Austrian summons, but not even has any written acknowledgment been sent from that city of the ratification of the treaty of December 2, which certainly the Russian Cabinet has to have sent, were it only through politeness. When, therefore, it is affirmed in various quarters that Prince Gortschakoff has already handed in a provisional note from St. Petersburg, we are able to declare that that assertion is altogether erroneous. No note has even entertained of the arrival of such document for some days to come. It is easy to imagine that these proceedings of the Cabinet of St. Petersburg are not satisfactory, although the Austrians to give verbally pacific assurances to that town to preside at the time exceedingly to be regretted that the efforts of Prussia to maintain peace between Russia and Austria find so little support at St. Petersburg. Were Russia and Austria as united on a well-informed circles as inevitable. In no circumstances it is not improbable that orders have been sent, as is affirmed, to the army to leave its winter quarters, and take up strategical positions at the commencement of January.

Indépendant quotes a letter from Berlin, dated the 28th ult., which says:—"According to recent accounts from St. Petersburg it may be considered as certain that the Emperor of Russia will for the present refuse any ulterior concession. Very confidential communications have been made in this sense to the Prussian Cabinet."

The Conference at Vienna on the 28th was not attended by the Russian Plenipotentiary, as has been stated in some of the papers, nor was the protocol agreed upon communicated to him. Count de Buol, Baron de Bourqueney, and the Earl of Westmoreland, having signed the protocol containing their interpretation of the Four Points, the Austrian Minister conveyed to Prince Gortschakoff "the sense of the interpretation," which he has transmitted to St Petersburg. If the Czar is anxious for peace, a telegraphic despatch will convey his answer, no doubt. If he is resolved to go on, he will take advantage of the fortnight's grace, as on former occasions.

THE FOREIGN ENLISTMENT BILL.

The question of the enrolment of foreign troops for the English service is exciting much attention in Belgium and in Holland. In both countries, but particularly in the former, there are many retired non-officers desirous of entering the above service. Numerous young officers, too, in the Belgian army are also willing to quit it for the English one, provided they have the guarantee that at the end of the war they will be received back into the former with the grade they have attained in the latter. There is, however, no little difficulty in the way of such a guarantee, particularly as Belgium is, by virtue of existing treaties, a neutral country.

The Swiss papers speak of an interview having been held between our representative in Switzerland and the President of the Confederation, the subject of which was understood to be the desire of our Government openly to enlist men in Switzerland for the purposes of the war with Russia. Several successful of rank were spoken of as willing to raise auxiliary troops for England.

The *Swabian Mercury* states that in Spain, Holland, and Hamburg, depôts for receiving volunteers for the Foreign Legion which England is about to raise are to be established under the direction of English officers of each volunteer, it adds, is to receive 25*f.* on entering, and 300*f.* when he shall have joined his regiment. He is also, it says, to receive as much tea, liquor, &c., as he likes.

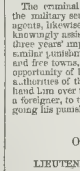
The Prussian Government, as was to be expected, is using every means to prevent its subjects from enlisting. The Governor of the province of Posen has issued the following notification:—

"The criminal code of Prussia prescribes that whoever enlists a Prussian into the military service of foreign States, or induces him to do their recruiting agents, likewise whoever intentionally receives a Prussian soldier to desert or knowingly assists his desertion, will be punished with from three months' to three years' imprisonment. Any attempt at the above will be visited with a similar punishment. As offices are now about to be opened in the Netherlands and free towns, for the purpose of enlisting men into foreign service, I consider it my duty to give special notice to every one of the opportunity of bringing the above penal law to mind, and call upon all the police authorities of the province immediately to arrest any recruiting agent, and hand him over to the State prosecutor, to take from him his papers, and, if he is a foreigner, to take measures for his being sent over the frontier after undergoing his punishment. I require to be informed of each separate instance."

OBITUARY OF EMINENT PERSONS.

LIEUTENANT-GENERAL JAMES ROBERTSON ARNOLD, K.H.

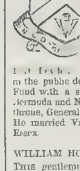
LIEUT.-GENERAL ARNOLD, K.H., K.C., died at his residence in Onslow square on the 27th ult. The gallant officer was second son of the late General Benedict Arnold, by Margaret, his wife, daughter of Edward Shippen, Chief Judge of Pennsylvania; and elder brother of the late Colonel William Eich Arnold, of Little Missenden Abbey, Bucks. He entered the corps of Royal Engineers in 1798, and served more than half a century. In 1800 he was present at the blockade and surrender of Malta; in 1801 participated in the campaign in Egypt, at the capture of Aboukir Castle, the battle of Alexandria, and the expulsion of the French from Grand Cairo. He was subsequently for several years in the West Indies, and took part in the conquest of the colonies of Demerara, Essequibo, Berbice, and Surinam. At the last-named place he was severely wounded, while successfully leading the storming party against Fort Frederick Frederic and Fort Fredk. For his conduct on that occasion he was honourably mentioned in the public despatches, and was presented by the Committee of the Patriotic Fund with a sword of the value of £100. His last military services were in Nova Scotia and North America. On the accession of King William IV. to the throne, General Arnold was appointed one of his Majesty's Aides-de-Camp. He married Virginia, daughter of Bartlett Goodrich, Esq., of Saling Grove, Essex.



WILLIAM HOWE WINDHAM, ESQ., OF FELBRIGG-HALL, NORFOLK.

THIS gentleman is one of the principal landed proprietors of the county of Norfolk—died on the 22nd ult., at 11, Berkeley-square, the residence of the Marquis of Stafford. Mr. Windham represented the Eastern Division of Norfolk in the first reformed Parliament. He was the eldest son of the late Admiral Windham, of Felbrigg, who changed his patronymic Lukyn for the surname of Windham, on succeeding to the estates of the distinguished senator, the Right Hon. William Windham; and grandson of the Very Rev. George William Lukyn, Dean of Wells.

Mr. Windham came into possession of the Felbrigg estates at the death of his father, in 1833, and in 1842 served as High Sheriff of Norfolk. He was born 30th March, 1802; and married in July, 1838, Lady Sophia Hervey, daughter of the Marquis of Bristol, by whom he leaves a son and heir, William Frederick, born 8th August, 1840.



BRIGADIER GENERAL GEORGE GUSTAVUS DU PLAT, K.H.

THE death of Brigadier-General Du Plat, her Majesty's Military Commissioner at the Head-quarters of the Austrian Army, took place at Vienna, on the 21st ult., from dropsy. The Brigadier entered the Royal Engineers in 1814.

MRS LEE.

THIS lady, who died on the 1st instant, in Bryanston-street, Portman-square, was Elizabeth, only daughter of the late Major Lee, of Bolney Court, Oxfordshire, and widow of his Excellency Henry Hamilton, fourth son of the Hon. Henry Hamilton, by Mary, daughter of Joshua Dawson, Esq., of Castle Dawson, County Derry; and grandson of Gustavus, 1st Viscount Boyne. His Excellency Henry Hamilton was Governor of Canada, the Bermudas, and lastly Commander-in-Chief of the British West India Islands and Governor of Dominica. Mrs Lee was descended from the family of Cunninghame, of Kilmaurs, in Scotland, settled there in the twelfth century, and was nearly allied to the 16th and last Earl of Glencairn—who was the friend and patron of Robert Burns, and the subject of one of his most touching poems; and at whose death, in 1796, the title of Glencairn became extinct.

WILLIS AND PERSONAL ESTATES. Mr. Joseph Hudson, of Oxford-street, tobacco and snuff manufacturer, died possessed of personalty amounting to £160,000. Mr. Francis Thorpe, flax-spinner and thread manufacturer, Lanark House, Peckham, £70,000. Mr. Alexander Ross Saddler, of Southwark and Lower Edmonton, mustard-mill proprietor, £45,000. Mr. W. Brookeding, Devonshire-street, Queen-square, £30,000. Dr. J. N. Merriman, £25,000. The Rev. Henry Harvey, Vicar of Overton and Canon of Bristol, £16,000. Miss Agnes Lockey, whose will was proved under £9,000, has bequeathed to All Souls Masonic Lodge, £100; Gloucester Magdalen Institution, £80; British and Foreign Bible Society, £200; and the Society for Additional Curates, £100.

RELIC FROM ROMARSUND. During last week Captain R. Hall, who, with his *Bulldog*, has so signalised himself in the Baltic during the summer, has returned to his old residence at Weymouth, and has made a present of the white flag of truce held out by the Russians at the capitulation of Bomarsund to Alf Soth Masonic Lodge.

SERIOUS ACCIDENT ON THE GREAT NORTHERN RAILWAY.—A serious accident took place on Wednesday night on the Great Northern Railway, at a short distance beyond the Leeds central station, to the train which leaves that town at 6.35 p.m., and arrives at Doncaster at 8.10 p.m. The train was passing over a crossing on one of the viaducts, when the first carriage behind the engine struck against the points, and was immediately detached from the train by the breaking of the coupling irons, and thrown over the viaduct, forty feet high. In the carriage, which was composed of first and second-class compartments, was the Recorder of Doncaster, Mr. R. Hall, who was returning to that town to preside at the sessions on the following morning. His right leg and shoulder were fractured, and he was very much bruised by the fall of the carriage, which was smashed to pieces. There were two or three other persons in the carriage, who were also much injured. An order was forwarded to Doncaster to adjourn the sessions for one month.

LOSS OF THE GOVERNMENT STAFF OF PHOTOGRAPHERS.—Some months since Government dispatched Mr. Nicklin, photographic artist, with two Sappers and Miners as assistants, with a valuable set of apparatus, for the purpose of taking views of the fortifications about Sebastopol. We regret to learn that the whole perished with the *Lion* near Wexford, which foundered in the late hurricane off Balaclava.

THE AFFAIR AT PETROPAULOVSKI.

The following despatch, relating to the affair at Petropaulovsk., has been published at the Admiralty:

President, at San Francisco, Nov. 15, 1854.

SIR,—As a sequel to Captain Sir Frederick Nicolson's letter of the 14th September last, addressed to me, the duplicate of which was forwarded hence on the 16th ult., I beg to transmit lists of the names of the seamen and marines belonging to her Majesty's ships who were killed at Petropaulovski, or who have since died of their wounds. I am, Sir,

(Signed) CHARLES FREDERICK, Commodore.

Ralphe Osborne, Esq., M.P., Admiralty.

Return of Officers, Seamen, and Marines belonging to H.M.S *President* who were killed, or have died since from wounds received in the attack on Petropaulovski:

Officer—Captain Charles A. Parker, Royal Marines. *Seamen*—James Arnell, James Callaghan, David Stedman, A.B.'s; John Lenk, Richard [illegible], George Henderson, Robert Woodards, privates.

(Signed) RICHARD BURRIDGE, Captain.

List of Men to be belonging to H.M.S. *Pique* who were killed, and who have since died of wounds received in the operations against the batteries and towns of Petropaulovski, Kamtschatka, on the 6th September, 1854.

Joseph Batt, master at arms. W. H. Garland, 2nd Class Boy; Daniel Davey, A.B., died on board from wounds on 13th September; James Alfred, captain fore-top; Charles Browne, John G. Browne M'Dermot, leading seamen, died on board from wounds on Oct. 15; Noah Yates, sailmaker's crew, ditto on Sept. 7; Thomas Morison (1), Ord., James Hanca, A.B.; James Elsworth, A.B.; Joseph Down, ordinary; James Marks, boy first class; Royal Marines—Lanman Race and John Carter, sergeants; Joseph Jackson, private; Henry Jefferies, private, died on board from wounds on 6th Oct.; Thomas Heverson, private; William Carna, private, died from wounds on Oct. 15th.

List of Persons belonging to H.M.S. *Virago* killed during operations, and since died from their wounds:

Killed at Petropaulovski, Sept. 4, 1854—George Tee, stoker; Henry Fowler, engineer, R.M.A., third class; Thomas Martyn, private, R.M.; third class; George Adler, private, R.M.A., died on Sept. 16th; Samuel Sergeant, third-class stoker, died Oct. 14th.

THE REPRESENTATION OF SUNDERLAND. The nomination of candidates for the vacancy in the representation of Sunderland, caused by the appointment of Mr. W. D. Seymour to the office of Recorder of Newcastle-upon-Tyne, took place on Monday in front of the Commission-rooms. Mr Seymour and Mr. Fenwick were the two candidates. The show of hands was in favour of the former; but the polling, which took place on Tuesday, placed Mr. Fenwick at the head of the poll. The result was as follows:—Fenwick, 966; Seymour, 641.

BRANDY AND BITTERS. A bill was lately handed to the authorities of San Francisco for payment for refreshments furnished to the grand jury of that city, while pursuing their investigations, which contained the following items:—"One dozen cherry wine, 1200 cigars, one dozen Martel's brandy, four gallons ditto, five baskets Heidsieck, one bottle of bitters, two tins of crackers, and 123 dollars' worth of cherry wine." The whole grand jury to each of the twenty-three jurors, two-and-a-half bottles of cherry, 150 cigars, two-and-a-half bottles of champagne, and one-and-a-half quart of brandy. In reply to some inquiries of the superintendent, the chairman of the jury replied, their deliberations were so intense that they required some artificial stimulants.

GAMBLING IN SALFORD.—The police of Salford have discovered an extensive system of gambling carried on in that borough by means of lotteries. It was stated that weekly lotteries were drawn at the Dyers' Arms public-house, kept by John Penny, in which as many as 10,000 shilling tickets were sometimes sold amongst the working classes, whilst the prizes yielded varied from 10s. to £40. The conductors of the lottery have been committed for trial for conspiracy to contravene the Acts of Parliament in force against lotteries.

A NEW SUGAR PLANT.—The scarcity of corn in France has drawn attention to a new plant, recently introduced from China, which promises to supersede to a certain extent the use of beetroot in the manufacture of sugar and the distillation of alcohol. The Agricultural Committee of Algiers has recently addressed a report to the Minister of War, in favour of the cultivation of the plant in question. It is called the *sorgho, or holcus saccharatus*, and was first introduced into France in 1851 by M. de Montigny, the French Consul in China, who sent some grains of the seed to the Government. Since then the culture of the plant has been commenced with success in Provence, and promises to be of great advantage to Algeria. The *sorgho* has been called the "sugar cane of the north of China," and numerous experiments have recently been tried with a view to ascertaining if it possesses the properties necessary for producing a crystallisable syrup, so as to become a rival to sugar and beetroot. According to the report of the Toulon Agricultural Association, it would appear to have those properties. The fact has been ascertained by a series of experiments made in the department of the Var. It also appears to be richer in the saccharine principle than any known plant, except the vine. Beetroot contains from eight to ten per cent of sugar; the *sorgho* produces from sixteen to twenty per cent, from which eight or ten per cent of pure alcohol, fit for all industrial and domestic purposes, can be produced. The refuse is excellent food for cattle, who are very fond of it. The plant grows with great rapidity, and does not require irrigation. The *sorgho* is not a new discovery, as it has been used from time immemorial by the inhabitants of the north of China, by whom large quantities of sugar are extracted from it. But this is the first time it has been introduced on anything like an extensive scale in Europe.

NEW-YEAR'S GIFTS IN FRANCE.

THE season for balls and festivities—for the reunion of long-parted friends—for the giving of presents and the interchange of compliments, has again arrived. The old legendary salute of "A happy New Year and many returns of the day!" again flies from lip to lip; but, kind hypocrites that we are! we all of us feel in our hearts how vain is the fond wish with which we beguile ourselves and our neighbours. We cannot ring the Joy-Bells to welcome Fifty-five, for Death has caught a hold of the ropes, and tolls a dirge.

The residents in Paris have at last begun to deplore the abuse of gift-making in the present day. We referred in our Christmas Supplement of last year to the nuisance which this once cheerful duty has by degrees become in that country. Of all the taxes in the year none are so exorbitant as those which are levied by servants, friends, acquaintances, and relatives, on this one day. The tax-payer knows exactly how much is expected of him by the Government, and arranges his affairs accordingly. But not so the donor of these compulsory gifts. He finds have, of course, too much delicacy to draw up a printed formula of what they think they ought to get on New Year's-day; they leave it entirely to "the sense of honour," as amiable cabmen do. So that, what with the fear of appearing parsimonious towards dependents and relations, to say nothing of the "quiet hints" of young ladies and the undisguised cravings of little children, he who happens to have a wide circle of acquaintance finds himself in a somewhat awkward predicament. Our readers will not be surprised to learn that many Parisians, and many, if not all, foreigners resident in Paris, make a point of absenting themselves from home on "important business" about the close of the year; just at the very time, above all others, when their fond friends were expecting to see their dear old faces at the door.

Far be it from us, however, to deny that there are cases in which the giving of presents is not only pleasing to the receiver but gratifying to the donor. The scenes illustrated in the accompanying Engravings are proofs that the old original feeling which prompted the donation of presents to those we love or esteem is not utterly extinguished in France. Gifts, in the true sense of the word, are outward expressions of the inner sentiments of the soul. To value a gift merely by its money-worth betrays a mean and mercenary nature. The book or trinket does not lie on your table or adorn your person as the representative of so much coin, but the tangible representative of so much intangible spiritual affinity which exists for you in your neighbour's heart. Regarded in this light, gifts become something holy, and the season for their distribution becomes a social festival from which no well minded person would desire to shrink. But the abuse of the custom is another matter, and it is an abuse which in France has gone to such an extreme as to render it probable that a remedy will soon be provided. In reference to this subject, we borrow the following sensible observations from a recent letter from the French capital:—

Though France has made many revolutions under the pretext of abolishing old abuses, there is one which all murmur at, against which all protest, but which all, or almost none few of the most daring, slavishly submit to; and it is doubtful whether it will ever be extirpated. The most courageous only avoid it by flight, with the excuse of a journey of the utmost urgency; and, while they pretend to leave for the most distant part of France, conceal themselves in some obscure town or village of the environs, and submit to the discomfort of exile, in order to shun, as if it were a pestilence, the obligation of New-year's Gifts. Each returning season brings still nearer the prospect of ruin. The march of intellect and enlightenment, instead of abolishing the tyrannical custom which forces people to throw away in one hour the savings, if not the income, of months, has increased the burden more than a hundredfold. The maker and vender of New-year's Gifts have, indeed, advanced with his age. Except in the lowest booths, and scarcely even there, you seek in vain the modest dolls, the small puppets, the manikest horse of wood, the huse of fierce soldiers in lead of other days. Objects of far greater value, playthings unknown to the past generation, articles of complicated mechanism and of fabulous prices have replaced them.

A simple paper of *bonbons* was formerly gracefully and gratefully accepted, not for the envelope, but for the sweets it contained. Now the bonbons are

NEW-YEAR'S GIFTS IN PARIS.

...ach valued for the sake of the *pâtisserie* [illegible] which ...es them. The principal gift is of little value; it is the accessory which is esteemed; the worth of the former may be 3f. or 4f., that of the latter will ...000f. Then consider, if you have an extensive acquaintance, blessed with a ... [illegible] ... with ... and the *étrennes* [illegible] to your porter, to your servants, to the servants of all your acquaintances, to the letter and ... [illegible] ... carriers, and to the whole tribe of tradesmen's servants and messengers who prey on you on that fatal day! It is terrible to contemplate! A man with such a prospect before him, and who has not the courage to defy the worst, ought not to approach the Seine at such a moment, as there is no knowing what despair may drive him to do

The abuse, however, must bring its own remedy. The fearful exaggeration for some time past in the cost of articles for New-Year's Gifts will not fail to produce some day a terrible reaction. The tyranny of the custom must fall Like all oth[illegible] ... [illegible] ... same no longer tolerable even to the ... [illegible] ..., or even more, must, sooner or later ... [illegible] ... they are now exhibited so temptingly, for no ... [illegible] ... ase them

NEW YEAR'S GIFTS IN PARIS

THE ROMAN WINE-CARRIER.

DRAWN BY GEORGE THOMAS.

SONG OF THE ROMAN WINE-CARRIER.

DRINK, brothers, drink! But O, not in the grape
Let us drink to the hearths of home
Though freemen we stand on our native land
Mid the vine-clad hills of Rome
At morn on the breezy mountain side
At noon in the sultry field
Or pausing at night 'neath the dying light
Let us drink of the Roman well

O, little they heed in their banquet-halls—
They for whom the red grape hath flowed
As they crowd the board where the wine is poured—
Of the peasant who bears the load.
No matter! God's rivers are freer than wine
And man he knoweth right well,
The hand that filleth the Roman vine
Filleth also the Roman well.

Drink deep, O my comrades! [illegible] health in [illegible]
cup.
[illegible] our burthens to bear;
[illegible]
[illegible]
With [illegible]
Say; what shall it [illegible] deep?
Only bitterness wrought by a slavish [illegible]
Can poison the Roman well.

[illegible] we rest from our toil,
[illegible] the fount gushes stainless and free,
How the water was blest by a holier guest
[illegible]
[illegible]at crimsons our southern sky
[illegible]
[illegible] rest on his beam
[illegible]

CALENDAR FOR THE WEEK.

SUNDAY, JAN. 7.—1st Sunday after Epiphany. Fenelon died, 1715.
MONDAY, 8.—Plough Monday. Fire Insurance due.
TUESDAY, 9.—St. Lucien Cape of Good Hope taken, 1806.
WEDNESDAY, 10.—James Watt born, 1736. Royal Exchange burnt, 1838.
THURSDAY, 11.—Hilary Term begins
FRIDAY, 12.—Outbreak at Sheffield, 1840.
SATURDAY, 13.—St. Hilary Old New-Year's-day. C. J. Fox born, 1749

TIMES OF HIGH WATER AT LONDON-BRIDGE,

Now ready, elegantly bound in cloth, gilt edges, price 21s.,

THE ILLUSTRATED LONDON NEWS,
VOL. XXV,

With upwards of 600 Engravings; including a very numerous Series of Illustrations of the Progress of the War during the past Six Months.

The COVERS for VOLUME XXV., with the New Design, price 2s. 6d. each, may also be obtained by order, of all Booksellers, &c., in the Kingdom.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 6, 1855.

THE private sentiments of the Queen do not often come before the public—but on all questions and on all subjects they are known to be such as to entitle her to the respect and love of her people. On the 6th of November last her Majesty addressed a letter to Mr. Sidney Herbert, which was first made public in the Crimea, and which we are certain will excite at home an admiration and a sympathy worthy of a great Sovereign to receive, and of a great nation to bestow. The letter, or an extract from it, was transmitted by Mr. Sidney Herbert to Miss Nightingale, whom it especially interested; and, if any breach of etiquette has been committed in its publication, it may well be forgiven, when the result is to show the Sovereign in a light so amiable, so patriotic, and so Christianlike. Its effects will be incalculable in cheering the spirits of our wounded soldiers, and in infusing, if that be possible, new life, energy, and courage among the unwounded. The following is the extract alluded to, which was first published in the *Morning Post*, in a letter from a Crimean correspondent of that journal:—

"WINDSOR CASTLE, Dec. 6, 1854.

"Would you tell Mrs. Herbert that I begged she would *let me "see frequently* the accounts she receives from Miss Nightingale or "MRS. Bracebridge, as *I hear* no *details of the wounded*, tho' I see "so many from officers, &c., about the battle-field; and naturally "the former must interest *me* more than any one.

"Let Mrs. Herbert also know that I wish Miss Nightingale and "the ladies would tell these poor noble wounded and sick men that "NO ONE *takes* a warmer interest, or feels *more* for their sufferings, "or admires their courage and heroism MORE than their Queen. "Day and night she thinks of her beloved troops. So does the "Prince.

"Beg Mrs. Herbert to communicate these my words to those "ladies, as I know that *our* sympathy is much valued by these "noble fellows. (Signed) "VICTORIA."

THERE has been a long lull before Sebastopol. Their signal defeat at Inkerman disposed the Russians to keep quiet; and the discouraging state of the weather from the 11th or 12th of November to the end of the year was sufficient of itself, independently of other causes, to reduce the military operations of besiegers and of besieged to a minimum. During this gloomy interval—only cheered in the British and French armies by the remembrance of the mutual glory which they had so recently achieved—the sufferings of our gallant soldiers have been neither few nor small. It is easy for brave men to confront the dangers of the battle, but it is not so easy to confront or endure the miseries of rain and mud, of cold and of starvation. But that melancholy period has passed away. The weather has brightened, and brought not only comfort to the minds but to the bodies of the troops. The roads have been rendered hard by frost; supplies and reinforcements have been received, and hailed with acclamation, both in Sebastopol and Balaclava. We may expect, therefore, to hear at no distant day of new and great battles in the Crimea. We neither know nor can compute the strength of the Russians; but we know that the French and British armies (without counting the Turks who have landed in the vicinity of Eupatoria to the number of 20,000 men) may be calculated to include an effective force, notwithstanding all their losses from sickness and on the battle-field, of upwards of 100,000 men. But are these numbers sufficient for the task in hand? We believe not. High military authorities are of opinion that they are scarcely half enough to act with such vigour upon the offensive, as to secure the speedy capture of Sebastopol. Great Britain and France, and all Europe, miscalculated the power of Russia, and the strength of her Crimean fortress. The mistake was not peculiar to Ministers, to Diplomatists, or to Generals. It pervaded all ranks; and the truth was, perhaps, known to none but to the Czar himself, and a few of his immediate functionaries. But the error is at length seen and confessed; and we hope and trust that it is not too late to remedy it. Neither France nor Great Britain has yet put forward a tithe of its strength; and the Turks, under Omer Pacha—if they cannot be useful in the attack or investment of Sebastopol—can and will render essential service, by keeping the Russians in check at Eupatoria and Bagtcheserai. Inkerman showed of what metal the British and French armies are composed; and the sufferings in the British Camp that followed that day of dearly-bought but imperishable glory, though they have exasperated the troops, have only made them the more eager to measure bayonets with the foe. There can be no doubt that their temper has been sorely tried; but, if the effect of their irritation is such as to render them more formidable than ever, to any number of enemies that may think proper to attack them, the cause may be deplored by every true heart in Britain, but the Russians, at least, will have no reason to rejoice at the result. A thousand British soldiers shivering knee-deep in the trenches, or slumbering in slush and mud, would think it a high privilege and favour to have a tussle with six or seven times the number of Muscovites. Every letter from the Crimea in which private soldiers relate the history of their hardships—and these brave men do not whine, as the comfortable critics of the war whine for them in London—manifests a spirit of pugnacity, and of impatience at the compulsory inaction to which the weather has reduced them, that augurs ill for the success of the Russians in the next battle that either party may provoke. The town of Sebastopol lies white and fresh, and apparently unharmed, before the gaze of our soldiers; and we know, on their own evidence, that there is not a man among them who would not much rather storm it, than look at it. All the most recent accounts tend to confirm the belief that the wished-for opportunity will not much longer be denied them, unless, as a preliminary operation, Lord Raglan and General Canrobert shall feel themselves strong enough to detach a portion of their forces, to deliver battle with General Liprandi. Such a movement is by no means improbable. Numerous as the Russians may be, they will speedily have more than enough on their hands to confront successfully the dangers that are concentrating around them. On every side they will discover a foe—either French, English, Turkish, or Austrian. In less than a fortnight they will, in all probability, have the whole power of the Austrian Empire arrayed against them; and Austria, besides rendering it necessary for the Czar to defend a long line of frontier against the hostility of 150,000 fresh and highly-disciplined troops, has at least 100,000 men to spare, if need be, to support the Allied armies in the Crimea. The mischievous outcry raised against the good faith of Austria by English newspapers, in the interest of the Red Republicans and ultra-Revolutionists of the Continent, has gradually been dying away, and few, if any, are left to share the opinion of M. Kossuth, that Austria will play false to her allies. On the contrary, public confidence—which, there can be no doubt, was somewhat shaken—has been restored; and a few days will prove, beyond even the power of cavillers and Red Republicans to deny, that Austria is heart and hand with France and England, and will aid them with all her armies, and with all her resources, both in Bessarabia and in the Crimea.

The ancient nations considered it treason to despair of the fortunes of the Commonwealth. We have in England a few traitors of this kind—craven hearts—who, by their cowardice, and by the loud utterance which they give to it, do much to harden the heart of the modern Pharaoh, and to protract a war which depends on his obstinacy alone. But the nation itself knows no despair. It treats the cravens with contempt, and will win the desperate fight, at whatever cost. Though we should be beaten at Sebastopol; though the Czar's orders to Menschikoff should be literally carried out; though our last man in the Crimea should be bayoneted on the field by a savage Muscovite, or driven into the sea, the nation would not, and could not, renounce the struggle. We should send round the fiery cross rather than succumb. Our old men as well as our young ones—nay, our very women would lend a hand, and do men's work at home—so that every male in the kingdom fit to bear arms should be made available, rather than that England and France should be foiled in the encounter which they have undertaken. Great Britain and France cannot despair. If they could, they would be alike bankrupt in fortune and honour; they would descend in the rank of nations, becoming second or third-rate States—breathing at the mercy of Czar Nicholas—crawling under his huge legs, and relapsing, as a necessary consequence of their dependence, into the semi-barbarism of Egypt or Assyria, or any other Power that once flourished and fell. But this will not be. The croakers croak in vain, and will gabble at no remote day of the glories which they did not aid, and of the victory which they discouraged. But whether they gabble or croak, the work will go on; and this mighty nation, true to itself, will vindicate its position, and crown its enterprise with that great crown of success, which fools and wise men alike acknowledge.

THE ungenerous outcry against the employment of foreign troops in the British army has produced a very bad effect on the Continent. Though the Ministers have got their bill, it is uncertain whether they will get their men. Germans and Swiss, who have been designated as "cut-throats" and "assassins" to say nothing of the milder epithets of "hirelings" and "mercenaries"—do not feel much disposed to offer their services to a country in which they are led to believe that this is the prevalent opinion regarding them. This is unfortunate; and the more so as the accusation brought against such men is as untimely as it is unjust. Is there a living Englishman, Scotchman, or Irishman who would dare to say that the gallant Sir De Lacy Evans was, when he commanded the British Legion in Spain, a cut-throat, or a leader of cut-throats?—an assassin—or a chief of assassins—or even a mercenary and a hireling? We believe there is not one; or, if there be one, that he would not like to trust himself before an audience of his countrymen to say so, lest he and the tar-bucket, or the parish pump, should be brought into unpleasant companionship. We are of the number of those who thought it a mistaken policy to raise a foreign corps before we had tried the preliminary expedient of throwing open the British service to the ambition of the brave and aspiring youth of our own country; but we never joined in abusing foreign troops merely because they were foreigners. Now that the bill has passed, and that the Ministers have reaped whatever odium was attached to its introduction, we may express regret that such odium should be incurred in vain. But, failing Germany, Switzerland, and Sardinia—from which good soldiers might have been procured—have we no reserves of our own on which we might draw in case of emergency? A suggestion has been made that a portion of the Irish Constabulary Force—soldiers—and first-rate soldiers, too, in everything but the name—might, with proper encouragement, be made available for the Crimea. The suggestion appears to be reasonable. The force in question is in the highest state of discipline and efficiency, and is composed of picked men. If the nation opened up to them the higher honours of the British Army as the rewards of their valour, it is probable that one-third or one-half of them would gladly volunteer for service in the Crimea. Ireland, very fortunately, stands in no need of their presence. Disloyalty and disaffection are defunct in that country. There is no longer any fear of rebellion. The race of agitators is extinct; and warm-hearted people, so far from being inimical to the war, its enthusiastic supporters, and have sent to the Crim some of the bravest of the brave in our armies. By fortunate combination of circumstances, for a country situa as Ireland, even Religion itself, for so long a peri the source of bitterness and dissension, takes part against Rus in the struggle. The Roman Catholic priests look upon Czar not only as the disturber of the world's peace, but as Ar christ; and it is difficult to say under which character they disl him most. But, though the consent of the Irish constabuli might, without much difficulty, be obtained, the cons of Parliament is requisite, and Parliament is not sitti At a time like this, when a day's delay might prove of inju to the effective prosecution of the war, it seems unwise to h adjourned Parliament for a whole month. The Legislature ought this moment to be in full Session; for, if the trained and ex rienced troops which were expected to be raised in foreign Sta were as absolutely essential to the carrying out of Lord Ragla plans as the Ministry led the nation to suppose, some new resou ought to be immediately discovered, on the failure of the old o As far as the public knows, nothing has been yet gained by t Foreign Enlistment Act; and for nearly a month nothing can done to remedy the failure. Our hope is, that the matter was of such consequence as it was represented. If it were, it is di cult to say who is most to blame the Ministry which proposed, the Opposition which discredited and vilified, a Foreign Legion.

LATEST INTELLIGENCE.

THE SIEGE OF SEBASTOPOL.

DESPATCH FROM GENERAL CANROBERT.

The French Minister of War has received from the Commander in Chief the Army of the East the following report, dated the 22nd December, 1854:

Monsieur le Marechal,—The bad weather has continued with but r and short intermissions. We do not the less continue our operations much as possible to surround the place with our trenches, and all the sie works are becoming perfect and consolidated, notwithstanding the ra weather, which renders transportation very difficult.

The two armies mutually assist each other. I am indebted to t English army for the transport of nearly all the cavalry which I have the Crimea; and on my side I have put at the disposal of Lord Ragl my ambulances to carry his sick to Balaclava, and lodges for the Ra port of his munitions. These interchanges contribute to keep up the e cellent understanding and perfect cordiality which subsist between t two armies.

A night seldom passes without a sortie being made on some portion our approaches, which, however, generally costs the enemy dear.

Yesterday, at two in the morning, the Russians, after having made sortie on the third parallel of the English, which the latter vigorously pulsed, made also a demonstration on the centre and left of our wor Received by a lively and well-directed fire, they retired before our soldie who pursued them with the bayonet. The enemy left many dead on t ground.

In order to render more effectual the guard of the trenches, I ha formed a corps of volunteers, whose duty it will be to watch during t night the entries to our works. I expect good results from this institu tion, which completes that of the franc-tireurs, formed at the com...ncement of the siege, and who do duty during the day in the trenches, a have already caused much injury to the enemy.

As I have already informed you, our works now extend to the bottc of the bay of the Quarantine. The enemy is evidently active to the effor we are making on this side, and his artillery briskly disputes with us t ground, where we are, as nearly every where else, obliged to dig in t rock, but our progress is not less real, and we remain the possessors.

I have already informed you that the enemy had evacuated the pa of the valley of Balaclava where we formerly perceived him in gre masses. As I wished to inform myself of the situation which he had fak in this direction. I yesterday pushed towards the village of Tchernaya reconnaissance, consisting of a brigade of cavalry, under the orders General Allonville. It encountered at the back of the village of Aumak some bodies of tirailleurs, whom it drove into the ravines. Some grou of cavalry, accompanied with artillery, and several battalions of infantr appeared on the flanks of the reconnoitring party, but did not attempt interfere with its object, which was very happily accomplished.

At the same time a thousand infantry—Scotch and Zouaves—issu from Balaclava on the right of our positions, and explored the heigh which extend towards the valley of Baidary. All they encountered w a post of Cossacks.

In fine, I think that on the left bank of the Tchernaya there are only few posts of the enemy, watching from a distance our positions. There evidently a movement in the Russian army, produced probably by t continued landing of the Turkish troops at Eupatoria. I shall soon kno how to proceed in this respect.

Although the number of the sick has a little increased, in consequen of the perpetual humidity in which we live, the sanitary state of the arm is satisfactory, and its *morale* is perfect.

If the troops have been incommoded by the wet, they have not as y suffered from cold. The snow, which has for some time covered the to of the mountains of the interior, has not yet appeared on the plateau w occupy, and the thermometer has not once fallen below zero. The general conditions are rendered better by the care which is taken for ce soldiers; and, thanks to the wise foresight of the Emperor and his Gover ment, the army enjoys a relative welfare, which causes it to bear chee fully the fatigues which are imposed upon it.

The total of the sick in our military hospitals at Constantinople 3794, of whom 1387 are wounded. Amongst this number are 200 Russian I have established in the Crimea, near the bay of Karatch, a depôt f convalescents, where will be placed those who, on leaving the am bulances, require a little repose before resuming service.

His Royal Highness Prince Napoleon, who is still detained at Con stantinople by the illness which forced him to leave the Crimea, has ex pressed a wish to rejoin us; but I have thought it my duty to oppose h return, which might seriously affect the health of the Prince.

Accept, &c., CANROBERT.

The following are among the latest telegraphic despatches received:—

VIENNA, Jan. 4.

Prince Gortschakoff has had an audience of the Emperor, which laste an hour and three quarters, but his Majesty is not likely to make an concession to Russia.

General Osten Sacken is to act against Eupatoria with 40,000 men an eighty guns.

According to telegraphic despatches from French head-quarters, but armies are preparing to attack the southern part of Sebastopol.

The *Moniteur* contains a telegraphic despatch, dated December 2 from the Chargé d'Affaires of France at Constantinople, in these words:—

General Canrobert writes to me on the 26th:—"We shall very soon b in a position to assume the offensive. We are renovating our conditio much faster and more effectually than the enemy can do with his W are full of confidence."

ST. MARY-LE-STRAND CHURCH. This beautiful edifice has bee repaired, adorned, and warmed by the best process, and its tree accomm dation augmented, under the auspices of Rev. J. F. Denham, Rector; an Messrs. Stewart and Saunders, Churchwardens. By the removal of a mighty range of middle pews, the altar has been thrown open to th view of the whole congregation, and the well known elegance of th interior completely restored. We congratulate the parish and its authc rities on the unanimous zeal with which, we understand, these judicion arrangements have been conducted. The fabric now affords its original illustration of the classical taste of its architect, and is in all respect worthy of its pre-eminent position in the great thoroughfare of the metrc polis.

BUST OF THE EMPEROR OF THE FRENCH.—Mr. Patric Park ha had the honour to submit to her Majesty the Queen, and his Royal High ness the Prince, the bust of his Imperial Majesty the Emperor of th French, which he has executed for his Grace the Duke of Hamilton This fine bust is engraved in No. 698 of the ILLUSTRATED LONDON NEWS.

REOPENING OF PANYER-ALLEY.—This thoroughfare, leading from Paternoster-row to Newgate-street, which has been entirely closed for a period of about six months, in consequence of the pulling down of th premises at its Newgate-street end, has been reopened to the public. Th ancient stone, with the inscription denoting it to be the highest ground in the City, and about which much solicitude has been expressed, is now again open to public view. The stone also marks the boundary between the parishes of St. Vedast Foster and St. Michael-le-Querne—the church o which last-named parish formerly occupied the now open space at the west end of Cheapside.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS TAKEN DURING THE WEEK ENDING THURSDAY, JAN. 4

Note.—The sign + denotes below the average and the sign + above the average. The 4th line in the seventh column are calculated upon the supposition that the saturation of the air is represented by 100.

The reading of the barometer decreased from 30.46 inches at the beginning of the week to 29.81 inches by January 1st; increased to 30.22 inches by the 4th, and did not exceed to 30.18 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 30.197 inches.

The mean temperature of the week was 43·5°, being 7° *above* the average of thirty-eight years.

The range of temperature during the week was 24·2°, being the difference between the lowest on December 29th and the highest on January 1st.

The mean daily range of temperature during the week was 8·8°. The greatest was 13·2° on December 30, and the least was 4° on January 2.

Rain fell during the week to the depth of six-hundredths of an inch.

The weather during the week has been distinguished by a high temperature both by day and night, and a cloudy sky. On January 1 there was a heavy gale from the S.W.

JAMES GLAISHER.

Lewisham, 1855, January 5.

HEALTH OF LONDON.—The number of births within the week ending December 30th, registered within the metropolitan districts, was 1649, of these 826 were boys, and 824 were girls. The averages for the same week for the preceding nine years were 655 and 643 respectively. The number of deaths within the same period was 1038; of these 502 were males, and 536 females. The number of deaths exceeded the average number as found from the preceding ten years, corrected for increase of population, by 269. The health of London does not seem to improve; it is nearly in the same state as it has been during the preceding three weeks. The average number of deaths lately has been about 1200 weekly; the excess this week is mainly owing to coroners' cases, which have been accumulating till the end of the quarter, and these deaths for the most part were caused by violence, privation, and intemperance. Two deaths were referred to cholera in the week. During the fifty-two weeks of the year 1854 the total number of deaths in London amounted to 73,708, showing the rate of mortality 29 in 1000 persons. The average rate of mortality in London in one year is 23 out of 1000 persons; so that the presence of the epidemic of cholera has raised the mortality one-fifth part above the average.

BROMPTON HOSPITAL. His Grace the Duke of Richmond, K.G., has intimated his consent to preside over the coming anniversary festival of the Hospital for Consumption at Brompton; on which occasion a numerous gathering of noble and benevolent individuals is expected, inasmuch as the indoor accommodation of the hospital is about to be extended from 90 to 220 beds, and the good offices of the charitable will be needed to expedite so desirable an object.

CHARING-CROSS HOSPITAL.—At a quarterly meeting of the committee of the institution on Tuesday—Charles Few, Esq., in the chair—it was reported that during the past year the large sum of £8000 was relieved by the hospital—of in-patients, 1138; out-patients, 14,875: total, 16,008. In the above were included 3288 cases of accident and dangerous emergency, of which 340 were so severe as to require to be immediately admitted as in-patients. The deep regret of the governors for the loss which the hospital has sustained by the death of the late Dr. R. Rowland, an efficient officer of the Hospital, and a very kind and able physician, was directed to be recorded in the minutes.

PRESERVATION OF LIFE FROM SHIPWRECK. On Thursday a general meeting of the Committee of the Royal National Life-Boat (late Shipwreck) Institution was held at the society's offices, Mr. J. Hamond, F.R.S., in the chair. The silver medal of the institution was voted to Lieut. Jeachim, R.N., and £13 8s. to nineteen others who had gone off with him in the *Rescue*, Life-boat, to the rescue of the crew of a Norwegian brig which during a gale of wind had been driven on the Holme Sand. A reward of £2 was also voted to two men who in their yawl had succeeded in rescuing the crew of the sloop *Request*, of Cardiff, which foundered near that place on the 21st ult. A reward of £18 was also granted to the crews of the life-boats of the institution stationed at Burnmouth and Portmadoc, in consideration of their laudable services to the crew, consisting of thirty-seven men, of the ship *Pride of the Sea*.

DRAINAGE OF LONDON.—At the meeting of the Metropolitan Commission of Sewers, on Tuesday, Sir John V. Shelley gave notice of a motion to the effect that for the complete drainage of the metropolis two main sewers must be formed, one on the north and the other on the south side of the Thames, thus preventing the pollution of the river. That in order to carry out this object, an outfall on each side of the river be made, in the only near the mouth of the Thames to prevent the drainage, when once discharged, being brought back by the tide into the mouth of the metropolis. That, as the law at present did not enable the Commissioners to effectuate such a scheme, inasmuch as they had no power to take land for the purpose of outfall works, and as the sanction of Parliament for the raising of £300,000 to be spent on the main drainage of the metropolis was obtained during last session, with the distinct understanding that the whole sum should be expended on the outfalls exclusively, in any bill to be introduced into Parliament for the better legislation of the metropolis, provision should be given to the Commissioners to take land for the purpose of works upon which, as outfalls, the most successful carrying out of vast drainage operations must mainly depend.

TRIAL OF EMANUEL BARTHELEMY.—The trial of Emanuel Barthelemy (for the murder of Mr. George Moore and Mr. Collard, in Warren-street, Fitzroy-square) took place at the Central Criminal Court on Thursday. The jury, after an hour's deliberation, returned a verdict of Guilty, accompanied by a strong recommendation for the mercy of the Court and of her Majesty the Queen. Lord Campbell, in passing sentence of death upon the prisoner, said he entirely concurred in the verdict, and considered the prisoner's crime to have been one of great atrocity, without a single mitigatory circumstance. The prisoner heard sentence of death passed without exhibiting the slightest emotion.

RAILWAY TESTIMONIAL.—A very gratifying mark of respect for long service and just appreciation of private worth has just been conferred upon Mr. Richard Peacock, a retiring officer of the Manchester, Sheffield, and Lincolnshire Railway Company. Mr. Peacock had long filled the office of Locomotive Superintendent in the above Company, and this public recognition of his merit was given at the close of a connection of fourteen years. With the exception of the contributions of a few friends of Mr. Peacock, who were anxious to participate in this substantial expression of regard, the entire amount of the subscription for the testimonial was raised amongst the men in the employment of the Company, and on the third of it was given by the men employed at the locomotive works at Gorton. He gentleman's testimonial took the form of a candelabrum, executed and elegantly chased in the style of the Renaissance. The candelabrum consists of a fluted column, with six branches for lights, and a base bearing flowers and fruit around the column are statuettes of Watt, Stephenson, Industry, Perseverance, and Science. On one of the panels of a hexagonal base is the following inscription:—

Presented, with other plate, to RICHARD PEACOCK, Esq., on his retirement from the service of the Manchester, Sheffield, and Lincolnshire Railway Company, by the officers and servants of the Company, and other friends, in token of their high appreciation of the valuable personal services rendered and manifested by him during the fourteen years in which he has filled the position of Locomotive Superintendent of the above Company.

The presentation took place in one of the large sheds at Gorton, when upwards of 300 of the workmen were present, besides most of the chief officers of the company. Mr. Rose, the secretary of the company, presented the testimonial to Mr. Peacock, and, in a short speech, referred to the exertions of the general manager of this company, Mr. Watkin, who had always been an active and zealous promoter of education, and had already set machinery at work which would shortly give to the employed at these works the benefits of these libraries and reading-rooms, and he trusted he had only to call this to their minds to make them anxious to avail themselves to the utmost of such facilities for gaining knowledge. The testimonial was presented to Mr. Peacock amidst loud cheers; and that gentleman said he felt especially proud that so large a proportion of it was contributed by those who had been near his control. The whole of this superb Plate has been designed and executed by T. Sharp, Connaught-terrace, London. The characteristic bas-reliefs on the Candelabrum were modeled from the works at Gorton.

DOD'S PEERAGE, BARONETAGE, AND KNIGHTAGE. The edition for the current year of this valuable manual evidences, in a remarkable manner, the untiring observation and care bestowed in its preparation. The political changes of the past year and the war with Russia have brought about more than the usual number of additions and changes in the titled world; and upon turning over the pages we find that they have been recorded with remarkable precision and completeness down to the very latest date.

GENERAL SIR HOWARD DOUGLAS ON THE CRIMEAN EXPEDITION.

SIR HOWARD DOUGLAS, in a new edition of his treatise on "Naval Gunnery," introduces a chapter on the history and present aspect of the Crimean Expedition, which deserves more extensive notice than it is likely to receive in a purely technical work.

This publication is important as being, amongst the numerous commentaries volunteered upon the subject of the war, the first which has been issued upon professional authority of acknowledged weight and character. In proposing now to give a brief abstract of the observations of the gallant veteran, we may remark *en passant*—and we do it with no small degree of satisfaction—that his opinions on almost all points are of a tendency to confirm some which from time to time we have ventured to publish upon this subject; and this fact is the more significant and important, inasmuch as the opinions which we have so adventured have all been based upon the best authorities in military science. This consentaneousness in views by those entitled to propound them, whilst it leaves no doubt of much error in the past conduct of affairs, is encouraging, as giving confidence in the suggestions of remedy for the future; and as establishing that the art of war, particularly in that most important operation, a siege, is not a matter of mere chance, but, on the contrary, one of calculation and of certainty.

Sir Howard Douglas, after referring to the unprepared state in which the country found itself when it had fairly drifted into this war, owing to the "reckless spirit of economy" which during a long peace had abolished or reduced all our military establishments, points to the undeniable fact—beside which establishment efficiency becomes a matter of secondary consideration, a fact which we have more than once adverted to: that the expedition to the Crimea was undertaken with an army much too weak, numerically, for the purpose; and that even thus inefficiently projected it was commenced too late in the season, except under the notion of taking Sebastopol by a *coup-de-main*. The battle of Alma, though a brilliant affair, by weakening our army, and leaving a hostile army of observation in the field, destroyed the only chance

CAVALRY AND ARTILLERY REINFORCEMENTS FOR THE WAR.

CHAIN-CABLES.

CHAIN-CABLE FORGING, AT THE [illegible] WORKS, TIVIDALE, NEAR DUDLEY.—CUTTING THE IRON OF 1808.

MANY a stroller upon the Chain pier at Brighton will recollect that around a sun-dial placed on the transverse platform is inscribed the name of the inventor of this elegant structure—Captain Sir Samuel Brown, R.N. To the same skilful engineer we owe the invention of the Chain-cable.

He established his works upon the Isle of Dogs some forty years since, and the invention was thus noticed in the "Reports of the Juries" of the Great Exhibition of 18[illegible]:

A Captain of the British Navy (Sir Samuel Brown) introduced cables made [illegible] arranged as to be easily worked. These Cables are now [illegible] in ships of war, but also in [illegible] shipping of every nation. We should have been happy [illegible] improvement had been recent enough to have received the highest of our awards, as

CHAIN-CABLE FORGING.—SIDE-WELDING.—(SEE NEXT PAGE.)

being one of the greatest boons effected for the shipping interests, and the preservation of life and property.

It is to a principal seat of this branch of manufacture that our Artist takes the reader in the pair of Illustrations engraved upon the preceding pages, as being fraught with interest at the present moment, when so many additional thousands of lives are exposed to the perils of stormy seapassage.

These scenes have been sketched at the Phœnix Works of Messrs. Melrose and Hussey, at Tividale, near Dudley, who are now casting an extensive order of Chain-cables for the Government.

There are two methods of making Cables, technically termed "side-welding and "end-welding:" the latter is the old-fashioned and the most common method, there being but few establishments laid out for side-welding. This is rather more expensive, but makes the best chain, not only as regards appearance, but also quality. All the Cables for the Government are made so as to enable them to stand the severest test to which they are subjected. The smaller-size Cables, however—say up to one inch are all end-welded. The method of making side-welded chain is as follows; viz.:—The bars of iron are put into a furnace, and, when hot, are cut up into pieces of the required length to form one link, by means of a circular saw. The cut is made in a sloping direction, so as to form what is termed the scarf, and so as to present as large a surface as possible for welding. From the saw, and when still hot, the scarf is taken to the bending-machine, and bent to the required form of the link. When a number of links are thus formed, they are handed over to the chainmakers for completion. This consists in welding the ends of the links together; connecting one link with the other, and inserting the staypins or studs, which are used to give additional stiffness to the chain. They now only remain to be tested, by means of a powerful hydraulic-machine; and the side-welded Chain is ready for use.

For the "end-welded" Chain, the iron is cut off cold of the required length to form the links, by means of a large pair of shears worked by a steam-engine. The remainder of the operation is performed by the chainmakers themselves, who bend the link to the required form by hand, instead of by machinery; after which they weld the ends together. In some establishments, which have not the benefit of machinery, the iron is entirely cut by hand, and the fires blown by bellows; but this is a very tedious operation. In all large establishments machinery is brought into requisition as much as possible; and the fires are all supplied with blast from a fan worked by the engine; so that the chain-makers have only to open a valve, and the fires are blown for them.

The difference between "side-welding" and "end-welding," as the name implies, is merely that, in one case, the junction of the iron is made at the side of the link; and, in the other case, at the end.

The Illustrations are a pair of Vulcanian scenes. In the first is shown the mode in which the long rods of iron are cut by the circular saw. At one end the rods rest upon a trestel, in the foreground of the workshop; while the other ends are placed in the furnace, and are there heated to red heat—three or four, or more, at a time, as required. They are then drawn from the furnace by a man and a boy; the man taking the cold ends of the bars, while the boy carries the heated end by means of a hooked piece of iron. Thus they carry each rod to the bench where is placed the saw, which revolves with great velocity, by means of steam-power. The boy then lays the end he has borne on the spot close to the saw, while the man presses it to the wheel, and places it so that it may be cut off somewhat wedge-shaped. The rods are thus cut into proper lengths for each link, according to the size required. The wheel in cutting the red-hot iron causes it to give off a molten shower of large sparks in an unbroken circle, resembling a firework wheel.

The second Illustration shows the method of "side-welding," already described.

THE COURT.

The Queen and the Prince-Consort have commenced the New Year by dispensing their annual bounty to an increased number of the poorer residents in the Royal borough of Windsor and its vicinity. On New-Year's-day, at seven o'clock in the morning, the band of the Royal Horse Guards assembled on the East Terrace, and played a selection of favourite airs. Her Royal Highness the Duchess of Kent came from Frogmore at nine o'clock, and breakfasted with her Majesty and the Prince. At ten o'clock her Majesty's annual gifts were distributed to about 600 poor persons resident in the parishes of Windsor and Clewer. The interesting ceremony was witnessed by her Majesty and his Royal Highness, who, accompanied by the Royal children, left the Castle, and proceeded to the gallery of the Riding school, within which the distribution took place, under the superintendence of the clergy of the joint parishes, and the district visitors of the poor. The gifts consisted of joints of meat, coals (proportioned to the various families), and clothing, divided among the members of the Clothing Club, established under the patronage of her Majesty: all members receiving according to their contributions, with the addition made by the Queen's bounty. In the evening the Queen gave a dinner-party. After the banquet a performance of choral music took place in St. George's Hall. The solo vocalists were Madame Clara Novello, Mrs. Weiss, Mr. Sims Reeves, and Mr. Weiss.

Lord Byron and General Sir Edward Bowater have succeeded Lord Camoys and the Hon. Mortimer Sackville West as the Lord and Groom in Waiting.

His Royal Highness the Duke of Cambridge continues, by the latest authentic accounts from Constantinople, in imperfect health; and it is not considered probable by those persons best able to form an opinion that his Royal Highness will return to the Crimea.

The Duke of Somerset, we are glad to learn, is going on favourably. His Grace has gained some strength during the last few days.

The Marchioness Dowager of Londonderry is passing the recess at Wynyard-park, surrounded by a family circle. The interesting ceremony of opening the Londonderry Literary Institute was celebrated at Seaham Harbour on Wednesday. Sir Archibald Alison delivered the inaugural lecture.

The health of the Earl of Westmoreland, which for some days antecedent had occasioned much anxiety, is described by letters from Vienna, dated the 27th ultimo, as having undergone a favourable change.

The Earl of Aberdeen left Argyll-house on Wednesday afternoon, for Windsor Castle, on a visit to her Majesty. His Lordship returned to town on Thursday morning.

The Earl of Lichfield is, we are glad to learn, recovering from his recent severe indisposition.

The Earl of Derby's new residence in St. James's-square (the late Earl of Dartmouth's) is nearly ready for the reception of the family.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. P. S. Newell to Wheathill, Somerset; Rev. F. Trevor to Upwell, near Axbridge; Rev. E. A. Cooper to Eastwood Harva, with the Vicarage of Ludford Magna, Lincolnshire; Rev. W. S. Hemming to Rayne, Essex; Rev. H. Alexander to Stoke Rivers; Rev. Wm. Geo to St. Stephen, Exeter. *Vicarages:* The Rev. H. F. Tattersall to Newbiggin-by-Romorry, near Crediton; Rev. M. Atkinson to Harewood, near Leeds. *Incumbency:* The Rev. A. Swinbourne to the Mariners' Church, Hull. The Rev. G. H. Heslop, M.A., has been appointed to the head mastership of St. Bee's Grammar-school.

The Rev. Alfred J. Deck, M.A., of Trinity College, Cambridge, has been appointed to a Mathematical Professorship in the Royal Military College, Sandhurst.

MISS STEWART, sister of Sir Michael R. Shaw Stewart, Bart., has given £10,000 to endow an Episcopal Chapel in Port-Glasgow, securing £200 a year to a Rector, and £100 to a Curate.

SETTING A THIEF TO CATCH A THIEF. At Bow-street Police-court, on Thursday, Charles King, a police-constable, who has been attached to the force several years, and has usually done duty in private clothes, was brought up in custody of Inspector Durkin and Sergeant Langley, charged with having been, in a great number of cases, the accomplice of thieves. The prosecution was directed by the Police Commissioners, in consequence of certain disclosures which had been made from time to time by the young criminals confined in the House of Detention—several of whom were brought to the court, under the charge of the prisoner, to give evidence. Several witnesses having been examined, Mr. Hall said it was one of the most frightful cases of delinquency that could well be imagined. It was due to the public that the matter should be thoroughly sifted, and he trusted the authorities would deem it of sufficient importance to engage the services of some professional gentleman to conduct the prosecution. The prisoner, who said nothing to the charge, was remanded for further examination for a week.

On Sunday last, the Rev. Henry Brooks christened 104 children in St. Peter's Church, Liverpool—the largest number ever known in one day in the parish.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE New Year opens with the same inactivity in literary circles with which the year 1854 concluded. There is no prospect before Christmas of two more volumes from Mr. Macaulay; and, from what we hear, as little prospect of our receiving the two volumes of Moore's Journal and Letters from Lord John Russell. There are, however, promises of moment in the literature of the Fine Arts. We are to have new lives of Velasquez, Sir Joshua Reynolds, Sir Robert Strange, and the late Mr. Etty. The Life of Velasquez comes from the pen of Mr. Sterling.

Another year reminds us of the veterans in literature, art, and the stage, still in the body among us. Our oldest poet is, of course, Mr. Rogers—now in his ninetieth year. Our oldest historian is Mr. Hallam—now in his seventy-fourth year. Our oldest critic is Mr. Wilson Croker—now in his seventy-fifth year. Our oldest novelist is Lady Morgan—but we shall conceal her Ladyship's age. Our oldest topographer is Mr. Britton—now, if we remember rightly, in his eighty-third year. Our oldest topographer in point of publication is the historian of St. Leonard's, Shoreditch, whose first work was a quarto, published before 1789. We refer to Sir Henry Ellis, still the active Principal Librarian of the British Museum. Mr. Leigh Hunt was a poet with a printed volume of his effusions in verse, and his own portrait before it more than half a century ago, and is now, in good health, in his seventy-first year. Our oldest artist is Sir Richard Westmacott, the sculptor, the father of the Royal Academy. Our oldest actor (now that Charles Kemble has gone) is Mr. J. P. Cooke, who was, when we saw him-the other day, ready to dance a hornpipe with all his wonted English vigour and sailor-like skill.

A new letter of moment in the story of Swift's Life has just been published by Mr. Cunningham in the concluding volume of his edition of "Johnson's Lives." It is a letter from Sir William Temple, the great statesman, to Sir Robert Southwell:—

SIR, The afternoon I hear, though by a common hande, that you are going over into Irelande, Secretary of State[for that kingdome, upon wch I venture to make you the offer of a servant, in case you may have occasion for such a one as this bearer. Hee was borne and bred there (though of a good family in Herefordshire), was neer seven years in the Colledge of Dublyn, and ready to take his degree of Master of Arts, when hee was forced away by the desertion of that colledge upon the calamitys of the country. Since that time hee has lived in my house, read to mee, writt for mee, and kept all accounts as farr as my small occasions required. He has learne and great witt, some french, writes a very good and current hand, is very honest and diligent, and has good friends, though they have for the present lost their fortunes, in Irelande, and his whole family having been long known to mee obliged mee thus farr to take care of him. If you please to accept him into your service, either as a Gentleman to waite on you, or as a Clarke to write under you, and either to use him so if you like his service, or upon any establishment of the Colledge, I recommend him to a fellowship there, wch hee has a just pretence to, I shall acknowledge it as a great obligation to mee, as well as to him, and endeavour to deserve it by the constancy of my being alwaies,

Sr, yr most faithfull and most humble servant, W. TEMPLE.

Moor Parke, near Farnham, May 29, 1690.

When this letter was written Swift was in his twenty-third year. The description of Swift's capabilities is curious.

In the same volume, and also published for the first time, is Swift's last letter to Dr. Arbuthnot. Most touching is the account he gives of his own condition and prospects:—

[Dublin, 1733?]

My dear Friend, I never once suspected your forgetfulness or want of friendship, but very often dreaded your want of health, to which alone I imputed every delay longer than ordinary in hearing from you. I should be very ungrateful, indeed, if I acted otherwise by you, who are pleased to take such generous constant care of my health, my interests, and my reputation, who have presented me so favourably to that blessed Queen your mistress, as well as to her Ministers, and to all your friends. The letters you mention which I did not answer I cannot find, and I have all that ever came from you, for I constantly endorse yours and those of a few other friends, and date every one of them the day I receive them, whether I answer them or only read them. If there be anything particular, though of no consequence, when I go to the country I send them to some friends among other papers for fear of accidents in my absence. I thank you kindly for your favour to the young man who was bred in my quire. The people of skill in music represent him to me as a lad of virtue and hopeful and endeavouring in his way. It is my own fault if I give you trouble, because you never refused me anything in your life. You tore my heart with the account of your health; yes, I should please God to call you away before me, I should not pity you in the least, except on the account of what pains you might feel before you passed into a better life. I am not a pity none but your friends, and among them chiefly myself, although I never can hope to have health enough to leave this country till I leave the world. I do not know among mankind any person more prepared to depart from us than yourself—not even the Bishop of Marseilles, if he be still alive; for, qualities that have procured you the love and esteem of the world, I ever most valued your moral and Christian virtues, which were not the product of years or sickness, but of reason and religion, as I can witness after above five-and-twenty years' acquaintance. I except only the too little care of your fortune: upon which I have been so free as sometimes to examine and to chide you, and the consequence of which has been to confine you to London, when you are under a disorder for which I am told, and know, that the clear air of the country is necessary. The great reason that hinders my journey to England is the same that drives you from Highgate—I am not in circumstances to keep horses and servants in London. My revenues, by the miserable oppressions of this kingdom, are sunk £300 a year, for tithes are become a drug, and I have but little rents from the demesne lands, which are my only sure payments. I have here a large convenient house; I live at two-thirds cheaper here than I could there; I drink a bottle of French wine myself every day, though I love it not; but it is the only thing that keeps me out of pain. I ride every fair day a dozen miles, on a large strand or turnpike road. You in London have no such advantages. I can buy a chicken for a groat, and entertain three or four friends, with as many dishes, and two or three bottles of French wine, for ten shillings. When I dine alone, my pint and chicken, with the appendices, cost me about fifteen pence. I am thrifty in everything but wine, of which, though I be not a constant housekeeper, I spend between five and six hogsheads a year. When I ride to a friend a few miles off, if he be not richer than I, I carry my bottle, my bread and chicken, that he may be no loser. I talk thus foolishly to let you know the reasons which, joined to my ill health, make it impossible for me to see you and my other friends. And perhaps this domestic tattle may excuse me, and amuse you. I could not live with my Lord Bp—— or Mr. Pope: they are both too intemperate and too wise for me, and too profound and too poor. And how could I afford horses? And how could I ride over their cursed roads in winter, and be turned into a ditch by every carter or hackney-coach? Every parish minister of this city is governor of all carriages, so are the two Deans, and every carter, &c., makes way for us at their peril. Therefore, like Cæsar, I will be one of the first here rather than the last among you. I forget that I am so near the bottom. I am now with one of my forebenders, five miles in the country, for five days. I brought with me eight bottles of wine, with bread and meat for three days, which is my club: his is a bachelor with £300 a year. Pray God preserve you, my dear friend. Entirely yours,

J. SWIFT

Dr. John Arbuthnot, at his house, Cork-street,
Burlington-Gardens.

A curious controversy is waging about the money value of the small triangular opening at the east end of St. Paul's Cathedral—for no one seems to doubt the architectural value of such an open space. The controversy is conducted, not anonymously as is too often the case, but openly, and by well-known persons. The actual space is, we are assured, one-fifth of an acre, or 8700 feet; and the money value, at City frontage prices, is estimated by Mr. Tite at £60,000. Messrs. Daniel Smith and Son, the surveyors, value the land at *half* that sum; and Mr. Dickinson, the papermaker, is inclined to agree with the Messrs. Smith in their estimate of its value. All the combatants are able men at figures, and each has a large experience of the value of frontage ground in the city of London. In one thing they are all agreed—that the opening must be preserved; and all are willing to put their hands into their pockets towards its purchase.

We have received the following letter (one among many) on the subject of Mr. Martin's celebrated picture of "Belshazzar's Feast

46, Portland-place, January 1, 1855.

SIR,—In your number of Saturday last—article, "Town and Table Talk of Literature and Art" in reference to the late lamentable destruction of Mr. Naylor's pictures, you state that the original and *only* painting of "Belshazzar's Feast" by Martin, and *that from which the print was engraved*, has been so seriously injured by the late accident as to be past all chance of restoration.

As a sincere lover of art no one can regret more than I the loss sustained by that liberal patron Mr. Naylor. At the same time, I think it right to correct the statement above referred to—first, by saying that Mr. Naylor's was not the *only* picture of the subject by Martin; and next, that Mr. Naylor's was not the picture from which the engraving was taken. It will be seen, upon comparison, that the subject of Mr. Naylor's picture differs materially from the print. The original picture, from which the engraving was taken, is now in the possession of Mr. White, printseller, of Brownlow-street, Holborn; and I am sure it would be happy to show it to you or any person who would call upon him.

I remain, sir, your obedient servant, C. J. PALMER.

We have not seen the picture in Mr. White's hands, but can state (from our own knowledge, derived from Mr. Martin himself) that the engraving—and a most excellent one it is—differs materially, and for the better, from the first design, from Mr. Naylor's picture, and from every other variation of the subject made by Martin himself. Mr. Martin's family look upon Mr. Naylor's picture as the original picture, and regret its destruction.

NATIONAL SPORTS.

THE New Year has opened with a steeplechase meeting at Manchester, which was a very sickly shadow of the bygone Grimaldi and Lottery days of the sport: and as yet no more are set down on the January list, except one at Croydon for the 31st. The Liverpool entries are not as yet complete, but we hear that they will probably fall about eight short of last year, and the Great Handicap entries are also expected to be below the average.

The public coursing meeting for the ensuing week are seven in number: Claddesley (Corbett), Worcestershire, claims Plough Monday: and the coursers of Erin have their meeting at Kilkenny on Tuesday and Wednesday; Biggate (open), which is reached by a six-mile ride over the wolds from Pocklington, is appointed for Wednesday, Thursday, and Friday; Spelthorne for Wednesday; Lytham (Wharton open), for Thursday and Friday; Red Dial (Wigton), for Thursday; and Caledonian (Lanark), for Thursday, &c. Mr. McGeorge is to be the trier at Huggate and Mr. Dunlop will hold that office at the next Lytham meeting which is fixed for January 29th.

There is little to record of the hunting season, except that Melton is very full of fashion and company, and Mr. Pittersall will bring seventeen or eighteen good, seasoned specimens to the hammer on Monday. The foxes generally are said to be very good, now that the importation of "French men," who were spoiling the breed (as much as the red-legged partridge is spoiling the science of our setters and pointers), has very much ceased, and Irish foxes substituted in their place. One of the monarchs of his vulpine race was killed by terriers last week, in Cumberland, among craigs where "the horn of Royal Inglewood" is no longer heard, and was found to weigh 29 lbs. It seems that the celebrated Pytchley run, to which we alluded some time back, will be known to all time as the "North Kilworth day," and rank among fox-hunting archives with "the Billesdon Coplow day," and that leash of remarkable runs which were spoiling the science of our setters and pointers), has very much ceased, and Irish foxes substituted in their place. One of the monarchs of his vulpine race was killed by terriers last week, in Cumberland, among craigs where "the horn of Royal Inglewood" is no longer heard, and was found to weigh 29 lbs. It seems that the celebrated Pytchley run, to which we alluded some time back, will be known to all time as the "North Kilworth day," and rank among fox-hunting archives with "the Billesdon Coplow day," and that leash of remarkable runs which three packs, one of them Earl Fitzwilliam's, had on the same wonderful scenting morning about seven seasons ago. "Scribble," in the *Sporting Magazine* of this month, thus epitomises the above Pytcheley run:—"I lasted three hours, engaged two foxes, and extended over about eighteen miles *from point to point*. It certainly was one of the most brilliant runs on record; and as Charles Payne has accounted for his fox not by a *leap*, but by running him to ground, every credit should be given to him for his patience and perseverance. The fox was changed in Scotland Wood, after running at a wonderful pace from North Kilworth, by Stanford Hall, Hemplow, Sir Willoughby Willows, and Silkerstoft; and the second fox was run to ground near Cottesbrook late in the day, without three horses persevering to the finish."

The Sporting Intelligence of the *Sporting Magazine* contains a capital likeness of the celebrated jockey, Frank Butler, who may that the chances of seeing Frank Butler (who has just sustained a very sad loss by the death of his wife) in the saddle seem so very dubious, ranks with Sam Rogers at the head of the jockey fraternity. We glean from the memoir which accompanies it that he first saddled Weathergall at Beverley, June 30th, 1831, on Mr. Bell's Cinderella, who proved a winner in his hands. At this time he was able to ride six stone, and even now he can ride 7st. 5lbs., without any serious discomfort, when a great occasion calls for it. We are just now occupied with mental speculations on the weights for the great handicaps, which have just closed, and business at "the Corner" is not lively. John Scott has already 9 nags in hand, and now includes the Hon. Stanhope Hawke amongst his numerous patrons. His inscription is full, thanks to Virago. Gladiator is quite at the head of French sires, in point of winners and amount; and the four-year-old brother to Maid of Masham, whom the Earl of Glasgow was anxious to purchase, when a yearling, for 400 guineas, appears on the forfeit list with £700 stake arrears.

The York blood stock sales this week were fairly good. Mr. W. Stebbings bought Sicily for 400 guineas, and Lord Londesborough the brood mare Florence for 270 guineas. It is said that his Lordship is to have Newminster for £1000 at the close of the present season, during which he has been let for £250. Thomas Dawson bought Red Lion in for 400 guineas, Chief Justice was sold for 410 guineas, and Inheritress (not in foal) for 110 guineas.

Herring's four racing pictures are announced for publication by Messrs. Fores shortly, and contain capital portraits of Voltigeur, Teddington, and West Australian; and a most speaking print has just come out of Tom Egan, in his well-known boating attire.

THE NEW BANK OF ENGLAND NOTE

To the Editor of the ILLUSTRATED LONDON NEWS

Engineering Department, Bank of England.

In your Paper of the 30th December, 1854, in the article on the subject of the Bank of England Note, relative to the Water-mark, it is stated that "the moulds from which the paper is made are executed by Mr. Brewer." I beg to inform you that the whole of our valuable patent process for the manufacture of the new Water-mark is executed on the premises of the Bank in London (and not at the mills, as stated), by our own hands, under the superintendence of Mr. Heusman, the engineer-in-chief; by whom it is sent to Mr. W. S. Portal, at the Mill, when Mr. W. Brewer places the different portions together, and makes the manufactures, supervises any repairs, &c., that may be necessary. (See extract of Mr. Sumee's paper, at Society of Arts, December 20th, 1854. Journal, page 85.)—I am, Sir, your obedient servant,

JOHN SMITH.

*** In the account of the Bank-note Paper-mill, at pp. 703-4, for "Messrs. Donkin and Co., of Manchester," read "Messrs. Donkin and Co., of Bermondsey."

LOUIS THE FOURTEENTH'S BUILDING EXPENSES.

A curious document has been lately found amongst the papers of a rich Versailles tradesman, recently deceased. This document is an account of the building expenses incurred by Louis XIV. under Mansard. The account is drawn up by Mansard, as the architect's employé. We add a few items: Versailles, Marly, and dependencies, 116,238,369 livres; Saint Germain, 6,155,551 livres; Fontainebleau, 2,775,746 livres; Chambord, 1,225,701 livres; Louvre and Tuileries, 10,808,360 livres; the Observatory, 1,774 livres; the Invalids, 1,718,382 livres; Place Vendôme, 2,062,623 livres; Canal de Languedoc, 7,736,655 livres; Gobelins, &c., 3,645,242 livres, on account of manufactures, 1,979,860 livres: total, 168,000,000 livres, or upwards of six millions sterling.

ST. MARTIN'S HALL. On Monday a meeting was convened by Mr. Robert Owen, which was numerously attended. The subject of his letter was considered preparatory to Mr. Thomas Atkins, C.E., moving, to establish an industrial and productive social, scientific, and education-al union, in connexion with a college to educate youth of both sexes in the practical duties of life, a sort of "model university," in short, in which the several points of science of human nature and society—magnetism and electricity, astronomy and geology, chemistry and mechanics—shall be taught by means of easy, industrial healthy labour." In the course of his remarks Mr. Owen complained of having been neglected or obstructed by the press his advertisements having been frequently rejected, notwithstanding his willingness to pay for them. He proposed, further, that on Monday, the 14th May next, a great aggregate meeting in the metropolis should be held, consisting of delegates from all Governments and countries, religious sects, parties, and classes. Among the speakers were Mr. Atkins, Mr. Pemberton, Mr. Wilkins, and Mr. Campbell. At length the proceedings were adjourned until the 14th May, when a "Universally Attractive System" is to be put into operation.

Government are said to be about to cut down very considerably the working expenses of the Irish General Post-office.

MUSIC.

HERR GOFFRIN'S second soirée musicale, at the rooms of the Réunion des Arts in Harley-street, on Wednesday evening, attracted a large and fashionable assemblage, including many of our most distinguished professional musicians and amateurs. The entertainment was worthy of the audience. The principal pieces were Mozart's second quartet in G minor, and Beethoven's first quartet in F, performed by Messrs. Ernst, Goffric, Hill, and Piatti; a new sonata, for the piano and violin, composed by Mr. Benedict, and played by the author and Herr Goffric; Moscheles's celebrated pianoforte duet, "Homage à Handel," performed by Messrs. Benedict and Goldmick; and a solo on the violoncello by Signor Piatti. The quartets, two of the finest specimens of their respective composers, displayed Ernst's great (we may almost say unrivalled) qualities as a chamber performer—his delicacy of vocal tone, refinement, and feeling. He was admirably supported by his three confutors, Piatti especially, who maintains his ground as the first of our violoncello-players. Benedict's new sonata is a masterly work, well deserving of the warm applause bestowed upon it by a very critical audience. Two airs, well sung by Mdlle. Bauer, formed an agreeable variety. The last of these elegant entertainments is announced for the 17th of this month.

THE concerts of the PHILHARMONIC SOCIETY are to commence this season on the 16th of March. Signor Costa is no longer the society's conductor. It is understood that the engagement for the season was offered him as usual, but unexpectedly declined, on the alleged ground of the state of his health; though he seems to be pursuing his professional avocations without any abatement of activity. This unlooked-for disappointment has of course considerably embarrassed the directors, who have been for some time past anxiously endeavouring to find a competent successor—a most difficult task which, it appears, has not yet been accomplished.

THE NEW PHILHARMONIC SOCIETY have announced that their concerts are to commence in February. They are to return to Exeter-hall, their original *locale*, instead of St. Martin's-hall, where the concerts took place last year. The first two concerts are to be conducted by M. Hector Berlioz, the remaining four by Dr. Wylde.

MR. CHARLES SALAMAN has announced two lectures, to be delivered at the Marylebone Literary and Scientific Institution, on the 9th and 16th of the month: the first, "On the Ancient Keyed Stringed Instruments which Preceded and Originated the Pianoforte;" the second, "On the Invention and Development of the Pianoforte." These are curious and interesting subjects, to which Mr. Salaman, by his learning, taste, and attainments, is well qualified to do justice. His first lecture, we observe, is to be illustrated by *actual performance* of specimens of the music of the sixteenth, seventeenth, and eighteenth centuries, on the very instruments for which they were composed, the *virginal* (Queen Elizabeth's favourite instrument), the *spinet*, and the *harpsichord*. In the second lecture Mr. Salaman will be able, we believe, to throw light, by newly-discovered evidence, on the disputed question of the invention of the pianoforte, and to trace the progressive improvements which have gradually produced the magnificent instrument we now possess.

BEAUMONT INSTITUTION, MILE-END-ROAD.—The second concert of the season took place on Wednesday, January 3, the room being crowded to excess. The principal vocalists engaged were Mdme. Clara Novello, Miss Messent, and Mdlle Julie Mouat; Mr. Farquharson, Mr Bolton, Mr. Montem Smith, and Mr. Sims Reeves; with Mr. Frank Mori as conductor. Mdme. Novello's fine pure voice told admirably in Verdi's aria, "Ernani involvami;" she also sang a new song, by Hatton, "How proudly they'd bear this at home," and "Bonnie Prince Charlie." Mr Sims Reeves was unrivalled in "Fra-Poco"—managing his voice with rare skill, and displaying a *chiaroscuro* to be heard only in great artistes. He also, with Mdme. Novello, created a *furore* in Verdi's duet from Rigoletto, "E il sol dell' anima," and was rapturously encored in Charles Mackay's new patriotic song, "Strew roses," set to music by Frank Mori, and which we may venture to augur will become before long a household tune. Miss Messent, Mr. Farquharson, and Mr. Montem Smith gave great satisfaction in the pieces allotted to them.

THE THEATRES.

DRURY-LANE. On Monday a new drama was produced. It is by Mr. Dion Bourcicault, and entitled "Eugénie." It is of the class of pieces denominated *petite*; and to which a certain amount of laxity is expected to be shown, on account of the limits to which the action is confined. The rapidity with which the story is developed in this brief domestic drama, and a climax of distress accumulated on the heroine, was not in exact accordance with the taste of the audience; who, in one short act, could not understand how *George Thriton* (Mr. Belton) could pass from one mistress to another, and accomplish a marriage with the second, just at the moment that he was to have effected it with the first. Miss Marriott performed *Eugénie*, the deserted lady, and it would appear that the scenes were contrived to display to the special capacity of the actress. She certainly has a degree of pathos and an emphatic kind of elocution that is not altogether ineffective; but the force that she manifests is at present in a provincial state, and "requires much castigation, exercise devout," before it can be so reduced in quantity and improved in quality as to command the suffrages of a metropolitan audience. The house was exceedingly well attended.

PRINCESS'. Mr. C. Kean appeared on Wednesday night, for the first time this season, in *Hamlet*—a character which he has long since made his own—and in which he stands unrivalled amongst living artists. The house, as might have been expected on such an occasion, was crowded in every quarter soon after the doors opened. There is much to occupy the public mind at present of a more grave character than mere amusement: the performance that commands such powerful attraction at such a moment proclaims its own strength, and speaks a volume of criticism on its inherent merit. Mr. C. Kean, by time and study, has improved on his original vigour and elegance in this great part, and was applauded with as much enthusiasm in all the most striking passages as during his first successful career at Drury-lane, in 1838. The tragedy was well played throughout. Miss Heath was a highly-interesting *Ophelia*, while Mr. Ryder and Mrs. Phillips imparted the importance so often wanted when inferior actors are placed in the characters of the *King* and *Queen*. Mr. W. Lacy made a most impressive and majestic *Ghost*.

ROYAL MARIONETTE.—A troop of well-trained dogs and monkeys is performing here with great success; and their imitations of humanity are surprisingly close.

ROYAL GALLERY OF ILLUSTRATION.—Lady Raglan and family visited the diorama of the events of the war on Saturday last. The following distinguished and fashionable visitors have also honoured the above diorama with their presence: viz., the Duchess of Argyll, Marquis of Lorn and family, the Duke and Duchess of Montrose and party; his Excellency the Count Walewski, the French Ambassador accompanied by the Countess of Walewska; the Earl of Erroll, Earl of Carlisle, the Marquis of Winchester, the Countess of Bathurst and party, Lord Stanford, Lord and Lady Feltham and party, Azemullah Khan, Lord Rancliagh, Lady Brougham and party, &c

THE BONMAHON INFANT, INDUSTRIAL, AND RAGGED SCHOOLS, Waterford.—In February last we called the attention of our readers to these schools, which have lately received a mark of distinction given by her Majesty having graciously accepted a beautifully-bound copy of Dr. Cobb's "Commentary on the Scriptures," which was printed at the schools. It comprises six thick royal octavo volumes, and contains 46,200,000 letters, which were "set" or put together by little Irish boys 2250 sets were printed, comprising in the whole 1800 volumes, for which nearly 40,000 sheets of paper were required. The work was accomplished in a most private village, and under the greatest possible disadvantages, and, although the boys work, they fly past from the fifty desks at their entrance, the undertaker left a surplus of £20, which the founder (the Curate of the parish, the Rev. D. A. Doudney), has devoted to the erection of a globe house for the clergyman. On Tuesday week a Christmas feast of soup, beef, and plum pudding was given to the children of the Infant and Embroidery Schools. Upwards of seventy sat down to dinner, all newly clad, the clothes of the latter being the fruits of their own labour. In the evening the boys acted for nearly the same number of the printing-boys and the parochial school children. These schools are altogether a striking proof of what may be accomplished under the greatest possible difficulties

SINGULAR BEQUEST. Captain Cline, a well-known teacher of gymnastics, not only in France and Switzerland, but in England, having been professor at most of the large public establishments of this country, died lately at Berne, where he lived in comfortable retirement. He has left to that city several considerable sums for public purposes, under the condition that his skeleton should be exhibited in the Cabinet of Natural History of Berne, as a palpable confirmation of the beneficial effects of gymnastics (*turnkunst*) on the human body.

CHESS.

TO CORRESPONDENTS

VIATOR.—You will find an excellent little Chess-club at Leamington. President Rev J H Smith, Vice-President, the Rev W Temple. The Club-rooms are at No 4 Upper Parade

OXONIENSIS. We had not the pleasure of hearing Mr Capper's Lecture on Chess at Exeter Hall, but are glad to learn from such good authority that the subject was [illegible] in the hands of the accomplished lecturer, to entertain a numerous and select audience for some hours.

H J. Hollmes's late Treatise on *Odds* at Chess is that on Carrera's work, of which a very good translation was made by Mr Lewin, some years back. Carrera touches upon every well known description of *Odds*, and upon an infinity of others, which no one player in a hundred ever heard of. He would seem indeed to have exhausted the subject but the Rev H Bolton, to whose ingenuity we are indebted for some of the most masterly Chess Problems ever published, has submitted to us a kind of *Odds* which even Carrera was unacquainted with. This novelty consists in the *first* player agreeing not to give *check* to his adversary until, with check, he gives *checkmate*. These odds Mr. Bolton estimates as about equal to giving the Queen

J. T. C.—We have received a copy of the poem entitled "Chess," published by Harrison, of Pall mall, and when less pressed for space intend to notice it. Meantime we can have no hesitation, notwithstanding its frequent blemishes in expression, and many defects in versification, in commending this "Poem" to the attention of our readers as the production of an elegant and thoughtful mind.

AMATEUR. The most effectual course will be for you to transmit your "Range stone on the subject of the proposed Grand Chess Tourney in Paris" direct to the Committee, under cover to M de Rivière, Hon. Sec. of the Paris *Cercle des Echecs*. It is impossible for us at the moment to find room for them in our *columns*.

BOOKWORM. To the allusions to Chess in works of the fifteenth and sixteenth centuries, which you address, we could add several. For the moment we need be content in pointing out two in an author whom you name as one of those who never perused a game. If you will look again at Chap xvIII, Book II, of Warner's "Albion's England," you cannot refer—

"Xtes could she not so give the *checke*
But that she tooke *the mate*."

Again, in Chap xxvIII, Book V, you will find

"Of villaines, of-stoens, clownes, and knaves,
That *checkmate* durst to brag."

J. A. M, Fakenham; J. P., Bath; and F. T., Derby, are wrong in supposing Mate can be effected in Problem No. 564, by the *modus operandi* they suggest. The only course is that traced out in our letter.

M. P., of C—l. The names to "Black and White" was not addressed to you, but to a Correspondent who subjected that signature to. Your Problem is too simple even for the merest eyes.

F. T., Derby.—They shall be examined.

F. R., of Norwich.—If in Problem No 564, White play 1 B takes Kt, then Black, by playing P to Q R 8th, becomes a Queen and Mate impracticable in five moves.

J. P. Your analysis of No. 564 is defective. At move 4 of your third Variation Black plays Kt, *takes B P*, and escapes

B. G. K. L., Manchester.—In the situation you show there is nothing whatever to prevent Black playing his Pawn on. He may either march forward, stand still, or take the adverse Pawn.

G. F. C.—1 There is no such name as that you have put down. Perhaps you mean "a back game," that is a game which, by the skilful play of the pieces, can either parry, or played and again for the amusement or instruction of the competitors.

E. B. C., Hoddesdon.—Yes, there is an edition, published in 1562 which is obtainable in all

YORK A. L.—A reply has been forwarded by post.

DR. R., of Paris.—We shall be glad to receive a prospectus and a full report of the doings at the last general meeting.

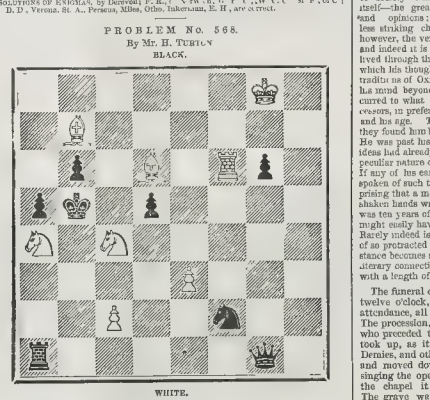
SOLUTIONS OF PROBLEM NO 562, by J. P., of Bath; Dorvem M. F., of C. I. T., Hanworth; F. R., Norwich; J. A. M., Fakenham; F. T., Derby; W. C., E. H. are correct.

SOLUTIONS OF ENIGMAS, by Dorvem, F. R., Norwich; J. A. M., C. C. M. F., of C.; D. D., Verona, St. A., Persons, Alles, Otho, Inkerman, E. H., are correct.

PROBLEM NO. 568.

By Mr. H. TURTON.

BLACK.



WHITE.

White, playing first, mates in three moves.

CHESS IN THE METROPOLIS.

The following Game forms part of a little Match played between Mr. Staunton and Mr. Brien. Mr. St. giving in each two odds of the Pawn and two Moves.

(Remove White's K B Pawn from the Board)

Black (Mr. B.)	White (Mr. S.)	Black (Mr. B.)	White (Mr S.)
1 P to K 4th		15. Kt takes Kt (ch)	Q takes Kt
2 P to Q 4th	P to K 3rd	16. P takes P	Q to Q B 6th (c)
3 P to Q B 4th	B to Q Kt 5th (ch)	17. Q R to K sq	Q R to K B sq
4 Q Kt to Q B 3rd	K Kt to K 2nd	18. Q R to K 2nd	K R to K B 5th
5. Q B to K Kt 5th	Castles		(d)
6. K Kt to K B 3rd	P to Q Kt 3rd	19. Q to K Kt 6th	Q to Q B 3rd
7. K B to Q 3rd	P to Q 3rd.	20. Q to K R 7th (ch)	K to B 2nd
8. Castles	B takes Q Kt		(e)
9. P takes B	Q Kt to Q 2nd	21. B to K Kt 8th (ch)	K to his 2nd
10. P to K 5th	B to Q Kt 2nd	22. Q takes Kt P (ch)	K to Q sq
11. Kt to K Kt 6th	P to K R 3rd	23. B to K 4th (f)	Q takes P
12. Q to K R 5th (a)	P takes K P (b)	24. Q R to Q 2nd (ch)	K to Q B sq
13. Kt to K Kt 8th	Q Kt to K B 3rd	25. B takes B (ch)	K takes B
14. B takes Kt	R takes B		

The game from this point, with steady play on both sides, would, probably, have been drawn; but Mr. Brien unfortunately committed a *faux pas*, and lost one of his Rooks, which, of course, decided the battle.

(a) The obvious course of play here is for Black to take the Kt, and then plant his own Kt at K 6th; but, as the following Variations show, that would lead to many complications, at the end of which it is doubtful whether White has not quite as good a game as his adversary. For example—

12	B takes Kt	Q takes B
13	P takes B	Q to K Kt 6th
14	P to Q 5th (best)	R to K B 4th

(The only move, we believe, by which White can hope to "hold his own.")

15. P to K 5th (best) Kt to Q B 4th

Instead of this move, White may take the Kt with his Queen, or take the Q P with his K P; the results of which it may be well to demonstrate before proceeding with the main Variation. Suppose then

To the first place:—

15.	Q takes Kt	17 B takes R	Q to K 2nd
	P takes K P	18. P takes B	

And White has evidently a bad game.

To the second place

15.	P takes Q B	17. P takes P	Q takes P
	Q takes Kt	18. R takes R	

And again White is at a disadvantage.

16.	Kt to K 7th (ch) (best)	Q to K Kt 4th	18. K to R sq
17.	P takes R (best)	Q to K Kt 4th (ch)	19. P to Q Kt 3rd

He may also play "Q P takes Q P" first, and then P to K B 3rd; but without any material advantage to his game.)

19. Q to K 6th
20. B to K 2nd Q takes K P

And now as White must win another Pawn and has a free game with all his pieces in play, we should take his side for choice.

(b) It is a refining over much, and ought to have lost the game. The plain and simple course was to play the Queen to K B 2nd, and then, Black having two Pawns doubled, and the one on his Q Rook's 6th almost indefensible, White would have had at least as good a game as his opponent.

(c) This enables Black to take the square he wished, but White had an better move to

(d) A little crisis Black deliberated for some time whether to give the check or play his Q R to Q 2nd; and, unluckily for him, chose the wrong move. Had he placed the Rook at Q 2nd, he would have cut off White the winning Pawn the very least

(e) Played apparently under the misconception that White must take it with the Rook, which would have been immediately fatal to him, or, at the best, have cost him a clear piece.

White to play and mate in three moves.

THE LATE DR. ROUTH, PRESIDENT OF MAGDALEN COLLEGE, OXFORD.

THE President of Magdalen, whose death we recorded last week, had entered on his hundredth year, having been born 15th September, 1755. The departure of the venerable Doctor will revive old memories of times and men long passed away. Dr. Routh had known Dr. Theophilus Leigh, the contemporary of Addison; had seen Dr. Johnson "in his town viz., inhabiting up the steps of University College;" and had been told by a lady of her aunt who had been present when Charles II. walked round the parks at Oxford. Dr. Routh was the connecting link between the last and the present centuries. His father, the Rev. Peter Routh, was instituted to the Rectory of St. Margaret's Church, South Elmham, Beccles, Suffolk, in 1753, and became Master of the Grammar-school, Beccles, in 1774.

In 1770 Martin John Routh matriculated at Oxford; and, about 1785, being Senior Proctor of the University, officially attended an entertainment given to George III. and Queen Charlotte, on their visit to Oxford. In 1791, on the resignation of Dr. Horne, Bishop of Norwich, the well-known commentator on the Psalms, he was elected President of Magdalen, and continued to fill that honourable post until the time of his death—a period of sixty-three years, during which he admitted 183 fellows, 284 demies, and 162 choristers. Amongst his numerous friends may be especially mentioned Dr. Parr, Porson, Dr. Maltby, Sir Francis Burdett, and William Windham. The fruits of Dr. Routh's learned life do not afford a fair estimate of the immense extent of his reading and knowledge. In 1814 and 1815 appeared his "Reliquiæ Sacræ"—a laborious compilation, highly eulogised by Dr. Parr; in 1833 his edition of "Burnet's History of his own Times;" and in 1832 his annotated impression of the same author's "Reign of James II."

In 1810 he became Rector of Tylehurst, near Reading. Here he enjoyed the vacation allowed him by the statutes of his College; and here, in 1820, he married Eliza Agnes, daughter of John Blagrave, Esq., of Bulmer Park, in that neighbourhood. Dr. Routh had the courteous manners of the old school; and he bound every friend to him by his paternal kindness, his warmth of heart, and the accomplishments of his well-stored mind. His memory will long be cherished by the educated society of this country.

Dr. Routh had maintained an immediate and personal connection with the University of Oxford for upwards of eighty years, and his long life supplied many instructive links between the present and the past.

He was born in the reign of King George II., before the beginning of the Seven Years' War, before India was conquered by Clive, or Canada by Wolfe, before the United States ever dreamt of independence, and before Pitt had impressed the greatness of his own character on the policy of Britain. The life of this college student comprehended three great epochs—three periods of prodigious importance to the interests of humanity and the fortunes of the world. Martin Routh lived the last years of the old state of society which introduced the political deluge; he saw the deluge itself—the great French Revolution, with all its catastrophes of thrones and opinions; and he lived to see the more silent but not less striking changes which forty years of peace engendered. Perhaps, however, the very magnitude of the view precluded any comprehensive survey: and indeed it is not a little striking to read of such a man—of a man who had lived through the most astounding events of recent history—that the times on which his thoughts chiefly dwelt were those of the Stuarts. It seems as if the traditions of Oxford which he found when he entered made an impression on his mind beyond the power of succeeding events to efface, and as if he rescued from the hand of death all that early contemporaries and his predecessors, in preference to imbibing new ideas from the scenes of his manhood and his age. The truth is, perhaps, that when the days of revolution arrived they found him beyond the age at which external scenes prove most impressive. He was past his youth before even the last generation commenced, and his ideas had already been formed from the associations of a still earlier period. The peculiar nature of his office and his abode conduced, no doubt, to the result. If any of his early associates were men of advanced age, they could have spoken of much more than their own recollections: nor is it altogether surprising that a man should talk about the Stuarts who might himself have shaken hands with the Pretender. This Prince did not die till young Routh was ten years of age; so that, if accident had put the chance in his way, he might easily have had an interview with the representative of James II. Rarely indeed is it that we meet, under any circumstances, with the example of so protracted a life as that which has just now terminated; but the instance becomes still more striking when, as in the present case, studious habits, literary connexions, great opportunities, and unfailing faculties are combined with a length of days so far above the common lot. *Times*

The funeral of the President of Magdalen took place on the 30th ult., at twelve o'clock, and was in solemnity, impressiveness, and largeness of attendance, all that such a funeral could have been expected to have been. The procession, headed by the Vice-President and the Bishop of Oxford, who preceded the coffin, which was followed by the relatives and friends, took up, as it passed the entrance to the College Hall, the Fellows, Demies, and other members of the College, with the choristers and choir, and moved down two sides of the cloister of the quadrangle, the choir singing the opening sentences of the service. On entering the choir of the chapel it divided, and stood round the altar on both sides. The grave was immediately before the altar, on the north and south sides of which stood the Bishop of Oxford and the Vice-President, who read the service, the choir chanting the opening psalms, and singing the musical parts. The long rows of chapel lights showed the stalls of the Fellows and other seats in the Chapel occupied by the family and friends of the President, and a large attendance from the University, while below the altar lights was the open grave, surrounded by the Fellows of the College in their surplices and funeral scarfs. But the true solemnity of the scene was derived less from its outward or funeral honours than from the deep feeling with which so many generations of the Society of Magdalen stood watching the consignment to the vault of the last remains of one who had been so long a father and a friend; joined with the consciousness which every one of that large body had of the thoughts, contemplations, and recollections which were passing through the mind of any other. It was a scene of which the impressions can never wear away from the mind of any one who was present. The singing was most striking and effective, especially that which accompanied the procession through the cloister, which had that exquisitely solemn but piercing character which belongs to the highest order of funeral music. The Bishop, at the conclusion, gave the benediction, the congregation kneeling.

Through the obliging aid of Mr. Joseph Skelton, we are enabled to engrave the accompanying Portrait of the late President, who kindly consented to sit for a Photograph *on his hundredth birthday*. From this Photograph, a beautiful picture, by Mr. Robert Faulkner, has been finished, and is now in the possession of the Rev. Dr. Bloxam, Fellow and Bursar of Magdalen College. We have copied our Portrait from this picture, which Mr. Skelton intends to carry out into a highly-finished Engraving.

LECTURE IN THE GREAT HALL OF HAMPTON COURT PALACE.

THIS fine apartment has lately been appropriated to a two-fold national object of great interest and attraction—the delivery of two Lectures upon the National Kings of England, in aid of the Patriotic Fund. Our Artist has sketched the Hall as it appeared on Friday week.

The northern side of the central quadrangle of the Royal Palace of Hampton Court is occupied by the Great Hall, a noble apartment, of the time of Cardinal Wolsey, which is approached by a broad flight of steps leading upward from under the arched passage between the first and second quadrangles of the building. The Hall itself is 106 feet in length, 40 feet wide, and in height 60 feet proportions which produce upon the spectator very powerful impressions of grandeur and also of symmetry. A series of large and lofty perpendicular Gothic windows occupy the Hall, along both its sides, and also at either end; and, in addition to these, at the south-eastern angle, a fine oriel completes this *beau-idéal* of a Gothic Hall. The windows have all been recently filled with glass by Mr. Willment: the whole being of an heraldic character, which harmonises well with the edifice, and has been most skilfully adjusted to its historical character and associations. The roof is an elaborate specimen of hammer-beam and tracery construction; and unquestionably may be pronounced one of the most important examples of this style. At the lower end of the Hall is the Minstrels' Gallery, of carved wainscot: while towards the east, from a dais of a single step, an arched doorway leads into the Withdrawing Room, about 71 feet in length, 30 feet in breadth, and 26 feet in height. The ceiling of this fine room is flat, and ornamented in late Gothic panel-work in plaster, with pendants, &c

The north, south, and east walls of the Great Hall are covered with tapestry, in eight compartments, and representing the History of Abraham

Above the doorway at the east end of the Hall, upon a boldly projecting bracket, stands a figure of St. George, in plate armour, in the act of piercing the dragon, which lies writhing at his feet. On either side of the patron saint of "merrie England," each upon a separate bracket, is a figure of a man-at-arms. A trophy of armour, weapons, and banners, appears above the gallery at the opposite end of the Hall. At each of the four angles is a banner, bearing either the Royal Arms of King Henry VIII., of the same Royal Arms, impaling

THE LATE REV. DR. KEITH. FROM A DRAWING BY R. PALMER.
(SEE PRECEDING PAGE.)

the paternal Arms of Queen Jane Seymour; and from each of the corbels which carry the pendant-posts and hammer-beams of the roof the emblems of the Tudor dynasty—the portcullis, the Welsh dragon, the Scottish lion, and other supporters of the Royal Arms—are boldly displayed. Stags' heads with their antlers, and other trophies of the chase, with the coats-of-arms of the Howard Tudor, complete the decorative accessories of this noble old Baronial Hall.

Under the reign of Elizabeth and James I. this Hall was occasionally used for theatrical performances, and there is a tradition that here the first performance of some of Shakspeare's plays took place. It was again fitted up as a theatre in the time of George I., but since October 16th, 1731 (on which occasion a play was performed for the entertainment of the Duke of Louvaine, afterwards Emperor or Germany), the Hall has never been used, with one single exception only, until the two lectures, which, with the special sanction of her Majesty the Queen, have recently been given in it by the Rev. Charles Boutell, in aid of the Patriotic Fund. The exception which we have noticed has reference to the use of the Hall for the purpose of parochial worship during the two years (commencing in 1529) in which the present parish church of Hampton was in the course of erection.

The fine effect of the Hall when filled with a numerous assemblage, and its admirable adaptation both for military music and also for speaking, lead us to hope that it may in time to come be granted for at least occasional use. Possibly, at a more genial season in the coming spring, the claims of the "Patriotic Fund" may again gather together a crowded audience to hear another lecture on the "War," under the aspect which it will then have assumed; or, far better still, perchance the re-establishment of peace may furnish a more welcome subject to the lecturer on the war, and may be the means of attracting a numerous assemblage within the walls of Wolsey's Hall.

After some general remarks on the origin of heraldic devices and cognizances, the lecturer gave an account of Flags and Banners mentioned in Holy Writ, and found amongst sculptures at Nineveh and Egypt; then passed on to notice reference to their Standards by Greek authors, with a more complete description (illustrated) of Military Ensigns of Romans. Thence, passing on to the "Middle Ages," he described the "Pennons," "Banners," and "Standards" then in use, and pointed out their distinctive peculiarities. The difference between the Royal Banner and the National Banner of England was traced from the earliest period. The Banners of St. George, St. Andrew, and St. Patrick were described. The first combination of Union Flag, by command of James I., with the subsequent incorporation of the Banner of Ireland in 1801, were fully described, and copiously illustrated, and the term "Union Jack" explained. The Standards borne by our cavalry and the "Colours" of our infantry were also minutely described; as were the "Ensigns" used at sea with the Flags and Pendants of our Admirals and other officers in command of her Majesty's ships, and also with the Flags of the Admiralty, the Trinity-house, the Ordnance, the Port of London, &c.; the whole being traced historically, from their earliest forms to their present condition. The lecture concluded with some remarks upon the ornamental nature of Flags, and their various associations; and reference was continually made to the gallant conduct of our soldiers and sailors in arms in the Crimea under the National Flags of England, and finally the lecturer pointed to the Red Cross in our National Flag as the symbol of that high and pure faith which should animate us in all things, and constitute our guiding, our inspiring, and controlling principle, and which we are bound to spread abroad to others, whithersoever our Flag is borne, as to cherish and realise it in and for ourselves.

MONUMENT TO A CHAPLAIN ACCOMPANYING THE ARMY IN THE CRIMEA

THIS Tablet has just been erected in Christ Church, Watney-street, Commercial-road East, by the congregation and neighbours, as an affectionate token of their regard for the memory of the Rev. George Mockler, who, after having officiated as Curate of the [illegible] for many years, went out last spring as Chaplain to the Army in the East. He joined the Third Division at Gallipoli, near Varna; and, amongst other arduous clerical duties, was stationed by the Bishop of Gibraltar to the officers and men of that Division on board the transports when they had left the service before embarking for Sebastopol. The Rev. Mr. Mockler accompanied the troops to the Crimea, was present at the battle of the Alma, attended to the wounded, and buried the greater part of the English who fell in that engagement. He then marched with his Division to Balaclava on foot, and was, with the rest of the army, exposed for many days and nights to the inclemencies of the weather without tent, or any covering except a blanket. These exposures, coupled with his overwhelming official duties, proved too much for his physical energies, and he died of exhaustion and fatigue shortly after his arrival at Balaclava. The Tablet bears the following inscription:—

MONUMENT TO THE REV. MR. MOCKLER, JUST ERECTED IN CHRIST CHURCH, WATNEY-STREET.

"Erected to the memory of the Reverend George Mockler, M.A., [illegible], Curate of this church, and late Chaplain to the Forces attached to the Third Division of the British Army, in alliance with France and Turkey, engaged in the Crimean War. He had endeared himself during a ministry of seven years to [illegible] gation, who have raised this memorial of their attachment and esteem. The zeal evinced by him for the welfare of the dying and wounded, after the battle of Alma, so exhausted his physical powers that he sank under [illegible] typhus. He died on the 5th day [illegible]. His remains were interred upon [illegible]."

LECTURE UPON FLAGS, DELIVERED BY THE REV. MR. BOUTELL, IN THE GREAT HALL, HAMPTON COURT.

WEST-STREET, IN D'URBAN. FROM AN ORIGINAL SKETCH.

NATAL.

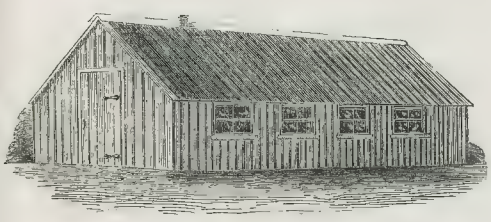
(From a Correspondent.)

Now that fleets and armies are rushing, in your part of the world, to the sanguinary fight, cannot you find a place for a more quiet scene, taken from the middle of our West-street in D'Urban?

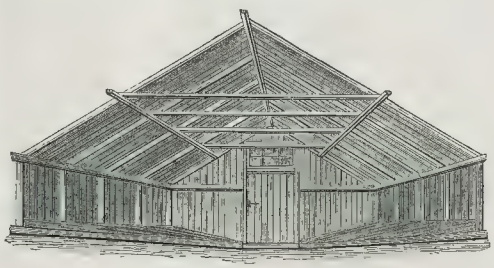
Natal has passed through the ordeal to which all young colonies are in the beginning of their career subjected, and is now emerging from her state of trial into circumstances of prosperity. The system of cultivation which the emigrants at this place pursued at the commencement of their colonial life has given way to the cultivation of the sugar cane, the coffee-tree, and other tropical productions; and the results are of a most encouraging character. Sugar is produced equal to any from the West Indies or the Brazils, and before long you will see Natal sugar supplanting much of that which is now sent to the London market from other parts of the world

At the time of writing this letter (July) our coffee-trees are bearing fruit, and anticipations of no visionary kind are beginning to bless the often-daunted but never-defeated enterprises of the English settler. We have lately had a legislative reform in the country, which is now divided into counties or districts, each having its own Council. Boroughs have been formed, and Corporations called into existence; and, as a consequence, society is become more stable.

From ignorance of the climate and capabilities of the soil, and the misfortunes arising out of that ignorance, a large amount of prejudice has existed against Natal. The ignorance dissipated, the prejudice has been removed with it; and now many are actually re-emigrating from golden Australia to this place; the salubrious nature of our climate being more essential to their health and happiness than the gold of the country.



OFFICERS' BARRACKS.



PRIVATES' HUT, SHOWING INCLINED SLEEPING-FLOOR

FRENCH PORTABLE PAVILION BARRACKS, DESIGNED BY HIS MAJESTY THE EMPEROR OF THE FRENCH.—(SEE NEXT PAGE.)

SHOAL OF WHALES IN THE SOLWAY FIRTH.

We this week give an Illustration showing some of the *Delphini* recently captured on the coast of Cumberland from one of the most extraordinary shoals of *Cetacea* ever known to visit our shores. They were first seen by some fishermen in the Irish Sea, on Saturday, 16th December; when it was evident that they were out of their reckoning, as they lay floundering about on the surface of the water in a state of great exhaustion. On the following day they were brought by the tide to the mouth of the Solway Firth, and their numbers and magnitude were then more clearly ascertained As far as the eye could reach, these huge black creatures were to be seen rolling about in the sea, and spouting out great columns of water. The

SHOAL OF WHALES IN THE SOLWAY FIRTH.

noise made by their blowing and lashing the water, as they got into the shallows, soon drew attention, and great numbers of fishermen and country people came to the shore, hoping to take some of them. A considerable number were slaughtered, but, owing to there being a scarcity of horses to drag the carcases up the beach, they were one by one floated off by the returning tide, and carried out to sea. On the following day, however, a number of horses having been brought to the shore, very many were secured. Within a distance of two miles from Silloth Bay, where our Sketch is taken, upwards of twenty were taken.

On Tuesday they got still further up the Firth, and at Annan Durnoch and other places nearly 200 were killed, and oil to the value of upwards of £600, has been secured

It is estimated that there were several thousands of them. Their dimensions varied from 18 to about 30 feet, and about 12 feet in girth. They were of the family *Ambletæidæ*, having twenty teeth in the upper and eighteen in the lower jaw. They appear to have belonged to the sub-order *Delphinidæ*. In their magnitude, however, and several other characteristics, they differ altogether from the *Delphinidæ phocenæ*; while in some respects they resemble the *Cachelot*, or Spermaceti Whale

Quasto delphinis balæna Brittanica Major

WOODEN BARRACKS FOR THE FRENCH ARMY IN THE CRIMEA.

Two descriptions of Wooden Barracks are now being shipped from, this country for the French army of the Crimea. Of the first of the two buildings, engraved upon the preceding page, 1200 have been ordered by the Imperial Government for the soldiers; and the other for the accommodation of the officers; and of these latter 350 are in course of delivery. They both measure 39 feet long by 16 feet wide on the sides of the soldiers' barracks are 8 feet 6 inches in height; and of the officers, 6 feet high; the roof of both being precisely similar.

The soldiers' house is provided with bed-boards raised on sleepers above the ground, with a 4-foot passage running through the centre; and the accommodation is ample for twenty-six men

The officers' barrack has bed-boards raised floor, but will be divided by curtains into four compartments, each furnished with a window; the officers' beds being placed transversely across the building during the night, and by day the whole space of the building will be used as a messroom

It may not be uninteresting briefly to state the circumstance which induced the two Allied Governments to provide these Wooden Barracks for the armies before Sebastopol. During the visit of Colonel Tulloch, R.A., to the Australian gold-fields, enormous quantities of wooden houses, doors, windows, mouldings, and other wooden materials used in house buildings, have been here prepared by machinery, packed and shipped for the markets of Melbourne, Geelong, and Sydney.

The facilities and economy obtained in this manufacture, the power of rapid production, and the stores of plant, machinery, and seasoned materials on hand, suggested the idea, in the first instance to Mr. Potter, of Gloucester, a member of the firm of Messrs. Price and Co., of that city, that barrack accommodation upon a large scale, and upon a short space of time, could be provided at this establishment for the Army before Sebastopol

The proposal was made to our Government, and, after a short delay in determining the best and cheapest form of barrack 500 of these buildings were ordered from Gloucester, and 600 from a contractor and builder of Portsmouth, in the first instance, and ultimately executed, partly in Portsmouth, partly in Southampton and London.

We have already given an illustration of these houses, as supplied to the English Government. Mr. Potter upon receiving the order to furnish or supply these houses for the French army. The Emperor, having minutely and carefully examined the designs, and compared them with other proposals which the Majesty's Government had received, requested Mr. Potter with a long interview, and suggested many alterations; lowered the height of the walls, to give "solidity" to the building against the storms of the Crimea; introduced two doors into the sides instead of at each end; simplified the framework of the roof, to save space and weight in carriage, and raised the height of the bed-boards above the ground. His Majesty spent several hours in personally explaining these alterations, and himself compared the proportions of the design with a small guardhouse adjoining the Palace of St. Cloud, measuring each portion of the Barrack

The Emperor ordered a house of each design, one of the English Barrack, and one of his own, as altered and adapted, to be immediately prepared, and brought to Paris, and sent down to Portsmouth, to the care of Gloucester, to bring back the two sample houses. In the course of a few days they were received in Paris, and were erected in the gardens of the Tuileries, under the immediate inspection of the Emperor, the Minister of War, M. le Maréchal Vaillant, several Engineer officers of the French army; and the opinion of French builders was obtained as to some of the details. A Board was then assembled to subject the houses to thorough examination, and a guard of twenty-six men were made to lie down on the bed-boards, and were accommodated without pressure

The order was prepared and signed at the Minister of War in the course of a few hours after final approval of the designs; and it would be difficult to exaggerate the extreme care, order, and business-like dispatch with which the whole affair was managed, both by the French Government, and the clear, distinct, and satisfactory arrangements they made for advise and facilitate the due execution of the contract

Mons. Chef de Bataillon Frossard, and Mons. Boulogne, having the engineering management of the camps there, was entrusted by the Emperor with the superintendence of this work; and he accompanied to Gloucester a detachment of Sappers and Miners, under the immediate command of Mons. Latrielle, Sous-Lieutenant of Engineers. The object of sending these men to the establishment at Gloucester was, first, to secure inspection and control over the manufacture; and, secondly, to familiarise the men with all the details of the work, and to employ them in the erection and taking to pieces of the Barracks, with a view to their performing the same services at the French Camp before Sebastopol They resided at Gloucester for a fortnight, and spent the whole of their time upon the premises where the houses are manufactured. The novelty of the circumstances, and the enthusiasm in the favour of our gallant allies, induced the citizens of Gloucester to féte, dine, and fraternise with this small detachment of the French army. In the intervals, the men steadily applied themselves to their work, and acquired in a short time the most perfect skill in erecting the houses

The Barracks, numbered and marked in packages capable of easy transport, are landed into trucks at the branch of the Great Western Railway at Gloucester, and there formed into special trains of about eighty to a hundred complete houses in each.

The trains are dispatched, at regular intervals, to Basingstoke, whence they are conveyed to the quay of the Southampton Dock Company, and there landed on board the vessels chartered by the French Government. The first of these ships, the *Samroo*, arrived at Southampton on Tuesday the 18th December, late in the afternoon, was loaded with 300 Barracks, and sailed on Friday, the 29th, towed by the Emperor's yacht, the *Reine Hortense*, and taking with her Mons. Latrielle and his detachment of Sappers and Miners. By Saturday, the 23rd inst., the contractors at Gloucester, Messrs. Price and Co., had completed and landed their 500 houses; by Saturday, the 30th, 962 more; on this day (Saturday, the 6th inst.) 600 more will be delivered; and by the 10th or 20th January the whole engagement, to supply 1850 Barracks, will have been fulfilled.

To accomplish this result—requiring the conversion, preparation, and packing of some 5000 to 6000 loads of timber—the number of carpenters and workmen employed is upwards of 1000; and the work proceeds by day and night, with little rest or intermission.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The market for national securities on Monday was exceedingly inactive, and prices were rather drooping. Three per Cents were 91 to 9⅝, and Consols for Account, 91¾ to 91. Long Annuities, 1860, were 8 5-16; the New Three per Cents, 91¾ to 92; Exchequer Bills marked 4s to 7s premium; Exchequer Bonds, 99¾. On Tuesday there was very little done in Stocks:—The Three per Cents Reduced were 91⅝ to ⅞; Consols for Account, 91 to 91⅜; New Three per Cents, 91⅝ to 91¾; Long Annuities, 1860, 8 5-16; Exchequer Bills, 4s. to 7s premium. The market on Wednesday was very inactive. The Three per Cents Reduced were 91⅝; the New Three per Cents, 91⅝, 91¾; Consols for Account, 91⅜; India Bonds, 99; Bank Stock, 210; India Stock for the Account, 229; Long Annuities, 1860, 4⅜; Ditto, 1859, 8 5-16. Exchequer Bills, 4s. to 7s. pm.; Exchequer Bonds, 1858, 99¾. There was rather more business in the market on Thursday. Consols were done at 91⅜ ⅜ 91 ex div.; the New Three per Cents, 91⅝ 91 to 91¾; and the Three per Cents Reduced, 91⅝. Bank Stock, 210. India Bonds, 98 to 12s.; three for Exchequer-Bills, 4s to 7s. prem.

There has been great inactivity in the foreign house; nevertheless, no material change has taken place in the quotations. Turkish Scrip has realised 5¾. Mexican Bonds, 19 per Cents, 20; and Deferred, 21 to 20¾. Equador Bonds have marked 3½; Russian Five per Cents, 97; Spanish Three per Cents, 37; Ditto New Deferred, 18 ex div.; Dutch Two-and-a-Half per Cents, 60¼; Dutch, Four per Cents, 91½; Brazilian Four-and-a-Half per Cents, 91¾ to 92½; Peruvian Four-and-a-Half per Cents, 70; Sardinian Five per Cents, 83¾ to 84, and Buenos Ayres Six per Cents, 83. There has been an arrival of about 90,000 dollars on account of the Mexican dividends.

There has been only a limited business transacted in Joint-Stock Bank shares. No price of no material change has taken place. Australia have realised 76½; London Chartered of Australia, 21½; London and County 25½; Union and Australia, 67½. Most miscellaneous securities have been very flat. Canada Bonds have sold at 105 ex div.; Ditto, Government Six per Cents, 107 ex div.; Crystal Palace, 3¼; Electric Telegraph, 7½. London Dock, 105½; St Katharine's, 96; Netherlands Land, 4; Suburban, 6; Telegraph, 2 pr c; Ditto, Registered, 12; Australia, 19½; Prince Patent and Land, 2½; Canada Land, 2½; Crystal Palace, 3¼; Electric Telegraph, 7½; Hungerford Market, 4½; Metropolitan Improvement, 1½; Peterborough, 1½; Tottenham, 1½; Coventry, 2½; Derby, 3½; Grand Junction, 7½; Grand Surrey, 48; Loughborough, 7; North Kent, 19; Oxford, 10; Regent's, 16; Rochdale, 1½; Sheffield and Ware-dale, 47; Shrewsbury, 20½; Worcester and Birmingham, 26 to 24.

Waterwork Shares have been quoted as follows.—East Hertford, 97; Grand Junction, 70; Kent, 79; Southwark and Vauxhall, 90; New River, 85; West Middlesex, 96. Gaslight and Coke Companies' Shares have been:—City of London, 109; Equitable, 98; Imperial (New), 92; Ratcliff, 70; Surrey Consumers', 11; United General, 20; Westminster Chartered, 89. Insurance Companies' shares have been very dull:—Alliance, 19; Atlas, 18; Argus, 22; County, 12; General, 5; Globe, 12¾; Guardian, 5¾; Imperial Fire, 330; Ditto Life, 23; Law Life, 8; London, 72; Marine, 2; Ditto, A Stock, 7¾; Ditto, B Stock, 12¾; Great Western, 68¾; Lancashire and Yorkshire, 7¾; London and Blackwall, 7¾; London and North-Western, 104¾; London and South-Western, 89¾; Manchester, Sheffield, and Lincolnshire, 34¾; Midland, 63¾; Ditto, Birmingham and Derby, 44¾; Norfolk, 89¾; North British, 31¾; North-Eastern Berwick, 74¾; Ditto, Extension, 19¾; Ditto, G. N. E. Purchase, 8¾; Ditto, Leeds, 75¾; Ditto, York, 52¾. Scottish Central, 96¾; Shropshire Union, 45¾; South-Eastern, 59¾; Thames Haven Dock and Railway, 2¾.

LINES LEASED AT FIXED RENTALS.—London, Tilbury, and Southend, 11¾. Manchester, Buxton, and Matlock, 2¾; Midland Bradford, 93; Wear Valley, 1. Wilts and Somerset, 94.

FOREIGN SECURITIES.—Ditto Scrip Fourth-and-a Half per Cent, 100¾; Great Western Four per Cents, 92; Lancashire and Yorkshire, 91; Manchester, Sheffield, and Lincolnshire New £10 Shares, 11¾; Consolidated Bristol and Birmingham Six per Cent Stock, 135; Ditto Four-and-a Half per Cent Preference, 92 ex div.

FOREIGN.—East India Five per Cent, 121; Ditto Extension, 2¾; Great Luxembourg Consolidated Shares, 2⅝; Ditto Obligations, 2⅝; Great Western of Canada, 16.

In Mining Shares very few transactions have taken place:—Australian Freehold have realised 4; British Iron, 6; Cobre Copper, 80; Santiago de Cuba, 3; and Tamar Valley, 2¾.

Friday Evening

Very little change has taken place in the value of National Securities to-day, and the business doing has been trifling. The Three per Cents for the Account have been 92⅛; the Three per Cents Reduced, 92⅛; and the New Three per Cents, 91 to 91⅝. Exchequer Bills, 4s. to 7s. prem Foreign Bonds and Railway Shares have met a dull market.

THE MARKETS

CORN EXCHANGE (Friday).—There has been a fair arrival of English wheat to the market coastwise during the present week. The supply from up-to-day was limited, and the show of samples was small. However, the demand for all kinds of wheat in a sluggish state, at a sort Monday's prices. Upwards of 12,000 quarters of foreign wheat have come to hand. The transactions in that grain were very limited, at barely late rates. There was a dull inquiry for barley and malt. Inferior grades of the former made 2s per quarter less. Quite the above of which was tolerably good—were in fair request, at full quotations. Both oats and peas were a trifle heavy. Monday's rates. Beans were 1s dear. Rye Brite was dearer.—Our prices were:—

ENGLISH.—Red wheat, 34s to 38s; white, 40s to 42s; Norfolk and Suffolk, red, 71s to 72s; ditto, white, 43s to 50s; grinding barley, 33s to 33s.; distilling, 34s to 36s; Kingston and Ware, 37s to 38s; Chevalier, 40s to 42s; Yorkshire and Lincolnshire oats, 20s to 21s.; Scotch, 20s to 21s.; Dutch and Cork, 18s to 21s.; Suffolk, white, 40s to 42s; ditto, grey, 36s to 38s; per quarter. Town-made flour 38s to 40s per sack; country marks, 36s to 38s per sack.

FOREIGN.—Pulse and cakes continue in good request, at full prices. Other articles moved off slowly. Prices were:—

Wheat.—Mediterranean and Odessa, 64s to 68s; Pomeranian and Prussian, 66s to 68s; Danish and Holstein, 66s to 68s; Russian, 66s to 68s; Baltic, 66s to 68s; Petersburg, 66s to 68s; Archangel, 66s to 68s; Marianopoli, 66s to 68s; Egyptian, 66s to 68s; Salonica, 66s to 68s; Smyrna, 66s to 68s; Taganrog, 66s to 68s; Nubian, 66s to 68s; Polish, 66s to 68s; Ghirka, 66s to 68s; per quarter.

Barley.—The prices of wheaten bread in the metropolis are from 10d to 11d.; of household ditto, 8½d to 9½d per 4lb. loaf.

Imperial Weekly Average.—Wheat, 73s. 9d.; barley, 34s. 10d.; oats, 27s. 11d.; rye, 47s. 1d.; beans, 47s. 3d.; peas, 46s. 8d.

The Six Weeks' Average.—Wheat, 73s. 4d.; barley, 34s. 10d.; oats, 28s. 6d.; rye, 46s. 10d.; beans, 48s.; peas, 46s. 8d.

Duties.—Wheat, is.; barley, 2s.; oats, 1s.; rye, 1s.

English Grain Sold last Week.—Wheat, 11,846 quarters; barley, 12,956 quarters; oats, 1800; beans, 4800; peas, 3000

Gilds.—Linseed, on the spot, is active, at 38s. to 39s. Rape is slow in sale, at 52s. for brown, and 56s. for pale. Palm, 46s. to 48s.; cocoa-nut, 48s. to 50s.; fine spots, £120 to £122. Southern, £46 to £47 10s.; pale seal, £42 10s. to £46; and *Lucca* ditto, £43 to £45; and straw, £40 to £42.

Hay and Straw.—At Smithfield, £4 15s. to £5 5s.; inferior ditto, £3 to £3 15s.; and straw, £1 2s. to £1 8s. per load. Trade dull.

Spirits.—There has been a moderate inquiry for rum, at full prices. Proof Leewards, 1s. 9d. to 2s. 6d.; East India, 2s. 1d. to 2s. 2d. per gallon. Foreign, proof to 18 per cent over hydrometer, 1s. 8d. to 1s. 9d. per gallon. Of brandies a very good sale for home consumption, but brands of 1851, 1s. 8d. to 1s. 9d.; 1850 ditto, 1s. 9d. to 1s. 10d.; older, 1s. 10d. to 1s. 11d. per gallon. Genevas, 1s. 2d. to 1s. 3d. per gallon.

Tea, Sugar, &c.—We have a steady demand for fine new hops, at full prices. A parcel of 1854 growth, of Farmer Tully's, realised 300 guineas. The duty on hops from Holland will, from and after the 5th inst., be reduced to 1s. per cwt.

Provisions.—Coarse Irish, 49s. to 50s.; fine ditto, 53s. to 54s.; Waterford, 52s. to 53s.; Limerick, 52s. to 53s.; Carlow, 52s. to 53s.; Kilkenny, 52s. to 53s.; Clonmel, 52s. to 53s.; Cork, 52s. to 53s.; Belfast, 52s. to 53s.; Londonderry, 52s. to 53s.; Dublin, 52s. to 53s.; Sligo, 52s. to 53s.; Tralee, 52s. to 53s.; Wexford, 52s. to 53s.; Galway, 52s. to 53s.; Limerick, 52s. to 53s.; Waterford

LAUNCH OF "THE MEANDER," FROM THE CLIFTON WORKS, BRISTOL.—(SEE PAGE 14.)

(*Continued from page* 14.)

The "pièce de résistance" (as Jullien himself called it in his programme) of the concert was the "Allied Armies Quadrille," which was received with the usual manifestations of patriotic enthusiasm.

There was also a new quadrille of a comic kind, called the "Pantomime Quadrille," in which a number of popular and cockney tunes, such as "Little Bo Peep," "Pop goes the Weasel," "Jones and Girls," "[illegible]," "[illegible]," "[illegible]

Rossini

MADAME BORGHI MAMO.

MADAME BORGHI MAMO, OF THE PARIS ITALIAN OPERA.

This lady is at present the chief object of attraction at the Paris Italian Opera, and is, undoubtedly, the most remarkable dramatic singer of the day. There is reason to expect that she will appear at our Royal Italian Opera in the course of the approaching season; and a few words, therefore, respecting her career may be acceptable to our musical readers. Her voice is a contralto—a species of organ which is rarely found in a high degree of excellence, and still more rarely accompanied with genius and musical acquirements. On the Italian stage, consequently, it is always a desideratum. The last great dramatic contralto who has been heard in London was Alboni; and, since her retirement, many fine parts have either been most inadequately supported or laid aside altogether. But these parts have been now revived by Madame Borghi Mamo, with an *éclat* hardly, if at all, surpassed by the triumphs of her gifted predecessor.

Madame Borghi Mamo is about five-and-twenty. Her biography is little more than a series of successes, constantly increasing.

Adelaide Borghi was born at Bologna, or in its neighbourhood. Her family were neither musical nor in affluent circumstances, so that she grew towards womanhood with scarcely any musical instruction. But she had received from nature those precious gifts which instruction (though it can improve them) cannot give. It happened, when she was about fifteen, that she was taken to a musical party in Bologna, where she contributed to the entertainment of the evening by singing an air from Vaccai's "Romeo e Giulietta," with so much sweetness and feeling that she attracted the notice of Madame Festa, the distinguished contralto singer, who was so charmed with her artless talent that she embraced her warmly, foretold that she would one day be a great artist, and undertook the charge of her musical education. Two years afterwards she made her début at Urbino in the "Giuramento" of Mercadante, with sufficient success to attract the attention of managers. In the following year she had engagements at Modena, Rimini, and other places in the north of Italy, where she appeared in various contralto parts, especially *Orsini*, in Donizetti's "Lucrezia Borgia." It was in this character (so well known in this country by the splendid performances of Alboni) that she gained her first great triumph. She then went to Malta, where she remained three years; during which time she performed almost all the principal parts suited to her voice of the modern Italian répertoire. By this time her fame had spread over Italy, and in 1851 she was engaged at Naples, where she made her first appearance at the San Carlo in the "Cenerentola." She immediately became the idol of the Neapolitan public, performing the part of the *Zingara*, in the "Trovatore" of Verdi, no less than seventy-four times consecutively. When she took her leave of Naples, in January last, after the performance of the "Trovatore" for her benefit, she had an "ovation" to be met with only in Italy. She was escorted in triumph from the theatre to her residence, and serenaded by the orchestra and chorus of the theatre, amid the acclamations of the multitude; and the journals teemed with sonnets in her praise, in which, whatever might have been their poetry, there was no lack of enthusiasm. It is no wonder that these children of the South are apt to be chilled by the coldness of our northern latitude; but they are soon reconciled to John Bull's want of demonstrativeness by the weight of his purse and his readiness to open it.

Last spring Madame Borghi Mamo went to Vienna, where her reception was most flattering. During the summer she visited Leghorn and Florence; and it was while singing at the latter place that she received those overtures which have brought her to Paris. She has there brought the "Trovatore" into the highest vogue at the Italian Opera; and M. Ragani, the manager, is so sensible of her importance to the theatre, that he has wisely entered into a new engagement with her for several seasons. Mr. Gye, we have been informed, is endeavouring to engage her for Covent-garden; where, however, she can appear only for two months during next season, having a subsequent engagement at the Imperial Theatre of Vienna.

FOX-HUNTING.—(SEE NEXT PAGE.)

Madame Borghi Mamo is handsome and attractive. She is a graceful and intelligent actress, as well as a most accomplished singer. Her voice is a pure contralto of the richest quality and extraordinary compass, extending from F in the bass clef to C two octaves and a fifth; and so skilfully does she join the chest voice with the falsetto, that in the whole of that great range there is not the slightest inequality.

Subjoined to our Portrait of this distinguished lady is a *facsimile* of a very interesting musical autograph. When she was at Florence this time twelve months Rossini heard her sing in his own "Cenerentola," and was so lavish in his expressions of the pleasure he had received from her performance, that she was emboldened to ask him for a few lines in his own handwriting, handing him a piece of music paper for that purpose. The illustrious *maestro* instantly wrote down this extempore fragment—a graceful little melody for the violin, with an accompaniment for the piano. A musicum of taste, taking it as a theme, could easily expand it into an elegant movement.

FOX-HUNTING

There were many came down to the banks of the brook
Came down with a rush not to leap but to look
There were horsemen who took to the water like rats
There were steeds without riders and men without hats
Cheshire Song

YO-HO! over she goes. There's the cream of the thing in a grass country—the pack streaming away over a flat country, too fast for music, the bright green of a field of a hundred acres, and a row of pollard willows give warning of a brook, not to be seen at a distance though full to the brim, and chill many a heart by anticipation, for there's not an open bridge within a mile. The first flight are all right, the pace has weeded the field, and the men and the horses know how and where to make the rush needful for clearing a wide uncertain number of yards of water. The lady would not be there if she had not full confidence in herself and her horse.

So said all, but there is one exception in the unhappy gentleman without his hat; it is quite evident that neither he nor his horse means risking a cold water bath. By nicking or skirting, or some unlucky accident, he has got in too forward for his comfort; and now he has seen the last of the sport for the day, he may pick up his hat and go home by the road, for there are five miles of grass between the fox and the next cover, and, according to all signs the pack will race over every yard of it. Never mind, he will have plenty of "companions of his solitude." The rush is too far behind to face that water on the chance of a check. They must all ride round a mile or two for the highway bridge. Brook-jumping—like storming a fortified town, charging squares of infantry with cavalry, and many other feats—is invariably performed with great ease and success *after dinner, over the mahogany*; but in a fast run in an open grass country, there is nothing that thins a well-mounted field like a brook that must be jumped; and in grazing counties the farmers have an awkward trick of locking high-backed spiked gates in the centre of accommodation hedges.

Neither men nor horses like water. Men don't like the chance of a day in wet clothes, not to speak of falling between two high banks, and requiring the help of a plough-team to get out; and horses that will do every other kind of leap in perfection, will often so absolutely refuse to face water, that no persuasion, determination, or skill on the part of the rider can get them over. And what is worse, a horse that has once fallen into water will generally refuse, or jump short, from fear, ever after—an effect which no fall over any other kind of fence will produce; indeed, there is a prejudice, which we do not share, that a fall over a gate or a hedge makes a young horse jump cleaner in future.

We remember seeing Captain Beecher ride a through-bred he was training for steeplechasing into two brooks, one after the other, without being able to produce the semblance of a leap. The brute galloped straight on, as if his legs were of wood, and the water had been solid ground.

On another occasion, last season, the whip of a metropolitan pack of staghounds rode his horse three times into a brook without success—the last time part of the way, and scrambling out on the far side, while the horse turned back to the other. A gentleman passing at the time, who had witnessed the scene, volunteered to ride the animal over, and did, successfully, at the first trial, without whip or spurs. So much for the man's part on a good horse. After all, however, there is no leap so safe as water, where the horse is a water-jumper, where the banks are sound, and you can gallop up to the "taking off" over a surface not too deep for wind and speed. Very often the banks are fetlock deep in mud, trodden down into a paste by bullocks drinking, or well drained by the stream. The best ground will usually be found near trees or bridges. The Eversleigh is the very finest water-jumper of that country, and a hard, with a stiff clay bottom and precipitous banks.

When Earl Fitzhardinge first looked at it, he asked his Whip, "How broad is it?"

"About nine yards, my Lord

Deuced awkward place to get out," he observed "And how deep is it?" he continued

"About ten feet," my Lord

"Deuced awkward place to get out

We know all the water apply to the Wilnecote Line, in Leicestershire, which forms a leading feature in Nimrod's celebrated sketch of Leicestershire, the Mole, in Surrey, which no one has celebrated; and all the water jumps noted among fox-hunters

Water must be ridden at fast, but not wildly. People talk of twenty miles an hour—fourteen miles an hour for the last 150 yards is more like the reality. But, whatever the pace, your horse should be collected in a measured stride, so that he can measure his distance, and not be hurried to take off too soon or too late. The rider must be determined—hands steady, and legs and thighs clasped, in the way that means going. If his nerves fail him at the last moment, or, as is often the case, he changes his mind as to the best place for taking off, the horse will to a certainty stop or swerve, or jump into a cold bath.

As to how an awkward place should be ridden at, we remember seeing the celebrated Jack Goddard, of the Heythrop, ride down to the banks of the Evenlode, then much broken, at a canter, to choose a piece of firm ground for leaping off, and the circling back, without stopping, to the top of the field, he returned at a thundering pace, and skimmed across like a bird, while half a dozen, more rash and less knowing, were floundering in the stream. Every season horses, perfect in other respects, are sold out of the Leicestershire country, because they cannot be made to face water in proper style. So, before a man goes into any of the brook-divided counties, he should make sure if he means to ride straight, that his steed will make him look ridiculous

Before entering into descriptions of particular packs (which we propose to illustrate with Portraits of some of the most celebrated Masters of Hounds and Huntsmen with their packs—commencing with the Quorn, the Brocklesby, the Belvoir, and Mr. Assheton Smithe's), it may be well to say a few words on two or three subjects likely to be useful to those who make their first appearance in the hunting-field this season

And first as to railroads. Railroads have completely changed the character of hunting-fields by rendering large circles round the coverts, to whom the meeting of Parliament, or other engagement, compel to spend the season in London, as well as by extending the circle of the principal centres where hunting men congregate; as, for instance, Melton, Leicester, Leamington, and Cheltenham Oxford undergraduates can now reach, for a short vacation, distances formerly too much even two hacks and an unlimited quantity of beer. Indeed, railroads have almost made hacks unnecessary. For instance, Sir Richard Sutton frequently leaves London in the morning, and meets his hounds between Leicester and Syston stations

Taking London as the chief centre of railroads available for those who either return to town the same evening, or keep up a hunting-box within telegraphic distance of the political clubs and the Stock Exchange,—the following is a condensed list of the accessible railroad stations and Packs of hounds

Beginning on the north side of the Thames. The Great Western Railway:—Slough, reached in 27 minutes from Paddington, is in the centre of the Queen's hunting-grounds. At Reading, an hour and a quarter from Paddington, Mr. John Phillips, and the South Berkshire. We have seen a very quick thing along the Pangbourn, within sight of Magdalen Tower. At Didcot, two hours and a quarter from Paddington, the Craven, lately taken up by the young Earl of Portsmouth; and the Old Berkshire, hunted by Mr. Morrell, the brewer and banker, of Oxford, meet all round. On the other side of Oxford, the Oxford, Worcester, and Wolverhampton intersects the Heythrop: master, Lord Redesdale; huntsman, the celebrated Jem Bills. On the other side, Mr. Thomas Drake, the descendant of a long line of squires and sportsmen, hunts a country which the triangle of the Buckinghamshire lines intersects

Thus, leaving London in the morning at ten minutes before eight o'clock, you can be at Didcot at half-past nine; or, by sleeping at or near Oxford, a good day's sport may be enjoyed with either the Heythrop, Mr. Drake's, the Old Berkshire, Mr. Phillips's, and often with the Warwickshire, with the opportunity of returning, if necessary, to London, by trains leaving Oxford at nine or ten o'clock p.m.

The London and North-Western Railway taps a district even richer than the Great Western, and grants peculiar facilities to sportsmen in the shape of tickets, available for hunting purposes only, at £10 to Tring and £90 to Rugby, for the season.

The notable stations are Watford, Tring, Leighton, Wolverton, Weedon, Blisworth, and Rugby—Watford, twenty-five minutes; Tring and Leighton, about two hours; and Rugby, three hours and twenty minutes, go through the centre of the following Hunts: Lord Dacres, who occupies the chief part of Hertfordshire, formerly hunted by the Earl of Salisbury, and afterwards by Mr. Delmé Radcliffe, author of a standard book upon the "Noble Science

Lord Lonsdale, who has taken up the Old Berkeley country, and keeps both fox-hounds and harriers at Tring; the Baron Rothschild's stag-hounds, hunting the grass country in the Vale of Aylesbury; Lord Southampton's hunting part of Beds, including part of the wild country given up by Mr. Selby Lowndes, and part of Northamptonshire; and, lastly, the Pytchley, a district of Northamptonshire, not second to Leicestershire in broad pasture fields and with even stiffer fences. On an emergency, by leaving London at half-past six o'clock in the morning by a fast train, Rugby may be reached at 8.50, which will be time enough with a hack to get to a few of the best meets, not only of the Pytchley, but of the Warwickshire also. The same train also reaches Weedon at 9.17, giving time to get to the famous Crick Meet. But these are extreme exertions, not worth while, considering that a good run of two hours can be had for hunters and huntsmen at Tring, at Leighton, at Rugby, and other stations which it would take too much space to name. Rugby, indeed, stands in the first position as a hunting centre; and a series of trains—the last leaving at 9.10 from Rugby—will deliver sportsmen in town before twelve o'clock at night

The Great Northern is less rich in hunting districts than the two other great metropolitan lines: but it passes through the best part of Lord Dacres' hunt. Between Hatfield, less than an hour from London, and Hitchin, by express five minutes more than an hour, eight meets are passed—all within four miles of a station. At Biggleswade, one hour and a half from London, the Cambridgeshire hunt is accessible, where the Misses Reynolds have performed their feats of horsemanship; and at Huntingdon, which can be reached by ten o'clock, Earl Fitzwilliam's is within an easy canter—certainly one of the best countries and packs out of what may be called the fashionable districts. The inn accommodation is excellent, and hack-hunters may be hired

The Eastern Counties Railway, with its double lines, opens up hunting districts of very varied character. For instance, for the benefit of the City men living on the east side of London, there is the South Essex, a provincial pack, hunting twice a week over a flat grass country, interested by broad deep drains, which require a steady clever horse to execute comfortably and fast. This district has recently been brought within two hours' travelling by the Tilbury and Southend Railway, with one terminus in Fenchurch-street, and the other at Tilbury, opposite Gravesend, which passes within a couple of miles of the best covers. The South Essex is in every respect the reverse of the Pytchley; but a clever horse is required. Then the Eastern Counties Railway surrounds with its two arms the "Essex hunt," which has been rendered classical in a fox-hunting sense by the fact that it was once hunted by Colonel Cook (whose book was long a standard authority with masters of hounds), and has since been held for more than forty years by Mr. Conyers, who resigned it two seasons ago, and was succeeded by Mr. Henley Greuves. Essex is a plough country where the scent lies well; the foxes are wild; and the deep ditches and high banks require a bold and brave pluck to surmount. Bishop Stortford, on the one side, which can be reached in an hour, at 9.4 a.m., and Ingatestone station, which can also be done in an hour, arriving at 8½ a.m., place you within reach of all the best meets. The latter station approaches a few meets of the Essex Union—a hunting country with Devonshire banks, hunted for a short time by Jim Morgan; now, we believe, with Lord Lonsdale

Crossing the Thames, we have the East Kent, with kennels close to Gravesend, hunted by Mr. Colyer, entirely at his own expense, on a very liberal scale, over, as we hear, a very rough, unsatisfactory country, with too many covers and too many unjumpable banks for much sport. Next to the East Kent lies the Old Surrey, to be reached by the Croydon line, in an hour from town. The Surrey is an excellent county for a constitutional ride; but it is so strictly a subscription pack that the presence of strangers is not desired.

The Reigate and Guildford Junction line between the South-Eastern and South-Western, intersects the best part of the Surrey Union, thus completing the circle round London, and accommodating all tastes, from the very quiet constitutional cob-rider, to the man who can go first flight with the Pytchley. We may mention, from personal experience, for the information of travellers in strange countries anxious to see sport, and of gentlemen in their first season, that these back-hunters, with the exception of that purchase, may be had from Charles Simmonds, Oxford; T. Percival, the Haycock, Wansford, near Peterborough; Tollit Streatham, Croydon, for the Surrey and the Queen's. There are, no doubt, many others equally to be depended on—we speak of those we have found up to their work.

(To be continued.)

DUKE OF CAMBRIDGE.—The Duchess of Cambridge received letters on Saturday, brought by the Queen's messenger, who arrived that morning from Constantinople, with the news that the Duke of Cambridge was in a favourable account of the health of his Royal Highness. The Duke has been staying at Therapia, and his health has gradually improved, mainly from returning change of scene. The Duke is said to have obtained permission from the French Government to pass through France.

RELIC OF THE GREAT FIRE.—There still exists a financial relic of the Great Fire of London. A return has just been printed, at the instance of Mr. Alderman Salomons, of money raised and paid by parishes within the city of London, under the Act 44th George III. chap. 39, "for the relief of certain incumbents of livings in the city of London," since the passing of that Act. All parishes, the value of which were not burnt down in the Great Fire of London, are exempted from the operations of the Act. From the figures supplied in the return, it appears that £50,000 have been paid annually under the Act; and, as it was passed just half a century ago, it follows that there has been raised under it, up to this time, a gross amount of something like £2,920,000; or adding about the average for the two parishes in which the amount is not named, probably £350,000 would be nearer the mark.

ENGLISH GOVERNESSES IN RUSSIA.—Private letters from English governesses in Russia state that it has been intimated from high quarters that it is desirable for them to return immediately to their own country. The cause of this measure is said to be, that the Czar thinks that, as the war will reduce a great many wealthy persons to poverty, their daughters ought to find employment given to them. As most of the noble families are quite aware of what "the gentleman with mild eyes" means by a hint, they have advised their governesses to take it, however unwilling to lose their services; but the opportunity of departing in comfort: as, by waiting for an official order, they might have to do it with inconvenient haste, or possibly not be permitted to leave at all, and be favoured with an opportunity of verifying their geographical studies under disagreeable circumstances.

THE ARMY OF THE GERMAN CONFEDERATION. A general view of the force forming the army of the German Confederation will not be without interest at the present moment. The contingents which according to the returns for 1853 laid before the Military Committee of the Diet, amounts to 255,037 men, and is divided as follows:—The First, Second, and Third Army Corps (Prussia), 130,393; the Fourth, Fifth, and Sixth Army Corps (Prussia) make 170,599; the Seventh Army Corps (Bavaria), 50,236; and Eighth Corps (Wurtemberg, Baden, and Hesse Darmstadt), 47,427. The Ninth Corps (Saxony, Electoral Hesse, Nassau, Luxemburg, Limburg), 35,336; the Tenth Corps (Hanover, Brunswick, Oldenburg, the Hanse Towns, Mecklenburg), 49,918, the Infantry Division of Reserve, 18,150. Of these them 3271 on the Staff. The Infantry amount to 404,592 men, of whom 28,621 are Chasseurs and Riflemen. The Cavalry are 71,149, with 42,002 horses doing work. The Artillery consists of 40,378 men, with 1242 guns. The so-called technical troops amount to 7745 men: to whom are to be added 1470 army surgeons and 16,850 men attached to the transport service. The siege-park contains 250 pieces of ordnance, 122 of which are cannon, 31 howitzers, and 97 mortars. According to its tactical distribution, the Federal Army consists of 397 battalions, 409 squadrons, and 147 batteries, with 1122 guns

THE ENTENTE CORDIALE. In the beginning of the campaign some officers of the Zouaves invited several officers of General Bosquet's division to dine at their mess. The officers thought it prudent to decline the invitation in the most delicate and friendly terms possible. Most of them, they said, had little or nothing beyond their pay to live upon; they could not return hospitality in the same style that they knew it would be offered to them; and they felt certain that English officers would understand their scruples, and not press them to accept civilities which some at least among their number might feel as laying them under the weight of an obligation. They would eagerly seize every occasion to grasp the hand of an English officer, would be delighted to join in a promenade and a cigar, but they must absolutely insist on their abstain from entering upon a course of dinner-giving. Against such an excuse of course no remonstrance could be made, and the English officers merely expressed their regret that they could not see much of their comrades in arms as they had hoped to do. But after the battle of Inkerman the English mess in question had lost their plate and china, their cellar, their potted meats, among their number many luxuries, and, owing to commissariat difficulties but too notorious, found it difficult to procure the most ordinary rations. When these misfortunes became known in the Camp, the French deputation of officers renewed their visit, and said, with comic good-humour, that, since the fortune of war had removed the inequalities which originally constituted their only objection to an interchange of feeding, they hoped the English officers would condescend to take potluck with them. This *spirituel* invitation was naturally accepted, and the delightful fraternity which prevails between the two services was thus cemented by another link.

TWO NEW-YEAR'S-DAYS.

A STORY.

BY AMELIA B EDWARDS

I AM the organist to St Martha-cum-Silvermere, a little quiet church, in a little quiet town, some five-and-forty miles north-east of London. It is not a very brilliant appointment—thirty pounds a year, and a small old-fashioned house to live in. But I can exist upon it. I have a few pupils; a gratuity from the Vestry on Christmas-day and Good Friday: and, above all, a contented disposition, and a sincere love for my art. Besides, do I not possess a first-class certificate of merit from the Musical Academy of Zollenstrasse, in the Duchy of Zollenstrasse-cum-Rhein, where I received my professional education? Do I not rejoice in the ownership of that famous complimentary letter addressed to me by the wife of the Town-Councillor Von Stumpf? Am I not the proud and fortunate competitor who carried off those two bronze medals, and that faded laurel-wreath, which were awarded at the three grand examinations, and which now adorn the mantelshelf of my little parlour?

The worst part of it is that I have no one to whom I can show these trophies, excepting my little pupils and my child-servant. I am very lonely. How it happens that I possess no friends or kindred in all my native England is of no importance here. My residence abroad and my foreign education have something to do with the matter, and . . . But I will not enter upon that subject, as it is painful to look back upon a home and social circle broken up—upon a sunny childhood faded—upon parents lost, but unforgotten: and, moreover, that has absolutely nothing to do with my story

Yes, I am lonely; and, for one still warm of heart, it seems a strange, cold fate enough. Yet my life is not without its pleasures. I like my little church, with its carven tombs and Gothic crypt, and monuments, brasses here and there. I am interested in the aged sexton, and in his long, prosy tales of the De Lacy family, whose tattered banner hangs above the old oak sculpture near the altar-rails. I am attached to the little, rosy-faced rustics of the Sunday-school, many of whom come every Wednesday to the rectory to hear their sweet infant voices in those chants and psalm-tunes which they sing during the services of the Sabbath. Above all, I love my quaint old organ, up in the dark nook over the church door. I love its triple row of black keys, its obsolete stops, its curiously-carved music-desk, and the little gilded angels with trumpets and violoncellos which are perched so uneasily on the top, and "pipe to the spirit-ditties of no tone."

It is true that the organ is not perfect; nay, I must confess that it is, in many respects, somewhat of an eccentric instrument. There is a trumpet-stop in the great organ which always plays a tune and a half too high, and which I have not dared to use for the last two years. The pedals are so worm down by the fingers of more than a century, that they are reduced to the thinness of laths, and many of them are dumb. And there is something odd the matter with the bellows, so that the wind comes with a puffy, intermittent sound, as if the organ were asthmatic—a defect which is peculiarly annoying, as it makes the softest passages thick and spoils the effect of my most brilliant passages. However, I am a very constant little woman in my attachments, and I love the organ dearly for all that

Silvermere is a very pleasant place in the summer time; and, though I always find plenty to occupy my time and my thoughts, I certainly feel happier then than during any other period of the year. I have my walks in the fields and by the river side; my long practices in the empty church, when the mellow evening sunlight comes streaming through the oriel window, and glanches all among the gilded aisle; my garden to cultivate; and my little vases on the chimneypiece all filled with fresh, sweet flowers But sometimes I find the winters linger very drearly Mind, I do not complain; I have my books and my fireside, and many, many comforts, for which I am grateful; yet the long, dark evenings do seem heavy to me at times, and the brightest fire loses half its cheerfulness when one has to sit by it alone. Of all days in the year New-Year's-day seems the loneliest and dreariest to me. I had been accustomed, while in Germany, to see this anniversary merrily celebrated, and had borne my share in the gay round of good wishes, and balls, and pleasant social festivities with which the Germans usher in the great Birthday and the new-born year; so it is no wonder I should feel sad now when all around me are so gay, when London come down to spend their winter holidays with our townsfolk: when joyous parties are taking place night after night all around me, and I alone receive no loving smiles or grateful greetings from any human creature

It seems strange that the inhabitants of this town have noticed or befriended me. The Rector is always kind to me, but his wife is far too haughty even to speak, and the rest of our little aristocracy, the lawyer's, doctor's, and squire's families follow her example. With the tradespeople I am, in my humble way, a favourite, and I have no doubt my conduct since I arrived at Silvermere has earned me a character for steadiness and propriety. But I know that I am not a prepossessing person. I have not the gift of pleasing where I choose. I am silent, and distant, and plain; but oh! I know how full my heart is of love and charity, and how it yearns for something to lean upon and cherish! But there are none who care to read that heart, and none for it to love.

But it was not always thus—there was once. . . . It was a long time ago. I had been about four years in England, and scarcely two at Silvermere, when all changed for me, and when my pains, and hopes, and fears began as I am now. The organ, too, was in better condition, and not so asthmatic as it is at present.

I saw him first at church. How well I remember it! It was towards the end of June. The weather was gloriously beautiful; and the days were so long and calm that life seemed twice its usual length. The afternoon service was just about to commence—in fact I was playing the opening voluntary when one of the children, who sat beside the organ, stole round softly to my elbow, and whispered—

"Please, Ma'am, there's a strange gentleman in the church!"

A stranger amid a country congregation is an event, and an important one. He attracts more attention than the Queen on the throne. I was a more remarkable person in the eyes of the children than the bashful himself

It was my duty to keep the little urchins in order, so I shook my head gravely, and said, "Hush! don't talk in church," and went on with my voluntary

"Please, Ma'am, he looks like a Frenchman, or—or a Turk!"

This last suggestion was hazarded dubiously, and accompanied with a peep between the red curtains that hid me from the congregation. Now a peep between the curtains was a liberty and an act of disobedience which I never would permit; besides, it looked so badly from below; so I turned round very sharply, and tried to assume an exceedingly angry countenance

"Sarah Wilson," I said to the offender, "go back to your place directly, and pay attention to the service. It is of no consequence to you who is, or is not, in the church!"

Sarah Wilson retreated to her seat in disgrace; but I am forced to confess that I was myself guilty of the offence for which I had punished her, for I could not resist peeping through the curtains as soon as the sermon began

He was sitting in the farther corner of a pew midway between the altar and the door, and leaning back in such a manner that I could see his pale face and his large dark eyes distinctly. His appearance was that of a foreign make and style; but he was young, and fell in careless masses about his face: and I was probably a large moustache that caused the child to take him for a Frenchman "or a Turk." His face was more intellectual than handsome: and I could not help fancying, as I looked at him, that he must be a musician

Somehow I took especial pains with my concluding voluntary that afternoon. and it was wonderful how long it took me to select one from amongst the piles of music in the corner. First I fixed upon a fugue of Sebastian Bach's; then upon a "Dead March in Saul;" then upon a movement from the "Mount of Olives." At last I chose the Hallelujah Chorus in the "Messiah" (the most divine piece of music in the world), and played it with all my heart. Indeed, I entered into it with so much enthusiasm and pleasure, that, until I had concluded, and closed the organ-board and set him standing there in his place alone in the church, and looking up earnestly towards the organ, I had forgotten all about the foreign stranger.

Of course I drew back directly, and busied myself in putting away the music, and locking the organ doors, and when I looked round again he was gone

I saw no more of him, heard no more of him—yet I could not keep from thinking of him all the week, and wondering whether he would return on the following Sunday. I fancied that he would: indeed, so certain of it was I, that, when I found him already occupying his former place before any one else had entered the church, I felt no surprise at it.

This time he was not only remarked alone like any foreigner; it seemed to me more as if he had lived much abroad. As for his age (though I was too young to be a judge), it was perhaps thirty or thirty-five. He might be younger; but the gravity of his manner gave him the appearance of a man in the prime of life.

For two or three more Sundays this continued. Each time he contrived to address me, but always with the deepest respect; and I grew at last so absorbed in the interest with which these weekly meetings filled my mind, that I thought of little else from Sabbath to Sabbath.

One morning I met him by the river side. It was my favourite walk and,

though the autumn was far advanced, it was not yet too cold to stroll, book in hand, through the green meadows and under the alders which stretched along beside the water's edge

He spoke to me—he whom beside me—he talked of music, of books, of rural life. He told me the tale of another and spoke of the lands he had visited, and of the scenery through which he had passed. I listened in a sort of dream. I had never heard a voice so eloquent before. Its every word sank into my heart, and warmed my imagination. He said that he would lend me a book which he had written, and that he would bring it the next morning to the same place where I at first met him. I made an effort to refuse it, but he over-ruled my object ons, and—I went.

Let me pass over the weeks that followed. Let me not dwell upon the frequency of our after-meetings—the charmed eloquence of his speech—the wrapped and humble delight with which I listened and learned. His books were grave and full of thought—far more profound than any that I had attempted to read before. Yet I strove to comprehend his philosophy, and pored over the pages night after night that I might be able to speak of them with him, and render myself worthier of his friendship

Ay! his friendship—for he never spoke to me of love. Yet I loved him—loved him timidly, reverently, as a child might have loved! The very touch of his hand when we met and when we parted made me tremble—the merest glance from his calm eyes seemed to blind and trouble me. Had they once looked upon me in anger, I felt as if I must have fallen at his feet and died

It was wrong, foolish, childish—what you will; but it was not surprising that I should so worship the first who had been kind and gentle with me Remember—I was so young, so lonely, so in need of affection and support

The winter came, and there were many days of rain and snow, when I could not venture out; and those were melancholy days for me—yet sometimes, even then, he would not suffer them to go by without once seeing my face, and would walk patiently up and down the road in front of my little cottage, till I chanced to see him.

Then came Christmas time, and he told me that he must go to London for some days to visit his friends. He parted from me very coldly and gravely, as was his wont; but, when he had gone a little distance, came back, and, saying that he should return on New-Year's-day, lifted my hand suddenly to his lips, and then went hastily away.

It was the first token of love that he had shown for me—the very first! Sometimes, at a time, I had fancied that there was a deeper thrill in his voice, a darker fire in his eyes—but it was so fleeting that I had scarcely dared to frame it into words; and, after all, it might have been my fancy only. But this kiss! that burning kiss upon my hand! I hastened home; and, entering my little parlour, burst into tears, and kissed my own hand over and over again where his lips had rested upon it.

I do not now remember any circumstances of those days, between Christmas-day and the last day of the old year. They glided past me like the pictures of a magic lantern, and I lived as one dreaming. Nothing wore the same aspect to me, which it used to wear, before that day. People's faces passing in the street, seemed more cheerful; the wintry landscape looked beautiful in my eyes; the sound of my own voice, as I walked to sit singing softly to myself, appeared to have grown sweeter with my happiness.

Then arrived the thirty-first day of December. To-morrow I ah, to-morrow I should see him again. My heart beat strangely when I thought of that; and I so longed to greet the day and year which would herald in my golden future, that I resolved to sit by my fireside and hear the clocks strike twelve.

It was a very cold and silent night. My little house stands just on the outskirts of the town, and the far fields beyond the hedge were covered with deep snow. He view was dreary, and I drew the curtains closely, piled a blazing fire, and tried to read. It was useless I could not fix my thoughts that night. There was a strange, restless, expectant feeling upon me; and as the evening hours went by I grew nervous and agitated.

All at once I felt that he was there, and I trembled. I had heard no sound —I had had no warning of his coming, and yet I knew that he was standing yonder outside the window

What awful mysterious sympathy is this which I then experienced, and which occurs to all of us at some time or other during life!

I rose, went over, and drew the curtain. Merciful Heaven! the promptings of my heart were right—he was standing close beside the lattice, and the moonlight was shining down upon his face!

"Alice," he said softly. "Alice."

I opened the window and leaned out into the cold air.

"I said that I would be here on New-Year's-day," he said, and his voice was agitated and broken. "It will be New-Year's-day in a few moments more. I have travelled miles that I might see you. Come to say good-bye!"

I would have spoken: but the words died away upon my lips, and I could only clasp my hands silently together.

"I have received news of my brother's illness," he continued; "that brother in Madeira, of whom I have told you. I must go to him; but I will write to you by the first ship. I felt that I must speak to you again before I left. I could not go without telling how I love you! Hark!" he said, pausing suddenly, and lifting his finger, "they are tolling out the year!"

And the low solemn tones of the bells of St. Martha came moaning through the night.

"The year is almost gone, Alice! Tell me, before it is past, that you love me!"

"I do love you

The church clock now began to strike

"I shall come again before long, Alice. Promise me that you will be my bride before these clocks strike out a year again!"

"I promise"

The clock was yet striking

He grasped the vine with both his hands, and climbed up to the window where I stood.

"Kiss me, Alice:—kiss me on the lips before I go! I must be in London by daylight; and the chaise waits for me in the road. One kiss, my life!—one kiss at parting!"

He was hanging to the window by his hands. I laid mine upon them, for he could not remove them to clasp my fingers in his; and then, bending down, I kissed him for the first and only time.

At that instant the joy-bells rang out their merry chimes like a chorus of laughing voices—his hands slipped away beneath mine—he dropped down upon the snowy path below, and, crying aloud to me, "A happy New Year, darling!" ran swiftly along the road and disappeared

How long I stood there at the open window listening to the bells and looking down at his footprints underneath, and at the places which his hands had made upon the snowdrift on my window-ledge, I know not; but when I returned to my seat, the fire had gone out, and the candle was expiring in the socket.

And now I have but little more to tell; and yet I feel that I would fain write on and on, and still defer the story of my sorrow. But it must be said, and a very few words will suffice to relate it: *no letter from him ever came to me*

The weary months passed by: the spring-time came and went; the golden summer brought its flowers, the autumn its fruits; and yet I never heard from him. Life grew stale and heavy for me; hope died slowly from my heart; a dull, listless melancholy took possession of my whole soul; and I only wished to die.

Then the winter came again with all its varied aspects, and my only comfort was in wandering where I had wandered, a year since, with him in recalling each word that he had uttered in reading once more each book that I had read with him. The Christmas-day passed on. If I had had any hope left it faded from me when this day was past: "for surely," I thought," were he still alive, he would have written to me now"

The New-Year's-eve was come again; a foggy, misty night unlike the last. I was sitting by my fireside with my head buried in my hands, too, miserable for tears, when there came a knock to my door, and a letter was brought in and laid before me—a letter written in an unknown hand; a letter which had been directed and re-directed many times, and which bore the postage marks of many places. A dread came upon me, for again I felt that here was something which concerned him whom I loved. For several moments I dared not open the letter, and when I had opened it, it was some time before I could read it. This was what it told me:—

"Madam. It has devolved upon me to convey to you of the painful intelligence of the death of Mr. B——, of ——. He was taken seriously ill during the voyage to Madeira, and expired before we reached the port of Funchal. I enclose a piece of his hair and this ring, which he was in the habit of wearing.—I am, Madam, &c., &c."

You see that my story is but a commonplace one, after all; but perhaps, now that you have heard it, you will not be surprised when I say that New-Year's-day was the happiest and the most sorrowful of my life.

PHENOMENON NEAR ABERSYCHAN.—An extraordinary natural phenomenon occurred, on Tuesday week, at the Rhiwfrank Mountain, near Abersychan, Glamorganshire. About five o'clock on the morning of that day a shaking of the earth was felt, after which it was followed by the shock of an earthquake, which produced considerable alarm among the parties resident in the neighbourhood, especially to Mr. Roger Newell, whose house is near the Abersychan works, at the foot of the mountain. As soon as there was sufficient daylight to investigate the cause, it was ascertained that the top of the mountain had descended to the base, a portion of the fragments falling into Mr. Newell's garden. In its descent the mountain-top had torn up oak and other trees by the roots, and had split the trunks of many of them in fragments. There had been no underground workings in the mountain, and there seems nothing to account for the phenomenon. Some country people state that they saw flashes of fire issue from it; but that must have been mere fancy.

LOANS OR TAXES?

A GREAT controversy is beginning, whether the expense of the war should be defrayed by Taxes to meet the whole cost as it arises; or by Loans, to pay a great part of the cost now, and the remainder year after year, through an indefinite period. In reference to this important subject, we have received the following from an esteemed Correspondent, whose position and study of the question entitle his opinions to a fair and respectful hearing. We do not undertake to vouch for the correctness of every part of his reasoning, but present his views, as a contribution to the proper discussion of a matter of high public interest at all times, and especially important at the present period:

(From a Correspondent.)

An individual always borrows from other individuals, but a nation rarely borrows from other nations. So far as it can a loan may be useful. We are, in fact, about really to borrow the assistance of foreign soldiers, though we purchase it; and if we could borrow, were they wanted, foreign ships, or foreign cattle, or foreign corn, they might assist us to bring the war to a more speedy and successful conclusion. So, if the nation borrowed money from other nations, and with it bought the services of their people, their ships, cattle, or corn, it might add to the national power, as the loans of a trader enable him to extend his business, and might, by enabling us to win a battle, be worth borrowing. But we are not likely to borrow from other nations. England is the great lending nation of the present time. Holland is also a lending nation to some extent. But almost all other nations are rather borrowers than lenders, and as the rule they come hither for their loans. We may exclude, therefore, from our argument, though there may be instances of it, the notion of foreign lending us money, the supposition that any part of the Loan is to come from abroad, and consider it entirely and exclusively as the nation lending to itself. In fact, the Government, in the name of the nation, borrows from one portion of the people a sum for the use of which some other portion has to pay.

It is said that Loans throw part of the cost of the war on posterity, or spread it over a long period; that the war is waged partly for the advantages of our successors, and they ought to pay a part for it. On we throw any part of the burden on posterity? The supposition appears to be a mistake. It is the fallacy which lies at the bottom of the whole argument. We cannot possibly fix any such obligation on posterity. All the money in the country is worth, at the most, £60,000,000. The value of all the goods bought and sold in the country is probably ten times as much as the value of the money; and the bulk of this remains in the country year after year; while all our bread, and beef, and ale, and cloth, and gunpowder are made or grown, and used month after month, and year after year, as they are required. Money is merely the instrument for counting wealth, and is not wealth itself. An individual borrows money to spend it, and he gets a greater share of the objects he purchases than he would otherwise have. But a nation borrowing from itself cannot get more of the objects it requires than it already possesses. The present generation cannot borrow a grain of gunpowder, a musket, or the use of one arm from posterity. It must, therefore—and cannot help itself—really pay its way as it goes. The real expense of the war to the nation consists in so much labour employed in soldiering and in sailoring, in erecting batteries, blowing away gunpowder, destroying the stone walls of the enemy, and putting the enemy to death; and in providing all the materials which all the persons engaged in the war use or consume. All this labour must be done daily, and no part of it can by any possibility be put off for posterity to do, or postponed even till to-morrow, without risk or loss. The real cost of the war, consisting of so much labour or stock applied to work destruction, must be paid day by day, and it is a shallow fallacy to suppose that the present generation can, by borrowing money, the mere instrument of counting, throw a single sixpence of this cost on posterity. The generation adds neither to its wealth nor its power by borrowing of itself.

A Loan, in fact, is merely getting the moneyed classes to pay at present a much larger share of the cost of the war than is fair; but they advance the money voluntarily because the Government undertakes to pay them in return, a certain sum annually, for an indefinite, or for a long period, to defray the cost. For example, a subscriber to the Loan of £100 pays £100 of the year's expense of the war, when his fair share of the annual taxation is, say £10; and for the loan of his £100, he receives back an annual payment, say of £5—the sum being determined by the rate of interest at which the loan is negotiated. Thus his share of the national burdens is immediately lessened by £5; and by the community paying him this sum annually, it bears so much of his fair share of the public charges—less, to state the matter with strict accuracy, the little trouble which he, as a tax-payer, will have to bear of it. This sum must be paid to him in perpetuity, or until the whole sum of £100, in addition to the interest, is repaid to him. Loans by the State from a portion of the people are a means of exonerating the lenders who advance £100 now, to be paid £5 at the end of the year, and every succeeding year, from a share of taxation. They enable the rich to escape, and throw the whole burden on those who cannot advance their capital to redeem themselves. They exonerate capitalists, and increase the burdens of industry; they make the rich richer, and the poor poorer—the very evil those writers deplore who now recommend us to defray the expense of the war by Loans.

Taxes in every shape and form are great evils. Direct taxes introduce great irregularities of taxation and great tyranny. Day after day we experience their inconvenience and injustice. They should be continued, therefore, for as short a time as possible. We cannot raise one per cent from every man's income, in order to pay the interest of a Loan, without as complete a system of supervision, of appeals, and commissioners, as would raise ten or twenty per cent, and pay the whole expense of the year. The Chancellor of the Exchequer means to retain the present rate of Tea-duties, but to levy it he will not require an additional Custom-house officer, nor would he have dismissed one had the promised reduction taken effect. We can levy two or three Excise duties, and two or three Custom-house duties, as cheaply as we can levy one; and we can levy them at a high rate as cheaply as at a low rate. But every such duty requires the services of a great number of officers and the imposition of a great number of restrictions in order to levy it. We have enjoyed the prodigious advantage of getting rid of the Excise on glass and soap, and the Customs duties on silk, wool, &c. Every tax, therefore, whether direct or indirect, should be imposed for the shortest possible time. By every single tax, too, as large a sum should be levied as it can conveniently yield, so that the number of taxes—each one carrying with it injustice, vexation, and petty tyranny—may be as small as possible. To borrow of our capitalists, instead of paying our way as we go, is to doom our industry to a long continuance of taxes and to vexatious restriction. What writers call throwing part of the burden of the war on posterity means becoming it to taxes on knowledge, and light, and leather, to taxes on varying and uncertain incomes, to surcharges, appeals, summonses, and distraints, such as have, for so many years, plagued us, and impeded our progress, cut up our comfort, and lessened our power. It is supposed by Mr. M'Culloch that £12,000,000—and this is, probably, the aggregate—which would have sufficed to pay the national expenses year by year since the peace, had our predecessors not burdened us with taxes to pay the interest on their Loans. The misery entailed on the community by collecting £28,000,000 per annum since 1815 to pay the interest of the Debt is beyond human power to describe. We get glimpses of it in the continued poverty and continued crimes of the multitude. Shall we leave an increased heritage of the woe to our posterity! If we so decide, we must at the same time recollect that we shall not exempt ourselves from our share of evil, for the taxes which must be levied to pay the interest of the Loans, carry with them all the evils, all the restrictions, and all the official tyranny of an amount of taxation judiciously levied, which would render Loans wholly unnecessary. We have a Property Income, and a Succession-tax already in existence. By an increased per-centage on one or all of them, we might levy all the money the State requires, and impose no additional restriction on trade or industry. Those who deny the utility of Loans, do not propose as a substitute, as is implied by some writers, the renewal of indirect taxes, and the imposition of fresh restrictions on industry

There is one moral effect of Loans amongst many which we cannot overlook. Individuals desire to provide for their offspring, and to secure them against the necessity of eating bread by the sweat of their brow. We applaud the object, but it may be carried too far, and the desire is not one the State should strengthen. Take every title in the peerage, from the Dukedom of Wellington downwards, which has been earned by great abilities and great toils; look at the original possessor and his offspring, and the conviction will flash on the inquirer that the robust-minded struggling parent was, in every condition of his existence, however severe his toil, a happier being than any one of his well-provided families, sinless, offspring. It is, in most cases, an injury to children so to provide for them as to relieve them from the necessity of exertion. It crushes the soul to impart a little comfort to the body. The interest of all Loans, however, being paid by the annual produce of taxes, become a property in taxes, bequeathed from parents to children: they are a provision for idleness; they quarter a certain number of persons on the public, and doom some to inaction and others to excessive toil. We all see examples of young people beginning life on a competency left them by their parents, and living on to the end of their days nearly useless to all but themselves. Nobody pays them for useful labour. Their services are worth nothing. There is for them no mutual paying and receiving. They promote no man's welfare, they are generally extremely selfish; and far from [illegible] reader, the unfortunate, the semi-genteel or semi-noble and even genteman with a moderate income, having about the Court, and wasting his or her time at watering-places, is about as useless a person as is provided for in the earth. National loans giving national security to a great multitude of such little incomes, are a great and permanent injury to the national spirit. They substitute idleness for activity, and make drones of the people who should be honey-bees. We say nothing against the desire to relieve children from some of the difficulties their parents have encountered, but the State should not encourage a system which, among so set aside a dispensation of Providence, dooms the many to increased toil, while it deprives others of motives for honourable exertion

Let us cast a glimpse for a moment at the comparative expense. The security of the Government is not to be surpassed, and therefore money or capital will be lent to it in preference. It will be abstracted from trade and manufactures. But the security of the Government is already pledged to an immense sum, to which much of the available funds of all the moneyed classes is invested. The money so invested, as the rule, is withdrawn from the old securities and lent on the new. The old securities are sold to the public at large, who are tempted to purchase by a fall in the price of the Funds. The capitalists who sell out of one security to invest in another of only equal validity, or advance the Loan, would not do this unless they were to gain by it Thus we may be quite sure that every new Loan is contracted for at some per-centage rate of interest higher than the market rate of interest on all the previously existing securities. Capitalists will only take it as a more advantageous investment, and the Loan can only be made on terms advantageous to them. Their sale of old securities, together with the superior rate of interest on the new Stock, invariably have the effect of depreciating all existing securities. The whole of our £800,000,000 of debt will be to some extent lowered in value by a new loan of ten or twenty millions. After a season the new and the old securities come to have an equal market value; but the addition of so much new Stock to the already in the market lessens the value of the whole; and, where it is so vast as in England, a very small per-centage on the whole may be equivalent to the new Loan. All the possessors, therefore, of landed property, and all other securities, will lose, to some extent, to enrich the contractors and grantees of the new Loan. This is one of the losses

The Government, by its Loan, enters into competition with all the industrious classes, who carry on their business partly by credit. It offers a higher than the current rate of interest for the use of capital, and it unduly abstracts so much capital from trade. It raises for a time, *pro tanto*, the rate of interest throughout the community, and a new pernicious increase on all the paper negotiated in the year—many thousand millions—would be equivalent to a considerable increase in the rate of the Property-tax. To all trade an increase in the rate of interest is a serious evil, and, like a small tax, puts a stop to many transactions, much to the public detriment

Let us suppose that the increased expense of the war for the year is £20,000,000 over and above the ordinary expense of our military armaments By increasing the rate of Direct Taxation this might be raised without adding expence to the cost of levying it, and without imposing a single additional restriction on the industry of any class. All would be felt as free as at present to gain more. It would impose on many a necessity to expend less, and might stimulate exertion to gain more. They would endeavour to save the tax, and no other injury would be done by it to the productive power of the nation than the unavoidable diversion from the profitless work of making carriages and breeding horses, importing wine and preparing feasts, to the destructive work of war By Direct Taxes the State reduces people to save in another direction, and to exert themselves to gain Loans supply less motive for saving, and consequently the destruction of war and the destruction of extravagance continue together. By Taxation to meet the expense of war we check the extravagance and dry up one source of loss and ruin. To make a pecuniary estimate of the advantage a not possible; still we believe it would be equal to the amount of the Loan, and would in the end be little felt by the public

The waste of labour and of capital by the war cannot be stopped, and the problem is to make it as little as possible. The most direct means is the best. For the mere management of the Debt the annual cost is not less than £5,000,000. If we raise an additional £20,000,000, paying the Bank £400 per million for management, we should have to pay £8000 per annum more. There will be premiums and other incidental expenses amounting to a considerable sum. In no case does the whole amount of money contributed by Loans find its way into the Exchequer, and former modes of borrowing, perhaps now to be repeated, subjected the nation to a loss on the Loans contracted chiefly during Mr. Pitt's administration of from £7,000,000 to £8,000,000 If we look at the depreciation of property already produced, at the loss in trade by raising the rate of interest, at the waste caused by Loans, there can be no question that in a pecuniary sense it is much less [illegible] gross to defray the expense of the war year by year by Taxation than to defer any part of it by Loans. The present loss to the industrious classes, especially as such a loss is supposed capitalists, would be very great, and the evils of Taxation as continued beyond the period of war, to pay the interest of the Loans, would be to our posterity, as we have found it, nothing short of a dire curse

FRENCH MEDICAL STATISTICS. From the 10th October to the 30th November, from 8000 to 9000 sick and wounded entered the French ambulances 1000 have died, 1500 have returned to their duty, and 6000 have been sent to the hospitals at Constantinople. The very sick alone have been sent to the latter 2000 per month, more than one-half of whom rejoined their ranks after a month's absence, and which reduces the total of the losses for the effective strength of the Army to 500 per month, that is to say, a loss of about two per cent per month on our effective strength, which is a trifling loss when we take into account the arrival of fresh contingents.

THE ROYAL WEST INDIA MAIL STEAM-SHIP "TRENT"

ALTHOUGH we have frequently had occasion to notice the services of the steam-transport fleet, chartered by the Government for the conveyance of troops and stores to the Black Sea, there are many of the vessels employed which deserve more than a passing word. The West India mail-steamer *Trent*, under the command of Captain Gordon Ponsonby, is one of those which has been found most useful since the commencement of the operations in the Black Sea, as the following record of her services will show:—

The *Trent* left Southampton on the 4th of April, 1854, with the 23rd Regiment—1150 strong—for Constantinople. Notwithstanding her heavy living freight, she towed up from Malta, on her way, the steam-ship *Tonning*, French commander, that ship having broken down. Both ships encountered a heavy gale in the Doro passage, during which the hawsers parted. The *Trent* stood by, and, fresh cables having been made fast, the two vessels proceeded on their way. The *Trent* then returned to Malta with the *Tonning* in tow; and, on her arrival there, took over a horse-transport, by order of Admiral Stewart. Having taken on board 700 men of the 53rd, and staff horses to the number of 120, she again proceeded to Constantinople. These horses had been brought to Malta in the *Bulkeley* and *Simla* screw-steamers, which were found to roll too heavily at sea to be fit for the safe carriage of cavalry From Constantinople the *Trent* sailed for Varna with 328 horses and 200 men. She returned, immediately on landing them, to Constantinople, where she again shipped 310 horses and 200 men. With these she proceeded safely to Varna. On her return from this service, the *Trent* was ordered by Admiral Boxer to take Captain Nolan and Captain Thompson to Beyrout, where horses were purchased for the remount of Artillery. There was one horse lost on the passage back to Varna. Returning again to Constantinople, the *Trent* took up to Varna 299 horses and 50 men for the Commissariat; and having safely landed these, she proceeded to Barcelona. There, notwithstanding the state of confusion in which the town was—bloody the evil cries of the revolutionists, 225 miles, with their drivers, were shipped, and Captain Ponsonby had the satisfaction of taking out in safety Generals Rocher and Cotabe the Captain-General of Catalonia and the Attorney-General of Spain, whose lives were in jeopardy from the attacks of the mob.

The mules having been landed without loss, the *Trent* took part in the first expedition to the Crimea, taking on board and landing in safety the whole of the 11th Hussars and part of the 17th Lancers. Proceeding from Old Fort to Varna, she took on board the Bashi-Bazouks, and a number of staff horses for Lord Raglan, Lord Cardigan, and General Scarlett; and though she encountered a heavy gale, during which the *Rip Van Winkle* parted from her, she reached Balaclava without a single loss in men or horses. From Balaclava the *Trent* proceeded to Bourgas, and took up in safety to Kherson Bay 304 men and horses of the French Chasseurs d'Afrique. Returning to Varna, she brought back to Balaclava 60 draught horses for the Artillery, and 240 French gunners and horses. During her stay at Varna she had ridden out one of the severest gales of the season; making her way out, under steam, through the midst of a mass of sailing transports. Damaged as she was on this occasion, her paddle-box boats being unserviceable, her other boats swept away, and her bowsprit carried off, she still performed valuable service. Though further damaged in the gale of the 14th at Balaclava, she took from thence 320 sick and wounded to Constantinople without the loss of a man. From Constantinople she brought a large number of invalids to Malta, where she is now refitting. During the whole of her trip the *Trent* towed seventy sailing-ships.

THE ROYAL WEST INDIA MAIL-PACKET "TRENT," AT MALTA.

Such is a catalogue of the services rendered by one of our transport steam fleet in a period of eight months. Doubtless many other steamers—the *Medway*, Captain Baynton; the *Orinoco*, the *Himalaya*, the *Emperor*, the *Jason*, the *Simla*, the *Hydaspes*—have done excellent service also; but none, at all events, have done it better, or more effectually, than the *Trent*.

THE HOSPITAL, SCUTARI BARRACKS.

We have been favoured by a Correspondent at Constantinople with the accompanying View of the Barracks at Scutari; and from another obliging Correspondent we have received the following extract from a letter, dated Dec. 14th, from the Rev. C. E. Hadow, Resident Chaplain, Scutari Barracks:—

This Hospital, which is the larger of the two, is capable of containing 3000, but has not more than 2000 in it now. It is a wonderful institution; and great credit is due to Dr. MacGrigor, and those under him, for so admirably arranging the accommodation for the sick and wounded. His difficulties must have been enormous; but he has triumphed over them, and it is now beautifully arranged. I enclose you a plan of the building, showing all the floors now used as Hospital in these Barracks. It improves daily, and through the joint co-operation of Dr. MacGrigor and Lieut. Gordon, R.E., it will, doubtless, become a model for military hospitals. The corridors, full length, contain 200 men—the wards an average of 30. The medical officers and the nurses have, now that the Engineers have repaired the south-west side of the building, the means of preparing accommodation for the freshly-arrived patients, so that they no longer wait in the passages on their beds, but are taken immediately to the ward, or corridor, prepared for their reception. I can find my way about to any ward, and to any man, with perfect ease, thanks to Lieut. Gordon's having lettered the corridors and numbered the wards. The comforts which our men enjoy here are very many:—First, there is assiduous medical attendance, and careful watching by orderlies or nurses, good shelter, good food, warm beds, and, I am happy to add, warm rooms, from the stoves now put up by Lieut. Gordon.

The kitchen of Miss Nightingale is constantly at work for those, too, who require extra nourishment. She herself is literally everywhere, and her emissaries do their best to emulate her activity. They are the first to call the aid of the doctor at a critical moment; and I can add with much gratitude that they never miss an opportunity of sending to the chaplain when the way seems opened to the heart of any poor fellow whom they may be tending.

With regard to my labours, I can truly say they have been most encouraging. Great respect is paid to the clergy by the soldiers, and the eagerness with which many of them look for our visits leads one to hope that some really care for the message which we bring. The convalescents come to our services when they know the hour (for as yet there are no clocks in the corridors; get rich friends to send some out). On Sunday nights my quarters (Corridor A 18) are crowded with a most attentive set; and on the week-day, at seven o'clock, there is a gathering in Corridor F, Quart. 5, where the evening service and a short exposition on the second lesson attracts them; last night the first chapter of the First Epistle of St. Peter was very forcibly felt, as addressed to "Strangers scattered in Bithynia."

The chaplains now here are Mr. Halpin and Mr. Lawless, chaplains of division; Mr. Sabin, and Mr Lewes, together with myself. Mr. Halpin and Mr Sabin share this hospital with me; Mr. Lewes and Mr. Lawless work the General Hospital, containing about 1600; and we take it by turns at the Hulks moored off Pera, which contain about 600. The funerals also we share; they have averaged about 100 a week, but are now decreasing, I rejoice to tell you.

BARRACKS AT SCUTARI.—THE BRITISH HOSPITAL.

SEBASTOPOL.

FORT ALEXANDER.

THE accompanying Sketch of Fort Alexander was taken by an officer of the *Valorous*, who was present when the Russian prisoner, Captain Kouyowloff, was landed at Sebastopol, on the 7th ult., in exchange for Lord Dunkellin, and who forwards an account of what he saw —

"On the 7th December the *Valorous*, 16, paddle steam frigate, Captain Buckle, having received instructions from the Admiral, proceeded off Sebastopol, for the purpose of landing the prisoner Captain Kouyowloff (exchange of Lord Dunkellin). When about two miles off the outer fort, the ship was stopped, the Russian ensign hoisted at the main, and a flag of truce at the fore. A cutter was then manned, and sent in with the prisoner, under a flag of truce, in charge of the First Lieutenant, accompanied by the Chaplain, to act as interpreter. We pulled in for the outer forts, and, on nearing Fort Alexander, a Russian boat pulled out and showed us a passage by which we might approach the beach, as we had some difficulty in avoiding the rocks which lie off the point. A convenient place was then pointed out, where we landed, and delivered our charge over to the embraces of his countrymen, who flocked down in crowds to the beach to welcome the returned captive.

We now had a good opportunity of observing the fortifications, which were within fifty yards of our place of landing. Fort Alexander, as shown in the Sketch, appears very similar in construction to the fortifications of Bomarsund; the only apparent difference being, that the top of the former has a tier of guns mounted on it, which are protected by sand-bag parapets, whereas the latter had none. We also saw close to us the mast heads of the sunken vessel at the entrance of the harbour. The passage appears to lie between them and Fort Alexander.

Our prisoner and his baggage having been landed, we returned to our ship; and it was on our way off that the Sketch was taken.

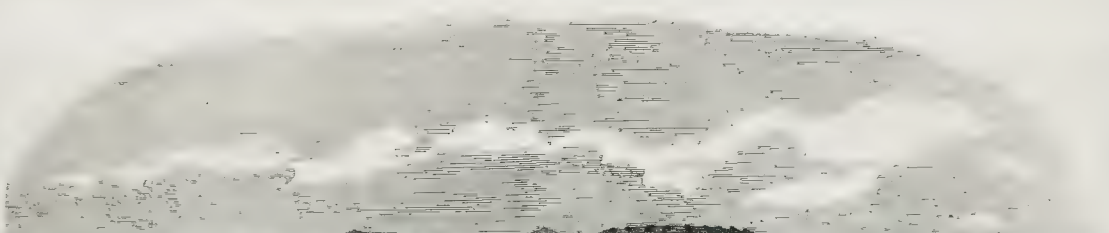
Fort Alexander is a strong, square fort, mounting 84 guns, in two tiers. It lies next to the Quarantine Fort, from which it is distant about 300 or 400 yards. An officer on board the *Valorous*, who officiated as interpreter on the above occasion, gives the following account of the transaction:—

Yesterday (Dec. 7) we received orders to take on board from the flag ship a Russian Captain of Artillery, and land him, under protection of a flag of truce, at Sebastopol, to be exchanged for Lord Dunkellin. So we went down to the forts, carrying a flag of truce at the fore, and the Russian ensign at the main; our own ensign being, as usual, at the mizen. On drawing near the forts we lowered a boat with a white flag, and the Russian went under charge of our First Lieutenant. I went as interpreter-general. The Captain asked me whether I would like to go, which just anticipated my wish. We had a fine morning, and a delightful pull in to the shore, so that we had a close view of the mud batteries, Fort Constantine, the Long Fort, the shore battery, &c.; we also saw the sunken vessels, and the rocks and stones that have been thrown in to make the place shallow. A boat met us, and guided us in, where a great many Russian soldiers and officers were all standing without arms, in compliment to the flag of truce. We landed, and gave up the Russian captain to the officer appointed to receive him. We took leave of him, and in going away the Russian superior officer shook hands with us, and, between the French talking and the unarmed men, one would scarcely suppose we were enemies at all.

The same officer, in his description of the affair on the 6th ult., in which the *Valorous* played so brave a part, says —

As I know you are most anxiously regarding the war with Russia in a prophetic point of view, perhaps it may interest you to hear of the chase of two Russian steamers into Sebastopol by her Majesty's ship *Valorous*, on the 6th of December, last. The particulars are these. The fleet lay at some distance from the harbour in a safe anchorage, one small French steamer being the only vessel anchored close in, just outside the range of the forts; she was stationed there as a look-out. We perceived the French steamer suddenly slip her cable, and go out to sea as fast as possible in the direction of the fleet, firing, meanwhile, upon a Russian steamer which was just coming out from under the forts in pursuit and firing on the Frenchman, who, from his inferior size, was forced to keep up a running fire. We at once received the order, "Up anchor," and the capstan flew round; but, as there was a deep anchorage, and, consequently, a good deal of chain out, it would have taken some time, but that the appearance of a second Russian steamer made the Admiral make signal, "Chase the enemy at once." This, of course, was enough—they ceased to have up the anchor, buoyed the chain, and let it run out, and having thus "slipped the cable," we went in at the Russians full speed, and, although the Russian steamers, Fort Constantine, the Wasp Battery, and the long mud battery, were all firing upon us, we were able to make them retreat into Sebastopol.

I thought Bomarsund hot work, but it was nothing to this. In the Baltic our guns were so large that we were able to batter the forts, while we escaped, to a great extent, by keeping out of the range of the forts' guns. On this occasion, however, we escaped by the reverse of that across hands, by running close in under the batteries, so that two-thirds of their shot and shell went over us. It was a very daring thing to do. But our Captain is a fine, cool brave man under trying circumstances. Many of the Russian shot and shell told upon the hull and riggings of the vessel: several marks are on the sides, the ropes are cut, and a large shot went right through our large ensign at the mizen-stay. One of our boats was shot away. Several shells burst over us, and the men picked up the splinters and pieces on deck. Notwithstanding this, and the fact that these were the same battleships that injured the fleet so much before, and that on one occasion we were so close in as to see Riflemen creeping along the beach and firing on us, yet, strange to say, we had not one man killed nor one wounded.



FORT ALEXANDER, SEBASTOPOL.—FROM A SKETCH TAKEN DURING THE LANDING OF THE PRISONER KOUYOWLOFF.

LITERATURE.

THE LIFE OF P. T. BARNUM. Written by HIMSELF. S. Low, Son, and Co.

BARNUM, the Yankee showman, having made a princely fortune, and built a princely residence out of the contributions of a gullible public, resolves, while yet in the meridian of life, to spend the remainder of his days in tranquillity, in his own home, in the midst of his family, home and family, as he observes (for Barnum is sometimes seriously inclined, and troubled with lofty aspirations), home and family being "the highest and most expressive symbols of the kingdom of heaven!" Well! Barnum, looking back upon the chequered career of the past, has some misgivings, and in his celestial retreat having also some leisure, he resolves to make a clean breast of it, and reveal to the public—the proceeds of whose credulity he is revealing in—how shamelessly on all occasions he has bamboozled them. A man less squeamish than Barnum, or, as he would say, less *conscientious*, would have shrunk into his boot before making such revelations; he would have considered that in so doing he was only adding insult to injury, and might tremble for the windows of Ironistan. But Barnum has no such misgivings; he knows his public, and justly shows his supreme contempt for them by giving them a kick at parting:—"It will be seen," says he, "that I have not covered up my so-called 'humbugs,' but have given a full account even of such schemes as 'Joice Heth,' and the 'Fejee Mermaid,' and the 'Woolly Horse,' while I trust that I have displayed no more than an *honest pride* (!) in recounting the history of the American Museum and General Tom Thumb. The musical campaign of Jenny Lind, for which I have on all hands been thanked and congratulated, is herein minutely described. None of my enterprises have been omitted; and, though a portion of my 'Confessions' may by some be considered injudicious, I prefer frankly to acknowledge the same wherever I have had a hand in plucking it." As for "Joice Heth" (the pretended nurse of General Washington), and the "Fejee Mermaid," and the "Woolly Horse," we shall not enter upon their history; only observing that if they elevate Barnum, in audacity and unscrupulousness, above all traffickers in human credulity on this side the Atlantic, they also prove the vulgus curiosity and easy credulity of Brother Jonathan, to far exceed those of John Bull. The affair of the American Museum, also, we shall pass over, as unveiling merely points of sharp practice, in which the public had neither credit nor part. The history of General Tom Thumb, however, which Barnum recounts "with no more than honest pride," comes nearer home, for more reasons than one, and claims attention. Many readers, who recollect the General's crowded levees at the Egyptian Hall, and who thought at the time that the whole affair was a mere dozen years ago, will be glad to know who and what he really was. We have his pedigree and first starting in life thus ("with no more than honest pride") set forth by Barnum himself:

I had heard of a remarkably small child in Bridgeport, and by my request my brother brought him to the hotel. He was the smallest child I ever saw that could walk alone. He was not two feet in height, and weighed less than sixteen pounds. He was a bright-eyed little fellow, with light hair and ruddy cheeks, was perfectly healthy, and as symmetrical as an Apollo. He was exceedingly bashful; but, after some coaxing, he was induced to converse with me, and informed me that his name was Charles S. Stratton, son of Sherwood E. Stratton.

He was only five years old, and to exhibit a dwarf of that age might provoke the question—How do you know that he is a dwarf? Some licence might indeed be taken with the facts; but even with this advantage I really felt that the adventure was nothing more than an experiment, and I engaged him for the short term of four weeks at three dollars per week—all charges, including travelling and boarding of himself and mother, being at my expense

Dec. 28, 1854.

THE SOCIETY for IMPROVING the CONDITION of the LABOURING CLASSES, No. 21, Exeter Hall. The Dwellings of the Labouring Classes, their Arrangements and Construction. With Descriptive Particulars, &c., of the Model Houses belonging to the Society. Numerous Designs for Dwellings adapted to Towns or Rural Districts, Agricultural and Manufacturing Districts, and an Appendix, containing H.R.H. Prince Albert's Exhibition Model Houses, Hyde Park, 1851. The Model Cottages, &c., built by the Windsor Royal Society. By HENRY ROBERTS, Esq., F.S.A. Third Edition, enlarged. Cloth, 4s.

WESLEYAN MISSIONARY SOCIETY.—
Missions Commenced 1786. Society Organised 1816.
General Summary:
Missions in Europe, India, China, Australasia, and Polynesia, South and West Africa, British America, and the West Indies.
Central or Principal Stations, 367; Chapels and other places of Worship, 3018; Missionaries and Assistant Missionaries, &c., 567; Catechists (Interpreters, Day School Teachers, &c. 783; Sabbath-school Teachers, &c. 8270; Church Members, 112,728; and Total for Members, 1827; Scholars, 78,811. Printing Establishments 10.
Receipts, 1853, £121,000; Expenditure, £111,000. Increase, £10,000, nearly.
Donations and subscriptions on behalf of the Wesleyan Missions will be received at the Central Treasurer, Thomas Farmer, Esq., and the Rev. John Scott; and by the General Secretaries, the Rev. Dr. Beecham, the Rev. E. Hoole, the Rev. George Osborn, and the Rev. William Arthur, M.A.; at the Wesleyan Mission-house, Bishopsgate-street Within; at the Mission-house of Messrs. Smith, Payne, and Smith's, 1, Lombard-street

SPECIAL APPEAL.—CANCER HOSPITAL, Cancer Pavilions and Wards, Brompton and West Brompton.
Patron—His Royal Highness The Right Hon. the Earl of ALBAN.
Treasurer—John Parkinson, Esq., 68, Lincoln's-inn-fields.
Chaplain—The Rev. Nathaniel Libbey, 6, Elm-place, West Brompton.
Bankers—Messrs. Coutts and Co., 59, Strand
Chairman—The Hon. Colonel Ogilvy, Hextable Hall, Kent
Donations are much needed, as at the present season of the year, parts always reminded that there are many of their fellow-creatures suffering from the dreadful disease, and seeking shelter from it as painful and destructive malady to which the human frame is liable.
The Institution nearly four years. Nearly 700 cases have come under treatment, and it is gratifying to announce, that attempts to remove it have been effected in seventy-five cases, operative incidence, and the ordinary expenditure in maintaining the Charity, from £1,000 to £1,500 per annum, are more urgently required.
Bankers—Messrs. Coutts and Co., 59, Strand.
Secretary—Mr. Wm. Bowditch, 2, Pall-mall East.
Solicitors—Messrs. Bircham, Hasluck, and Nisbeta, have also kindly consented to render their gratuitous services.
By order, W. J. CRAKE, Secretary.

EQUITABLE FIRE INSURANCE COMPANY, Chief Office, 156, West-strand, London.
Capital, £1,000,000 sterling, in 10,000 shares of £100 each, of which upwards of £300,000 is actually subscribed for and paid upon
HALF THE PROFITS DIVIDED AMONGST THE INSURED.

Prospectuses and every other information may be obtained at the Chief Office, as above, or from any of the Agents
W. H. PRESTON, Secretary

CLASSICAL and COMMERCIAL.—The Head Master of an Endowed Grammar School has Two Vacancies. Terms forty guineas.—Address A. C. L., 43, Queen-square, Bloomsbury.

EDUCATION. WICK HALL SCHOOL, HACKNEY.—The leading features of this establishment are an Education of a useful and practical character, a locality unique for healthiness, and domestic arrangements compatible with the most sanguine expectations. Parents desirous of further information are requested to call personally, with every particular, by eight hours as above, by post or otherwise. Inclusive terms thirty guineas per annum.

HOME EDUCATION.—A LADY resides in the immediate vicinity of ASHDOWN, in a commodious and airy house, having an unexceptionable Governess who speaks the French and German Languages, thoroughly understands music and singing, together with the other usual branches of a polite education. She receives into her family three or four little GIRLS, to study with two daughters of her own, under the most maternal care and attention whilst absent from their Parents. Address H. C., care of Mr. Owen, Bookseller, Duke-street, Grosvenor-square, Middlesex.

DR. LOVELL'S SCHOOL, WINSLOW HALL, BUCKS. The PUPILS will REASSEMBLE after the present vacation on the 25th JANUARY.—A late pupil has just been gazetted Ensign in the 95th Regiment, now in Canada. Others have entered the Army Examination last September, and receive appointments as Cadets in the East India and Sandhurst Colleges. Pupils reside in the house of the Principal, who is assisted by W. Mr. Mr. Masters there, in addition to the Resident Masters. Particulars of the terms may be had on application to the Principal.

EDUCATION.—Twenty-two Guineas per annum, at a Boarding-school, Village, six miles from London. Young Ladies are literally boarded, and encouraged to Play French, Music, Drawing, Dancing, Writing, and [illegible] Needlework to Parents. No Tuition previous to Twelve Years of Age. Address to Parents, No. 9, Mr. Mr. May, Masters there, in addition to the Resident Masters. Particulars of the terms may be had on application to the Principal.

VALUABLE BOOKS, including the Works of Dugdale, Strype, Stow, Rudder, Burton, Drake, Dugdale, Pennant, Lysons, Britton, Fielding, Hearne, Jackson, Gough, Knight, Milburn, Middleton, Manchester, Marryat, Barrow, Lingard, Hallam, Macaulay, Pepys, Defoe, Boswell, Pope, Swift, Sterne, Spenser, Scottish, Scott, Southey, Voltaire, Whitelocke, &c., at very low prices. Catalogues sent for one Stamp.—WILLIAM NIELD, 12, Davies-street, Berkeley-square

SCHOOL BOOKS, SCHOOL STATIONERY, and every Requisite for School and College Use supplied on the most liberal terms by HODGKINSON, 156, Bedford-row, Holborn. Established 1795.
Immediate Application Catalogues of Stationery and Sundries for the New Year. Free by post, on application

CRIMEAN ARMY FUND.
28, HILL-STREET, BERKELEY-SQUARE.
COMMITTEE.
Chairman—The Earl of Palmerston, K.G
The Duke of Richmond, K.G. | Major-General H. Bentinck
The Duke of Wellington | Thomas Barclay, Esq., M.P.
The Marquis of Blandford, M.P. | Alexander Barclay, Esq.
The Viscount Mandeville, M.P. | C. J. Bevan, Esq.
The Earl of Chesterfield | R. W. Cousins, Esq.
The Earl of Shaftesbury | John Dickinson, Esq., M.P.
The Earl of Mulgrave | C. Gurney, Esq.
The Earl of Wilton | St. Leger Hall, Esq.
The Viscount Sandon | E. Round Harvey, Esq.
The Lord Robert Grosvenor, M.P. | Spencer de Horsey, Esq.
The Lord Dunmore | Captain Howard
The Baron L. de Rothschild, M.P. | Henry Kingscote, Esq.
The Count E. R. de Stackelberg | H. Edward Rae, Esq.
C.B. | J. Stuart, Esq.
The Hon. W. Cowper, M.P. | [illegible] Esq.
Sir William Fraser, Bart. | Robert Stephenson, Esq., M.P.
Major-General Rocksby, M.P. | H. L. Wigram, Esq.
The Committee have this day chartered a large steam-ship, the "Pioneer," capable of carrying 700 tons of goods, which will sail early in January.
All contributions proposed to be sent to Balaclava must be forwarded on or before Tuesday, the 9th January, as after that day none can be received.
The Committee earnestly solicit subscriptions to freight and pay the expenses of this steam-ship, which is intended to be the last they will dispatch to the Crimea
NOTICE TO CONTRIBUTORS OF GOODS
Woollen Goods should be sent to Messrs. George Cross and Co., Lambeth-hill, Old-change.
Dry and other Provisions, Wine, Spirits, Beer, and all miscellaneous Articles, to the Irregular Wharf, Tower.
Fresh Meat, Game, and Poultry, to Messrs. Gunter, Berkeley-square; or Messrs. Grace, 107, Lombard-street, for immediate preparation
It is requested that all Boxes and Packages may have an Invoice of Catalogue attached with the name of the Donor legibly written and be addressed to "The Crimean Army Fund," the London Railways having liberally consented to convey such Packages free.
It would greatly facilitate the operations of the Committee if full particulars of all contributions, with the name of the Donor, were sent at the same time to the Secretary.
Subscriptions are received by Messrs Herries, Farquhar, and Co., 16, St. James's-street; Messrs. Coutts, 59, Strand; Messrs. Drummond, 49, Charing-cross; Messrs. Glyn, Mills, and Co., Lombard-street; and at the Mansion-House, Berkeley-square, where the Committee meet daily.

THE ILLUSTRATED LONDON NEWS.

No. 723.—VOL. XXVI.] SATURDAY, JANUARY 13, 1855. [WITH A SUPPLEMENT, SIXPENCE.

NEGOTIATIONS FOR PEACE.

THE hostile attitude assumed by Austria has produced its effect upon the Czar, with a rapidity that was wholly unexpected. When Prince Gortschakoff declared at the conference of Vienna that he had no instructions to accept the interpretation of the "Four Points" which Austria, Great Britain, and France had unanimously determined to insist upon and abide by, a delay of fourteen days was granted to him to communicate with St. Petersburg. If at the end of that period—which would have elapsed to-morrow (the 14th of January)—the Czar had accepted the points, but rejected the interpretation, the Austrian Government would have united itself with France and Great Britain in offensive and defensive alliance. The war would immediately have assumed larger and more formidable proportions, and involved the whole of Europe. But the Czar has not felt disposed to incur so heavy a responsibility. The identical propositions which he rejected with contempt a few months ago, as inconsistent with his dignity, and as only fit to be proffered to a defeated and exhausted Power, he has now expressed his readiness to accept. In less than eight days, instead of the fourteen allowed him, his Plenipotentiary at Vienna has been instructed to negotiate a peace on the minimum proposed by the Allies; and negotiations will be forthwith resumed, if they have not already commenced. The representative of only one of the Great Powers of Europe will be absent from the Conference. Though Prussia may, at the last moment, wish to share in the deliberations, her opinion will neither be asked, nor listened to, if proffered. She is self-exiled from the councils of the world, and has, with her own hand, sealed her doom of degradation.

The perfidy and treachery of the Czar have been so often exhibited during the progress of the unhappy war which his ambition has forced upon Europe—and in no instance more notably than in the proclamation which he has recently issued to his subjects—that a very natural doubt is felt in many quarters whether his expressed willingness to accede to terms of peace is to be depended upon. Without giving him any undue credit for sincerity, or placing any reliance upon his sense of duty, the world may, at all events, give him the credit of sagacity. It is so obviously his wisest and safest policy to yield to the pressure of events which he can no longer hope to control, that his sincerity seems more probable than the reverse. To yield to the remonstrances of Europe before a signal and otherwise inevitable defeat is a course of conduct to be expected of a Potentate not wholly blinded and maddened by ambition and wrong-doing. If the Czar be still a sane man, as we believe, he cannot fail to see that his submission at the present moment would entail upon him fewer sacrifices, and be accompanied by a smaller loss of dignity and honour, not only in the eyes of Europe, but in those of his own people, than submission consequent upon the attacks of Austria, on the capture and destruction of Sebastopol by the Allies, and on the threatened reconstruction of the kingdom of Poland. Submission at the present time, and on the terms proposed, would leave him a character for wisdom as well as magnanimity, which he might hereafter turn to account; while submission after defeat, and on terms dictated at the cannon's mouth, would, in contemporary opinion, and in the page of history, give him no title to either quality. Magnanimity should sacrifice pride, if it could spare the effusion of innocent blood; and where would be the magnanimity of a struggle as sanguinary as it would be hopeless? Wisdom—even that lower quality of it designated as "worldly" wisdom—would extricate itself from an untenable position at the least possible loss; and where would be the wisdom of yielding all with discomfiture and ignominy, rather than yield a portion without a crushing defeat and with comparative security and honour?

For these, among many other, reasons we think the Czar is in earnest in authorising Prince Gortschakoff to negotiate a peace on the basis of the four famous propositions of the Vienna Conference. Popular as the war is among the British and French people, wicked as the Czar has shown himself to be, highly as he may deserve punishment, and righteous as may be the cause in which France and Great Britain are allied, war is too frightful a calamity to be persisted in a moment longer than it is necessary. Lord Aberdeen, whose fame is already emerging from the dark clouds which for a time threatened to obscure it, declared that war under such circumstances was a crime. The wise and the good, as well as the brave, are of this opinion; and, however the factious or the ignorant may clamour, this country, and France also, as well as Germany and every part of Europe, will hail with sincere satisfaction the re-establishment of peace.

But if the Czar be insincere? If he be seeking to gain time, and to sow disunion among the Allies? Even in such a case no evil can accrue. He will not succeed in his attempt. Austria is no less determined than England and France to fight out the quarrel to any or every extremity, if it be not possible to secure a lasting and an honourable peace on any other condition than "war to the knife." The antecedents of the Czar are such that no one would trust his readiness to make peace, if the negotiation of the

H.M.S. WAR-SHIP "THE ST. JEAN D'ACRE" LEAVING CORK FOR THE CRIMEA.—(SEE NEXT PAGE.)

preliminaries were to put an end to the operation s of the war. The Allies know their duty too well to accede to such a proposition if it were made, and are too clear-sighted to fall into any pitfall of the kind, if the cunning of the Czar should have induced him to dig it for them. Whatever may be the cha racter of the events that take place at Vienna, the war will not slacken in consequence of the renewal of negotiations. If we read aright the feeling of the British and French Governments, and the feeling, at the same time, of the British and French people, the siege of Sebastopol will be pressed, if possible, with even greater vigour than before, so as to confirm the Czar in those good intentions of which his fear, and not his sense of justice, has been the parent. It is wholesome dread that has brought him to abate his high pretensions. The Czar finds the "knout" his most effective instrument of government. Europe will take a lesson from the Muscovite book, and coerce the Monarch whom it cannot control by appeals to his conscience. Should there be many delays at Vienna, Sebastopol we hope and believe will fall in the interval, and help to expedite the solid peace which Europe expects.

EMBARKATION OF TROOPS AT CORK FOR THE CRIMEA.

THE embarkation of reinforcements for the seat of war continues; and the Illustration upon the preceding page shows one of these interesting scenes of departure, at Cork, on Thursday week. In the afternoon, the *St. Jean d'Acre*, 600-horse power, Capt. the Hon. H. Keppel, arrived at Queenstown, having sailed from Plymouth in less than twenty-one hours. She had already two general officers on board; and carried besides a number of horses and a large quantity of stores.

Intelligence of her arrival was transmitted at 3h. 30m. p.m. to Mr. Donegan, River Steamers' Secretary, and at five o'clock the *Prince* steamer started, having in that short space of time taken on board the entire baggage and guard of the various drafts, which on arrival at Queenstown was embarked on board the *St. Jean d'Acre*. The drafts went down numbered 640 men, of the following regiments:—

51 of the 33rd, with Lieutenants Hunt and Hand.
51 of the 82nd, with Captain Bowden, and Lieutenant Hill
97 of the 33rd, with Captain Ellis, Lieutenant Wallis, and Ensign Ellis.
109 of the 41st, Captain Bertram, Lieut. Lambert, and Lieut. Nowlan.
67 of the 47th, Captain Elgee.
123 of the 17th, Captain Colthurst, Lieut. Thompson, Ensigns Travis and Disbrowe
17 of the 50th—no officers
45 of the 68th—no officers
39 of the 88th, Lieutenant Hannay.
67 of the 69th, Lieutenant Eustace
9 of the 57th, Captain Brown, and Lieut. Ashwin.

The *St Jean d'Acre* has on board Major-General Lord Rokeby and Major-General Barnard, both appointed to command divisions of the army in the Crimea. Such was the haste used in the embarkation, and so sudden was the arrival of the *St. Jean d'Acre*, that several officers who should have embarked in her were absent on a shooting excursion, and were unable to go on board with the drafts of their regiments.

The noble vessel, one of the finest and fleetest in the British Navy, left her anchorage at about half-past seven o'clock on Saturday morning: her top-gallant-masts were lowered; but she proceeded to sea in a spanking style. She had altogether 1700 men on board on leaving Cork harbour.

Our Sketch, by Mr. R. L. Stopford, represents the *St. Jean d'Acre* passing the Lighthouse.

PROPOSED CATHEDRAL AT LILLE.

AN architectural competition of more than usual importance and interest has been announced in France—the construction of a new church of "monumental" character at Lille, to be dedicated as Notre Dame de la Treille et St. Pierre. This building is destined to serve hereafter as the Cathedral of that city, under the not-unlikely contingency of its being detached from the see of Arras and being made the seat of its own diocesan. The projectors of this scheme have issued a prospectus, by which it appears that the building is to be from 100 to 110 metres (above 300 feet) in length, with one or two spires, and to cost, exclusive of decorations, 3,000,000 francs (£120,000). The style decided is the Gothic of the earlier portion of the thirteenth century, or what in England would be termed developed First Pointed. The competition is thrown open to the whole world—the architects of England and of Germany, who have made church building their particular study, being invited to enter into an honourable rivalry with those of France itself;—a proceeding creditable to those who have offered the invitation, and creditable to those who will accept it. Several of our most distinguished ecclesiastical architects are, we understand, desirous of this trial of skill. The size and importance of the city of Lille, and its proximity to England (lying as it does—since the organisation of the great Continental railway system—at the divergence of the high roads from our country to Paris on the one side, and Belgium and Germany on the other), render the erection of a church there of the proposed dimensions and character a work of no ordinary interest. To all lovers of mediæval architecture it must present itself as an unmistakeable and tangible proof of the European triumph of the Pointed style for church purposes. Among the names of persons mentioned in the programme as connected with the undertaking we observe those of gentlemen known beyond their own respective countries for their cultivation of Mediæval art, such as M. le Père Martin, M. Didron, M. de Caumont, M. d'Arcisnag, M. Reichensperger (the recently-elected Vice-President of the Second Prussian Chamber), &c. The 1st of Dec., 1855, is fixed as the date, previous to which it is expected that the designs (which are, of course, to be anonymous) shall be sent in. Three prizes of 6000f., 4000f., and 2000f. are offered for the three designs which shall appear to the judges most worthy of honourable distinction; the sum to be included (in case of the adoption of any of them for the actual building) in the architect's commission, which is to be at the rate of five per cent for the first 1,000,000 francs expended, four per cent for the second, and three per cent for the third; or an average of four per cent on the whole anticipated outlay of 3,000,000 francs. If the first prizeman shall be selected (as it is contemplated as the most probable result), an immediate advance of 10,000 francs is promised. M. Dalman, the well-known bookseller, of Bond-street, is named as the agent in England, to whom architects desirous of procuring copies of the prospectus are to apply.

PAPIER-MACHE.—This artistic trade in Birmingham is tolerably active. Messrs. Jennens and Betridge have just completed for her Majesty an admirable specimen of art-manufacture of the above class. It consists of a beautiful screen in three folds, the ornamentation of which is very artistic in design as well as skilful in execution. The effect of the whole is very chaste and attractive, and worthy in every way of the eminent establishment which has had the honour of supplying it to the Royal household.

THE Cape of Good Hope and Natal steamers belonging to the General Screw Steam Company have been ordered home, and the steam communication between Cape Town, Algoa Bay, and Natal, will therefore for the present be suspended.

THE receipts of the theatres, balls, singing cafés, and curiosities of Paris, in the month of December last, were 1,225,739 fr., which were 114,867 fr. more than in November. The total receipts of the year were 12,409,051 fr.

A NEW RUSSIAN RIFLE CORPS.—A private letter from St. Petersburg states that the Crown serfs have offered the Emperor Nicholas a contingent of 60,000 men, who are to be employed as sharpshooters. Among them are to be all the ermine-hunters, who are estimated at 20,000. These are said to be skilful marksmen, who pass their whole lives on the banks of the Ural or the Oby, in the chase of the fox, the beaver, and the ermine. It is known that this animal can only be aimed at from a considerable distance, and must be hit in the nose to avoid injuring the skin. The whole of the hunters (of the latter sex) are to be immediately organised and sent to the Crimea. They are to be armed with the Minié rifle.

AN innovation has been introduced into the army of the Two Sicilies, namely, that of a singing school. Thirty men from every regiment are to be instructed in singing religious hymns, in order that they may perform at processions and on other great occasions.

PIRACY IN THE CHINA SEAS.—Despatches from Rear-Admiral Stirling report the operations of the boats of the *Spartan*, under Lieutenant Palliser, in pursuit of pirates, which have resulted in the recovery of a French lady who had been seized by the pirates, and part of the cargo of a vessel they had plundered, as well as in the destruction of three forts mounting seventeen guns, the piratical settlement and twenty piratical junks, without the loss of a single man. The Admiralty have promoted Lieutenant Palliser to the rank of Commander.

FOREIGN AND COLONIAL INTELLIGENCE.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The announcement of the circumstances which seem to lead to a well-grounded hope that negotiations, tending to produce a solid and honourable peace, are about to be entered upon, has, as may be supposed, the happiest effect on the public mind here. The report, which was circulated about the Boulevards—the great centre of Paris—as early as Sunday night, was not generally spread till Tuesday morning, and was at all sides greeted with marks of the liveliest satisfaction; and the probability that matters will really terminate in the establishment of peace seems to be almost universally accredited.

Already has this prospect given a new impulse to affairs of all sorts, and the balls and receptions—public and private—which, frivolous as they may be in themselves, yet in such cases acquire an importance of no mean degree, as symptomatic of the state of the public mind, begin to assume an animation which they wanted. That of the Hôtel de Ville—the first of the season—to take place on the 20th, is expected to be particularly brilliant. The first official ball of the season was given by M. Billault on Saturday last.

The semi-official journals have dwelt much on a circumstance which did not seem to merit any very particular notice—the annual dinner of the Imperial family at the Prince Jérome's, which an indisposition of the Emperor prevented his attending. The real signification of the air of importance given to this réunion is the fact of its being the occasion of a complete reconciliation between the Princess Mathilde and her father—a reconciliation which the Emperor has long desired, and which he has finally brought about. It appears certain that the Prince Napoléon returns almost immediately to France for the restoration of his health—a decision arrived at before the prospect of the negotiation of a peace was brought forward.

The New Year's custom of persons sending cards to all the members of their acquaintance has, this year, been marked in several instances by a singular innovation, the appearance of photographic portraits of the sender on the cards.

The French Government has manifested an act of tolerance and liberality, which is a favourable sign of the times, in giving an official mission to M. Frossard, Protestant pastor of Bagnières de Bigorre, to go to the East, to organise the service of almoners for each of the troops as profess the Reformed religion. This mission is (of course in case of the continuance of the war) to occupy five months; and M. Frossard has already left France to commence his operations.

Various essays are being constantly made of new arms and projectiles for the necessities of the times. At Vincennes a newly-invented shell was, a short time ago, exhibited, but, bursting too soon it occasioned some slight accidents. It appears, however, to combine so many elements of success that a fresh experiment is to be tried with it. A celebrated artist, the first flower-painter in France, has made the discovery of a new projectile, which he has come from Lyon to Paris to submit for the approval of Maréchal Vaillant. The Minister and the Committee of Artillery have been much struck by the value of the invention, which, in addition to various other advantages, unites the extremely important one of enabling the shot to be directed, by night as well as by day, to any given spot with almost unerring precision. At St Chamans several hundred cannons are being constructed on the model of the Minié rifles, and are to carry twelve-pound shot. *Apropos* of this subject, there exists in the Institute of France, in one of the twelve autograph volumes left by Leonardo da Vinci, the description of a steam-cannon, drawn and designed under the name of Architonitruo: this bears the date of 1490, and Leonardo da Vinci declares that the invention is not his own but is borrowed from "The Book of Fires" of Archimedes: thus the ancients were evidently acquainted with steam as a motive agent.

One of the visitors to Paris on the occasion of the Great Exhibition is to be no less a personage than Queen Pomare—so at least the Bordeaux journals inform us.

Within the last five or six weeks there have been baptised at various churches in the capital five girls under the name of Alma.

At the Institute is now being displayed a splendid picture of Horace Vernet, representing the "Celebration of Mass in the French Camp in the Crimea." At the moment that the priest raises the *hostie* a ball falls in the midst of the assembly, and covers several of them with the earth it has ploughed up in its course. The energy and animation displayed in the figures, and, above all, the effects of light and shade, are peculiarly striking and truthful. The picture is to appear in the approaching Exhibition.

The Grand Opera has received a reinforcement in the person of the Senora Anglès Fortuni, a Spaniard, who has *débuté* with considerable success in the part of *Lucia di Lammermoor*. She has a most agreeable voice, a good method, a pretty face, and splendid hair: surely with such advantages the public ought to be satisfied! Neri Baraldi has made his appearance in the *Favorite*; France, it seems, is not in the vein of native singers, for the moment. Report states that M. Arsène Houssaye is about to resign the direction of the Théâtre Française, that the Emperor intends to bestow the functions of the office on a Senator or a Deputy, and that, as the salary of such a post would be not in accordance with the electoral law, he will receive, instead, *les frais de représentation*, amounting to 25,000f. (£1000). Another rumour asserts that the office of Grand Aumônier is to be reinstituted, and to be bestowed on the Cardinal Dupont, Archbishop of Bourges, with a palace and 60,000f. salary.

The manufacturing of lint for the service of the army is the great occupation of the *salons* at this moment: the Empress and her attendants set the example, which is of course followed by the guests.

DISTURBANCES IN SPAIN.

The news from Spain lately has not been of a very satisfactory nature. Disturbances have taken place in various parts of the kingdom, which are partly ascribed to Carlist intrigue, partly to local grievances. Malaga has been one of the worst places apparently.

In the morning of the 28th ult. the Governor caused a proclamation to be stuck up on the walls, announcing that the examining magistrate had ordered the detention of certain persons who were concerned in some disturbances that took place on the 18th ult. This detention being displeasing to a portion of the population, numerous groups assembled, and proceeded to tear down the placards. The alcalde thereupon assembled the municipality, and at their head went to the Governor to ask him to use influence to have the parties in question released. The Governor, after some hesitation, consented to do what they required, and the municipal authorities made an announcement to that effect. Nevertheless, the groups refused to disperse; and, having united into one body, proceeded to the residence of the Governor, uttering seditious cries, and demanding that he should be put to death. They attempted to force their way into his house; but a detachment of carabineers and civil guards which came up prevented them. The National Guard turned out, and used all their efforts to establish order. According to the *Espana*, the mob, after the failure of their attack on the Governor's house, committed no other excesses, and tranquility was re-established. It adds, however, that the Civil Governor had resigned his post, and retired to Granada; and that the Military Governor had undertaken the administration of civil affairs until a new Governor should arrive.

Some of the Spanish journals, and private letters also, make mention of disturbances as having taken place at other points—at Teruel, Valencia, Granada, and Arbacete—searbable, in the first place, to the municipal elections and discontent at the octroi duties; and in the last, to a band of Carlists, who proclaimed the Conde de Montemolin as King. There may be added to this catalogo, disturbances at Cordova, where a young gentleman of high family narrowly escaped massacre; a Carlist attempt at Pampeluna, rendered abortive by the vigilance of an individual sergeant, and of Montemolinist factions at Lugo, Santiago, and Orense, all of which were instantly put down by the civil and military authorities.

PROJECTED BOMBARDMENT OF SEBASTOPOL.

Rumours of the taking of Sebastopol have been current both in London and Paris during the last two or three days, but no value is attached to them by those who are presumed to be in the secrets of the campaign. The general belief, however, is that a general bombardment, with a view to an assault or a general engagement, will have taken place by this time if the weather has been favourable. Much would depend on that. The French batteries were quite prepared for the attack some weeks ago; and there is little doubt but those of the English army would be completed before this time. The Allied forces were estimated at 75,000 French and 28,000 English, on the 22nd ult.; since which period considerable reinforcements must have arrived. The Turkish force, including the Egyptian contingent, will consist of 40,000 or 50,000 men and 60 guns. Omer Pacha had sailed for Balaclava on the 1st inst., to concert his movements with Lord Raglan and General Canrobert. The understanding seems to be that the Turks will concentrate their forces at Eupatoria, and take the Russians in the rear when the decisive moment comes. Unless Prince Menschikoff receive large reinforcements soon, he will find himself in a very awkward position.

A correspondent of a Prussian paper, writing from the heights of Sebastopol, on the 23rd ult., after an extensive excursion through every portion of the French camp, gives the following *résumé* of their military position:—

Since the two attacks which were made against Sebastopol attacks necessarily limited by the insufficiency of our siege artillery—our army has completed immense works, which will double our means of action. Our batteries, which were only eighty-seven in number, are now tripled, and armed with guns of heavy calibre, recently brought from France or taken from the ships of the fleet. The armament of all the batteries is now completed. We can oppose 120 guns to those of the enemy; one-half of those guns belong to the navy, and are served by sailors and marines. The batteries have been constructed by engineer officers, assisted by our brave soldiers, with incomprehensible rapidity. Despite the incessant and well-directed fire of the town.

The line of the trenches is nearly three leagues and a half in extent. This will explain at once the amount of energy, labour, and patience that was required to execute such a work in so short a time. We are quite ready to open fire. Unhappily the English have not been able to push on their works as rapidly as us. Notwithstanding the ardour displayed by our allies, it is impossible that their batteries can be ready to open fire before the 10th or 12th of January.

The immense stores of the Russian arsenals give them a notable advantage over us. The batteries which protect the place on the land side are armed with about 300 pieces, to which we can only oppose about 230. It is only, therefore, a vigorous assault, after a furious cannonade, that can procure us any real success.

According to reliable information, which is justified by the opinion of all competent men, it is almost certain that the Commanders-in-Chief will not attempt the assault until they have acted in a decisive manner against the enemy's army in the field.

The Turkish army, which is landing at Eupatoria, will take the Russians in the rear, so as energetically to second the attack made in front by the Allies. Prince Menschikoff seems to be quite aware of the difficulties of his position. He has retired with the main body of his army between the right bank of Tchernaya, the main road of the peninsula and the Belbec, and he endeavours to make good his position and his communications with Sebastopol by covering his army by immense defensive works erected along the banks of the Tchernaya. His army, at the present moment, does not appear to exceed 80,000 men.

The garrison of Sebastopol, on the other hand, is not inactive. For the last three weeks great activity has been visible in the construction of additional works of defence between the Flag-staff and Quarantine bastions.

As you are doubtless aware, General Liprandi's Division, which threatened Balaclava, has joined the main body of the Russian army; but the General has left from 6000 to 8000 men in the mountain passes from the Tchernaya to the hills above Balaclava. The object of these troops is probably to watch our movements; they are only separated by the plain of Balaclava from our great line of circumvallation and from General Bosquet's Division.

In addition to the great works directed against the city, the Allied armies have constructed strong defensive works on various points. Thus, Balaclava is covered by many redoubts to prevent an attack by the Russians

On our extreme left the trenches have been pushed to the far end of the Quarantine Battery under the guns of the fort, so as to assure direct communications with the sea. Such is the complete *ensemble* of the works of attack and defence, and the general dispositions of the Allied armies.

Other correspondents, both English and French, describe the position of all the French ordnance as most commanding. If it is to be done by powder and shot, the French could level the town in twenty-four hours. There is not a single house or building, even on the north side, which their mortars cannot reach, and there is no precaution known to modern warfare which can avert the terrific effects of mortar shells. A 13-inch shell exploding levels all ordinary buildings for a space of twenty or thirty feet round the spot. Fires lighted from cannon hardly do as much mischief as cannon-shot, even among men. Whether they will prove more successful or not, none can say; but the general opinion in both camps is that the forty-eight hours' bombardment will hardly leave one stone of Sebastopol upon another. Of course this refers to the houses and smaller batteries. The large forts are built to bomb-proof, and will, therefore, suffer comparatively little, except in men.

The English are to support the French attack by a tremendous cannonade and bombardment on the eastern side of the town and head of the harbour. It is probable this is to be carried on principally as our batteries have been replaced by new ones, and an advanced parallel, containing eight guns, thrown up near the Ovens. This latter work is within 300 yards of the walls, and may therefore be considered as a kind of breaching battery. In place of the lancaster guns, mortars are mounted; and also in our other chief batteries (viz., Gordon's, the Naval, and Green Mound) large mortar banks have been thrown up, and the ordnance placed.

The new work at Inkerman was nearly finished when the last steamer sailed, and the greater part of the guns placed: 21 English and 17 French heavy guns and mortars will command the harbour from this spot. Great things are expected from its fire, which, it is said, must destroy the shipping in twelve hours.

The small "coburns" are to be moved into a little breastwork at the Ovens, and employed in throwing 5½-inch shell among the troops working the batteries, and into the nearest guardhouses and troop stations. These little mortars, which two men can run away with with perfect ease, will certainly do as much service in their way as the larger comrades. Their range is not above 1200 or 1300 yards; but from the Ovens at that range they can command most of the south side of the town, and nearly all the batteries opposed to the English. With these coburns are to be placed five or six light field-pieces for the purpose of destroying the formidable *chevaux de frise* and abatis which surround the Russian batteries, as with these in the way no storm could be attempted. A rocket battery will be stationed at Inkerman, and in the batteries of our old right and left attacks. In all—with French and English—we shall open with about 260 pieces of ordnance of all descriptions. Some accounts make the number of guns and mortars still greater.

It is said that, in the instructions which Count Montebello lately carried to the Commanders, the most positive orders were given to hasten on the works and expedite the fall of Sebastopol before any possible negotiations between the Cabinets could take place, and orders for a general suspension of hostilities be given. Nothing could be more unpopular, or give greater dissatisfaction to the troops, than any such an order as armistice arriving.

In the meantime, the besieged are not idle; but, on the contrary, busily engaged in fighting, mining, repairing damages, and preparing barricades and other contrivances to obstruct our eventually passing through the streets. That the garrison consider themselves as lost is evident from their not wishing to let the women and children be destroyed in the universal carnage that must ensue, but turning them out of the town. Even those women who had been still left there to attend and cook for the garrison have quitted the place. In passing through our lines they were very loud in their crying and lamentations; and our men, after feeling them, let them pass to Inkerman, where General Liprandi furnished them with camels and madjaris, the waggons of the country not being known on the Bargheesi.

It is a mistake to suppose that the Russian vessels of war have been so much injured or weakened by our guns, as has been represented by many correspondents. By their facility of changing position, getting shelter behind projecting points, and under high cliffs, and from our guns hitherto not having been of sufficient range, they have contrived to elude every effort at their destruction, and escaped with scarcely any damage. They are one of the most serious obstacles in the way of our taking the town, and would still be so in preventing our keeping possession of it, were they permitted to remain in their present whole and active state. Whether the new naval Commander-in-Chief will be able to assist us by his tactics, in ridding the besieging army of this thorn in their side, remains to be proved. On the night of the 19th ult. Captain Gordon traced out a new work very far in advance of those already made or in course of construction—so close that from it a stone may be thrown into the water—and the guns of which, there is little doubt, will command the shipping over a very extensive portion of the roadstead.

THE ARMY AT EUPATORIA.

The *Constitutionnel*, after stating that officers of artillery and engineers had been sent to Eupatoria to throw up earth-works and fortifications, in order to make it as strong a position as Balaclava, and as such the *point d'appui* of an army of operation, proceeds to say:—

Thus army must now have arrived there: it consists of the Egyptian division of the best troops of Omer Pacha, and is commanded by the Turkish Generalissimo. We have said that Eupatoria is to be to the north of Sebastopol what Balaclava is to the south. That fact will suffice to show in what a situation the disembarkation of Omer Pacha will probably place the Russian army—it will be placed between two fires. One of two things will happen either the Russian army will endeavour to crush the troops whose basis is at Eupatoria, with the certainty of being immediately attacked in the rear by the Anglo-French army—and the destruction of the Russian army would deprive Sebastopol of all hope of making a successful resistance; or, in the second place, the Russian army, in order not to accept battle in such a disadvantageous position, and with such adverse chances, will retire from the banks of the Belbec, as it has retired from the banks of the Tchernaya; will concentrate itself on Bagtcherai, or on Inkherman; and will abandon Sebastopol to its own resources and to the chances of an assault. Such a retreat of the Russian army would, in fact, be immediately followed by the complete investment of the place, and the *dénouement* would not be waited for long. Thus, we shall have a decisive battle in the most favourable conditions for the Allies, or the retirement of the Russians without combat, and the immediate assault of Sebastopol. Such was the situation of things in the Crimea at the end of the year. Let it be certain that the year 1855 will have well commenced for the arms of France and her allies.

A RUSSIAN SORTIE AND SURPRISE.

On the morning of the 21st ult., a little before three o'clock, the whole Camp before Sebastopol was suddenly aroused by bugles sounding the alarm. As the stirring notes ran from regiment to regiment, in many instances followed by the "double," the troops started up from their sleep and were quickly under arms. The night was fine and starlight, but there was no moon visible. Along the whole line of batteries was heard the sharp fire of musketry, and the sky was constantly illumined by the reflected flashes of the heavy guns and the flight of shells in the air. To the westward, in the direction of Cape Chersonese and the fleet, were also frequent flashes of light, which, at first, it was not easy to determine. The wind was blowing from the south, and in consequence of this direction, and some peculiar condition of the air, neither the discharge of the heavy guns in the batteries, nor the bursting of the shells, made the intense booming impression on the ear which, under other circumstances, from their numbers, they would have made. Some of the shot were thrown very far forward; and this fact, together with the direction of the shells, proved that many of them were aimed at reinforcements which might be expected to be approaching from the Camp to assist the men in the trenches. The rush of these missiles in opposition to the current of air was particularly and most unpleasantly audible as the regiments moved on in advance to the support; but, although the shot were heard to fall thickly around, no casualty was occasioned by them

The cause of the alarm and turn-out proved to be a sortie made by the Russians against the advanced works both of the English and French batteries. Distinct attacks had been made nearly at the same time on the troops in advance of Captain Gordon's battery on Frenchman's-hill, and on those protecting the advanced work which some time since was wrested from the Russians; another body approached the Inkermann originally made in advance of Captain Chapman's battery on Greenhill. The enemy came on in comparatively such limited numbers against the advanced work in front of Frenchman's-hill as almost to lead to the belief that it was planned as a feint, while the more serious attack was made against Greenhill and the advanced French works

In both of the British positions there was an inexcusable amount of negligence, and in consequence there was exhibited, though in a very limited and diminutive scale comparatively, a repetition of the disastrous victory of Inkerman But though comparatively trifling in its results, had the Russians been aware of our failing, and in force sufficient to take advantage of it, the issue might have been very serious, especially at Frenchman's-hill, for the guns in the battery might have been disabled, and the contest carried into the very camp of the Light Division, as before into that of the Second Division. Neither men nor officers were on the alert, and all were taken by surprise. There were eight companies in the advanced work of Captain Gordon's battery, taken from the 7th, 23rd, 33rd, and 34th Regiments; and this force, properly prepared and organised, was sufficient to hold it against double the number of the enemy who attacked it. As it was, however, the sentries posted only a few yards in front of the work must have been utterly careless, and in all probability were lying down, if not asleep; for the first intimation of the attack to the men and officers lying within the work was given by the shouts of the Russians themselves who had mounted the parapet, and were already committing havoc among the sleepers. In consequence was there was a panic, scarcely any resistance was made, and the covering party hastily fell back upon the battery. Some of the men even crowded in at the embrasures, and thus prevented the guns being used against the Russians in possession of the advanced work. Others crowding within the battery impeded the action of the troops stationed there for a time; but when order was restored, and an advance was made to regain from the enemy the work they were supposed to be still holding, it was found that they had already abandoned it. They were not in sufficient force to retain it, extending as it does for a long distance across the hill towards the middle of Orchakov ravine; but they had had time to carry off considerable booty in arms, blankets, and accoutrements. Five men were killed, and all been stripped, even to their boots. One body was found with eight bayonet wounds; another was mangled, and thrown into the well. Fifteen were wounded; some so badly that they were left for dead in the work by the Russians. These had been severely treated, having been repeatedly wounded after they had fallen, and in three or four instances had also been kicked and beaten over the head with the butt of the musket, to ensure destruction of life. About twenty-seven were missing—no doubt having received wounds which did not disable them from marching, and being carried away as prisoners. Among the latter was Lieut. J. Byron, of the 34th Regiment. This officer was seen to fall by a sergeant, who states that he was wounded, but apparently not severely, and has not since been forthcoming. There can be little doubt but that he was taken away as a prisoner.

FRENCH PREPARATIONS FOR WAR.

Whatever may be doing at Vienna, the French Emperor shows no abatement of zeal in forwarding troops and munitions of war to the Crimea. Letters from Toulon state that orders have been received to hasten as much as possible the completion of the gun-boats which are building there, and which are said to be intended for the Sea of Azoff The armament is said to have placed at the disposal of the naval engineer charged with the direction of the works an unlimited supply of men and *matériel*, and it is expected that these boats will be ready by the month of April. As regards war *matériel* a letter from Metz says:—"During the last month we have sent by railway for Marseilles and Toulon, for the army in the East, upwards of a million of Congreve rockets, large bombs, and howitzer-shells, and 150,000 kilogrammes of gunpowder."

On Tuesday last the Empeor, attended by the Minister of War, and Generals Regnault de St. Jean d'Angély, Rollin, de Cotte, and Mellinet, reviewed, in the court of honour before the Tuileries, the detachments of the Imperial Guard destined to join the army of the East in the Crimea, and whose departure was to take place on the 11th or 12th inst. These troops, under the command of General Ulrich, were composed of one company of Sappers of the Engineers, of detachments from the 1st and 2nd Regiments of Grenadiers, of detachments from the 1st and 2nd Regiment of Voltigeurs, of a half-battalion of the Foot Chasseurs, and two batteries of horse artillery. The infantry was arrayed in three lines, with the artillery behind it.

His Majesty after passing down the front of the troops, stationed himself near the Clock Pavilion, where the battalions were formed in square. The Emperor advanced to the centre, and pronounced the following address in a firm and fervent tone of voice, amid repeated cries of "Vive l'Empereur!"

Soldiers,—The French people, in the sovereignty of their will, have set up again many things deemed for ever dead, and now the Empire is reconstituted. Intimate alliances exist with our former enemies. The flag of France waves with honour on distant shores which until now the bold flight of our eagles has never reached. The Imperial Guard, the heroic representative of military glory and honour, is here before me, surrounding the Emperor as of yore, with the same devotion, carrying the same flag, and, above all, cherishing in its heart the same feelings of devotion to its country. Receive, then, these flags, which will lead you on to victory, as they led your fathers, as they have just led your comrades. Go and share what dangers yet remain to be surmounted, what glory to be gathered. Soon you will have received the noble baptism to which you aspire, and *you will have helped to plant our eagles on the walls of Sebastopol.*

After this harangue the Emperor alighted from his horse, and with his own hand gave the flags to the two Colonels commanding the Grenadiers and the Voltigeurs. Her Majesty the Empress, present in the balcony, then descended into the square, and walked round it, leaning on the arm of the Emperor. Their Majesties stopped several times to speak to the soldiers. Seeing the emotion of the Empress, these warriors redoubled their enthusiastic cries. The Emperor, after conducting the Empress back, remounted his horse, and the ranks began to defile past him. A considerable crowd pressed against the iron railing of the Carrousel, and mingled their acclamations with those of the soldiers.

NEGOTIATIONS FOR PEACE.

Instead of refusing to accept the Four Points as interpreted by the Three Powers, the Czar has hastened to announce to Prince Gortschakoff, by electric telegraph, that he is perfectly willing to agree to the terms proposed. On Sunday last a conference was held at Vienna, at which the Russian Ambassador stated that he was authorised to enter upon negotiations with a view to the re-establishment of the peace of Europe. On Monday the Conference again met, and the declaration of Prince Gortschakoff having been considered satisfactory, it was agreed that the negotiations for peace should commence as soon as full powers have been conferred on Lord Westmoreland and Baron de Bourqueney. The readiness of the Czar to give in is said to be owing to the bad news he has received from the Crimea. If that be true, his submission to the terms may be sincere. The *Kreuz Zeitung*, the organ of the Berlin Russian party, which will naturally feel angry at the turn affairs seem to be taking, professes not to believe the report.

There has not appeared as yet any authentic account of the identic interpretation of the four guarantees. These guarantees were laid down in the identic notes of the 8th of August. It was then declared by each Power separately, but in the same terms, that the relations of the Sublime Porte with the Imperial Court of Russia could not be re-established on solid and durable basis

1. If the protectorate hitherto exercised by the Imperial Court of Russia over the Principalities of Wallachia, Moldavia, and Servia, be not discontinued for the future; and if the privileges accorded by the Sultan to those provinces, dependencies of their empire, be not placed under the collective guarantee of the Powers, in virtue of an arrangement to be concluded with the Sublime Porte, and the stipulations of which should at the same time regulate all questions of detail.

2. If the navigation of the Danube at its mouths be not freed from all obstacle, and submitted to the application of the principles established by the acts of the Congress of Vienna

3. If the treaty of July 13, 1841, be not revised in concert by all the high contracting parties in the interest of the balance of power in Europe. ("Si le traité du 13 Juillet, 1841, n'est pas revisé de concert par toutes les hautes parties contractantes dans un intérêt d'equilibre Européen.")

4. If Russia do not give up her claim to exercise an official protectorate over the subjects of the Sublime Porte, to whatever rite they may belong; and if Austria, Great Britain, France, Prussia, and Russia do not lend their mutual assistance (this phrase is an imitative from the Ottoman Government) to the continuation and the observance of the religious privileges of the different Christian communities, and to turn to account, to the common interest of their co-religionists, the generous intentions manifested by his Majesty the Sultan, at the same time excluding any aggression on his dignity and the independence of his Crown ("sans qu'il en résulte aucune atteinte pour sa dignité et l'indépendance de sa couronne")

Lord Clarendon, in his despatch of July 22, explained the meaning attached by the English Government to the guarantees. He said—

These guarantees are naturally suggested by the dangers to guard against which they are required

That Russia has taken advantage of the exclusive right which she had acquired by treaty to watch over the relations of Wallachia and Moldavia with the suzerain Power, to enter those provinces as if they were part of her own territory

Again, the privileged frontier of Russia in the Black Sea has enabled her to establish in those waters a naval power which, in the absence of any counterbalancing force, is a standing menace to the Ottoman Empire.

The uncontrolled possession by Russia of the principal mouth of the Danube has created obstacles to the navigation of that great river which seriously affect the general commerce of Europe

Finally, the stipulations of the treaty of Kukschuk-Kainardji, relative to the protection of the Christians, have become, by a wrongful interpretation, the principal cause of the present struggle

Upon all these points the *status quo ante bellum* must undergo important modifications

The interpretation placed upon the guarantees by the French Cabinet is expressed in similar terms by M. Drouyn de Lhuys, in his despatch of the same date. In reciting the third guarantee, he adds, "and in the sense of the limitation of Russian power in the Black Sea."

In addition to these identic interpretations by the Ministers of England and France, we have the opinion of the guarantees given by the Russian Minister in his despatch to Prince Gortschakoff of August 14 (26). After first declining to examine the four guarantees, on the ground that even their acceptance would not put a stop to hostilities, he characterises them as "conditions which, if they were to remain as they have been actually submitted to us, suppose Russia to be *already crushed by the exhaustion of a long war*, and which, if the force of temporary circumstances forced us ever to submit to them, so far from assuring to Europe a solid and especially a durable peace, such as the Austrian Government appears to expect, would only expose that peace to complications without end." Count Nesselrode adds:—"In acceding as he has done to the principles laid down in the protocol, the Emperor certainly had not any intention of attributing to them the signification which has been here claimed." This, however, it will be remembered, was the decision of Russia before the expedition to the Crimea.

We know now that Austria agrees with the Western Powers in their interpretation of the four guarantees, and the above extracts enable us to conjecture the character of that interpretation—now accepted by the Emperor of Russia. It must be borne in mind, however, that the four guarantees, as interpreted, are put forward as the minimum of the Allied demands, and that all the questions arising out of the eventualities of the war are expressly reserved.

THE BALTIC TRADE.

Letters from Riga state that, from the extreme mildness of the season, the ports in the Gulf of Finland remain open, and the arrivals and departures are exceedingly numerous. Though two Imperial edicts had successively forbidden the exportation of corn from that part of the empire, the Russian authorities, looking to the benefit of the commercial and agricultural interests, which had suffered so grievously from the war, opposed no obstacle at present to this traffic. Neutral vessels were freely loading grain, principally rye and wheat. Danish and Swedish vessels were preferred, as greater confidence was felt in the continued neutrality of those two flags. A good deal was also doing on Dutch account, and not less than ten vessels under that flag had very lately left for the ports of Holland.

AMERICA.

The steam-ship *Pacific*, which left New York on the 28th ult., did not arrive at Liverpool till Wednesday, having been detained by fog

In New York a memorial to Congress had been numerously signed, calling upon the Government to tender the mediation of the United States in the pending war in the East. We also learn from Washington that the Committee of Foreign Affairs of the House of Representatives had concluded to report a resolution in support of the proposition.

In the House a resolution had been brought in the principal item being to unite with Great Britain in building a first-class lighthouse on Cape Race. After some debate the resolution passed.

There was a very strong probability of a resolution being adopted by Congress to send a vessel to Smith's Sound, in the spring, in search of Dr. Kane and the crew of his brig, the *Advance*.

The Washington correspondent of one of the best-informed New York papers states that the rumour that the British and French Ministers had entered a protest against the annexation of the Sandwich Islands to the United States is without foundation at present.

CATCHING A TARTAR.—Two Turkish Mulazim (Lieutenants) have been just brought into the Camp in a most dreadful state. They had been out with their detachment on patrolling duty, and fell in with a horseman in a rich Tartar dress, whom they took with them to show them the road. He rode between the Mulazim, pretending to be a nobleman, and professing the greatest loyalty towards the Russians. He, however, led them into an ambush, and galloped off in the confusion that ensued. The detachment of Turks was cut off nearly to a man. The Russians were, however, disturbed in their work by the appearance of a band of Tartars, and made off as fast as their little Cossack horses could carry them. The two Turkish officers are, however, seriously wounded, one of them received no less than seven wounds from the lance in his body and legs; the other lost his right hand, broke his leg in falling, and, whilst lying on the ground, received a pistol-shot in his face, which carried away his lower jaw.—*Letter from the Camp, Dec. 30.*

At the last sitting of the French Academy of Sciences, M. Halpen exhibited the large diamond called the Star of the South, which was found in Brazil, and of which he is the owner. It weighs 244 carats, but it is estimated that it will lose half its weight when cut. M. Halpen values this diamond at five millions of francs. When cut it will be placed in the Great Exhibition of the Palace of Industry.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

A letter from Paris says that the Emperor intends to visit the South next summer

A medical board was held on his Royal Highness the Duke of Cambridge on the 27th, at Scutari, and he has been advised to return home: his complaint is stated to be intermittent fever.

Prince Napoleon was preparing to leave Constantinople to return to the Crimea by the last accounts; but the Emperor, having been informed by the medical men that the state of health of the Prince would not allow of his continuing the campaign, has given him orders to return to France.

The Princess of Prussia is suffering at Coblentz from a slight attack of erysipelas, but it is hoped that she will completely recover in a few days

The Earl of Cardigan has arrived in Paris, from Marseilles, *en route* from the seat of war in the Crimea. His Lordship is daily expected to arrive in town.

The Duchess of Brabant returned to Vienna on Friday, from a visit to her sister, the Princess Elizabeth, at Pesth.

The health of King Louis of Bavaria is not yet re-established, but it appears that it has sensibly improved. The symptoms of his malady have diminished, and his strength is gradually returning

Lord Elgin was one of the passengers by the *Pacific*, which arrived at Liverpool on Wednesday

Madame de Fonton, the wife of the Russian Councillor of Legation at Vienna, left St. Petersburg for Vienna on the 21st December. The Viennese gossips are inclined to believe that she has been employed *a la Russe* on a diplomatic mission

Mussa Pacha (Sir S. Lakeman) has quitted Bucharest, having received an order to repair to Varna in the quality of Quartermaster-General, and there to superintend the embarkation of the Ottoman troops for the Crimea

It is said that the Duke de Montebello—who was a member of M. Guizot's Administration at the period of the Revolution of February, 1848—has given in his adhesion to the Imperial Government, and is to be created a Senator, and sent as Ambassador to Spain

The Hon. Charles A. Murray, C.B., our newly-appointed Minister to the Shah of Persia, has arrived at Teheran from England, via the Overland route

Letters from Tripoli give hopes that the report of Dr. Barth's death may be unfounded

The Grand Duke of Tuscany has decreed the cessation of the state of siege at Leghorn from the 2nd inst

Cardinal Wiseman has been appointed by the Pope a member of the Sacred Congregation of the Index

A tribute has been paid to art in appointing Professor Kiss (the sculptor of the "Amazon") President of the Society for the Advance of Art.

Mr. Cobden intends paying Leeds a visit before Parliament reassembles, to receive renewed expression in public to his views of the present war.

Count Buol gave a grand dinner at Vienna on the 31st of Dec. All the diplomatic corps were present, with the exception of the members of the Russian Legation.

The Duke of Sevillano, the Spanish Minister of Finance, has advanced several millions from his private fortune to meet the wants of the state.

His Royal Highness the Duke of Saxe-Coburg left Southampton on Tuesday, for Lisbon, in the *Great Western* steamer

The saloons of Paris occupy themselves with conjectures as to the scene at the Tuileries when M. Guizot, as Director of the Academy, shall have to present M. de Berryer, the newly elected member, to the Emperor; and, further, ask the Emperor's approval of the election of the Duc de Broglie and M. Falloux

General Viscount Combermere has had recently manufactured a portable steam-engine for farming purposes. He intends it to be used mainly in the cutting of timber

The Berlin carnival is expected to be unusually brilliant, and the *fêtes* at Court more than ordinarily splendid.

The *Belfast Mercury* makes the strange announcement that the corporation of Belfast is bankrupt—that it has, in fact, failed, with a debt of £380,000.

The Academy of the Beaux-Arts, on Saturday, appointed M. A. Thomas its President, and M. H. Lemaire its Vice-President.

Mr. Archibald Prentice, formerly editor and proprietor of the *Manchester Times*, has received a substantial testimonial of the respect of his friends for his public services during a period of thirty years, consisting of an investment of £1500, the produce of a subscription amongst them, in a life annuity of £150 for the lives of himself and Mrs. Prentice

The theatres at Verona and Brescia have been closed on account of disturbances having taken place during the performances.

A few days ago, during a pantomime performance at the Theatre Royal Glasgow, one of the performers had two of his fingers blown off, from the incautious use of a pistol.

It is rumoured that 8000 of the French Imperial Guard are to leave for Strasburg, and the movement is considered in the light of a demonstration against Prussia.

A vote of £2000 had been introduced into the Nova Scotia House of Assembly towards the relief of the orphans and widows of the soldiers who may fall in the present war.

The Government of Honduras has agreed to sell Tiger Island to the United States for 20,000 dollars

The number of men who, up to the present moment, have sailed from France and Algeria for the seat of war in the East amounts to 118,000.

The Committee on the Spanish Budget have resolved to propose a reduction of 500,000 reals in the allowance of the Duchess de Montpensier.

The colonists of Sydney, New South Wales, are forming themselves into a volunteer corps, to be ready to repel any attack that may be made by the Russians.

Recruiting for the Papal service is very actively carried on in the cantons of the ex-Sonderbund, and particularly in Lucerne and Friburg.

The want of rain is much felt all over England. A large number of corn and paper mills in the south have been stopped for some time on account of the drought.

The navigation between Rouen and Paris, which had been interrupted in consequence of the rising of the Seine, is again open, the river having fallen more than seventy centimetres during the last four days.

On the evening of the 23rd of December, from some unexplained cause, the gaslights went suddenly out in Stockholm, not only in the streets, but also in the shops and houses.

Such was the force of the gale on the night of Sunday week that every signal-lamp on the line of the Edinburgh and Glasgow Railway was blown out.

Among the passengers by the West India mail-steamer *Atrato*, which arrived at Southampton last week, were twelve French Republican proscripts, returned from their exile in Cayenne.

The copyright convention signed by the Governments of France and Spain came into operation on the 1st of January, 1855

Some missionaries of the Mormons are labouring most sedulously amongst the ignorant populations of several districts in Gloucestershire, particularly among the doctrine of polygamy.

The Imperial Commissioner of the Great Industrial Exhibition of 1855 has addressed a communication to French and foreign artists, inviting them to exhibit their works of art. Several facilities are offered by the French Government.

So great is the mildness of the season in Paris that roses and other flowers may be seen in abundance in the public gardens.

During the last year 210,749 persons left Liverpool as emigrants, being at the rate of more than 4000 each week.

The Legislative Body of Bremen have adopted a bill which prevents any Jew from residing there without having obtained permission from the Senate; thus legalising what has hitherto been the custom.

A lunar rainbow was recently observed during the night in front of Coniston Old Man.

New South Wales is going ahead at a great rate in the cost of her Government—for 1854-5 doubled, and the estimates for 1855 are £796,456—population being only 231,300

The new Police in Paris is reported to work exceedingly well. About 3500 men are already on duty.

More than 19,000 persons are under restraint as lunatics in England and Wales

The "Orphan of Lowood" ("Jane Eyre" dramatised) has become a stock play on the German stage

The first locomotive engine ever constructed in Italy left the factory at Pamper d'Arena (Piedmont) on the 30th ult. Its trial trips to Pontedecimo proved satisfactory.

The office of Grand Almoner of France, which was suppressed in 1830, is likely to be revived in the person of Cardinal Dupont, Archbishop of Bourges. Sixty thousand francs a year, and a palace to live in, are spoken of as the emoluments of this office.

The vault at Weimar which is the burying-place of the Princes of the Grand Ducal family, and in which the bodies of Schiller and Goethe are also deposited, has been broken into by thieves, who opened three of the coffins, and carried away all the ornaments in gold, as well as the jewels and gold opaulettes

NAVVIES FOR THE CRIMEA.

THE BALACLAVA RAILWAY CORPS

THE departure of the second detachment of the men engaged by Messrs. Peto and Betts to construct the railway from Balaclava to the trenches before the heights round Sebastopol, which we briefly noticed last week, was witnessed by a large party of noblemen and gentlemen. The "navvies," who are nearly all young men in the prime of vigorous manhood, presented all those evidences of stalwart strength and endurance for which their class is proverbial.

Every navvy, besides his pay and rations, has given to him gratuitously complete suits of clothing adapted for every variety of weather and work in which he may be engaged. They consist of a striped cotton shirt, over which a large red flannel shirt of stout quality. The trousers are of moleskin, lined throughout with flannel; strong worsted stockings, with laced boots, technically known as "ankle-jacks." The waistcoat is also of moleskin; and the coat a sort of "pea-jacket," which is also padded and lined with flannel. Some of the gangs were supplied with large roomy white flannel shirts or smocks. When working in boggy soil or in water, high boots are to be worn, as shown in our Illustration. We also give the costume to be adopted in wet weather, consisting of a complete suit of waterproof, with a "south-wester," instead of the woollen cap to be ordinarily worn. It is needless to add that the whole of the clothes are of excellent quality, and well adapted for the wear and tear they will have to undergo. The men themselves, who may be said to be the best judges, were highly pleased, and expressed themselves well contented with their "rig."

A large crowd assembled on the Brunswick Pier to witness their departure. Shortly after two o'clock the men were mustered on the fore-deck in their new clothing, to hear addresses from Capt. W. S. Andrews, managing director of the North of Europe Steam Navigation Company, and Lord Henry Clinton, who, with a party of gentlemen connected with the [illegible], were on the platform [illegible].

Capt. Andrews addressed the navvies in brief but homely and energetic terms which elicited hearty plaudits from his hearers. He told them that though the accommodation to be found on board ship necessarily differed considerably from what they had been accustomed to, yet nothing had been neglected that could contribute during the voyage to their comfort and the preservation of that health and strength on which so much reliance was placed, not only by their employers, but by the whole country. Everything that could be done had been done as far as human foresight could effect it for them; and if they would only be united and cordial among themselves—exhibiting good temper, cheerfulness, docility, and confidence and respect towards those placed over them on board—they would be as happy as the circumstances of the case would permit in a lengthened voyage at this period of the year. For his own part, he could unhesitatingly say, that he never knew an emigrant vessel—and he had known many—that had furnished quarters in any respect preferable to those on board the *Hesperus*. He then explained the more immediate objects of the expedition, and dwelt upon its importance as an auxiliary to the operations of our gallant countrymen in the Crimea. They were going to the aid of our heroic defenders, who had not only to fight—and how they fought the whole world would for ever admiringly testify—but had also to work and perform many duties for which it could not be expected that soldiers were so well adapted as the skilled and trained men who were now going out to relieve them, and leave them at full liberty to deal with the enemy as they had done in the dashing rush at Alma and the immortal conflict at Inkerman. The future success of the siege operations, and of other operations, too, in the Crimea, would depend in a great measure on the present expedition; and it might be said, accordingly, with far more truth of Peto's navvies than of more aspiring experimentalists, that "the eyes of Europe were upon them." They must expect, and would not be cast down by, hardships and privations; some of these, perhaps, would not appear so very terrible in the Crimea as at home. There would be no public-house to go to; but there would be plenty of good substantial refreshments always available when needed, and while that was the case he had no fear that there would be much grumbling at whatever work might be expected at their hands. They were not like Russian serfs, who dare not call their souls their own, but who must slay and be slain without asking why or wherefore. They were free Englishmen, volunteers at perfect liberty to go or stay just as they pleased, according to their own unbiassed judgment, without the least undue influence, concealment, artifice, or exaggeration used to warp their opinion one way or the other. All that was said or done was to guarantee them good clothing, good food, good pay, a good ship, and a good Captain. They had a good cause—the cause of the country, the cause of justice, and fair play. They would bring good hearts to the cause—English hearts that never recoiled from the obligations of duty, come in what shape they might, whether at the point of the pick or the bayonet; and he doubted not that the British navvy would prove himself as great a benefactor in repelling the evils of barbarism abroad as he had been in extending the blessings of civilisation at home. At the invitation of Captain Andrews, who was loudly applauded, three cheers were given for the Queen, and three for Messrs. Peto and Betts.

Lord Henry Clinton then addressed them, and said that it had been the intention of his brother, the Duke of Newcastle, to have been present, as his Grace would have been proud to make the acquaintance of the men who were going with so much alacrity to the aid of an object he had so much at heart as the Balaclava and Sebastopol Railway, but was unable to attend, owing to a Cabinet Council being held that day, and at that hour. His Lordship also dwelt on the importance of the undertaking, and enforced Captain Andrews's admonition as to the desirability of maintaining sobriety, union, and good humour in the face of every annoyance to which they might unavoidably be exposed; for then he was sure that the energy for which they were so deservedly famous would carry them triumphant over every impediment. The disinterested, self-sacrificing promptitude with which Mr. Peto had acted upon the suggestion which led to the present magnificent enterprise was beyond all praise, even the praise it had everywhere been met with. As it was raining, and time pressed, he would not detain them with a long speech, but would conclude by earnestly wishing them a safe and pleasant voyage, and a speedy return to their families and to their country, which they might be sure would welcome them as they deserved.

Three cheers were given for his Lordship, and three for the Duke of Newcastle, by whom, on the part of the Government, this undertaking has been entered upon. Captain Raymond, the Marine Superintendent of the intended works, and Mr. Kellock, Superintendent in the Crimea, each spoke a few words of encouragement, which were received with great cordiality; the cheering being renewed as the visitors and officials put off for shore in a waterman's boat. The *Hesperus* then steamed down the river.

By way of summary, it may be stated, that, from the original conception of the plan to the completion of the final details thus far, everything connected with the expedition has been conducted not only with the greatest celerity, quite unprecedented in an undertaking of this magnitude, but with uninterrupted success. The great secret of this has been a judicious division of labour, and the entrusting of each department to a competent official; the whole being supervised by the experienced eye, and stimulated by the energetic example, of Captain Andrews—whose varied knowledge of administrative requirements in controlling large bodies of men proved of the utmost value in an enterprise of such very miscellaneous characteristics as the present. All the vessels of the "navvy" fleet have now sailed, with the exception of the *Levant*, which sails this day. One of the firm of Peto and Co. has had an interview during the present week with Sir De Lacy Evans, by whom the plans of operation in connection with the Railroad have been thoroughly approved of; but the nature of these plans is, for obvious reasons, not permitted to be made public. Enough to say, however, that there is substantial ground for calculating with confidence that the expectations formed of the efficacy of the navvy corps will be completely realised in the Crimea; and that, if even peace should supervene, and there be no absolute necessity for employing them in actual belligerent purposes against Sebastopol, enough will remain to be done to demonstrate the sagacity of intrusting its execution to such hands, and to render it certain that the precedent now adopted will be followed on all occasions of a like nature for the future, if such occasions should unfortunately arise. We may, perhaps, take this opportunity of saying that the suggestion offered in a leading journal

THE ADDRESS TO THE NAVVIES ON BOARD "THE HESPERUS."

NAVVIES RECEIVING AND CARRYING THEIR KITS ON BOARD.

CLOTHING FOR THE NAVVIES.

"THE PRINCE OF WALES" STEAM-SHIP LEAVING BLACKWALL WITH NAVVIES FOR THE CRIMEA.

by Sir F. B. Head, as to the preferability of plank-roads, on the Canadian plan, over the proposed railway, would be quite inapplicable to the circumstances of the case in the Crimea. The delay in obtaining huts for the men all this winter is conclusive as to the impracticability of procuring wood of a kind suitable to roads—to say nothing of the difficulty of having it sawn and dressed in a proper manner, and in the enormous quantity that would be needed for the distance from Balaclava to the heights around Sebastopol; while a scarcely less serious objection arises from the wide-spread injury to the road itself, and to all in the neighbourhood, from the splinters that would be caused by the Russian shot and shell falling upon so exposed and fragile a surface. The engineers entrusted with the construction of the Balaclava Railway are perfectly conversant with the merits of all modes of traction in all parts of the world, and not less so in Canada than elsewhere; and we may be quite sure they will adopt that which is best suited to the present undertaking, in every respect.

Previous to the departure of the ships from Blackwall, all the men were assembled in the premises occupied as storehouses by the Crimean Expedition, and, under the able superintendence of Captain Raymond, the Commodore of the fleet of those transports, each man was furnished with his kit. The beds were first carried on board, and then the individual parties returned for the remainder of their outfits, the last article delivered to them being a stout leather strap capable of embracing all the articles delivered to them. On getting on board, most of the men immediately equipped themselves in their new outer clothing, and in it exhibited themselves to the people on shore. One navigator distinguished himself by ascending to the foretop of the *Hesperus*, in full costume, and cheering his friends from his elevated position, to the great amusement of the assembled crowd.

The *Prince of Wales*, with fifty more men on board, left Blackwall on Friday afternoon, the 5th instant, and proceeded to sea on Sunday last.

THE VINE DISEASE.—A commission established at Bordeaux, to make investigations respecting the malady in vines, and the means proposed for its cure, has published a series of resolutions, in which it declares that the various remedies that have been recommended have produced no satisfactory results. It declares also that the malady was less intense last year than previously, that the vines are at present in an infinitely better condition than at the same period in 1852 and 1853, that the malady appears to have entered on its period of decline, and that it would be a great error to pull up the vines, which form the principal wealth of the Gironde.

NEW CHURCH AT CHELTENHAM.

NEW CHURCH OF ST. LUKE, CHELTENHAM.

THIS Church (which was consecrated on the 9th ult.) owes its origin and accomplishment to the Rev. Francis Close—assisted by grants from various societies, and by the Lord Bishop of the diocese personally, amounting altogether to about £800; the remainder of the funds being obtained by public subscription.

Some sixty years since Cheltenham had but one church; but the rapid growth of the population has rendered the present additional Church accommodation absolutely necessary for their requirements; and there are now in the parish, including St. Luke's, nine churches, accommodating 11,000 or 12,000 persons. This latter edifice provides for 1040 persons, 576 sittings being free for ever. The proceeds from the appropriated seats are devoted to the repairs of the Church and the maintenance of the minister. On the completion of the purchase of the site, the committee sought by public competition for plans adapted to their views. The designs of Mr. Frederick W. Ordish, of the Adelphi, London, were approved of, and the Church has been built in conformity therewith. It is an elegant ecclesiastical structure. Its style is the Geometric Decorated, and is in its embellishment and character both simple and inexpensive. The detail is treated in accordance with that prevailing throughout the churches of Lincolnshire.

The interior dimensions are about 131 feet long, and about 54 feet wide. The plan is composed of nave, aisles, north and south transepts chancel, and chancel aisles. The Church is well arranged for sound, and is lighted with gas. The warming is by hot water, at a low pressure, and the temperature can be raised to 60° of heat.

The spire would have appeared more graceful had it been carried up 30 feet or 40 feet higher, as planned by the architect; but its accomplishment involved a greater outlay than the committee were justified in incurring. The edifice is built and covered in with native stone; and the contract has been executed by Mr Ranger, of Cheltenham, in a workmanlike manner; Mr. H. J. Ingram being the clerk of the works.

A RUMOUR is prevalent in Paris of a project for making the Archduke Louis, brother of the Emperor Francis Joseph, King of Poland. The Archduke Louis is at present at Lemberg, in Galicia. This project has been so seriously spoken of that amongst the higher Poles in Paris it is rumoured that Count Zamoiski, nephew of Prince Czartoryski, intends proceeding from Bucharest, where he is at present, to Lemberg, to assure the Grand Duke of his complete devotedness.

CALENDAR FOR THE WEEK

SUNDAY, Jan. 14.—2nd Sunday after Epiphany
MONDAY, 15.—Oxford Term begins. Queen Elizabeth crowned, 1559.
TUESDAY, 16.—Battle of Corunna, 1809. Gibbon died, 1794.
WEDNESDAY, 17.—Dr. Franklin born, 1706.
THURSDAY, 18.—Old Twelfth day. St. Prisca.
FRIDAY, 19.—Earl of Surrey beheaded, 1547.
SATURDAY, 20.—St. Fabian. American Independence acknowledged, 1783.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING JAN. 20.

TO CORRESPONDENTS.

ONE WHO SHARES IN TAKING THE "ILLUSTRATED LONDON NEWS."—The information you require, even in the most abridged form, would far exceed the space devoted to such subjects in this paper. Every particular may be gathered by consulting "Colonel Burn's Dictionary," "The British Gunner," and "The Artillerists' Manual," published by Messrs. Parker and Furnivall, Military Library, 30, Charing-cross.

H. LEO.—It is impossible to give any information without having seen the 200 coins. Send them to Mr. Webster, 17, Great Russell-street, Covent-garden.

WILLIAM WRAY.—The crown and half-crown of Charles II are of no value. The first is not the famous trial-piece, by Simon.

W. T. C., near Guernsey, is thanked; the evidence is not conclusive.

A CONSTANT READER, Nottingham.—A stamped Newspaper, of any date, can be sent to any part of England, postage free.

AN OLD SUBSCRIBER.—We are not in possession of the names.

E. B. B., Edinburgh.—We cannot avail ourselves of your favour.

G. G., Gloster.—Apply to the Inconvenience of your district.

AN OLD SUBSCRIBER need not fear; we have no intention of illustrating the subject in question.

A CORRESPONDENT, who inquires as to the respective portions of the invention of the Paper Machine, by the Brothers Fourdrinier, is informed, that to Mr. Sealy Fourdrinier was due the merit of discovering the mode of giving a straight edge to the continuous paper, and thus rendering the invention perfect. With respect to the informality in the Law of Patents, in connection with the invention, we may add that, at the trial before Sir Charles Abbott, afterwards Lord Tenterden, it appeared, by the specification of the patent, that Henry and Sealy Fourdrinier claimed to be in possession of "a machine or *machines* capable," &c.; the evidence before the jury was, that they had "*one machine*;" and upon this quibble, not upon any real defects or merits of the Paper Machine, or its capabilities, was the fortune of those two patentees, and of many other persons, sacrificed.

A CONSTANT READER, Whitfield.—The national song of "Rule Britannia" was written in 1740, by Thomson, in the masque of "Alfred," which was represented before the Prince and Princess of Wales, at Cliefden. Thomson wrote this piece in conjunction with Mallet, to whom Mr. Bolton Corney, "on no slight evidence," ascribes "Rule Britannia."

L. M.—The poet Rogers was born in 1760: his "Pleasures of Memory" was published in 1792.

ONE WHO SEEKS A COLONIAL HOME.—Sidney's "Three Colonies of Australia."

G. J. had better apply to the Secretary of the Geographical Society, 15, Whitehall place.

H F, Herts.—The picture in question, painted in 1716, is by Jan Wemink "the Young," a distinguished Dutch painter, who greatly excelled in hunting and sporting pieces; but, like his father, painted in almost every department. Wemink "the Young" died in 1719.

DECLINED.—R. E., Penzance; J. D., Hampstead; VIAV; W. J. B., W. L.

A. B. the lines—

> There is a tide in the affairs of men.
> Which, taken at the flood, leads on to fortune—

are from Shakspeare's play of "Julius Cæsar," act iv. sc. 3.

A REGULAR READER is reminded that a Map of the Crimea appeared in the ILLUSTRATED LONDON NEWS for September 29.

V., Manchester.—The best Elementary works on Fortification and Siege Operations are those by Macaulay and Straith.

IGNORAMUS.—Lady Clementina Davis is sister of the Earl of Perth and Melfort.

INQUIRER.—The Beauchamp Tower, at the Tower of London, is now exhibited with the other portions of the fortress. The last edition (1854) of Mr. Hewitt's correct Guide, "The Tower: its History, Armouries, and Antiquities," contains a full account of the restored Inscriptions in the Beauchamp Tower. See also Mr. Dukes' careful fac-simile exemplars.

AN OLD SUBSCRIBER, Manchester, is informed that with the last *ten* years—the statement cannot be extended to *twenty* without considerable trouble—the population of several towns has increased faster than that of Liverpool. The rate of increase has been in Liverpool 31½; in Glasgow, 35; Belfast, 36; Bradford (Yorkshire), 44; Brighton, 50; and Luton (Bedfordshire), 71 per cent. An Old Subscriber must, however, remember that Liverpool, being a limited space, and being almost full before the beginning of the decennial period, does not increase the people within its limits so much, as it overflows on the country around. Thus in the ten years, Walton-on-the-Hill, near Liverpool, but not included in its boundaries, has increased 120 per cent. He should consult our Census, from which this and a great variety of similar and other information may be gleaned.

M. S.—H. Doncaster, will find the addresses of the Foreign Ambassadors and Consuls resident in London, in the "Post-office Directory."

T. E. C. L. Castle, is thanked for sending the photographs, of which we regret we cannot avail ourselves.

T. S. L.—We cannot undertake the recommendation; it would occupy much more space than we can possibly spare.

C. S., Oswestry.—Received.

W. J. B., W. L., and J. B., Lewes.—Declined.

W., Bayswater.—Apply to the Secretary to the Society.

R. I., Dublin.—A Sixpence of Queen Elizabeth of no value.

C. B. RN., is thanked; but we have not space for the sketch.

A. W., Lexington.—We cannot undertake to ascertain the value of the coins in question.

C. M., Jamaica, is thanked; but we have not space for his letter.

KATE.—The shortest day happens on the 22nd of December, as the 2nd and 3rd years after leap year. The cause is the accumulation of the excess of the year above 365 days.

M.—"Loans and Taxes" in our next, if possible.

Now ready, elegantly bound in cloth, gilt edges, price 21s.,
THE ILLUSTRATED LONDON NEWS,
VOL. XXV.,
With upwards of 600 Engravings; including a very numerous Series of Illustrations of the Progress of the War during the past Six Months.
The COVERS for VOLUME XXV., with the New Design, price 2s. 6d. each, may also be obtained, by order, of all Booksellers, &c., in the Kingdom.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 13, 1855.

THERE have been rumours during the week, both in London and in Paris of the surrender of Sebastopol; but they have not been traced to any reliable source. But it is evident, from the tenor of all the accounts that come to hand from the Crimea, that an attack upon the fortress by the combined armies may be daily expected. The Turks under Omer Pacha are mustering in force at Eupatoria, and will hold the Russians in check in that quarter, even if they do not achieve more important triumphs, worthy to rank with, if they do not surpass, the successes of Citate, Ottenitza, and Silistria. As we stated last week, the number of British and French troops concentrated around Sebastopol amounts to at least 100,000 men; all of whom, despite the lugubrious lamentations of white-livered journalists at home, are animated with the best spirit, and long for nothing so much as for an opportunity of active exertion, either in battle on the open field, or by a dashing assault upon Sebastopol. It is impossible to read the simple, manly, straightforward, sensible, and affectionate letters of the private soldiers of the British army without being convinced that they at least feel no discouragement; and that to them must not be attributed the demerit of habitual and systematic grumbling, such as is found in the letters of their superiors in education, and of subaltern officers, who perhaps fancy that if they were in the position of Lord Raglan they could manage matters better. The French army is animated by equal courage and hopefulness—if it does not share that still more lively feeling of impatience which sometimes breaks from the ranks when General Canrobert rides along the line, and is urged by a respectful cry from some unknown soldier, "To the assault, my General!" Many facts might be cited so prove that, whatever distresses and hardships these brave fellows may have endured, they have not had the effect of demoralising or discouraging them. They are up to the mark. They know that war is no child's play; and fully appreciate their duties and responsibilities, and the magnitude as well as the splendour of the achievement for which they have been landed in the Crimea. Whenever the Generals are ready for the work, their troops will be ready to accomplish it. The French had been, for some days prior to the date of the last letters, prepared to open their fire on the town, and only awaited a similar state of preparation on the part of the British, who have had to transport their guns and heavy ammunition over a distance more than twice as great, and through steep unpaved roads knee-deep in mire. But all difficulties yield to energy and perseverance, when rightly directed; and by the first day of the year it is confidently believed that the English batteries were fully armed, and ready to recommence the bombardment, as soon as such an operation should be decided on. Neither the nation nor the army expects a cheap or an early triumph; but neither the army nor the nation doubts the ultimate victory. There is but one circumstance that can save Sebastopol from the gallant soldiers of France and England; and that is the immediate surrender of the Czar, and his acceptance of the terms of peace to be imposed upon him at Vienna. But such surrender is not likely to be immediate; and in the meantime events will march, and prove to the whole world—even to the Russians themselves—that the Allied Powers are first in Might as they are in Right; and that no Potentate, however arrogant or grasping, can be allowed to break the peace of the world without being called to account in the Present, and restrained in the Future.

THE national Revenue to the end of the year is somewhat larger than was expected. It exceeds the calculations of our financiers, who do not in general make low estimates; and is a proof of the increasing resources of our country. In the last quarter of the year the excess over the corresponding quarter of 1853 was £1,440,567; in the whole year, the excess was £2,291,356; and in the nine months of the financial year which began on April 5th, 1854, and ended on January 5th, 1855, the excess was £1,928,316. There are, however, but few of our readers not aware that, in 1853, considerable alterations were made in our system of taxation, including a change in the Property-tax, the addition of the Tax on Successions, and an increase of the Spirit-duties; and that, in 1854, large additions were made to the taxes, including an increase in the rates of duty on property and income, on malt, and on spirits, with a change in the Sugar-duties, which had the effect of increasing slightly the Customs revenue obtained from sugar. It is extremely difficult to estimate the effects of these changes on the produce of the Revenue in the two years, so as to enable us to make a fair comparison betwixt them; but we must remind our readers that only a small portion of the increased Property-tax—that which is paid out of dividends and salaries—has yet been collected. The actual increase of the Revenue in the year, and in the financial year, is therefore only an imperfect index to the increased Revenue which will be yielded by the new taxes before the close of the financial year in April. Amongst all the changes made, however, there are only two which affect the Customs revenue in the last quarters of 1853 and 1854; one is the reduction of the Tea-duty of 4d. in the pound, which took away from that revenue in the quarter of 1854 about £200,000; and the other is the change in the Sugar-duties, which increased it by a very trifling but unknown sum. Had consumption, therefore, not been greater in the last quarter of 1854 than in the last quarter of 1853, the Customs revenue would have been nearly £200,000 worse. In fact it was £284,072 better; which is an index—though not perfectly correct, the plainest and best supplied by the Revenue returns—to the increasing consumption, wealth, and power of the nation.

The Board of Trade tables, just published, for eleven months of the year, supply some evidence of the same progress. In 1852 the total declared value of our exports was £78,076,854; in 1853 it reached the extraordinary sum of £98,933,781 an increase in one year of £20,856,827, or about thirty-seven per cent., giving a rough average increase of £1,738,000 per month. Of this increase, £1,595,000 occurred in November. But the value of the exports in November, 1852, was £844,000 greater than the value of the exports in November, 1851, and was nearly one-fourth of the total increase, £3,600,000, in the value of the exports in the whole of 1852 above the value in 1851. In the month of November, 1852, there was, therefore, a great increase in the exports; and in November, 1853, there was a still greater increase; making the difference, between November, 1851, and November, 1853, above £2,400,000. Now, it happens, in the month of November, 1854, in consequence of the markets of the United States being disordered by a wide-spread bankruptcy amongst banks and merchants there, and in consequence of the markets of Australia having been actually flooded with our exports, a sudden and a severe check has been given to our exports. The declared value has fallen from £7,628,760 in November, 1853, to £5,771,772 in November, 1854—a decline of £1,850,000; which leaves the value, however, more than £500,000 above the value of the exports of November, 1851. It pleased a very influential contemporary, however—who is fast usurping the functions of Government, trying to nominate a prime Minister and clothe her Majesty's regiments after his own fashion, out of funds entrusted to him to relieve the sick—to look, most unstatesmanlike, no further than the first fact of the decline of our exports in November, 1854, which fell under his nose on Thursday, and he immediately set up a howl over the national decay, as if he were, after the fashion of the Irish, "waking" the dead prosperity of the empire. In the same column, however, the *Times* showed by enlarged imports, and by increasing consumption—though from the sinister motive of desiring to prove that the nation would be beggared by having to pay for them—that the prosperity had continued without any serious abatement to the end of November. In fact, the value of the total exports of the eleven months of 1854 exceeds the value of the total exports of the eleven months of 1852, though a little less than the value of the exports of 1853, by no less a sum than £13,793,704. In fact, too, up to the end of the year, the bulk of the population has been fully employed, if not quite so actively as in 1853. Many of them are extremely well employed and well paid; and the inference, from one little check, that the national prosperity is coming to an end, is totally unwarranted. The trade-tables of November, 1854, certainly show, in general, diminished imports and diminished exports in the month, as compared with November, 1853; but then trade was unnaturally excited and overdone, and is now returning from a fever to a condition of health.

The value of the enumerated exports in the eleven months of 1854 is no less than £79,073,838, and only £1,710,677 less than the extremely large exports of 1853. There are, besides, a number of small articles exported called unenumerated, the value of which, in the eleven months of 1854, amounted to £10,673,997; making the total of the eleven months £89,747,835. With the previous year we cannot compare these figures, because unenumerated articles are included for the first time in the monthly returns of 1854; but they are included in the totals of all preceding years. Comparing them, we find that the value of the exports of eleven months, in 1854, exceeds by almost £12,000,000 the highest total export of any previous whole year except 1853. It is only necessary, therefore, to look a little below the surface, to find in the Board of Trade tables, as in the Revenue tables, the most striking proofs of growing prosperity, which leave a public writer no excuse for endeavouring to propagate despair and discord through the hearts of the people.

Our trade in 1854 has, however, been exposed to many adverse circumstances. In the first months there was an apprehension of war, which led to some premature speculations; there was then war itself, with partial and uncertain blockades cutting off portions of our accustomed supplies; doubtful prospects; a sudden and exorbitant rise in the price of various articles, such as hemp, flax, and tallow, not afterwards realised, to the loss of hasty speculators; and all the fluctuations and disasters attending a war, of which this generation previously knew nothing. War was conjoined with a bad harvest in 1853, and an extremely high price of bread in the first months of 1854, followed by such a comparatively low price between June and September, that the importation of corn almost ceased; and, in spite of our own excellent harvest, was followed by very high prices, continued to the present time. We have had both high and fluctuating prices of food in the year, which has tended to curtail and render uncertain many enterprises. With war and dear food, we have also had a commercial convulsion in the United States, more severe than trade has experienced since 1847, which in the latter months of the year has put an end to at least one-third of our trade with the States. Without being at war, that country, our largest customer, has been very seriously afflicted; and her affliction—her deranged credit, her numerous bankruptcies—has seriously affected us. To all these causes we have to add the choked trade to Australia, which swelled the returns of 1853 to diminish those of 1854. In spite of all these adverse circumstances, favoured by an abundant harvest, which has given life to the home trade, and wealth to the agriculturists, the country has gone forward, though not quite so fast as in 1853, in her career of prosperity. Our united, patriotic, and contented people feel none of that howling despondency which the *Times* tries to beget; but are grateful, as they may well be, for rich rewards showered on their well-directed and energetic exertions, and for the conspicuous part they have been chosen to perform in the history of civilisation.

THE COURT.

The Queen and Prince Albert have paid a flying visit to their marine residence at Osborne during the past week. Her Majesty and his Royal Highness left Windsor Castle on Friday morning and arrived at Osborne in the afternoon. On Tuesday the Queen and Prince, with the Princess Royal and Princess Alice, attended by the Viscountess Canning, Major-General the Hon. Charles Grey, Colonel F. H. Seymour, and the Master of the Household, left Osborne at one o'clock, and proceeded to Windsor Castle, where the Royal party arrived at a quarter past five.

Lieut.-General Sir De Lacy Evans has had the honour of being invited to Windsor Castle, but has been prevented by indisposition from obeying her Majesty's commands.

Her Royal Highness the Duchess of Kent left Frogmore House on Saturday morning, and came to town, for the purpose of paying a visit to her Royal Highness the Duchess of Gloucester, who is passing the winter at her town residence, Gloucester House, Park-lane. The Duchess returned to Windsor about four o'clock in the afternoon.

Their Royal Highnesses the Duke and Duchess of Brabant left Vienna on the 3rd for Pesth, whence they were to return on Saturday. Their Royal Highnesses were to take their departure from Vienna on the 6th inst.

His Royal Highness the Duke Augustus of Saxe-Coburg left Southampton on Tuesday, for Lisbon, in the *Great Western* steamer.

The Earl of Glengall, who has been seriously indisposed, at Lord Chesterfield's seat, Bretby Park, was stated, in answer to inquiries, to be better. His Lordship is suffering from a paralytic attack.

His Excellency Lord Cowley left town on Wednesday evening, on his return to the British Embassy in Paris.

The marriage of Lord Massy with Isabella, eldest daughter of the late George More Nisbett, Esq., of Cairnhill, county of Lanark, took place in Edinburgh on the 4th inst.

Lord and Lady John Russell left town on Monday for Paris, in consequence of the illness of Lady John Russell's sister in that capital.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. W. Stockdale, to Wickhamford, near Pershore: the Rev. G. N. Barrow to West Hanningfield, near Chelmsford. *Vicarages:* The Rev. Henry Meeres to Leverington: the Rev. Robert James to Goodnestone, Kent; the Rev. G. Lubbock to Eccles, Lancashire. *Incumbencies:* The Rev. A. Swinburn to the Mariners' Church, Hull; the Rev. R. Rolleston to Scathwaite, in the parish of Kirkby Ireleth, Lancashire; the Rev R. H. Poole to St. Thomas's Church, Leeds. The Rev. F. Tearle, Assistant Tutor of Trinity Hall, Cambridge, to be Diocesan Inspector for the diocese of Ely.

On Saturday last, being Old Christmas-day, the ancient ceremony was performed in the Chapel Royal, St. James's Palace, in commemoration of the offering of the three Kings, a remnant of Christian symbolism.

AGES OF BRITISH STATESMEN.—The following gossiping statistics on the ages of British statesmen is going the round of the papers:—Lord Lyndhurst, 83; Lord Brougham, 76; Marquis of Lansdowne, 75; Earl of Aberdeen, 71; Lord Hardinge, 70; Lord Palmerston, 70; Lord Raglan, 67; Lord John Russell, 62; Earl of Derby, 55; Earl of Harrowby, 67; Earl of Clarendon, 55; Earl of Malmesbury, 46; Earl Grey, 62; Earl Granville, 60; Earl of Carlisle, 53; Duke of Newcastle, 44; Duke of Argyll, 32; Lord Stanley, 29; Lord Cranworth (Lord Chancellor), 64; the Right Hon. Sir James Graham, 63; the Right Hon. W. E. Gladstone, 45; the Right Hon. H. Labouchere, 57; the Right Hon. E. Cardwell, 44; the Right Hon. B. Disraeli, 49; the Right Hon. T. B. Macaulay, 55; the Right Hon. Sir W. Molesworth, 45; the Right Hon. S. Herbert, 44; the Right Hon. Sir George Grey, 56; the Right Hon. Sir C. Wood, 54; the Right Hon. Sir J. Pakington, 54; Richard Cobden, 51; and John Bright, 44.

GENERAL activity prevails at all naval stations of the United States, in consequence of recent orders from Washington to fit vessels for sea as speedily as possible.

LATEST INTELLIGENCE.

TELEGRAPHIC DESPATCHES.

(From the Daily News, of Friday.)

PARIS, Friday Morning.

The following most important telegraphic despatch has come to hand:—

BRAILOW, January 9th.

The Russians have crossed the Danube, invaded the Dobrudja, and taken both Tultscha and Babadagh

Sadyk Pacha defended Tultscha as long as possible.

CONSTANTINOPLE, January 1st.

There is no change reported from the Camp. Two or three vessels have come into the Bosphorus damaged by an ordinary storm in the Black Sea. Guns, horses, and men, are daily landed at Eupatoria. It is not expected that the active co-operation of the Ottomans there can commence before a week or ten days hence, by which time the French and English will be better prepared than at present

Advices from Vienna state that the belief gains ground that the interpretation given to the Four Points by the Allies, while it is clear so far as it goes, leaves undetermined essential and inevitable questions which may give rise to insurmountable difficulties.

WARSAW, January 5th.

General Berg leaves to-morrow for Finland, to organise his army for the expected Baltic campaign.

Captain Jefkovitch has arrived with 10,000 first-rate rifles, made with all the recent improvements. He bought them in Belgium, having been sent thither especially for that purpose.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, JAN. 11.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer: Highest Reading	Thermometer: Lowest Reading	Mean Temperature of the Day.	Departure of Temperature from Average.	Degrees of Humidity.	Direction of Wind.	Rain in Inches.

„ 11	30.525	37·8	24·0	31·3	— 2·9	94	—	0·00

Note.—The sign + denotes above the average and the sign — below the average.

The reading of the barometer decreased from 30.14 inches, at the beginning of the week, to 30.08 inches by the afternoon of the 8th; increased to 30.47 inches by the 8th; decreased to 30.27 inches by the 9th; increased to 30.54 inches by the 10th; and decreased to 30.47 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 30.370 inches.

The mean daily temperatures from the 5th to the 10th were very high, averaging 12°·9 in excess; the mean temperature of the period was 46°·9, and is the highest mean temperature consisting of the corresponding consecutive days at present recorded—the register extending back to the year 1816.

The mean temperature of the week was 42°·0, being 7°·4 above the average of thirty-eight years

The range of temperature during the week was 37°, being the difference between the highest reading on the 6th and the lowest on the 11th.

The mean daily range of temperature during the week was 8°·6.

Rain fell during the week to the depth of eight-hundredths of an inch

The weather during the week was fine, but the sky, with few exceptions, was cloudy. *Fog* was prevalent on the 10th and 11th.

Lewisham, January 12, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—In the first week of the year the births of 1317 children were registered within the metropolitan districts—938 were boys, and 879 were girls. In the ten corresponding weeks of the year 1845 to 1854 the average number was 799 and 748. Within the same week the deaths of 1404 persons were registered within the metropolitan districts, the calculated number of deaths for the week was 1414; so that the public health in this week was in about its average state for this time of the year

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL, CHARING-CROSS. At a quarterly meeting of the Governors of this Institution, held on Thursday week, the Secretary reported that the number of poor persons who had applied for relief to be admitted as out-patients from 1st January to 31st December was 5767 (the number for the quarter, 1257), and 136 poor persons admitted as in-patients, making a total of 5903 persons to the 31st December. The quarterly account of receipts and expenditure, audited and submitted to the Governors, showed a deficiency of assets to pay the quarterly bills of £94 18s. 8d. It is deeply to be regretted that the funds of this useful charity are not adequate to its increasing demands: diseases of the eye being very prevalent amongst the poor, we most earnestly hope this hospital will meet with the assistance it stands in need of from a benevolent public

THE widening of Chancery-lane is being carried on. On Monday, by instructions of the City Commissioners of Sewers, the building materials and fittings of several more of the old houses, and also a large one nearly new, standing in Chancery-lane, within a few doors of Fleet-street, were disposed of by public auction, in order that the houses may be pulled down and rebuilt further back, and the thoroughfare thus be widened. The old houses, standing opposite, on the east side, have also been pulled down, and are now being rebuilt, but they are built as forward to the street as the former houses, which is several feet in advance of the line of the adjoining buildings of Serjeants'-inn.

ANOTHER DOUBLE MURDER.—Scarcely has the excitement created by the recent double murder in Warren-street, London, subsided, when we have to record the perpetration of a similar offence by another foreigner, in almost the immediate vicinity of the former outrage. The scene of the catastrophe was Foley-place, Portland-street. About half-past nine o'clock on Saturday morning, the inhabitants of that neighbourhood were alarmed by the report of fire-arms, and by a woman rushing into the street in a frantic state, screaming that her master had been murdered. The house was tenanted by Mr. Joseph Lambert and his wife, both about thirty-two years of age. The upper part of the house was let out furnished, and a Mrs. Jane Williamson, described as a milliner, and who is separated from her husband, occupied apartments there. They were acquainted with an Italian, named Luigi Baranelli, who is about forty years of age, and was formerly valet to Mr. Thomas Stewart Drummond, of Perth, by whom he was much esteemed, and from whose brother he had a pension of £20 a year. An attachment had sprung up between the Italian and Mrs. Williamson, which the Lambert family greatly discouraged. He had been ordered to quit the house; and it would appear that in consequence of this he had resolved on a terrible revenge. In the murder of Mr. and Mrs. Lambert, the murderer, Baranelli, reached Foley-place about half-past nine on Sunday morning. He asked the servant where her master and mistress were, and on her replying, "In the back parlour in bed," he proceeded thither, placed the pistol at the back of Mr. Lambert's head and shot him dead, and then shot Mrs. Lambert. It would appear that the unfortunate murdered man was shot while he was asleep. The report of the pistol roused Mrs. Lambert, and she was in the act of jumping out of bed when she received the contents of the second pistol in her arm and breast. The wounds, however, were not immediately fatal, though it is not likely she will recover. The murderer, after committing the atrocious deed, ran up-stairs, and, after an ineffectual attempt to enter Mrs. Williamson's bed-room, sought refuge in an attic, where he shot himself with a pistol. His wounds are not thought to be mortal, but it is now said that he may possibly recover. He made a full confession of his guilt, ascribing the crime to the desire of revenge for the interference of Mrs. Lambert. On the police searching his lodgings, they found a small packet addressed to Mrs. Williamson, which, on being opened, was found to contain a small daguerreotype portrait of the murderer in a morocco case. Inside the case was a letter written in Italian, and a slip of paper bearing in English the following:—"Remember this miserable man" (a word wholly unintelligible), "and then think worthy "the of love." "From Luigi Baranelli—Adieu, my dear, adieu my love, adieu for ever—5—1—55." So that it would appear he had contemplated self-destruction when he wrote this on that instant. From all that can be ascertained from Mrs. Lambert and the servant, it would appear that the unfortunate murdered man, Mr. Lambert, was shot while he was asleep, and that the assassin placed the muzzle of the pistol close to the back of his head while he lay in bed. It was the report of the pistol which roused Mrs. Lambert, and she was in the act of jumping out of bed to grapple with her husband's murderer when she received the contents of the second pistol in her arm and breast. The pistol with which it is believed he shot Mr. Lambert was found lying by the bedside on the floor, and that which he fired at Mrs. Lambert was the one with which he destroyed himself, and which he reloaded as he went up-stairs. The room door at which Baranelli was heard rattling by the police sergeant was the second-floor back room, occupied as a bed-room by Mr. Williamson, and in which she was at the time in bed with another female lodger An inquest on the body of Mr. Lambert was held on Tuesday; but, in consequence of the dangerous state of Mrs. Lambert, it was adjourned to the 17th inst.

WHO'D RATHER BE OPPRESSED THAN FIGHT?

[FOR MUSIC.]

WHO'D rather be oppress'd than fight?
Low, low, low, let him lie!
Let him feed among the sheep,
Where the meadow waters creep,
Growing fat till the danger's nigh
Not for him, or such as he,
To hold council with the free;
Let him browse while the wolf is in its den!
And thank his lappy fate,
When the foe is at the gate,
That he lives in the sight of men!

Who'd purchase peace at honour's loss?
Low, low, low, let him lie!
He was born to be a slave;
His own soul his *fetters* gave;
He's a fool, for a knave to buy!
Not for him a word to breathe
When the brave their swords unsheathe,
And Peril calls to Duty, saying, "Come!"
In the council he'd betray,
In the fight he'd run away:
Let him grovel in the dirt, and be dumb!

Who values honour more than life?
High, high, high, let him stand!
We have need of such as he—
The defenders of the free—
The glory and the pride of the land.
When a coward sues for peace,
Though awhile the war may cease,
'Tis but respite that he begs from the strong,
But the peace that heroes gain
In the fiery battle plain
Shall defy the world to break it, in the Wrong.

M.

MUSIC.

MR. CHARLES SALAMAN, the eminent composer and pianist, delivered a lecture on Tuesday evening, at the Marylebone Literary and Scientific Institution, on the ancient keyed-stringed instruments which preceded and originated the pianoforte. He is to complete the subject by a second lecture, next week, on the pianoforte itself, its invention and development. This is a subject of great musical interest, and the announcement of the first lecture attracted a very numerous audience, among whom were many distinguished lovers of the pianoforte, both professional musicians and *dilettanti*. Mr. Salaman handled the subject with much learning and ability, illustrating his observations by performing various curious compositions of old masters upon the kinds of instruments (now disused) for which those pieces were originally written. He thus blended the *dulce* with the *utile*, the agreeable with the instructive. He set out by describing those antique instruments in use among the Greeks, Hebrews, and Egyptians, the harp, psaltery, dulcimer, &c., the first rude elements of the magnificent instruments which now issue from the workshops of Broadwood, Erard, or Kirkman. He explained (as far as is now known) the structure and powers of these ancient instruments by means of diagrams copied from the works of old authors. But when he came to comparatively modern times, he gave additional interest to his lecture by exhibiting and playing upon actual specimens of the instruments he described. We now saw and heard for the first time the *virginal*, which for several centuries held the place as a fashionable instrument which the pianoforte does now. It was the favourite instrument of Queen Elizabeth, who was an excellent performer on it, and for whose use the manuscript collection of pieces—the celebrated Queen Elizabeth's Virginal-book," which is still preserved—by the greatest composers of that day, was expressly made. Mr. Salaman played one of those pieces, the old English air called the "Carman's Whistle," with variations by William Byrde, the celebrated author of "Non Nobis Domine." It is a highly curious and interesting specimen of the instrumental music of the sixteenth century. The variations are rich in harmony, and show considerable fancy: both hands are fully employed, and even an able pianist of the present day would find their execution by no means easy. The tone of the instrument (which must have been some 300 years old) was thin and weak, but clear and sweet, and the rapid passages were very distinctly articulated. Mr. Salaman described several other "Virginal-books," or collections, made for the use of Henry VIII., Philip and Mary, the Lady Neville, and other great and fashionable personages of those days which are still to be found in our public libraries. The *spinet* was in great favour for several centuries, both on the Continent (especially in Italy) and in England. It remained in use in this country till the latter part of the last century; and old people may still remember having seen and heard it—chiefly in old houses in the country—played upon by venerable ladies, to whom it was dear as one of the reminiscences of their youth. It was akin to the *clavichord*, an instrument greatly prized by the German and Italian composers till within these hundred years, because it possessed in some small degree the power of expression which has now been so fully developed in the pianoforte. The remainder of the lecture was devoted to the *harpsichord*, the greatest and last precursor of the pianoforte. The harpsichord was incapable of those expressive gradations of sound by the touch of the finger on the key, to which the modern instrument, the *piano-forte* owes its name. But we perceive from the specimens which remain that it was a fine and powerful instrument. Mr. Salaman was enabled to bring before his audience an object of striking interest—Handel's *own* harpsichord, the instrument once possessed and played upon by the "mighty master" himself. This relic is in the possession of Messrs. Broadwood, to whose kindness Mr. Salaman owed the use of it on this occasion. It is above two centuries old, having been made by Ruckers in 1651. Mr. Salaman played upon it several of the finest harpsichord pieces by Handel and Dominico Scarlatti; and, notwithstanding its want of the peculiar feature of the pianoforte, it was yet, from the resonant fulness of its tone, and its capacity of clear articulation, well suited to the style and character of the music written for it; while the effect of the music, to our ears, was even heightened by the quaint and antiquated tones of the instrument. It was an instance of oldness having the charm and freshness of novelty. Mr. Salaman's lecture did honour to his literary as well as his musical talents. It was elegantly written, agreeably delivered, and received with every demonstration of interest and pleasure.

Mendelssohn's "Elijah" was performed by the Sacred Harmonic Society for the first time this season, on Friday, last week. It drew an audience not merely crowded but literally overflowing, numbers being unable to obtain admission. The performance was probably the most complete and satisfactory that ever has taken place in this country The principal singers were all English. The arduous part of the *Prophet*—a part which demands so great an amount of dramatic, as well as vocal power—was sustained by Mr. Weiss in a manner which has not been surpassed by any of his foreign rivals. His conception of the character was grand, his department full of dignity, and his expression noble and pathetic. The principal soprano was Madame Clara Novello, the principal tenor Mr. Sims Reeves, and the principal contralto Miss Dolby; none of whom, in their respective branches, have any superior The Exeter Hall choristers are now so conversant with "Elijah" as with the "Messiah:" indeed the one oratorio may be said to be naturalised in this country as well as the other. Mendelssohn was a German as well as Handel. But it was to England that both devoted their noblest efforts, and England may be called the adopted country of both.

Herr F. Wustemann, jun., an excellent performer on the flute, gave his annual evening concert on the 7th inst., at the Educational Institute, Cadogan-gardens. It was fully attended and gave much satisfaction Herr Wustemann was most cordially received; his rich tone and great neatness of execution were displayed in a concertante duet for the flute and pianoforte, entitled "Italia and Ireland" (in which he was ably accompanied by Mrs. F. Wustemann), and in Richardson's well-known solo, "There's no luck about the house." A violin solo of De Beriot's was beautifully played by Herr Pollitzer; and Herr Oberthur delighted the audience with his fine performance on the harp. Miss Hermann's singing of Mendelssohn's "Zuleika," and of a German national song, was extremely neat and graceful. Miss E. Birch sang with great éclat Linley's "Welcome, my bonnie lad," being warmly encored. Madame Schurer, who made her début in public, sang with taste and promise. Miss R. Coleman's cavatina and Mr. N. D. Becker's "Adieu" and comic song were greatly admired. The accompanyist was Mr. J. G. Callcott.

NATIONAL SPORTS.

ALTHOUGH the prospects of long-protracted warfare in the Crimea have naturally a very deadening influence on turf pursuits at home, the entries of last Tuesday week are not so much below par as we expected. The Great Northern Handicap has certainly lost 101 entries in comparison with last year, but the Chester Cup is still great and glorious as ever, with 203, or only 13 less. The two Epsom Handicaps show a falling off of 53; and taking the five Spring Handicaps at Newmarket, Northampton, Epsom, and Chester, we have 353 entries in 1855 against 631 in 1854. The new meeting at Thirsk has had very good support, while Acrobat, Andover, Hermit, Knight of St. George, Orestes, Rataplan (gone to Joseph Dawson's to train), Scythian, and Virago, form a right dainty Epsom Cup mixture.

There are fifty-one subscribers to the Liverpool Steeplechase, or eleven less than in 1854; while Doncaster has forty-one, or an advance of three. Wolverhampton is now fixed for January 29th, and between that date and March 23rd there are already fifteen other steeplechase meetings on the cards.

We received too late for use last week, an intimation that the Haggate Coursing Meeting had been postponed until the Wednesday, in the next week, for which the other coursing fixtures are Penrhyn (Bangor), on Wednesday and Thursday; Spelthorne (held, we believe, in the Home Park, Hampton), on Wednesday; and Brough (Catterick), on Thursday and Friday. There are four Sixteen-dog Stakes to be run for at Haggate, which can be reached in a three-mile ride from Whetwang, on the Malton and Driffield line, as well as Pocklington. The post-chaise difficulties of the latter journey we know of old. Lord Sefton's Sylph has again been successful for the Twenty-four-Dog Scarisbrick Cup, which makes her Waterloo Cup chance look not a little rosy.

The Wheatland hounds gallantly opened the New Year with a ten-mile run, done in fifty minutes, without a check, and ended with a kill under an old woman's bed! Mr. Lumley's hounds made a similar finish, not so long since, among the gallipots in a Doncaster surgery. We hear also that another pack have varied their sport by killing one of the largest badgers that has ever gladdened the eyes of a naturalist since the early days of English history, when hunters followed the yellow-breasted marten on Cuxhaven Chase for its fur, and

Gaily slipped their greyhounds at the bustards in the fens.

This strange kill reminds us how we lately met a friend on the quay at Liverpool with a leash of fine Durham otter hounds, and found that they were being consigned to North America to form the nucleus of a bear-hunting pack. Coming nearer home again, we may add that a picture of the Wynnstay Hunt, by Calvert, is about to be presented Sir W. W. Wynn, who is said to have fifty hunters and fifty couples of hounds on his four-days-a-week hunting establishment. Among the jumping feats of the season must also be reckoned one of thirty-three feet, which was lately taken by a fifteen-hand mare over a stiff-staked hedge and ditch. It is very rarely that a hunter covers such a distance, and we only remember to have seen it done once, viz., by Allen M'Donough, in a Rugby steeplechase on a grey mare, Magic.

Our Derby news, setting aside the entries, is scanty enough. The lengthy Sortie, whose heart was as faint as that of her dam Escalade, is gone to the stud; and The Model, as in 1854, has again produced the first blood foal of the season, in the shape of another brown Cossack colt, which was born on New Year's-day. The renowned Alice Hawthorn is expected to have a Flying Dutchman foal this year; and we may look for a scion of hers and West Australian in 1856. Chief Justice, considering his bad legs, is rather a heavy 410 guineas' purchase. We understand that he will go to Austria, whither Cardinal Puff, Clincher, Old Dan Tucker, and Old England, &c., have preceded him during the last three or four years. Marley Hill, the one-eyed brother of West Australian was bought in again for 250 guineas; but we perceive his name in no Spring Handicaps, where Maroyas, who was "dead amiss" in last season, figures pretty frequently. *Apropos* of last year's sales, we may state that the 182 yearlings which were brought to the hammer realised 26,025 guineas, or 143 guineas apiece; and that the 59 brood mares (some of them with foal at their foot) averaged 96 guineas a piece. Vivaldi (1000 guineas) was the highest purchase among the former; and Palmyra, dam of Tadmor (600 guineas), the highest among the latter.

The last monthly meetings of the Yacht Clubs show a very flourishing state of things. For instance, the Royal Thames Yacht Club has a balance of £254 9s. 8d., besides £1500 in the Funds; and the Anglesey Club has already more than sixty members, and fifteen yachts of the club tonnage. The former of these clubs has voted 50 guineas to the Patriotic Fund, for which object the Royal Victoria Yacht Club has subscribed £231 5s. 6d. Several yachts are for sale, and among them the *Esk* and *Zuleika* cutters, winners of fourteen prizes each, and the schooner *Halcyon*.

THE LORD CHANCELLOR'S LEVEE.—Thursday being the first day of Hilary Term, the Right Hon. the Lord Chancellor, Lord Cranworth, entertained the Judges of the several Courts of Equity and Common Law at breakfast at his residence in Upper Brook-street, Grosvenor-square, and at the same time held his general levee of the Bar The attendance of Judges, Queen's Counsel, and Serjeants-at-Law, was most unusually limited, and certainly considerably less than on any former occasion since his Lordship's accession to the Great Seal. The following were the only Judges and members of the Bar present:—Lord Baron Parke, Lord Chief Baron of the Exchequer, the Lord Chief Justice of the Common Pleas, Mr. Wilcocks, Q.C.; Mr. Temple, Q.C.; Mr. Bagshawe, Q.C.; the Vice Chancellor Kindersley, Mr. Daniel, Q.C.; Mr. Baron Alderson, the Right Hon. Lord Campbell, Mr. Justice Cresswell, Mr. Craig, Q.C.; Mr. Malins, Q.C.; Mr. Serjeant Channell, Mr. Bailey, Q.C.; Mr. Whateley, Q.C.; Mr. Anderson, Q.C.; the Vice-Chancellor Sir Wm. Page Wood; Mr. Bramwell, Q.C.; Mr. Wigram, Q.C., the Solicitor-general, Master Barlow, Mr. Bacon, Q.C., Mr. Andrews, Q.C. Sir Frederick Thesiger, Mr. Grove, Q.C.; the Vice-Chancellor Sir James Stuart and Mr. Hart, Mr. Mackay, Mr. Randall Palmer, Q.C.; Mr. Serjeant Goulburn, Mr. Justice Crowder, Mr. Serjeant Byles, Mr. Warren, Q.C.; Mr. Walker, Q.C.; Mr. Lush, and Mr. Palmer. Shortly after 10 o'clock the Lord Chancellor and the Judges proceeded in State to Westminster-hall, preceded by Mr. Owen, the High Constable of Westminster; the procession being escorted by the beadles of the parishes of St. Margaret and St. James, and by streets of Westminster, as it proceeded through each parish. The route of the procession was through Park-lane, Grosvenor-gate, and the new road in Grosvenor-place, to Westminster-bridge, and owing to the dense fog and inclement state of the weather very few persons were present. The usual formalities having been gone through, the Lord Judges proceeded to their respective Courts

PRESENTATION OF A TESTIMONIAL TO THE MASTER OF CHRIST'S HOSPITAL SCHOOL AT IPSWICH.—On the evening of Monday week a large number of the former and present pupils at this school attended in the school-room, to present to Mr. Howe a testimony of their gratitude for his past kind services to them. This consisted of a handsome silver teapot and cream-jug, the teapot bearing the inscription. The senior scholar present, Mr. E. Stevens, the certificated master of a large school in the north of England, read the address, to which Mr Howe replied. At the conclusion of the meeting it was proposed by Mr. Ixer that they should meet half-yearly at the school, when a paper on some useful topic should be read and discussed. The first meeting was fixed for the first Wednesday in July.

DESTRUCTIVE STORM AT HAMBURG.—Hamburg and its vicinity, on New-Year's-day, was visited with a hurricane and inundation of a severer kind than anything witnessed for the past half-century All the principal streets were rendered impassable save in boats. The dykes built along the banks of the river to prevent inundations were also broken through in many places, and the country flooded. In the harbour several ships, some of large size, were driven from their moorings and capsized; others were dismasted, and again others thrown with each commence against other ships that the weakest were stove in. The hurricane appears to have swept with equal force over the wide district from the Dutch coast up to Lubeck. Several ships were lost, among others the *George Canning*, a fine ship of 700 tons burden, one of the Hamburg and New York packets, with every one on board. She sailed from New York for Hamburgh on the 3rd of December, with a cargo of sundry merchandize, and, it is reported, above fifty passengers. She had a favourable run across, and arrived off Heligoland on the evening of the 31st of December, all well, when the outburst of the gale compelled her captain to heave to, and await a more favourable opportunity of running into the Elbe. Nothing was seen of her afterwards, and her melancholy fate was first brought to light on Tuesday morning last by a quantity of wreck being washed up near Cuxhaven, with the name of the vessel on the fragments. There is little doubt that she must have quickly gone to pieces, and that all belonging to her (twenty-five of a crew, and above fifty passengers) perished

AMONG the visitors to the Crystal Palace, on the 26th December, were 1100 of the workmen from the factory of Messrs. Maudslay and Field, a large number of whom were accompanied by their wives and children.

SHIPMENT AT TRIESTE OF WOODEN HOUSES, FURS, ETC., FOR THE ALLIED ARMIES IN THE CRIMEA.

SHIPMENT OF HUTS AND CLOTHING FROM TRIESTE.

IN addition to the Huts which have been sent from Southampton for the Allied army, a large number have been forwarded to the Crimea from Trieste within the last few weeks. Those sent from the latter port were made at Cilli, in Steiermark; and our Correspondent at Trieste, who has sent the accompanying Sketch, states that all the joiners in the surrounding districts had been working day and night for some time to complete the order. The result of this activity has been, that the first shipment of the Huts was dispatched about three weeks ago, and must have reached Balaclava before this time

Several hundred bales of furs have been shipped by Lloyd's steamers for Constantinople. We see also that Lord Westmoreland, on the part of our Government, has made a contract with the house of Weikersheim and Co., at Vienna, for an immediate supply of furs and winter clothing for our troops in the Crimea.

A large number of articles of winter clothing, and particularly of shoes, ordered of a house at Berne, on account of the British Government, left Switzerland last week.

BURNING OF A TURKISH SHIP OF WAR OFF EUPATORIA.

(From a Correspondent.)

A CORRESPONDENT, writing from Eupatoria, Dec 22, says, "I send you an outline of a little adventure which took place here yesterday. At eight a.m., the 21st Dec., a Turkish line-of-battle ship, which was wrecked in the gale of November last, about four miles from this place, was observed to be on fire, when boats from H.M.S. *Curaçoa* were sent to try and extinguish the flames. There being large bodies of Cossacks on the beach, and in the immediate neighbourhood, the *Viper*, one of the new gun-boats, was sent to protect the boats' crews. On arriving at the wreck she was found to be in one mass of flame, fore and aft. The boats returned to their ship, and the *Viper* steamed a few miles along the coast towards an out picket near the sea, from which the Tartars had been driven during the night by the Cossacks. From not knowing the coast soundings, we proceeded with great caution, having a boat ahead to sound; this gave the Cossacks time to get away from the picket-house, where they had taken up their quarters. On arriving within 4000 yards we fired our Lancaster guns, with shot, at 18 deg. elevation, to try the range, when both shot fell in amongst them; at which, being evidently surprised at our long range, they galloped off as fast as their horses could carry them, extending into very open order over the plain. It is not known if any damage was done by our shot, but two riderless horses were seen galloping off. As we steamed within 600 or 800 yards of the beach into two fathoms water, we opened again with shell; but, from the way they had opened out, without doing anything beyond frightening some of them—as was seen by one man going down on his face till the shell had burst, and then up and away. They disappeared over some low hills about 4000 or 5000 yards off.

"Observing a good-looking boat on shore, we landed a party to bring her off or destroy her, which latter they did. This was probably the boat in which the Cossacks came off and set fire to the wreck."

The accompanying Sketch, by Lieut. Lodder, is taken at the moment the main-mast was falling over the side, the mizen-mast having previously fallen. The boats are seen leaving the wreck. The *Viper*, with her boat ahead, sounding, is on the right, firing upon the Cossacks near the Picket-house. Some Tartars galloped along the coast, abeam of the vessel, and in the retreat of the Russians entered the picket-house, and brought out some lances, evidently left in the hurry of departure by the Cossacks.

COSTUME IN THE CRIMEA.—A young officer of cavalry, in a lively letter to his father, admitting his severe privations, but undepressed by them, gives the following account of his clothing:—A pair of large sailor's boots, a pair of course sailor's trousers, a peajacket with anchor buttons, and his own old foraging-cap, the last remnant of his regimental rags.

PARIS under Julius Cæsar covered a space of 15 hectares 23 ares (the hectare is nearly 2½ English acres), under Julian, of 38 hectares 79 ares; under Charles V., of 250 hectares 87 ares; under LOUIS XIV., of 1126 hectares 21 ares; and at present it is, within the fortifications, 25,755 hectares and 80 ares—which is more than half the department of the Seine.

THE ELECTRIC TELEGRAPH IN THE EUXINE.—Mr. Liddell, the engineer of the new Leicester and Hitchin Railway, has obtained leave of absence for two months to lay a submarine cable for telegraphic purposes from Varna to either Cape Chersonese or Balaclava. The cable is ready, and Mr. Liddell is on the point of sailing to complete his commission of thus bridging the Euxine, 300 miles across, for the flight of intelligence between the Allied armies in the Crimea and their respective Governments

THE tenant-right agitators are preparing for a "demonstration" in Wexford, in which a so-called county meeting is to take place on the 23rd instant.

THE clipper-ship *Blue Jacket*, one of the Fox line of packets was on Wednesday taken up by the Postmaster-General, for the conveyance of the Australian mails of the 5th of March next.

BURNING OF A TURKISH SHIP-OF-WAR, OFF EUPATORIA.

ILLUSTRATED LONDON NEWS

GENERAL CANROBERT.

The Portrait of the French General which we give this week is from a Sketch taken by our Artist on the memorable afternoon of the battle of Inkerman. General Canrobert does not appear to be afraid of the Russian sharpshooters, as he always wears his gold-laced hat, with white feathers, even when in action. From all accounts it would appear that the French troops altogether, both officers and men, attend much more to the "pomp and circumstance" of war than our countrymen do. For example, in a grand reconnaissance made by the French on the 28th ult., frequent allusion is made by those who describe it to the gallant show which our allies made on the occasion.

At ten o'clock on the day above mentioned, large bodies of French cavalry were seen from the English Camp in motion across the plain; the glittering helmets, *pantalons rouges*, and white horses upon which one regiment was mounted, forming, in contrast with the green plain, a pretty spectacle in the morning sunlight. They advanced skirmishers in front to the well-known Turkish redoubts, from which the Cossack pickets and videttes beat a hasty retreat. A body also galloped to their left, and crowned the heights close underneath which occurred the memorable Light Cavalry charge on the 25th October. Turning to their right, the reconnaissance galloped towards the village of Kamara, and then came in full pursuit of many Cossacks who, with their shining spear-heads in the air, made the best of the way before them, with the exception of one, whose horse stumbling brought him to the ground, and, after running for some distance, was made prisoner. The Cossacks continued to retreat until they reached the entrance of a gorge, where stands a ruined house; here the French halted, the cause being soon rendered apparent by the appearance of a large force of Cossacks and the rallying of the runaways. A sharp interchange of fire from the respective carbines on either side took place, which lasted for several minutes, when the Cossacks again retreated through the gorge, and a portion of the French cavalry galloped gallantly up to the crest of the brown hill overlooking it, firing down below, and evidently making also the best use of their eyes in their commanding position, from which might be had a fine view of the Ruselan camp. This same camp has been observed for some minutes to have become the scene of some great activity, and from it emerges a large cavalry force, and ten guns are by this time horsed and being moved from a redoubt by the rear to a commanding position. The Russian trenches, too, are lined by their great-coated soldiers

GENERAL CANROBERT, SKETCHED AFTER THE BATTLE OF INKERMAN.

The French cavalry are quickly seen retiring from their position on the top of the brown hill, having seen all they wanted to see; and it is rather well for them that they have beaten a retreat, for a long line of skirmishers gradually appears, and Russian battalions now top the heights; the bodies of Russian cavalry, too, on the Mackenzie-road made preparations for passing the lower bridge; whilst the French troops, having finished their reconnaissance, retire over the hills of the Turkish redoubts, which, in their turn, are again occupied by the advancing Cossacks, who, however, come thus far and no further, having a salutary remembrance of the batteries occupied by the Marine Artillery and Marines. The French cavalry remain for some time on the plain in the event of the Russian troops being drawn on to attack, and then return to their Camp. Whilst all this was going on, a reconnaissance was also attempted on the right of the English Camp, in front of the heights: a regiment of Zouaves, the left wing of the 2nd Battalion of Rifle Brigade, and the 42nd Regiment, the Royal Marines, also having orders to be ready to stand instantly to their arms. Here, however, little was done. The Russian pickets, of course, made the best of their way from their picket-house (800 yards only in advance of our pickets, and occupying an extremely beautiful position in a hollow between two high hills), leaving behind them all their cooking utensils and a Cossack lance: the former useful articles were, of course, immediately appropriated by the Zouaves, the latter became the capture of the bow and spear of Colonel Sterling, the Assistant Adjutant-General. At this point the troops forming the French reconnaissance were seen to retire down the vale between the mountain ridges, and our reconnaissance, therefore, followed their example. Daylight, on the morning after these proceedings, revealed the Russians prepared for an attack; battalions crowned their hills with skirmishers thrown out in front; and a breastwork which had risen during the night crossed the face of the brown hill, up which the French cavalry had advanced; they remained working at this the whole day, they threw up these works with wonderful quickness, and they appear to be exceedingly well made.

VISIT OF THE SULTAN TO THE DUKE OF CAMBRIDGE

This event, of which our Artist has given a Sketch, has excited a wonderful sensation among the orthodox Turks, and indeed among all classes in Constantinople. That a Sultan should not only enter the house of an Ambassador, but actually comply with Christian usages, so far as to allow of the presentation of ladies, is thought to be one of the most startling innovations witnessed since the war began. The visit, which took place on the 24th ult., is thus described by the *Journal de Constantinople*:—

VISIT OF THE SULTAN TO THE DUKE OF CAMBRIDGE, AT CONSTANTINOPLE.

His Royal Highness the Duke of Cambridge, whose health is better, left the Hotel d'Angleterre on Monday last, to take up his residence at the palace of the British Embassy at Pera. On Friday last his Imperial Majesty the Sultan, accompanied by his ordinary suite, proceeded to the palace of the Embassy, to visit his Royal Highness. The Sultan was received at the entrance of the palace by Lord Stratford de Redcliffe and the whole *personnel* of the British Legation in full uniform, and by the Duke of Cambridge, who waited at the head of the grand staircase. Introduced into the chief saloon, the Sultan entered most affably into conversation with the Duke. Lord Stratford de Redcliffe and M. Etienne Pisani, first dragoman of the Embassy, were present at this interview, and as the noble Ambassador remained standing, his Majesty graciously requested him to be seated. After the interview—which lasted twenty minutes, and in which the Sultan expressed to the Duke his sentiments of friendship and sympathy for Queen Victoria and the English people, and satisfaction at the improvement in the Duke's health—his Majesty visited Lady Stratford, who, with her daughters, was in the ball-room, and conversed with them in the most friendly manner. The Duke accompanied the Sultan half-way down the grand staircase, when the Sultan insisted he should go no further. Lord Stratford and the other members of the Legation accompanied his Majesty to the great vestibule. M. Etienne Pisani accompanied his Majesty to the palace gates, where the Sultan mounted his horse and returned to Tchiragan.

NAVAL AND MILITARY INTELLIGENCE.

THE *Himalaya* left Portsmouth harbour for Southampton on Saturday morning last. Having been now commissioned as a ship belonging to the fleet, she will receive an armament and a staff of naval officers.

THE *Ripon* arrived at Malta on Dec. 30 from Constantinople, with invalids for England direct. On her arrival, however, her destination was of a sudden changed, the troops disembarked, and the ship was ordered to proceed to Marseilles for the conveyance of French troops.

ON December 28 the *Fairy* yacht, laden with stores sent out by the Crimean Army Fund, sailed from Malta for Balaclava, as also the following transports, with reinforcements, stores, warm clothing, winter huts, and stoves—namely, the *Rajah*, the *Empress*, the *Candia*, the *Edwin Fox*, the *Army and Navy*, and the *Alster*.

THE *Pincher*, one of the new light draught gun-boats, having had her engines put on board at Deptford, was brought down to Woolwich dockyard on Saturday, to have her guns mounted and be completed for sea. Several of the other gun-boats building at Northfleet are in an advanced state. They are all ordered to be ready previous to the ice breaking up in the Baltic in the spring of the present year.

THE following detachments are under orders to proceed to the Crimea as soon as possible, to join their respective corps, viz.:—the 9th, 14th, and 30th Regiments, consisting of 430 men, to embark at Portsmouth in the steam ship *Princess Royal*. Drafts for the 4th, 17th, 19th, 20th, 21st, 28th, 34th, 38th, 42nd, 54th, 46th, 77th, 88th, and 93rd Regiments, and Rifle Brigade, consisting of 17 officers and 1136 men, will embark in the steam ship *Cressy* for the Crimea.

THE Royal College of Surgeons of Edinburgh have issued a notice to medical students intimating that those whose course of study would be completed at the end of the present session, and who intended to apply for admission to the Army Medical Service, may be admitted to examination for the diploma on or after the 16th January, provided they produce a certificate.

NO MORE GROWING LADS WANTED.—The following circular has been issued for the guidance of recruiting parties: "Horse Guards, Jan. 5, 1855.—It being very desirable that the recruits enlisted for the infantry should be of sufficient age and strength to enter immediately upon their duties as soldiers, the General Commanding-in-Chief directs that, until further orders, no recruit of the class of growing lads be received below the age of seventeen years.—By command, G. A. WETHERALL, A.G."

ACTIVE measures are being taken for carrying out the intentions of the Government of establishing a reserve at Malta. The reserve will, we believe, be composed of three companies of each of the regiments in the Crimea, and, for the purpose of forming these companies, all recruits for the army, as soon as attested, are to be sent to Malta, there to be drilled, before they receive their clothing. A number of efficient non-commissioned officers are to be selected from the different depôts in England, and sent to Malta to instruct the recruits. Temporary barracks are now in course of erection in the island, for the accommodation of the depôt.

THE *Saladin*, laden with a large number of wooden houses for the French troops in the Crimea, left Southampton on Monday, towed by the *William M'Cormack* steamer. A delay of a day or two in her getting away arose from the difficulty of obtaining hands, in consequence of the navvies they had to sign being for two years, provided the ship is wanted so long in the Black Sea. The screw-steamer *Black Boy* left Southampton also yesterday with eighty wooden huts for the English troops in the Crimea. A sapper from the Southampton Ordnance-office, and a number of carpenters from Gloucester, who are expert at getting up the houses, have gone out in the *Black Boy*.

ARRIVAL OF INVALIDS FROM THE CRIMEA. The *Candia* arrived at Southampton on Sunday from the Crimea—to which she conveyed French troops from Marseilles to the number of 1160 men, who were landed in good order and condition. She brings invalided troops of various regiments—the Scots Fusilier Guards, 68; Malta, 69; Gibraltar, 28—the whole under the command of Lieutenant Streatfield, of the 44th, and in medical charge of Staff Assistant-Surgeon Reade. She also brings the following invalided officers:—Captain Hume and Lieutenant Harriston, of the 57th Regiment; Brevet-Major Thompson, 10th Hussars, wounded at Inkerman; Lieutenant Newnham, 63rd Regiment, wounded; Captain Wilson, 7th Hussars; Captain Kemmis, 77th Regiment; Lieutenant Clarke, 34th Fusiliers; Captain Rumbold, 63rd Regiment; Lieutenants Granville and Greenwood, 23rd Fusiliers; Brevet-Major Yates, Royal Artillery; Captain Tryon, 7th Fusiliers. Private Scotland, Scots Fusiliers, and gunner Bowes, Royal Artillery, died on the passage, and were buried at sea. Among the passengers by the *Candia* are five Sisters of Mercy of Miss Nightingale's party, and two of Miss Nelson's, with three hospital nurses, besides some officers' wives from Gibraltar. About 26 or 30 of the officers and soldiers brought by the *Candia* are severely wounded, in a very bad state of health; the remainder are in various stages of convalescence, and generally in good spirits. Dr Frederic Smith and Colonel Lord Methuen were most indefatigable in personally directing the movements of those under their orders, and, as a consequence, the work of disembarkation was entered upon with propriety, and pursued with care and diligence until the ship was cleared. The medical staff of the garrison was most assiduous with its attendance; and; the wounded were removed to sick quarters under personal medical superintendence; and all engaged in the melancholy duty received the readiest and most cordial assistance from Captain Field and the officers and crew of the *Candia*, whose number of invalids amounted to 194. Thousands of people crowded the docks to catch a sight of the wounded soldiers, and the greatest sympathy for their condition was manifested. Refreshments of all kinds were spontaneously tendered to the men, and one firm in Southampton (Messrs. Cooksey) sent a waggon containing five kilderkins of porter, with tobacco, &c., as a present to the men, but the commanding officer declined to accept it.

THE *Alfred*, screw steam-transport, is at Deptford, being fitted as a baking establishment for the Black Sea. It is stated that another vessel will be fitted as a floating bakery. The *Alfred*, with her establishment, will supply sweet new bread to the troops in the Crimea. Surely some means will also be adopted for supplying the troops with fresh-roasted coffee.

THERE is now in Southampton Dock a screw-steamer called the *Loire*, loading with wine for Balaclava. A machine with wire rope is to be sent out in the *Loire* to draw the casks and barrels of wine up the sides of the rocks at Balaclava.

THE Government fleet of hired transports has within the last ten days been increased with the undermentioned vessels of considerable tonnage, viz.:—The *Lady Eglinton*, the *Union*, the *Foyle*, the *Prompt*, the *Marley Hill*, the *Kangaroo*, the *Peninsula*, the *Black Boy*, the *Whitley Park*, the *Cochrane*, and the *Canadian*. The total number of transports employed is 178—of which, 67 are steamers and 103 sailing-vessels.

OUR readers will be gratified to hear that the Board of Admiralty have paid a just tribute to the exertions and talents of Lieut. Montagu O'Reilly, by giving an order that he is to be promoted to Commander, on the removal of Captain the Hon. J. Drummond to the *Tribune*.

FRENCH SANG-FROID. The Russians having abandoned the ground in front of the Quarantine Fort, occupied by a small village, the French soldiers carried in to seize on all they could—vegetables from the gardens, articles of furniture, and even the doors and windows from the cottages. Gen Bizot had six windows placed aside to serve in Gen. Canrobert's dining room, when erected. "All that," says a letter from a French officer, "was done under a sharp fire of musketry; which, however, only wounded two men slightly. I saw Capt. de Marivault, of the navy, carrying away with the greatest precaution a window, which he protected with infinite address with his body against the balls. Near him I saw an artilleryman gathering a salad in one of the gardens. A ball knocked out of his hands what he had collected. Grambling at being so treated, he again set about his work, and finished it without further molestation. Such examples of *sang froid* are by no means rare."

THE whole of the 500,000,000 French loan is already subscribed for, and no doubt is entertained that the entire subscription will exceed 600,000,000.

NOTES OF SIEGE OPERATIONS AND FIELD FORTIFICATIONS.

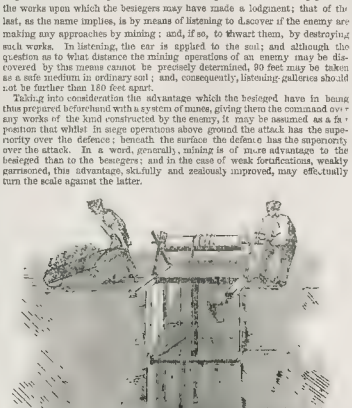
MINING.

MINING is a most formidable element in the art of fortification, and in siege operations, offensive and defensive; and often decides the issue of the conflict, after all the resources of skill above ground have been exhausted. It is a complete species of attack and defence in itself, and may be used to such an extent, and so successfully, by the weaker party, as to neutralise the effect of superior numbers and superiority of works above ground. One important feature in favour of the use of mining by the besieged is the comparatively few hands it requires. So long as the garrison is sufficiently strong to guard the posts against surprise, a company of fifty or sixty miners will be sufficient to render the approaches formidable; destroying batteries of attack, one by one, as they are brought to bear, and blowing up the outer works of defence, as soon as the enemy obtains footing on them. What is true also of mining in the defence of places is true also in the attack. "Mines," says General Monk," "where you may come to make them, are much better than batteries for the taking of towns or castles; because they always prove much more dangerous and terrible to an enemy, by means of their sudden and unexpected operations; and all sudden and unexpected actions are very successful in all martial affairs." He adds, "A commander cannot take any place of strength with any certainty or safety without the use both of batteries and mines;" by which, as we apprehend, he means that a commander cannot be certain of being able to take a place without having recourse to the use of mines, just as he cannot be certain of taking it without completely investing it: although many instances have occurred, both before and particularly since Monk's time, of places of great strength being taken without mining, as there have been some, but by no means numerous, of places taken without regular and complete investment.

The strength of mining lies in that which is the prime virtue of all military operations, the secrecy of its workings; and the protection under which, until discovered, those employed at it work. In works of attack it fairly counterbalances the advantages obtained by the concealed ramparts under Vauban's system of fortification; and, if left undisturbed in its operations, may be used to blow up a portion of the very wall of the rampart, or, by means of a subterranean passage, to bring cannon to the very ditch for the purpose of breaching it. But precautions are usually adopted in all permanent fortifications to prevent such methods of approach

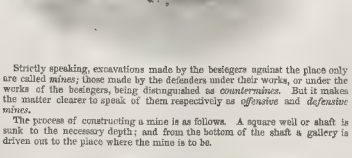
Every completely fortified place is provided with a system of mines, with galleries running not only under different parts of the works, but even beyond them, beneath the exterior ground. The system most generally employed would consist of—1. A gallery running all along under the *banquette* of the covert-way, and called the *counterscarp* gallery. 2. A gallery at the distance of the salient or extreme point of the ravelin, and called the *envelope* gallery, this used formerly to extend all round the work, like the counterscarp gallery, but its position being found to be exposed, it is now generally only laid at the salient angle itself. 3. Between the counterscarp gallery and the envelope are laid galleries called *galleries of communication*; and beyond these, (4) shooting out in all directions, and even beyond the foot of the glacis, *listening-galleries* in all directions. The outline of the whole scheme is very similar to that of a spider's web. The object of the first of these positions is to blow up parts of the works upon which the besiegers may have made a lodgment; that of the last, as the name implies, is by means of listening to discover if the enemy are making any approaches by mining: and, if so, to thwart them, by destroying such works. In listening, the ear is applied to the soil; and although the question as to what distance the mining operations of an enemy may be discovered by this means cannot be precisely determined, 90 feet may be taken as a safe medium in ordinary soil; and, consequently, listening-galleries should not be further than 180 feet apart.

Taking into consideration the advantage which the besieged have in being thus prepared beforehand with a system of mines, giving them the command over any works of the kind constructed by the enemy, it may be assumed as a fact, position that whilst in siege operations above ground the attack has the superiority over the defence; beneath the surface the defence has the superiority over the attack. In a word, generally, mining is of more advantage to the besieged than to the besiegers; and in the case of weak fortifications, weakly garrisoned, this advantage, skilfully and zealously improved, may effectually turn the scale against the attack.



Strictly speaking, excavations made by the besiegers against the place only are called *mines*; those made by the defenders under their works, or under the works of the besiegers, being distinguished as *countermines*. But it makes the matter clearer to speak of them respectively as *offensive* and *defensive mines*.

The process of constructing a mine is as follows. A square well or shaft is sunk to the necessary depth; and from the bottom of the shaft a gallery is driven out to the place where the mine is to be.



In digging the shafts and galleries the soil is supported at the sides and a top by strong planks or sheeting. In permanent mines these are afterwards removed, and the whole interior cased with brickwork. Our Engravings show the attitude of the miners in the operation of digging. All mines require ventilation and lighting when in progress. The latter is sometimes effected by means of reflecting mirrors, sometimes by candles—the former, by large bellows, drawing a supply of air through tubing from the outer atmosphere.

The shaft and galleries being thus prepared, the loading of the mine takes place; the necessary charge being placed in a box, and deposited in a chamber dug out from the side of the gallery into the soil. A hose containing powder, called a fuse (in French a *saucisson*), is then fixed in the box, and laid along the gallery in a narrow wooden trough (in French called an *auget*), to the place where it is to be fired. As soon as the charge is lodged in the chamber,

CHAMBER OF A MINE.

and the hose-trough fixed, the chamber is blocked up with earth—a process called *tamping*—so as to prevent the explosion from wasting itself laterally in the gallery. The charge put into the mine depends upon the depth perpendicularly (called the *line of least resistance*), the nature of the soil, and the nature of the explosion required. When the explosion forms a crater about twice as wide across the top as the depth, the charge is called a *two-line charge*, and the crater a *two-line crater*. Increased charges will give craters having diameters equal to three, four, five, and six times the depth, or line of least resistance. A mine loaded with a very great charge of powder is called a *globe of compression*, from its compressing or disturbing effects upon the ground beyond the sphere of its crater. It is said that a charge equal to a two-line crater will ruin galleries at a distance greater than four times the line of resistance. Hence they are much resorted to by besiegers to destroy defensive mines. Sometimes the mine, after being charged, is filled up with stones to make the explosion the more destructive.

In destroying an enemy's mine or subterranean work, or to stifle those employed at it, where it is not required that the explosion should extend to disturb the surface of the ground, a much smaller charge is employed, calculated according to the radius to which the explosion is intended to operate. This smothered mine is called a *camouflet*.

FOUGASSES.

An important application of mines is in the defence of field-works. In this case they are of much smaller dimensions than in works of permanent fortification; and they are then called *fougasses*. They are, of course, generally constructed before the weakest parts of the works, or those most exposed to attack, and particularly all salient angles or faces not protected by cross-fire: these points being so defended, even if an enemy should have advanced within a few paces of a work, gave way not, in the smallest degree, nearer becoming masters of it; since, on springing, the mines, they are blown up in a moment, which, besides the loss of men, throws the others into the utmost confusion, not suspecting the cause for what is prepared for them. To be effectual, the system of defence should be judiciously organised, and upon a scale of some extent. To resist a determined attack by a strong force, the fougasses should be laid in several lines, at appropriate distances from each other: for, should there be only one line, the enemy, on its blowing up, would instantly rush forward in the certainty of not meeting any more obstacles of the same kind. When the garrison is strong enough to permit of sallies, the explosion of mines affords good opportunity for making them with advantage.

The construction of *fougasses* for field-works is much simpler than that of larger mines. At the distance of ten, twelve, or even fourteen feet from the ditch of a work, a pit, or shaft, three feet square, is dug to the depth of six, seven, or eight feet. When the earth is not of a very firm nature, the sides, as in the case of larger mines, are supported with boards or sheeting. When the shaft is of sufficient depth, a square hole is made at the bottom, in that side next the work, and extending towards it, in order to form a lodgement for the box of powder. This excavation is called the chamber of the mine. The dimensions of the box holding the powder fit the height and breadth of the chamber, which should be exactly a cube, whose side is one-sixth part the depth of the shaft. The inside of the box must be a cube, whose solid contents are exactly the ninth part of the depth of the shaft. The cover is not quite so much in depth, and a half square, is cut in the side of the box, about an inch from the bottom, to admit a small wooden tube, intended to conduct the fire to the powder. It appears about an inch on the outside, but reaches quite to the middle of the box within, that the powder may kindle from the centre, which produces the best effect.

SECTION OF A FIELD-WORK; WITH A FOUGASSE.

In the case of fougasses attached to field-works, galleries of communications, to connect them with the body of the place (as in the case of mines attached to permanent fortifications), are not necessary. The powder having been buried in its chamber at the bottom of the shaft, the latter is filled up; and the auget containing the saucisson or fuse is conducted to the interior of the redoubt, or other field-works, after being made to pass under the glacis, and across the ditch, either in a small trench dug for the purpose, or over it, supported upon packets of wood.

OF BATTERIES AND VARIOUS KINDS OF FIRE

A Battery is a certain number of cannons, ranged side by side, so placed as to direct their fire upon a particular object. There are various sorts of batteries; but it will be sufficient to explain the nature of the principal descriptions.

Batteries of the Field are generally composed of light pieces, therefore called "field-pieces," which are moved in different directions, according to circumstances.

Siege Batteries, on the contrary, are permanent in their arrangement; being placed behind a bank of earth constructed for the purpose, which is called the *épaulement*, and the object of which is to conceal from the enemy the working of the pieces, and protect the men working them. The height of the épaulement is about six feet. The épaulement itself is pierced with cuts, through which the cannons are fired, which cuts are called *embrasures*. The embrasures are made wider on the outer than the inner face of the work, on account of the spreading fire of the cannon, and to prevent the *cheeks*, or sides, thereof from being destroyed, and also to allow of the cannon being moved round horizontally, according to circumstances—that is to command as wide a range as possible. The parts of the épaulement where it is not cut through with embrasures are called *merlons*

Siege batteries are divided into batteries à ricochet, and batteries in breach.

A Battery à *ricochet* is intended to enfilade a piece of fortification, so that the ball, falling upon a hollow spot, shall afterwards proceed by leaps and bounds—something after the fashion of a stone skimming the water—and, traversing the whole length of the rampart struck, overthrow everything that opposes its passage. The use of these batteries, which are placed at a certain distance off the sides of the works attacked, is principally to destroy or silence the guns of the enemy, so as to allow of the works of approach against the place to be carried on unmolested.

Batteries en *breach* are employed to destroy the rampart itself, or make such an aperture in it as to allow of the entrance of the besieging troops. They are, therefore, placed directly opposite, instead of off, the side of the works attacked.

Batteries en *barbette* have an épaulement of only about three feet or less in height, and the guns so placed as to fire over it. These batteries are especially available in situations higher than those of the enemy, which not being commanded by direct fire on a level, the comparatively low épaulement is sufficient protection. Guns en barbette have this advantage, that, not firing through embrasures, they may be turned to fire in any direction.

It may be desirable here to explain, for the information of the non-professional reader, the peculiarities of the various modes of firing which are employed in siege operations, and which are spoken of as "direct," "enfilade," "ricochet," "vertical," "pitching," "plunging," &c. *Direct fire* is that which proceeds from a gun pointed at right angles with the face of the fortification, or object attacked; and, of course, is that best adapted for breaching purposes. *Enfilade fire* is that which proceeds from a gun placed in line with the face of the wall, or object attacked; so as to sweep along from end to end of it. *Ricochet fire* differs but slightly from enfilade, or rather is a species of it; the only peculiarities being in the charge of powder, which is considerably less than that for a sweeping enfilade, and in the slight elevation given to the gun, by which the shot is made to touch the ground within the enfiladed face, and then to bound along the terre-plein. *Vertical fire* is peculiar to mortar-practice; in circumstances a very terrible mode of attack. Here the mortar being elevated to forty-five degrees, the shells take a bold curve in the atmosphere, and fall within the enceinte of the place besieged, where they burst, scattering destruction around. *Pitching fire* is employed in the case of projecting a shot or shell against a wall or other object, which itself is concealed from view by a mass of earth, or other obstruction. To this end the gun is elevated, so that the ball or shell may fall so as to graze the further side of the obstructing mass, and glance off against the wall or object to be destroyed. *Plunging fire* is that directed from a gun situated on a considerable eminence, and pointed downwards upon an object.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE memoirs and letters of the Rev. Sydney Smith, privately printed by his daughter, Lady Holland, will be published, it is said, with certain omissions, early in the present season. The few who have been permitted to see the work are delighted with Sydney's letters.

Mr. Lockhart's books will, we hear, be added to the library at Abbotsford. Mr. Lockhart, it is understood, has destroyed much of his extensive, and it is easy to believe valuable, correspondence. His predecessor in the editorship of the *Quarterly* did the same.

So little is known of William Vandervelde the younger (the great painter), that we shall be more than excused for bringing to light the following new facts about him. On the 16th of April, 1688, William Vandervelde, the younger painter, and Mrs. Magdalen Walravens, his wife, went before a Public Notary in Amsterdam, and attached their names to a document that the survivor of the other should be the sole heir of what they both possessed. This was done from the uncertainty of life, and from the fact, as the document sets forth, "that Mrs. Magdalen Walravens was then exceeding far gone with child." Now, this very document, written in Dutch, at Amsterdam, in 1688, was in 1707 the only will of the great painter, and was proved as such in London in that year by Magdalen Walravens, the painter's widow To this we will add another new fact, that the widow made her will August 13, 1716, describes herself therein as of the parish of St. Margaret, Westminster, and leaves all her estate, real and personal, to her daughter, Sarah Burgess, wife of John Burgess, of St. Giles'-in-the-Fields, Esquire. Collectors of Vandervelde's works will like to know the descent of the painter's property? Who was Mr. Burgess? and are there any representatives of the Vandervelde now alive?

The following interesting letter tells its own story. It is from the favourite daughter of the distinguished painter of "Belshazzar's Feast".

In reference to the communications of your correspondents on the subject of the "Belshazzar's Feast," you may probably like to know the whole history.

My father painted two finished oil sketches of the "Belshazzar" before he executed the large picture; but the latter was not copied from either; and a comparison of the three would satisfactorily prove that the sketches were merely memoranda of the first conception of the subject. My father himself viewed the sketches much in this light, and always spoke of the perfected work as the original, though literally it could scarcely be so esteemed. One of the sketches was purchased by Mr. Belsazio, a merchant; and the other by Mr. Wilson, a—both patrons of the fine arts—five-and-thirty years ago. Which of the two sketches may now be in the possession of Mr. White I cannot pretend to say.

As regards the engraving, it was, like all the other engravings executed by my father, designed upon the plate from his recollection of the principal picture, aided by his own imagination and by occasional reference to the sketches; and, as you observe, it differs materially, not only from the large picture which it most resembled, however—but from the previous sketches

On one point there can scarcely be two opinions—that, however curious and interesting the original sketches may be, their existence can in no way compensate for the loss of the great picture itself. Nevertheless my father was alive to the defects in the painting; and was, besides, so satisfied that he could vastly improve the composition, that he determined on painting a fresh picture on a larger scale, which he intended to leave as the picture of "Belshazzar's Feast," and one of the last conversations I ever had with him was on this very subject.

Artists express astonishment at the large amount of money which Mr Brockedon has left behind him. His property has been sworn under £30,000. He did not make his money by Art; but by indiarubber corks and other ingenious contrivances, to which we called attention at the time of his death

Mr. Tupper, the author of "Proverbial Philosophy," has given a gold medal "for the encouragement of literature in Liberia." The medal itself is from the graver of Mr. W. C. Taylor, and merits notice as a work of art. It bears no personal allusion to its donor.

We are sorry to record the death of the Belfast Government School of Design. It faded under the shadow of the Marlborough-house protection, soon found the self-supporting system one under which it could only starve, and has now decently given up the ghost. Marlborough-house will, in the long run, it is feared, swallow up all the provincial schools; but, in doing this, will it supply anything of corresponding value? and is it not likely to come into unpleasant collision with the Royal Academy in Trafalgar-square?

The dispute about the date of publication of the first edition of Pope's "Dunciad," which our contemporary *Notes and Queries* undertook to comprehend and decide, has just been determined. The "Dunciad" first appeared in May, 1728.

The admirers of Turner are angry with Mr. Leslie, the painter for saying that Turner was a poor hand at painting a tree. 'With the exception of here and there a willow, and, in his Italian views, the frequent pine and cypress, I look in vain," says Mr. Leslie, "for a specific discrimination in his trees; or in the vegetation of his foregrounds, in which there is little that is English. I cannot remember an oak, an elm, an ash, or a beech in any picture by him; nor do I remember anything much like the beauty of an English hedge. Neither has he expressed the deep verdure of his own country; and hence he is the most unfaithful among great painters to the essential and most beautiful characteristics of English midland scenery." This cannot avail, either Mr. Ruskin or Mr. Munro; but the truth of Mr. Leslie's position is, to our thinking, not to be doubted.

The forthcoming article in the *Quarterly* on Mr. Leech, the deservedly-favourite artist of *Punch*, cannot fail, it is said, to be brilliant. In this case we may foretell a treat.

ROYAL VISIT TO THE PHOTOGRAPHIC EXHIBITION.—On Thursday the exhibition of the Photographic Society was visited at eleven o'clock by his Royal Highness Prince Albert. The collection, which is rather an extensive one, has just been completed. The pictures include many by distinguished amateurs, and especially illustrate the progress made in the different branches of photography. Not the least interesting and attractive are the stereoscopic pictures. Several were exhibited by professional gentlemen—one stand being remarkable, as it not only exhibited the wonders of the stereoscope in producing the illusion of solidity, but presented wonderfully accurate likenesses of popular and well-known men, such as Mr. Charles Dickens, Mr. G. V. Brooke, Mr. Charles Kean, Mr. Macready, Mr. Charles Mathews, J. B. Gough, &c. These portraits were from the photographic establishment of Mr. Mayall, in Regent-street.

POSTAL REGULATIONS FOR THE WAR.—The Post-office authorities in St. Martin's-le-Grand, in order to give increased facilities with respect to the transmission of correspondence to and from the seat of war, have determined to increase the staff of officers in the department at Constantinople and certain other stations between the United Kingdom and the Crimea. Orders were issued a few days since for the engagement of a number of clerks, letter-sorters, and letter-carriers, for the performance of this "foreign duty," preference being given to men in the General Post division, in the first instance, who might be inclined to volunteer. Yesterday the appointments of a number of sorters and letter-carriers were authorised by the Postmaster-General, and these officers will in consequence be dispatched without delay. Most of them are of some years' standing in the office. Eight are destined for Constantinople, and others for other stations will follow. The pay is to be liberal, and a complete outfit is to be provided for them.

INCREASED SALARY TO COUNTY COURT JUDGES. By an order of the Government, fifteen of the sixty County Court Judges have been selected to receive a salary of £1500 a year each. Under a recent Act of Parliament the maximum salary to be paid to the County Court Judges was £1500, and the minimum £1200. The labour of all the Judges has been considered by the Government, and the result is, that the maximum salary is to be awarded to fifteen out of the whole number. The Judges are precluded, by a provision, from practising at the bar. It is understood that the metropolitan Judges have been included in the highest amount of salary to be paid. In some of the districts the causes entered have annually exceeded 10,000 in each. The County Court Judges are allowed their travelling expenses.

VIENNA, on the night of the 1st inst., was visited by a tremendous hurricane. One of the old walls of the Church of St. Stephen was blown down, and the roofs of several houses were carried away. It will be remembered that here the new year was ushered in with a violent gale, and the great storm at Hamburg raged on the same day.

SOME OBSERVATIONS ON THE ORIGIN OF CHESS.

BY DR. DUNCAN FORBES.

CHAPTER VII.—ON THE INVENTION OF CHESS IN INDIA—ACCORDING TO THE ARABS AND PERSIANS.

THE writers of Arabia and Persia are nearly unanimous on the following points:—1. That the game of Shatrang was invented in India. 2. That the inventor's name was "Sassa," or "Sassa," the son of Dahr. 3. That the aim and object of the game was to teach, explain, or illustrate the art of war. And 4. That it was introduced from India into Persia during the reign of Nasshirwan the Just, as we have fully detailed in the last chapter. So far, "Doctors agree;" but they assent all differ as to the precise time and place (meaning, by the latter term, that precise part of India) of the invention Suffice it to say that it occurred, as they believe, between the period of Alexander's expedition and the reign of Nasshirwan

I have already expressed my sincere conviction that what the Arabs and Persians consider as the "Invention of Chess," means merely the very natural modification of the "Chaturanga" into the "Shatranj." It is curious, too, that in this conviction I am confirmed by the author of a Persian MS. on Chess, belonging to the Asiatic Society. Unfortunately, this work is incomplete, and the author's name is not given. It is evident, however, that he lived either during the reign of Timur, or somewhat later; for he gives in his work eighteen problems (of which some will appear hereafter), which occurred in actual play to "Khája Ali Shatranji," the Philidor of Timur's Court. The anonymous author has given the three following different accounts of the Invention of Chess, which I have slightly abridged. He differs from all other writers in that:—"That Sassa, the son of Dáhir, did not invent the game of Chess, but that he merely modified an older, and—as he thinks—a more perfect form of the game. He is also singular in asserting that the Hindús did not invent the older game; giving as his sole reason for thus differing from all previous writers, "that the Hindús were a dull and stupid race, incapable of doing such a thing. This he repeats, in I believe half-a-dozen places, without the least variation. He, for some reason or other, desired the Hindús, and conferred the honour of the invention on the Greeks!' It must be said in his favour, however, that he *doubts* or claims it for his own nation. But let us allow the author to speak for himself:—

FIRST ACCOUNT OF THE INVENTION OF CHESS.

"They relate that immediately after the invasion of Alexander the Great, there reigned in India a King, by name Kad. He was very powerful and wealthy, and liberal and brave. He was passionately addicted to war, and always proved victorious over the enemies. The counsellors of Kad became sole masters of the whole of the land of Hind; nor did there remain in that extensive region a single King or Prince inclined to dispute his authority. At length, when he no longer had an enemy left to conquer, he was necessarily compelled to cease from war, which he thus had become a second nature. Now this King was endowed with high principles of justice, honour, and truth, for which noble qualities he was adored by his servants and subjects. While occupied in subduing the neighbouring kingdoms, his ruling passion was fully gratified in the pursuit of conquests, and in the acquisition of fame, which he considered as the only means of happiness in this world. To him, now that no enemy remained, peace became intolerably irksome; but his sense of justice would not permit him to involve in the miseries of war those who had already submitted to his authority. All his people, from the very highest to the lowest, passed their days in the enjoyment of peace and prosperity, while he himself had fallen a prey to sorrow and affliction to such a degree that he lost all relish for food and drink, and looked upon death as his only relief.

"The King had a Minister, by name Sassa, a man of profound wisdom and penetration, to whom he communicated his miserable condition, saying, 'Day and night my mind is harassed with the thoughts of war and strife; when in the hours of the night sleep overpowers me, I dream of nothing but battlefields and conquests; and in the morning, when I awake, I still think over my imaginary contests and victories. Now you are well aware that I have no longer one single enemy or rebel in my whole dominions with whom to contend. It is utterly repugnant to justice and common sense to go to war without any cause. If I were to do so God would be displeased with me, and a severe retribution for my evil deeds would soon overtake me, even in this world. For is it not said that "a kingdom governed by falsehood and oppression is void of stability, and it will soon pass away?" Tell me, then, O Sassa, for great is thy wisdom, what am I to do in order to regain my peace of mind, and obtain relief from my present state of weariness and disgust?'

"When the wise Sassa had heard from his Sovereign the detail of his grievances, he instantly thought him of a rare game, known to him by report, the invention of an ancient Grecian sage, by name Hermes, which had recently been introduced into India by Alexander and his soldiers, who used to play at it at times of relaxation from toil. In truth, the 'Shatranji Kámil,' or 'Perfect Chess' of which the Hindús had acquired a crude notion; but not one of them could play it correctly, because *they were a stupid and ignorant race of people.* This much, however, Sassa had learned, that the game of Chess, the invention of Hermes, the Grecian sage, represented an exact image of war, such as might have been carried on between two Kings, and consequently that it might, in reality, prove to be a seasonable remedy in the case of his own Sovereign. Then said Sassa to the King, 'Sire, grant me a little time in this important business, and I believe I shall be able to accomplish something in your behalf, so that you may still enjoy all the exatements of war, and the delights of victory, while at the same time your servants and subjects may live safe and secure in the enjoyment of peace and prosperity.' At this proposal the King was highly pleased, he granted the Minister the time required, and said to him, 'On that day when you shall have relieved my mind from its present state of misery, I will freely confer upon you whatever boon you may ask.'

"Sassa immediately sent messengers in quest of the chess board and men, which were accordingly procured for him. Inasmuch as he was a man of great penetration, he soon succeeded in discovering the moves of the pieces, and the nature of the game. This done, he said to himself, 'Verily the inventor of this game was a profound philosopher; the signs of Hind could never have accomplished this; nor are they capable of understanding it. Now if I were to present the game in its perfect state, before my own Sovereign, assuredly he would never learn to play it, neither would his mind find any delight therein. Let me then amplify this rare invention of the Grecian sage, so that it may fall within the scope of the Royal understanding and capacity; for, hath not our prophet Muhammed (on whom be peace) said to one of his companions, 'you must address yourself to mankind in accordance with the nature of their dispositions and the extent of their capacities.'"

"Hereupon, Sassa, the wise Minister, reduced the fifty-six pieces of the 'Perfect Chess' to thirty-two in number; having thus discarded twenty-four pieces from the great board of the Grecian sage. All that had been the duties of the original game he rendered easy; and he conferred on all the Pawns the very same privileges, viz., that of becoming Farzins only, on reaching the opposite extremity of the board; and not that of becoming a Rook, a Knight, or a Fil, according to circumstances, as in the older game. And he made the board to consist only of eight squares by eight, that is altogether sixty-four squares—the form in which it is now used; and then he presented it to the King. The latter soon acquired the theory and practice of the game, and night and day it formed his supreme delight, so that he henceforth gave up all thoughts of war and bloodshed in the real battle-field. One day he thus addressed his wise Minister, 'O, Sassa, did I not promise thee that I would give thee as a boon whatever thou wouldst be pleased to ask of me? Now is thy time to claim thy reward. I am a King of my word; for base and contemptible is that Sovereign who dealeth in falsehoods, and who shirketh from the fulfilment of his promises.'

"The sage Minister replied, 'O, my Sovereign, may you live a thousand years; I merely ask as my reward that for the first square on the board you give me one silver dram, two for the second square, four for the third, and so on, doubling the number for each square, till the sixty-fourth square is attained.' To the King the demand seemed very insignificant, and this he spoke, 'Friend Sassa, I have hitherto looked upon you as a man of wisdom; why will you render me ridiculous by limiting your demand to such a contemptible and trifling sum? You ought to have asked for something worthy of one of my munificence and of your own merit.' The Minister made his obeisance and said, 'Sire, I am quite satisfied with what I have asked, nor would it be becoming in your servant to alter his demand, merely because your Majesty is bountiful and liberal.' Once more the King said, 'Sassa, have you ever found me backward or niggardly in rewarding the faithful services of my friends? Your wits have altogether forsaken you; ask me at least to make you ruler of one of my kingdoms, or possessor of one of my well-stored treasuries.' To this Sassa replied, 'Sire, I will thus far comply with your commands, that if, after my present demand is settled, you should think that ought further is due to me, I will freely accept the same as a mark of your Majesty's bounty and liberality.'

"To this proposal the King readily agreed. He then sent for his treasurer, and said to him, 'Take with thee the sage Sassa, and pay to him from our treasury the small sum he hath demanded of us.'

"Hereupon the treasurer, together with the accountants and the sage Sassa, went to the Royal treasury, and brought themselves to the calculation of the 'gross sum.' At first matters went on easily and rapidly, and the accountants indulged in sundry facetious remarks, not over-complimentary to Sassa, on the score of worldly wisdom. But by the time they had passed the thirty-second square or so their mirth was changed into gravity. The treasurer clearly perceived that all the drams in the face of the earth, if multiplied millions of times over, would not suffice to satisfy Sassa's demand. This astounding fact was explained to the King; who, after due reflection, said, 'I now perceive the full extent of Sassa's profound wisdom. Verily I know not which I ought most to admire, the ingenuity of the game itself, or that of the Minister's demand. It is evident that what he asks is not in my power to give; but all that I possess in the way of territories and treasures I will freely bestow upon him. The whole of my possessions are henceforth his, and in the disposal of them his commands shall be paramount; all I ask is, to be allowed to pass the remainder of my days under his shadow, in the enjoyment of the game of Chess.'

"Then Sassa thus spake:—'Sire, I will have none of your territories and treasures; I am far happier in what I already enjoy—that is, your Majesty's esteem. As to mere worldly wealth, of what use is it to me? Have I not hitherto lived upon your bounty? Your property has at all times been to me as my own; and, should I ever want aught, I will freely ask it of your Majesty, without any fear of disappointment. Sire, you have been pleased to acknowledge that I possess some wisdom; and that is the only wealth I really covet. It is a species of property which no one can take from me by force or fraud; while territories, and treasures, and palaces, and thrones, are all liable to decay. Sire, let us all seek after knowledge and wisdom, for these are the only possessions that will abide with us till the hour of death.'"

SECOND ACCOUNT.

"It is related that once upon a time there reigned in Hind a certain King, whose name was Fur. He possessed great wealth, extensive territories, and a numerous army. On his death he was succeeded by an only son, then under age; and the consequence was, that the neighbouring Kings, who had stood in awe of the father, endeavoured to wrest his territories from the youthful and inexperienced son. From all quarters of the kingdom tidings arrived of hostile aggressions from without, and of the insolence of rebels within. In this state of things the elders of the people assembled together and said 'O, Prince, your enemies are collecting their forces, with a view to wrest from you your kingdom, your treasures, and your life.' The Prince said, 'I am very young, and as yet without experience; I pray of you to advise me as to what you consider best to be done.' They answered, 'It behoveth thy father's son to draw the sword, and lead forth our gallant troops against the enemy.' The young Prince replied, 'Assuredly my hand is ready to draw the sword; but, alas! I have never seen war. How, then, can I presume to become the leader of brave men?' They said, 'Fear nothing, you shall be surrounded by able and experienced warriors, and by wise counsellors, who will soon instruct you how to marshal your forces in the battle-field. All your faithful subjects will support you with their lives and fortunes. But time presses, and the foe must be met before he can enter your territories, slay your people, and burn your towns.' Now they say that Sassa, the son of Dáhir, was this Prince's Prime Minister and counsellor. He abridged the 'Perfect Chess,' as already mentioned, and brought the board and men to the Prince, saying, 'Here you have an exact image of war, which is conducted on principles similar to those which regulate this wonderful game. The same caution in attack, and coolness in defence, which you have to exercise here, you will have occasion to put in practice on the battle-field.' The Prince with eagerness availed himself of Sassa's instructions until he made himself fully acquainted with the principles of the game. He then assembled his army, and went forth in full confidence to encounter his enemies, whom he utterly defeated at all points. He then returned home in triumph, and ever after he cherished his love for Chess; to a knowledge of which he considered himself indebted for the preservation of his throne, his kingdom, and his life."

THIRD ACCOUNT.

"In Firdausi's epic poem, the Shâhnáma, it is related, that about the time of Nasshirwán the Just there reigned in Northern India a King, by name Jushkir, whose sway extended from East to the confines of China. On his death he left an infant son whose name was Gau; and as usual in such cases, the people conferred the Sovereignty on the late King's younger brother, who, in course of time, married the elder brother's widow, by whom he had a son named Gudarz. In a short time the King also died, and the people then conferred the sovereignty on the widow. This state of things continued till her two sons became of age. As these two Princes were equally ambitious of sovereign power, they one day went to their mother, and said, 'Which of us, Young and as yet without experience? The mother at this question was greatly distressed, for she loved both her sons alike, and she could not name one of them her successor without grieving the other. She, therefore, answered, 'That one of you shall be my successor, who shall prove himself the bravest in battle, the wisest in council, and the most beloved by the people and the army.' At this reply the brothers withdrew, but frequent and angry altercations used to take place between them. Tukharuj, the elder brother, contended that the Sovereignty was his as his father's inheritance. Gau would say in reply, 'The kingdom was given to your father merely on trust, as my guardian; he was only to act as Regent during my minority. Besides, I am our mother's eldest son; and in every view of the case I am the rightful heir to the throne.' The mother, on hearing of these disputes, was sadly perplexed, for she was really desirous of retaining the love and affections of both her sons, which now appeared to be altogether impossible. She, therefore, proposed that the people and the army should be appealed to for their decision—a measure to which the Princes agreed. Unfortunately the people and the army were divided in their sentiments; some declared for the elder brother and some for the younger; so that at last the matter terminated in a civil war

To the Editor of the ILLUSTRATED LONDON NEWS.

Sevenoaks, 8th January, 1855.

In the report of the meeting which I held in St. Martin's Hall, on the 1st January, it is stated that I complained of obstructions from the press. I complained only of the *Times*, which is the only paper that refused my advertisement, and declined to give any reason for so doing, or to say on what principle it was rejected

I have no complaint to make against any other paper; and your correction of this error will oblige, Yours faithfully, ROBERT OWEN.

WAR MEETING IN WESTMINSTER.—On Wednesday evening a public meeting of the inhabitants of the parish of St. Ann, Westminster, was held in the vestry-hall, Dean-street. The meeting was convened in consequence of a numerously signed requisition addressed to the churchwardens, and for the purpose of expressing deep sympathy with the brave army now being sacrificed in the Crimea, and of petitioning her Majesty to increase the efficiency of the various heads of departments, that confidence may be restored, and a belief created that every effort will be made to preserve the remainder of the British army from destruction. Mr. John George, the churchwarden presided; and, in opening the proceedings, commented strongly on the culpable neglect of the Ministry, which had led to our forces being ruthlessly sacrificed. He had no hesitation in saying that the Government was not in earnest in carrying on the war, and had failed to avail themselves of the boundless resources placed by the country at their disposal. Mr. J. Rogers proposed, and Mr. H. Lewis seconded, the first resolution, which was unanimously adopted, and was as follows:—"That the meeting, in expressing its sympathy for the brave army now being sacrificed in the Crimea, cannot but express its deep sense of the suffering, disease, and death to the delay and mismanagement on the part of the Government, and the neglect and indifference of those placed in authority." Resolutions were then passed to the effect that a petition to both Houses of the meeting, should be presented to her Majesty, and forwarded to the Earl of Derby for the purpose of such presentation. A vote of thanks was awarded to the chairman, and the meeting separated.

STORY OF A WILL. We find the following anecdote in the *Times*:—One of the most opulent of the Amsterdam capitalists died a few days ago, one Mynheer Van der B. He was during his lifetime very careful not to disclose to any one the amount of his possessions. He would not even confide in his notary. Thus, when a few years ago this worthy Dutchman a Roman Catholic—made his will, he resolved not to permit even his professional adviser to have anything to do in its composition. In the privacy of his own cabinet he made such a division of his almost fabulous wealth as he deemed right. The document—the last will and testament—he then placed in an envelope, sealed it with his own signet, and transferred it to the archives of his notary, by whom (and four witnesses, as the law requires) it was signed, registered, and only legalised as the will of the person whose signature it bore. On his deathbed he communicated to certain of his friends the fact that one of the items in his will was 250 florins as a legacy for every Roman Catholic priest residing in Amsterdam. This was no great tax upon the good man's heirs, and Mother Church required some proof of affection from her dying son. He died shortly after, and the will was opened. But the shrewdness of a Dutch capitalist had been deceived. The Roman Catholic priests were not mentioned in the document; that word had, by some accident, escaped the writer's memory. The good Catholic priests of Amsterdam, the guests of Mynheer, included residing in Amsterdam at the time of his decease the sum of 250 florins, or words to that effect, thrilled on the ear of the late capitalist's undertaker, as the notary read to the mourner rather a swift. Legal proceedings have been instituted by the family to obtain a rule against the enforcement of the will, but, as the error cannot be proved, the writer of it was never afflicted with an hour's insanity, and his profits will far more than meet all the claims re-uiting from this singular accident, it is not probable the plaintiffs will obtain a verdict. Several claims, I hear, have already been made, and it will require about 12,000,000 florins to carry out the liberal conditions of the will. However, 49,000,000 or 50,000,000, it is said, will still be left as a consolation for this injured family.

THE LATE LIEUT.-COLONEL PAKENHAM.—FROM A DRAWING BY HENRY TIDEY.

LIEUT.-COLONEL PAKENHAM.

THE late Lieut.-Colonel E. W. Pakenham, 3rd Battalion Grenadier Guards, was the eldest son of the late Lieut.-General the Hon. Sir Hercules Pakenham, K.C.B., and nephew of the late Earl of Longford. He entered the service some years ago, and got his promotion on going to the seat of war in February last. He was returned a member of Parliament for his native county of Antrim at the last election. The career of this gallant young officer was glorious though short. He was amongst the first who embarked for the East, for though the possessor of an extensive estate, in the enjoyment of which he might have surrounded himself with all the gratifications of public and private life at home, he accompanied his regiment to find there, in the bloom of youth and vigour, a soldier's grave. It is, however, to his sorrowing relatives and his attached constituents a proud though sad solace, that in his fall the honour of his country, and of the heroic family whose name he bore, as well as of that glorious name of Wellington with which his own is connected by ties of family, has been nobly sustained. After escaping the sickness that raged at Varna and its vicinity, he landed in the Crimea on the 14th of Sept.; and distinguished himself at the battle of the Alma, and in the magnificent charge made by the Guards, which turned the fortune of the day, he was foremost in leading on his men to victory. He and his company were amongst the first who entered and retained possession of the famous battery on the height that had previously caused such dire destruction to our troops. He himself first jumped over the embrasure, and was seen by one of the other Colonels of his regiment to scratch "Grenadier Guards," and the number of his company (7), with the point of his sword on the gun that was then taken. He had his right epaulette shot off by a cannon-ball in this battle. He was at the action of Balaclava, and went through the arduous march and siege operations, with the intense privations and difficulties that followed the landing of the troops, till the day of Inkerman, with the greatest patience and self-denial. At that most brilliant and hard-fought battle, at the Sandbag Battery, the key of the position held by the Allies, he fell, after displaying great bravery, covered with wounds. He lived, however, long enough to express his sincere hope as a brave soldier and sincere Christian.

BALACLAVA IN DECEMBER.

COMPARED with the dull marshy solitude of the Camp, Balaclava is quite a metropolis; in fact, there is not another village in the world which, for its size, could show the same amount of business and excitement as is perpetually going on ward in that little collection of huts which all the world is talking of under the name of Balaclava. The harbour is now like the basin of the London Docks, so crowded is it with shipping of all kinds; and from every one of these vessels, at all times of the day, supplies are being constantly landed. Along a flat, dirty causeway, rather beneath the level of the harbour, are boats and barges of all kinds, laden with biscuit, barrels of beef, pork, rum, bales of winter clothing, siege guns, boxes of Minié ammunition, piles of shell, trusses of hay, and sacks of barley and potatoes, which are all landed in the wet, and stacked in the mud. The motley crowd that is perpetually wading about among these piles of uneatable eatables is something beyond description. The very ragged, gaunt, hungry-looking men, with matted beard and moustaches, features grimed with dirt, and torn great-coats stiff with successive layers of mud: these men whose whole appearance speaks toil and suffering, and who instantly remind you of the very lowest and most impoverished class of Irish peasantry—are the picked soldiers from our different foot regiments, strong men selected to carry up provisions for the rest of the Camp. Mixed with these are about 200 horsemen, whose lank, feeble steeds, seem barely able to move about with their riders through the thick, tenacious mud. The horsemen themselves are all pretty much alike—that is, they are all ragged and all muddy; yet, on examining these men closely, you perceive that some have dingy brass helmets on their heads, others the small Scotch cap of the "Greys;" the remnants of red trousers indicate a Hussar; while a head-dress curiously misshapen discovers a Lancer. The led horse carries one bag of biscuit, and frequently is unable to bear this weight (80 lb.) more than half the distance to the Camp, when they fall and get rid of two burdens—their lives and their biscuits—together.

CATHEDRAL IN THE ISLAND OF CEYLON.

THE Cathedral of Christchurch, Colombo, has lately been consecrated to its sacred purposes by the Bishop of the Diocese. It is the first church in the colony, on a large scale, that has been designed in strict correspondence with the principles of Gothic architecture. It hitherto had been a matter of doubt whether it were possible to reproduce, under a tropical sky, the church of our English homes; or, if possible, whether such would be the best adapted to the climate, and convenient in other respects; the erection of the Cathedral has been eminently successful, notwithstanding many and serious difficulties. It must have been no easy matter for European art to accommodate itself to native means and native materials. A large share of the credit attaching to the successful completion of the work is due to Corporal Moore, of the 15th Regiment, who has been the resident architect, and superintended every stage of the operations. The original design was received from England, but various circumstances and difficulties compelled many departures from it, in which Corporal Moore was left to his own taste and ingenuity. The result has proved that her Majesty possesses in a corporal of her 15th Regiment a skilful architect as well as a loyal soldier.

NEW CATHEDRAL AT COLOMBO.

The interior length of the Cathedral is nearly 100 feet from east to west; its breadth is about 40 feet. The height and very graceful pitch of the roof (rising at an angle of forty-five degrees from the side walls) give the whole Church an appearance of lightness which cannot fail to strike on the first entrance. The plan consists of a nave and two side aisles; the latter separated from the nave by a row of four arches, supported on pillars of plain octagonal shafts with simply yet richly-moulded bases and capitals in the First Pointed or Early English style, which is strictly maintained throughout the whole Cathedral. Above the arches is the clerestory, marked off by a stringcourse, and pierced with five double-light windows. There is also a beautiful stained glass window above the west entrance. But, perhaps, the pride of the whole building, in an architectural point of view, is the chancel arch, with a height of 72 feet and span of 17½, exceeding, we believe, in both dimensions any pointed arch east of the Cape, even those in the Cathedral at Calcutta. The chancel itself is about 20 ft. square, paved with Minton's encaustic tiling. The east window has three lights; and on each side of the chancel are stained glass windows of simple design.

Another beautiful feature in the Cathedral is its furniture: the rich massiveness of the ebony in the chancel and the graceful form of the satin-wood in the nave display great taste in the design. As an illustration, we may notice especially the selection for ornament of such forms of foliation

BALACLAVA AND HARBOUR.

in finials and bosses as correspond with a tropical rather than a temperate climate. All is finished with the greatest nicety and care.

The exterior of the Church is equally worthy of praise. The gneiss or granite of which it is built gives an impression of solidity, and contrasts well, in its rich yet sober grey tint, with the fresh bright green of the surrounding foliage. The tower rising from the north-west angle of the Church is nearly seventy feet high, and will form a conspicuous and useful landmark, as it is visible for many miles out at sea.

Ceylon now possesses a Church combining beauty of proportion with elegance of detail—a centre of union where all Churchmen can meet in harmony and concord. She possesses, also, in the College and School of St. Thomas an establishment which contains within itself the germ of "better things to come" to many now in heathen darkness.

DR. WILSON.

THIS gentleman, who so highly distinguished himself in the battle of Inkerman, has just returned to this country in the *Himalaya* steam-ship. Dr. Wilson belongs to a family much esteemed and respected at Stranraer, in Wigtownshire. Finding that the 7th Hussars, of which he is Assistant-Surgeon, was not likely to be employed in active service, he got himself attached as volunteer to the Brigade of Guards; and at a most critical moment of the battle of Inkerman succeeded, by his courage and presence of mind, in rescuing the Duke of Cambridge from a position of extreme danger. For this service he received the thanks of his Royal Highness, at the head of the Brigade of Guards, at the close of that sanguinary engagement.

DR. WILSON (7TH HUSSARS.)

Lord Raglan, in his despatch of Nov. 11th, states:—"His Royal Highness the Duke of Cambridge speaks in the highest terms of the spirited exertions of Assistant-Surgeon Wilson, of the 7th Hussars, who at a critical moment rallied a few men, which enabled them to hold the ground till reinforced."

Colonel Kingscote bears the following testimony:—"The Duke of Cambridge was quite surrounded once, and had it not been for Dr. Wilson, who was in the 7th Hussars, drawing his sword and cheering some men on, I believe he must have been taken or killed."

Dr. Wilson has been extremely popular both in the 7th Hussars and in the Guards, and is also much esteemed in the county in which he resides.

The accompanying Portrait is from a Daguerréotype lately taken in Edinburgh.

ST. PAUL'S CHURCH, CHATHAM, CONSECRATED ON THURSDAY.

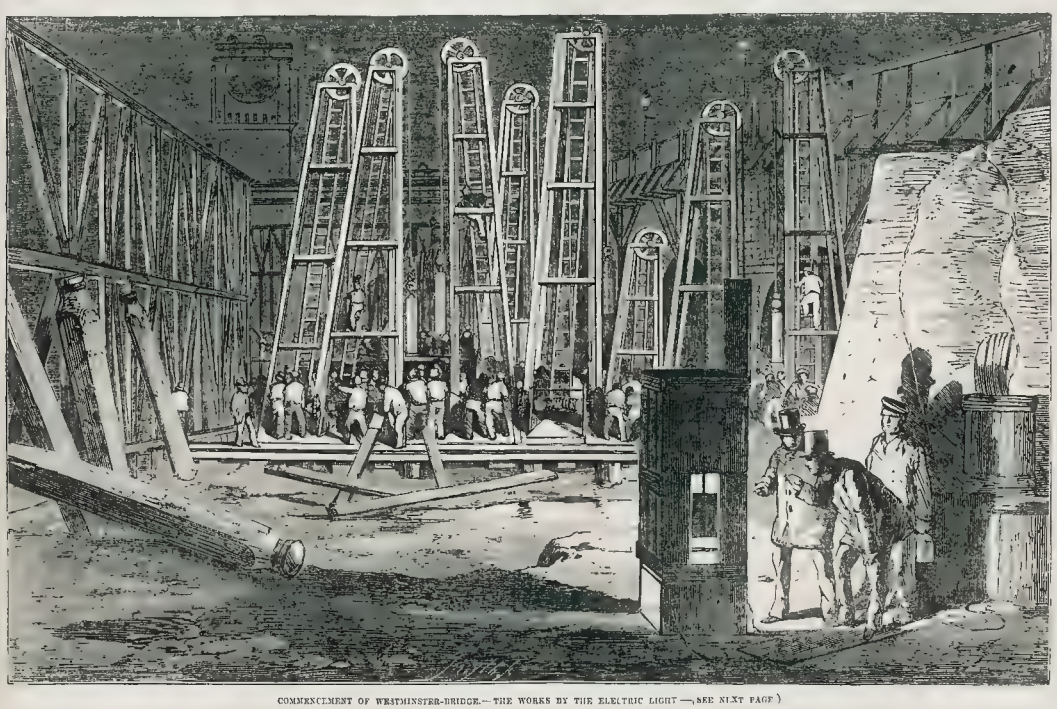
NEW CHURCH OF ST. PAUL, CHATHAM.

THE erection of this Church was commenced in the autumn of 1852, and the corner-stone of the tower was laid on the 25th of May in the following year, by the Earl of Shaftesbury; but its completion has been delayed by various circumstances.

The Church is situated on the slope of the hill on the south side of the New-road, Chatham, near the turnpike-gate. The assigned district consists of part of Chatham and part of Gillingham parishes [illegible]

The Church is built of Kentish rag-stone and Bath stone dressings. The style is the Anglo-Norman of the twelfth century; its details partaking of much of the boldness and richness of effect found in the ancient example of the later period of that style. In plan the Church is a Latin cross, consisting of nave, transepts, and choir, with a semicircular apse forming the termination of the chancel. The tower occupies the north-east angle of the intersection of the choir and transept; and a turret-staircase at the south-east angle gives access to the transept galleries. There is also a western gallery. The other parts of the Church are entirely free and unobstructed. From the New-road a broad flight of terrace steps of easy descent lead down to the south porch or principal entry to the Church.

Accommodation is provided for 1010 persons, entirely free. The seats



COMMENCEMENT OF WESTMINSTER-BRIDGE.—THE WORKS BY THE ELECTRIC LIGHT.—(SEE NEXT PAGE.)

are open benches, and, with the roof-timbers throughout, are stained and varnished. The pulpit and font, together with the arcade-work of the choir and chancel-arch, are of stone, in full accordance with the style and character of the Church itself. The architect is Mr. A. D. Gough, of Lancaster-place, Strand.

The Church was consecrated on Thursday, by the Lord Bishop of Rochester. Prayers were read by the Rev. George Venables, who has been appointed the incumbent of this new district. An eloquent sermon was preached from the 56th chapter of Isaiah, 7th verse—"My house shall be called a house of prayer for all people"—by the Rev. Thomas Robinson, D.D., Master of the Temple and Canon of Rochester.

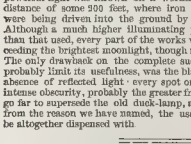
The Church has been erected by subscription, aided by grants from her Majesty's Commissioners for Building Churches, and the Church Extension Fund; together with two donations of £1000 each from private individuals. The Church is situated in the midst of a very poor district, the population of which amounts to 5000. The endowment has been provided by the Dean and Chapter, who have apportioned for that purpose £250 of the Vicarial tithe-rent charge of the parish of Chatham. After the consecration a collection amounting to £49 18s. was made towards defraying the debt which still remains on the fund for building the Church.

NEW WESTMINSTER-BRIDGE.

THE high illuminating power placed at our disposal by combustion through electric agency has been lately turned to good account in lighting the works now in progress at Westminster-Bridge. The coffer-dams formerly very generally employed in laying the foundations of a bridge are abandoned in the present case, tidal-working being substituted for. As the business of pile-driving can only be proceeded with at low water, it was desirable that the works should progress by night as well as by day, and the electric light appeared to Messrs. Mare and Co., the contractors for the works, a valuable agent for the purpose. A battery, consisting of seventy-two cells, placed under the centre arch of the bridge, supplied the power necessary. The lighting apparatus being stationed at the Surrey end of the Bridge. By means of a reflector a powerful light was thrown on a working stage in the bed of the river, a distance of some 200 feet, where iron piles of great length and solidity were being driven into the ground by the ponderous monkey-hammers Although a much higher illuminating power might have been obtained than that used, every part of the work was flooded with a radiance far exceeding the brightest moonlight, though resembling its cold gleam in colour The only drawback on the complete success of this light, and what will probably limit its usefulness, was the blackness of the shadows, from the absence of reflected light every spot on which the light did not fall was intense obscurity, probably the greater from the contrast. It will certainly go far to supersede the old duck-lamp, and similar contrivances; though, from the reason we have named, the use of an auxiliary light will never be altogether dispensed with

OBITUARY OF EMINENT PERSONS.

NATHANIEL, SECOND EARL OF LEITRIM, K.P.



THIS venerable nobleman, who was in his 87th year, died on the 2nd inst., at his seat, Killadoon, county of Kildare. His Lordship was a Knight of St. Patrick, Lord-Lieutenant and Custos Rotulorum of the county of Leitrim, Custos Rotulorum of Donegal, Colonel of its Militia, a Trustee of the Linen Manufacture, and Port Searcher of Dublin.

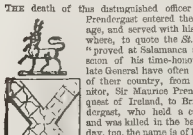
The family of Clements settled in Ireland in the reign of James I. and became ennobled in the person of Robert Clements, Esq., son and heir of the Right Hon. Nathaniel Clements, M.P., Deputy Vice-Treasurer of Ireland, who was created Lord Leitrim

Earldom October 6th, 1795. His son, the Peer whose death we record, obtained a Barony of the United Kingdom in 1831. He married Mary, eldest daughter and coheir of the late William Bermingham, Esq., of Ross Hill, county of Galway, and by her, who died February 5th, 1840, leaves surviving issue three sons and three daughters. Of the former, the eldest, William Sydney, succeeds as third Earl; and of the latter, the eldest, Lady Maria, is married to the Hon. and Rev. Edward Southwell Cadogan; and the youngest, Lady Caroline, to John Tnyr Burges, Esq., of Parkanaur

The Earl of Leitrim was entitled to a large pension from Government, in right of services performed by his ancestor, but this pension he always declined to claim or receive.

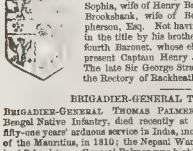
GENERAL CHARLES O'NIEL PRENDERGAST.

THE death of this distinguished officer occurred on the 9th ult. Genera. Prendergast entered the Scots Fusilier Guards at an early age, and served with his regiment in the Peninsular War, where, to quote the *St. James's Chronicle* of the time, he "proved at Salamanca and Vittoria that he was a worthy scion of his time-honoured race." The ancestors of the late General have often taken an active part in the battles of their country, from the time of their Norman progenitor, Sir Maurice Prendergast, who assisted in the conquest of Ireland, to Brigadier-General Sir Thomas Prendergast, who held a command in Marlboro.gh's army and was killed in the battle of Malplaquet. At the present day, too, the name is of high military repute. The uncle of the subject of this notice, General Sir Jeffry Prendergast (who still survives), was at the storming of Seringapatam, and a youthful scion of the family, Lieutenant Lenox Prendergast, of the Scots Greys, is now returning from the Crimea, disabled by a severe wound in the foot, received whilst gallantly charging with his regiment on the memorable 25th October.



The deceased General was unmarried. His property is left principally to his brother, Jeffery Prendergast, Esq. (also formerly in the Guards), and to the family of his only surviving sister, General Sir Jeffry Prendergast; with legacies to the relations of his mother and grandmother, the families of O'Niel and Gordon.

SIR GEORGE STRACEY, BART.



THE death of this Baronet, at the age of eighty-four, occurred on the 27th ult., at Thorpe, near Norwich. Sir George was second son of Sir Edward Stracey, of Rackheath Hall, county Norfolk, on whom a Baronetcy was conferred in 1818. He married, in 1814, Sophia Anne, youngest daughter and coheir of Edmund Mapes, Esq., of Rollesbury Hall, by whom he leaves two daughters—Sophia, wife of Henry Heydges Clarke, Esq.; and Charlotte Brookbank, wife of Berkeley Augustus Macdonald Macpherson, Esq. Not having had male issue, he is succeeded in the title by his brother, now Sir Josias Henry Stracey, fourth Baronet, whose eldest son and heir-apparent is the present Captain Henry Josias Stracey, of Rackheath Hall. The late Sir George Stracey was in Holy Orders, and held the Rectory of Rackheath.

BRIGADIER-GENERAL THOMAS PALMER.

BRIGADIER-GENERAL THOMAS PALMER, Colonel of the 73rd Regiment Bengal Native Infantry, died recently at Mussoorie, aged sixty-seven, after fifty-one years' arduous service in India, including the expedition to and taking of the Mauritius in 1810, the Nepaul War, in 1814 and 1815; and the war in Affghanistan. General Palmer was highly respected for his qualities as a soldier, and for his warm-hearted and benevolent disposition. He has died deeply regretted. He was at the time in command of the Cawnpore Division of the Indian army, having previously been at the head of the Sirhind Division. He had also commanded, as Brigadier, at Delhi. The gallant General was a son of William Palmer, Esq., of Brampton House, in the county of Huntingdon, Commissioner of the Royal Navy, and Director of Greenwich Hospital. The General's only brother, the Rev. William Palmer, M.A., was for forty-four years Rector of Eynesbury, in the county of Huntingdon. He died in November, 1851. General Palmer is succeeded in his estates by his cousin, Thomas William Palmer, Esq., of Hull and Brough, Yorkshire.

ERRATUM.—In the head-line of the memoir of Mrs. Hamilton, in last week's Obituary, page 3, for "Mrs. Lee" read "Mrs. Hamilton."

WILLS AND PERSONALTY.—General the Right Hon. Sir James Kempt, G.C.B., died possessed of personalty estimated at £120,000.—Rear-Admiral W. W. Henderson, C.B., £12,000.—Colonel Trevelyan, £8000.—The Rev. Henry Anson, of Bath, £70,000.—Colonel Bennett, Esq., of Enfield-highway, £80,000.—William Stubbs, formerly of Lancaster, file-manufacturer, £30,000.

On Wednesday the jury impanelled to inquire into the circumstances attending the death of Mr. John Southgate, who is alleged to have come by his death by taking oxalic acid, in mistake for Epsom salts, ressembled at Epsy's-house, Strawberry-vale, Finchley, before Mr. Wakley, coroner. After a lengthy examination of several witnesses, the inquiry was adjourned for a fortnight, in order to allow of Professor Taylor making the analysis required by the jury of oxalic acid and Epsom salts at the Middlesex Hospital.

SAILORS' HOMES INSTITUTION. The Sailors' Homes throughout the country have been invited by the central Institution to afford aid to the widows, wives, and children of sailors, soldiers, and marines involved in the present war, also to the wounded and sick who may require a temporary rest when passing through any town where Homes are established. The preference given by good seamen in general to Sailors' Homes, instead of the vile places to which they were compelled to resort before Homes were established, is very much on the increase; and the Homes established at Portsmouth and Devonport are of very great benefit to our men-of-war's men. Very gratifying accounts have been received from Dublin, Cork, Queenstown, and Belfast. At the latter places, in consequence of two shipwrecks, 27 men are lodged in the Home, and private lodgings obtained for 25 more, and the committee have received £1700 towards building a new Home. At Dover all shipwrecked seamen have been received into the Home during the year; a large sum has also been subscribed for the purpose of building a Home, and the Harbour Commissioners have given a piece of ground for the site. At Cardiff, a magnificent Home, built at the sole expense of the trustees of the Marquis of Bute's estate, is nearly complete, and will be opened for the reception of seamen in course of a few weeks, and the benevolent Marchioness will build a church for the use of the Home, at her sole expense. At Sunderland, 1264 men, of all nations, have been inmates of that Home during the year.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The news received from Vienna in the early part of the week, that the Emperor of Russia had accepted the Four Points as laid down by the Allied Powers as a basis upon which to negotiate peace (and as negotiations have been since carried on upon the points in question), has had great influence upon the English Stock Market. A considerable rise, equal to two per cent, has consequently taken place in the quotations; and altogether the amount of business doing, both for immediate and for the settlement, is very large. As regards the new French Loan, we may observe that the greater portion of it has already been taken up in France, and that the subscriptions here rather exceed £3,000,000 sterling. In the Stock Exchange it has been done at 2½ to 2¾ premium.

Some uneasiness has been felt in certain quarters as to the amount of gold which will be supplied to France on account of the new loan. No doubt the quantity will be large. Much about £100,000 has been sent off, and large parcels will follow during the next ten days. This drain, coupled with the total cessation of imports from the United States, will, in all probability, reduce the stock of gold in the Bank of England to something like £13,000,000 by the end of March.

There has been a good demand for money for commercial purposes. It has, however, been well met, without leading to any change in the rate of discount.

The Consol Market on Monday was very active, and prices rapidly advanced. The Three per Cents Reduced were 91¼ up to 92; the Three per Cent Consols, 91¼ to 92⅝; the New Three per Cents, 91¼ to 92⅝; and Consols for Account, 91¾ to 92¾. Bank Stock was done at 208½ to 210; India Stock, 224 to 225. India Bonds were 13s.; Exchequer-bills, 4s. to 7s premium, Exchequer-bonds, 99 ⅞ ⅞. There was less activity in the market on Tuesday; nevertheless, the previous day's advance was fairly supported. The Three per Cents Reduced varied from 91¾ to 92¾; Three per Cent Consols, 91¾ to 92¾; New Three per Cents, 92¼ to 92⅝; Long Annuities were 4 3-16; India Stock, 226; India Bonds, 11s. to 14s.; Exchequer-bills, 4s. to 7s. premium. Exchequer-bonds, 99⅝ ⅞. On Wednesday no material change took place in the quotations. Bank Stock was 208½. The Three per Cents Reduced touched 92⅝; the Three per Cent Consols, 92⅝; New Three per Cents, 92⅝; and Consols for Account, 92⅝. India Bonds were 14s.; Exchequer-bills, 4s. to 7s premium. The dealings on Thursday were steady, and prices were firm. The Three per Cents, 92⅛ to 92¾; and Consols for the Account, 92¾ to ⅞. Bank Stock marked 208½. Exchequer-bills 5s to 7s premium. Exchequer-bonds, 99⅝ ⅞. The New Three per Cents were 92 to 92⅝; and the Three per Cents, 92 to 92⅝.

There has been considerable activity apparent in the Foreign House, and large purchases of Stock have been made at, in some instances, a considerable rise in the quotations. Brazilian Five per Cents were done at 100½ between Paper Cents, 82¾; Peruvian Four-and-a-Half per Cents, 71; Russian Five per Cents, 102; Ditto, Four-and-a-Half per Cents, 92, ex div.; Spanish Three per Cents, 22; Ditto, New Deferred, 12; Ditto, Passive, 5; Venezuela Deferred, 17; Ditto, Active, 16: Dutch Two-and-a-Half per Cents, 61¼ ex div.; Dutch Four per Cents, 92; Buenos Ayres Six per Cents, 85; Ecuador Bonds, 4; Portuguese Four per Cents, 36; Sardinian Five per Cents, 85

Joint-stock Bank Shares have been firm, and prices have slightly advanced:—Australasia have realised 79; English, Scottish, and Australian Chartered, 1-; London Chartered of Australia, 23¾; London and Westminster, 4; New South Wales, 35; Oriental, 38½; Union of Australia, 66¾. Miscellaneous Securities have sold as follows:—Australian Agricultural, 25½; Canada Government Six per Cent Stock, 107; Canada Company Shares, 3; General Steam Shipping Company, 13⅛; London Dock, 103 ex div.; Mexican and South American, 6¾ ex div.; North-British Australasian, 7; Peel River Land and Mineral, 2½; Peninsular and Oriental Steam, 39; Royal Mail Steam, 61; South Australian Land, 37; Trust and Loan Company of Upper Canada, 5¾; City Navigation Bonds, 80; Patent Candle Company, 20¾. Canal Shares have been firm. The Grand Junction group has taken place:—Ashton and Oldham, 141; Coventry, 209; Derby, 84; Grand Junction, 55; Grand Surrey, 48; Leicester, 69; Loughborough, 675; Neath, 150; Oxford, 110; Regent's, 16; Rochdale, 20; Stafford and Worcester, 428; Stourbridge, 285; Worcester and Birmingham, 25 to 24. In Waterworks Shares very little has been done. Berlin, 3; Grand Junction, 70; Kent, 79; Southwark and Vauxhall, 89½; New River, 95; West Middlesex, 98. Gaslight and Coke Companies' Shares have realised the following quotations:—British Provincial, 21; City of London, 100; Equitable, 29; Great Central, 11; Imperial, 96; Ditto, New, 10; Phœnix, 23½; Rainhill, 20; Surrey Consumers', 11; United General, 19⅛; Westminster Chartered, 40½. Insurance Companies' Shares have commanded very little attention. Globe, 124 ex div.; Guardian, 5¾; Imperial Fire, 330; Ditto, Life, 18½; London, 39; Marine, 2¾; Provident Life, 30; Rock Life, 7½; Sun Life, 57½; Victoria, 5¾. Railway Shares have been fair. Hudson's Bay, 12; Rainhill, 20; Waterloo, 4¼; Ditto, Old Annuities of £3, 31; Ditto, New of £7, 28.

Railway Shares have been in good request. Prices generally have advanced. The following are the official closing quotations on Thursday:—

ORDINARY SHARES AND STOCKS.—Caledonian, 62; Dublin and Belfast Junction, 42; Dundee, Perth, and Aberdeen Junction, 68; Eastern Counties, 11¾; Eastern Union, 22½; Edinburgh, Perth, and Dundee, 78; Great Northern, 91¾; Great Southern and Western (Ireland), 91; Great Western, 69¾; Lancaster and Carlisle New Thirds, 11; Lancashire and Yorkshire, 75; London and Brighton, 108; London and North-Western, 101½; London and South-Western, 84½; Midland, 69½; North British, 31¾; North-Eastern—Berwick, 77; Ditto, Leeds, 124; Ditto, York, 54; North Staffordshire, 13¾; Oxford, Worcester, and Wolverhampton, 20; South-Eastern and Hereford, 8¼; South-Eastern, 60; South Wales, 29; Thames Haven Dock and Railway, 3; Vale of Neath, 16¾

The Mining Market has been steady, but the transactions in it have been devoid of interest.

THE MARKETS.

CORN-EXCHANGE, *January* 8.—We had a fair supply of English Wheat on sale here to-day. All kinds met a very dull inquiry, at a decline in the quotations of from 2s to 3s per quarter. Foreign wheat met a very slow sale, and prices were almost nominal. In barley scarcely any business was transacted. Fine parcels gave way 1s., other kinds 3s per quarter. All kinds of malt sold heavily, on rather lower terms. The oat trade was dull, at 1s per quarter. For beans and peas, we had scarcely any inquiry, at a fall in value of 1s. per quarter. The flour trade was very dull.

January 10. The general demand to-day was in a most depressed state, and prices were nominally unaltered.

English.—Wheat, Essex and Kent red, 70s. to 74s.; ditto, white, 74s to 82s.; Norfolk and Suffolk red, 72s to 74s.; rye, 44s to 47s.; grinding barley, 31s to 33s.; distilling, 31s to 33s.; malting, 35s to 37s.; Lincoln, York, and Essex, 36s to 38s.; Scotch, 36s to 38s.; Ringdale and Ware, 70s to 71s.; Chevalier, 72s to 73s.; Yorkshire and Lincolnshire feed oats, 23s to 27s.; potato ditto, 29s to 30s.; Youghal and Cork black, 25s to 26s.; ditto, white, 26s to 31s.; tick beans, 43s to 47s.; grey peas, 40s to 42s.; maple, 43s to 45s.; white, 47s. to 49s.; boilers, 49s. to 50s. per quarter. Town-made flour, 68s. to 72s.; country marks, 55s to 60s. per 280 lbs.

Seeds. There is less doing in our market, as follows:—

Linseed, English, sowing, 72s. to 75s.; Baltic, crushing, 66s. to 68s.; Mediterranean and Odessa, 65s. to 70s. Hempseed, 34s. to 36s. per quarter. Coriander, 16s. to 18s. per cwt. Brown Mustard seed, 12s. to 16s.; white ditto, 9s. to 10s. Tares, 9s. to 12s. per bushel. English rapeseed, £35 to £38 per last of 10 quarters. Linseed cakes, English, £13 to £13, ditto, foreign, £10 10s. to £12 10s. per ton; rape cakes, £6 5s. to £6 15s. per 20s. Canary, 54s. to 63s. per quarter.

Bread. The prices of wheaten bread in the metropolis are from 10d. to 11d.; of household ditto 8½d. to 9½d. per 4 lb. loaf

Imperial Weekly Averages. Wheat, 71s. 3d.; barley, 34s. 5d.; oats, 27s. 4d.; rye, 46s. 4d.; beans, 46s. 1d.; peas, 45s. 3d

The Six Weeks' Average.—Wheat, 73s 6d.; barley, 34s. 8d.; oats, 28s 1d.; rye, 46s. 8d.; beans, 46s. 5d.; peas, 47s. 7d.

English Grain sold last week. Wheat, 60,641; barley, 102,383; oats, 14,666; rye, 317; beans, 3156; peas, 1807 quarters

Tea. About an average business is doing in our market, and prices generally are well supported. Common sound congou, 10d. per lb.

Sugar.—Fine qualities have sold to a fair extent, at full quotations. All other kinds have met a very inactive demand. Low to mid. yellow Barbadoes has changed hands at 35s. to 35s.; brown Grenada, 29s. to 30s.; low to mid. yellow, 31s. to 32s.; low to fine [illegible] at 32s. to 33s.; low to fine [illegible] at 33s. to 33s.; brown Penang, 28s. 6d. to 29s.; low to fine [illegible] at 29s. to 30s.; low to fine [illegible] at 30s. to 31s. per cwt. Refined goods have changed hands to a limited extent at 42s. to 44s. per cwt

Coffee.—Almost all kinds have sold very slowly. In prices, however, we have very little change to notice. Good ordinary native has realised 45s. 6d. to 46s. 6d. per cwt

Rice.—Our market is very dull, and, to effect sales, lower rates must be submitted to.

Provisions. There is a moderate inquiry for Irish butter, at about stationary prices Fine foreign is somewhat dearer; but English qualities are slow in sale. There is more doing in the bacon market, and the quotations are fully supported to-day. Hams are very dull and Lower

Tallow. The demand is heavy, at a decline of 3s. per cwt. P.Y.C., on the spot, has changed hands, at 69s. to 61s. per cwt Rough fat, 3s 6d. per 8 lb

Oils.—In our market is very dull, and prices are declining. Linseed oil has sold at £30 to £31 10s. per ton. Rape, pale, £37 10s. to £38 per ton. Cocoa-nut, £37 10s. to £38 per ton. Palm, £34 to £35 per ton. Olive, £50 to £52 per ton. Spermaceti, £6 10s. to £6 15s. per ton. Sperm, £85 to £87 per ton. Cod, £34 to £35 per ton. Seal, pale, £34 to £35 per ton. Turpentine, £3 5s. to £3 7s. per cwt.

Spirits.—Another Government contract for 50,000 gallons of rum having been advertised, our market is firm Proof Leewards, 3s. 5d. to 3s. 6d.; East India, 3s. 7d. to 3s. 8d per gallon. Brandy is quite as dear as last week. In the value of corn spirits and Geneva no change has taken place

Hay and Straw.—Meadow hay, £2 10s to £4 14s.; clover ditto, £3 to £5 15s.; and straw, £1 2s. to £1 10s. per load

Coals.—Hasting's Hartley, 18s. 6d.; Tanfield Moor, 17s 6d; Wylam, 18s 6d; Hilda, 16s. 6d.; Lawson, 16s. 6d.; Eden Main, 15s. 6d.; Tees, 15s. 6d.; Stewart's, 20s. 3d.; Love, 20s per ton

Hops.—There is rather more doing in hops, at very full prices The imports from abroad have fallen off to some extent

Wool.—So little business is doing in wool, that the quotations are almost nominal

Potatoes.—The demand is very inactive, at from 90s. to 130s. per ton

Smithfield.—Each kind of stock has ruled from a very dull and drooping price

Beef, from 3s. 2d. to 3s. 4d.; mutton, 3s. 4d. to 3s.; veal, 4s. to 5s. 6d.; pork, 3s. to 4s. 4d. per 8 lb. to sink the offals

Newgate and Leadenhall.—The trade has ruled dull this week, on lower terms

Beef, from 2s. 8d. to 4s. 4d.; mutton, 3s. 2d. to 4s. 6d.; veal, 4s. to 4s. 10d.; pork, 3s. to 4s. 4d. per 8 lbs. by the carcase. ROBERT HERBERT.

THE LONDON GAZETTE.

FRIDAY, JANUARY 5.

Blanchard, Esq., entitled JACK NI HILL, or Harlequin Long Meg of Westminster, and Four-and-Twenty Blackamoors Headed

A DREAM OF TWELFTH-NIGHT.—DRAWN BY GEORGE THOMAS.

Sire dreams! Through all her hush of night
A breeze of joy floats wild and warm;
No shadow dims the halo light
That rays her sleeping form,
Where, robed in spotless youth, she lies,
A saint, whose soul is in the skies!

For, is not earth here turned to heaven?
Her childhood's heaven—a dream of bliss,
A rapture scarce to mortals given,
A joy the sages miss,
O'er whose dim night shall rise no more
The spells that fly when hearts grow hoar.

No train of state encumbereth *her*,
Nor golden crown her golden hair;
No regal cares her bosom stir;
She mounts no marble stair.
Yet, tranced, she walks a land of light—
In thought, she is a Queen to-night.

Bright fairy forms, through visions glancing,
Have ringed her in a magic round.
The strains to which her feet are dancing
On earth shall never sound;—
But oh! such dreams are nearer truth
Than our sad world—that weeps its youth

Life's skies for her have lost the cloud:
Not yet—not yet the tempests roll!
Nor blinding tears have learned to shroud
The visions of the soul,
Where thrills through each God-given sense
The spirit-joy of Innocence!

O, not unhallowed is the theme,
Through which her girlish fancies glide!
Thou pour'st in one delicious stream,
Old Yule! thy sacred tide;—
The thought, the hope, the chastened glee,
O, Dawn of Love, speak all of Thee!

By those pure lips, so silent now,
All solemnly the prayer was said;
And by each living pulse we know
Who watcheth by the bed!
A guardian care is His, and deep,
"Who giveth his beloved sleep."

"Our Father," God, who knoweth best,
Who gives soft night the closing flower,
Who gives, in shadow and in rest,
Dreams meet for childhood's hour.
Shall He not give to Christ's dear care,
The child that sleepeth after prayer?—E. L. Hervey

THE THEATRES.

We are now terminating the third week of the pantomimes and burlesques, and the regular dramatic business of different establishments is accordingly about to recommence. For the three weeks just past the character of the entertainment at almost all the houses has been very nondescript, and various novels have been ventured under the shelter of the different attractive afterpieces. These have been performed for a night or two, and then withdrawn; but something of a more permanent character may now be expected. Thus, at the Princess's, as we have noted, our friend, *Sir Edward Mortimer*, the *Stranger*, and *Hamlet* have furnished Mr. Charles Kean with the opportunity of showing how delightfully and powerfully he can prove his title to the classic walks of the drama, and inspire us with hope, from the reception that he has experienced, that the public will sufficiently encourage him to justify his continuance in the same. This evening (Saturday) he will support, as further earnest of his desire to persevere in the legitimate direction, the part of *Louis XI.*, in M. Casimir Delavigne's excellent historical drama, which has been translated for the purpose. This part is not new to the English stage, having been performed by Mr. Davenport, at Drury-lane, two or three seasons ago; but it is one which is peculiarly adapted for the display of Mr. Kean's genius, and we expect that he will manifest in it no little of the depth and grandeur of passion that is so readily acknowledged in his *Hamlet* and *Glo'ster*. We trust that Mr. Kean may be able to plant the tragedy on his boards and thus initiate a new era in his management.—In like manner, at Sadler's Wells, Mr. Phelps has been indulging in a variety of characters including *Sir Anthony Absolute*, the *Stranger*, and *Hamlet*, the preference having been given to the last, which has been acted several times; but this week the recurrence of steady business is marked by the reproduction, on Wednesday, of the tragedy of "Pericles," for a second run. The cast continues the same as it was prior to Christmas; the characters of *Thaisa*, *Dyonisa*, and *Marina*, being performed by Miss Cooper, Miss Atkinson, and Miss Edith Heraud. At the Marylebone, Mr. and Mrs. William Wallack have been resting, and depending on their past fame to ensure a temporary currency to a series of the better class of melodramas, which have been respectively supported by the working company. When these have run their course, the tragedy of "Vidocq," with Mr. Vandenhoff, is announced.—At the St. James's a similar register may be noted. Mrs. Seymour having appeared in some of Sheridan's and Bulwer's comedies. A brutal drama however from the French, by Mr. H. Spicer, is now underlined. The Lyceum, Adelphi, and Olympic will probably depend, as their manner is, for some time yet to come, on their burlesques and extravaganzas, with an occasional revival.—The Haymarket will, for the present, trust to some reproductions of its already established pieces; but we may expect in due season, an original drama of more than ordinary merit.

Drury-lane.—This management has also fallen back on an old drama for temporary support—"The Regent," by Mr. Planché—a translated piece, in which some five-and-twenty years ago, Mr. Wardé and Miss Somerville made considerable reputation. There is in it much amusing intrigue, and Mr. Meud and Miss Marriott supported on Monday, with respectability, the principal parts. The audience were evidently pleased, and accordingly this revival may be pronounced successful.

Adelphi.—The management of this theatre has thought it expedient to corroborate their spectacle with a revival, on Monday, under the title of the "Mysterious Stranger," of one of Mr. C. Selby's versions from the French—the "Satan," in fact, of MM. Clairville and Damarin. Madame Celeste performs the *rôle* of the lady, who, for the sake of love, assumes the appearance of the fiend, until, by such pretended magic, she has freed the object of her passion from the dangers by which he was surrounded. The various disguises by which she contrives to accomplish this purpose received from Madame Celeste their requisite and characteristic significance. Mr. Leigh Murray supported the part of the Parisian dupe with meritorious and discriminating propriety. The house was full, and the reproduction of this singular drama was received with approbation.

"A SKETCH."

PAINTED BY W. HEMSLEY.

In this clever little work (which we admire at the Winter Exhibition-room Pall-mall) Mr. Hemsley shows an improved and improving hand—a consciousness of power, and a self-reliance, which are the surest guarantees of success in art. He does not here depend upon a numerous group of characters, or upon a comically-contrived incident; nor, on the other hand, upon exaggeration of feature in his single subject. He appears to have studied simplicity as an element of effect; and he could not act on a truer principle. We have but one figure in this picture, that of a hard-working lad employed in a lowly, every-day office; but the life thrown into the action, the artlet-like attitude, the intelligence of the expression—as if a professor observing the progress of an operation of all-engrossing importance—the appropriateness of the costume, and all the et ceteras, constitute a picture of eminent merit

"A SKETCH."—PAINTED BY W. HEMSLEY FROM THE WINTER EXHIBITION, PALL-MALL.

DUNSE TEMPERANCE PAVILION

Dunse is a small country town, situated in the centre of Berwickshire. Though the largest town in the county, it contains only a population of 2800. There is an old saying, that "Dunse dings a'." If ever there existed a doubt in the mind of any one as to whether Dunse really deserved this enviable pre-eminence over the other provincial towns of Scotland, the proceedings connected with the Great Pavilion must have for ever dispelled it. It appears that the well-known J. B. Gough was, some time since, engaged by the Total Abstainers to deliver an oration on Temperance in Dunse, when, in order to afford an opportunity to as great a number of persons as possible of hearing the lecturer, two of the largest churches in the town were successively asked for the occasion. Both of these churches having been refused, and the others in the town being too small, the Committee, with that energy and enterprise for which they have all along been noted, resolved to erect a large wooden pavilion, capable of holding 3000 persons. For this purpose plans were prepared; the work to work, and, in a brief space, the Pavilion was completed. The erection is 100 feet in length, 70 in breadth, and 30 in height. The roof, which covers the whole with one span, is supported by two rows of massive pillars. The speaker's platform is 7 feet high, and has space on both sides capable of holding 140 persons, which is occupied by the Committees of the Temperance Society in the county. Behind the platform is a large picture of the town of Dunse, measuring 30 feet by 20, painted for the occasion. The building is brilliantly lighted with gas, and, when decorated with flags and other devices, presents a very tasteful appearance.

The opening of this Pavilion on the 21st of November last was a scene of intense interest. Long before the hour of meeting the vast area was filled with company, who were entertained with vocal and instrumental music. Shortly after eight o'clock Mr. Gough, the Committee and friends, left their room, and ascended the platform stair. The appearance of the great orator was the signal for a robust shout. The Rev. Mr. Ritchie presided: a brief but earnest prayer was offered up, and, with a few words, Mr Ritchie introduced Gough to his magnificent audience. He commenced in a few reluctant, hesitating sentences; then quicker, then firmer, then faster and firmer still, until he gradually acquired that impetus which made him master of himself and of his great audience; and thus he held the mastery over them through a powerful oration until he closed with an affectionate "good night." The multitude heaved and applauded in ecstacy. The multitude again became hushed. The chairman congratulated them upon such an oration, and presented a number of books to the lecturer as a tribute from the Committee. Mr. Gough rose, and thanked the Committee and all present in a touching address. The benediction was pronounced, and the assembly broke up.

Mr. Gough again appeared in the Pavilion on the evening of the 6th of December before a still larger and, if possible, more enthusiastic audience. Before the meeting separated Mr. D. M. Home, of Wedderburn, one of the largest landed proprietors in the county, who had been present on both occasions, moved a vote of thanks to the Committee for the energy and spirit displayed by them in the erection of this magnificent building, and for furnishing such an intellectual treat as had been enjoyed by the meeting on this and the previous occasion. The vast assemblage then retired, delighted with the eloquence of the great Orator of Temperance.

TEMPERANCE PAVILION, ERECTED AT DUNSE.

PLATE PRESENTED TO CAPTAIN CHARLES MACLEOD, LATE COMMANDER OF THE 1st REGIMENT OF THE NIZAM'S CAVALRY.

This elegant Testimonial, a silver epergne of appropriate design, has been presented to Captain Charles Macleod, by the native officers and men of the 1st Regiment of the Nizam's Cavalry, under the following circumstances.

For a period of fourteen years Captain Macleod commanded that portion of the force of native troops formerly known as the 1st Regiment of Cavalry of his Highness the Nizam's army. Prior to January, 1854, the officers in command of, and attached to, the Nizam's army, chiefly held commissions from his Highness, their nominations to the service having originally received the sanction of the Supreme Government. At the above date, the Government of India, having concluded a treaty with the Nizam, by which a portion of his territory became ceded to the Company, the force hitherto designated as his Highness the Nizam's army, merged into the Hyderabad contingent, and was incorporated with the Hon. East India Company's forces. The officers holding local, or Nizam's commissions, on this change being made, were pensioned off; and, on this occasion, the native officers and men have presented the handsome Testimonial to Captain Macleod, who was so long their Commander. It bears the following inscription:—

Presented to Captain Charles Macleod by the Native Officers and Men of the 1st Regiment of his Highness the Nizam's Cavalry, as a humble token of their esteem and respect, for his zeal in maintaining their honour and promoting their welfare; for his unwearied attention to their interests and that of their families, during the long period of fourteen years that he held uninterrupted command of their Regiment.

The commission for this piece of plate was entrusted to Messrs. Smith, Elder, and Co., of Cornhill; and the manufacturers are Messrs. Smith, Nicholson, and Co., Duke-street, Lincoln's-inn-fields.

PLATE PRESENTED TO CAPTAIN MACLEOD, LATE OF THE NIZAM'S CAVALRY

The Queen of Spain's Present to the Pope.—On Christmas-day the Pope wore for the first time the magnificent tiara just sent to him as a present by the Queen of Spain, glittering with a triple row of splendid diamonds, and valued at half a million of francs. In the present critical condition of the Spanish throne such extent of piety and purse cannot fail to excite surprise. The remainder of her Majesty's offering, in the shape of six Andalusian horses, is said to be on its way to Rome

At St. Petersburg Lord John Russell's declaration in Parliament, that the Allies were content to leave Russia a great and powerful State, has been adopted as the *refrain* of a popular political song, the inscription of which is—"O, how sour are the grapes."

THE WAR IN THE CRIMEA.

OFFICIAL DESPATCHES.

(FROM THE "LONDON GAZETTE" OF TUESDAY.)

War Department, Jan. 8, 1855.

His Grace the Duke of Newcastle has this day received a despatch, of which the following is a copy, addressed to his Grace by Field-Marshal the Lord Raglan, G.C.B.

Before Sebastopol, December 13, 1854

My Lord Duke, Nothing has occurred since I had the honour to address you on the [illegible]

The weather, which was then fine, changed on the following afternoon, and, during the night of the 16th, it darkly ceased either to rain, hail, or snow.

The night of the 16th was particularly severe; but it cleared up yesterday, and is now [illegible]

The bad days above mentioned have, however, rendered the communications more difficult, and materially retarded the movement of supplies and stores from [illegible] Regiments have arrived from Gibraltar, and will take their [illegible]

A considerable portion of the warm clothing has been received, and is in course of issue, and the men are most grateful to her Majesty's Government for having provided for them what conduces so essentially to their comfort.

I have the honour to transmit returns of the casualties between the 11th and 18th [illegible]

I have, &c.,
RAGLAN.

To His Grace the Duke of Newcastle, &c.

RETURN OF NON-COMMISSIONED OFFICERS AND MEN KILLED AND WOUNDED FROM 11TH TO 18TH DECEMBER, 1854, INCLUSIVE.

KILLED

1st Battalion Rifle Brigade.—1 sergeant, 1 rank and file, wounded
Total.—1 rank and file killed, 1 sergeant, 1 rank and file, wounded

J. B. BUCKNALL ESTCOURT, Adjutant-General.

RETURN OF NON-COMMISSIONED OFFICERS AND MEN KILLED AND WOUNDED FROM 11TH TO 16TH DECEMBER, 1854, INCLUSIVE.

KILLED

1st Battalion Rifle Brigade.—Private James Matthocks
Artillery.—Private Charles Mapp, and John Nowlan.

WOUNDED

1st Battalion Rifle Brigade.—Lieutenant John Smart, slightly; Private John Innes, severely
1st Regiment.—Private Michael Crowley, severely; William Storey slightly
7th Regiment.—Private Michael Connor, slightly; Private Thomas Holden severely
23rd Regiment.—Private Michael Connor, slightly; Private Thomas Holden severely
33rd Regiment.—Private Joseph Hatton, severely
47th Regiment.—Private Patrick Redmond, William M'Connell, Peter Golding, slightly; Private Henry Thompson, Simon Doyle, severely
49th Regiment.—Private James Vevers, slightly; Private John Hawkins severely
1st Battalion Rifle Brigade.—Sergeant Samuel Barwell, severely; Private Thomas Swinnell, slightly

J. B. BUCKNALL ESTCOURT, Adjutant-General.

War Department, January 9, 1855.

His Grace the Duke of Newcastle has this day received two despatches, of which the following are copies, addressed to his Grace by Field-Marshal the Lord Raglan, G.C.B.

Before Sebastopol, December 23, 1854

My Lord Duke, A good deal of rain has fallen in the last forty-eight hours, and the weather has become very inclement.

The only occurrence [illegible] has been a sortie made by the enemy [illegible] during the night of the 20th—the one [illegible] terrific, the other with drums beating, and shouting; the first being probably, from its direction and distance, an answer to the Inkerman heights.

Owing to the extreme darkness of the night, the enemy were enabled to come very near the right attack without being perceived; and having made a sudden rush upon the most forward parallel, they compelled the men occupying it to withdraw, until [illegible] by a party under Major Welsh, of the 97th Regiment, when it was [illegible] possession of, and the Russians retired, not, however, without occasioning some loss in both killed, wounded, and missing. Lieut. Byron, of the 34th Regiment, was amongst the latter.

On the left attack the enemy were met with great gallantry, by Lieutenant Gordon, of the 38th Regiment, who, when supported by the covering party of the trenches, under Lieutenant-Colonel Wynyard, of the 90th, succeeded in at once driving them back. But here, I regret to say, [illegible] was still more severe. Major Miller, of the 50th fell mortally wounded, and I am concerned to add as since dead; Captain Fremantle, of the Scots Fusilier Guards, is also reported to have met [illegible] Sir Richard England speaks in high terms of the gallantry and vigilance of these troops, and of the distinguished conduct of Lieutenant-Colonel Waddi

I enclose a return of the casualties to the 20th inclusive

Two regiments of French cavalry, under General D'Allonville, made a reconnaissance on the 20th, towards the great [illegible] recently occupied by the enemy in front of Balaclava: while the 42nd Regiment, a detachment of the Rifle Brigade under Colonel Cameron, 42nd Regiment, and a battalion of Zouaves, made a corresponding movement on their [illegible] right. The latter saw only a picket of Cossacks, which retired upon the approach; the former exchanged shots with the enemy, and ascertained that they had scarcely any troops on the left flank of the Tchernaya.—I have, &c., RAGLAN.

His Grace the Duke of Newcastle, &c

RETURN OF OFFICERS WOUNDED AND MISSING FROM 17TH TO 20TH DECEMBER INCLUSIVE

WOUNDED

30th Foot.—Major J. O Moller, dangerously [illegible]

MISSING

34th Foot.—Lieutenant J. Byron.
50th Foot.—Captain H. J. Frampton, Lieutenant M. A. Clarke

J. B. BUCKNALL ESTCOURT, Adjutant-General

Before Sebastopol, Dec. 26, 1854.

My Lord Duke,—I have nothing to report to your Grace to-day.

The rain which prevailed on Saturday, [illegible] succeeded by snow on Sunday, and it was almost the worst day I remember. At night it froze, and the frost has continued ever since, without being severe; but it has not as yet tended to dry the ground, still in a lamentable state.

Every effort is making that the state of the roads will permit to bring up ammunition and the materials of siege, and General Canrobert is, in respect, affording [illegible]

The [illegible] leavy fire upon our [illegible] last night, and [illegible] which I enclose, that we daily sustain [illegible]

RAGLAN

To His Grace the Duke of Newcastle, &c.

RETURN OF CASUALTIES FROM 17TH TO 20TH DECEMBER, 1854.

[illegible] rank and file wounded
[illegible] rank and file killed.
[illegible] 7 rank and file killed, 7 rank and file, wounded; 1 rank and file, missing
[illegible] 2 rank and file killed, 1 sergeant, 4 rank and file, wounded; 1 officer [illegible]
[illegible]—1 rank and file, killed; 4 rank and file, wounded
[illegible] rank and file killed
[illegible] sergeants, 12 rank and file killed, 1 officer 18 rank and file, wounded; 2 [illegible]
[illegible] rank and file wounded
[illegible] rank and file, killed
[illegible] 1 officer, 23 rank and file, killed; 1 officer, 1 sergeant, 43 rank and file, wounded; 1 officer 21 rank and file, missing

J. B. BUCKNALL ESTCOURT, Adjutant-General

RETURN OF NON-COMMISSIONED OFFICERS AND MEN KILLED, WOUNDED, AND MISSING, FROM THE 17TH TO THE 20TH DEC., 1854, INCLUSIVE

KILLED

1st Foot.—Private James M'Mahon
33rd Foot.—Private Timothy Holroyd, Stephen M'Garry.
49th [illegible]—Private George Rosman, Henry Watts
[illegible]—Private Alexander Blair
[illegible] Private [illegible]
50th Foot.—Sergeant James Howarth; Corporal Benj. Inglefield; Privates James Carmichael, James Cull s, Stephen Connelly, Patrick Connor, samuel Dermitar, Timothy Keefe, James Malley, Patrick Sweeney, Samuel Thompson, Patrick Thompson, Edward Wood; Lance-Sergeant Thomas Andrews
[illegible] Drummer
[illegible] Private [illegible]
1st Battalion Rifle Brigade.—Private Charles Mulcahy and Thomas Mulford

WOUNDED

1st Foot.—Private James M'Mahon
3rd Foot.—Private Timothy Holroyd, Stephen M'Garry.
49th Foot.—Private George Rosman, Henry Watts
[illegible]—Private Alexander Blair
[illegible] Private [illegible]
50th Foot.—Sergeant James Howarth; Corporal Benj. Inglefield; Privates James Carmichael, James Cull s, Stephen Connelly, Patrick Connor, samuel Dermitar, Timothy Keefe, James Malley, Patrick Sweeney, Samuel Thompson, Patrick Thompson, Edward Wood; Lance-Sergeant Thomas Andrews
[illegible] Drummer
[illegible] Private [illegible]
1st Battalion Rifle Brigade.—Private Charles Mulcahy and Thomas Mulford

MISSING

1st Foot.—Private Thomas Hall, Edward Bacal [illegible] James Nowe, Thomas Watkins
[illegible] Hall, [illegible] Watts, Thomas [illegible]
[illegible] Thomas Veins and Fitzgerald severely. Edward [illegible] slightly
[illegible] sergeant [illegible] severely; [illegible] Edward Howcott, Bartholomew [illegible] severely
Corporal [illegible] severely
[illegible] Private [illegible] severely; [illegible] slightly
[illegible] Private [illegible] severely; [illegible] slightly
[illegible] Private Alfred Hawks, severely
[illegible] Sergeant [illegible] severely; William Doran, William Walcroft, severely
[illegible] Private [illegible] severely; Thomas Mahoney, Michael Nicholson, severely
[illegible] Private [illegible] severely; [illegible] severely
Private [illegible] severely; Michael Cummins, Nathan Wood, John Brady, Charles Martin, John Taylor, slightly
50th Foot.—Private Edward Nugent, severely
1st Battalion Rifle Brigade.—Private Frederick Hall, slightly

MISSING

19th Foot.—Private William Veines
32nd Foot.—Private Thomas Hunt, John Gilmore, Thomas Golling, George Sparks, Patrick Fogarty, John Thompson, Robert Dear, Matthew Fox, Ambrose Hudson
33rd Foot.—Private Henry Smith and Thomas Baldwin
50th Foot.—Corporal Timothy Calnan, Privates John Callaghan, Thomas Corcoran, Matthew Dagan, George Doyle, Edward Hartigan, Lawrence M'Auliffe, Thomas Sinnott.
68th Foot.—Private James Mayer

J. B. BUCKNALL ESTCOURT, Adjutant-General.

RETURN OF CASUALTIES FROM 21ST TO 28TH DECEMBER, 1854, INCLUSIVE.

39th Foot.—3 rank and file wounded
[illegible] rank and file missing
[illegible] rank and file wounded
[illegible] rank and file killed
47th Foot.—1 rank and file killed; 2 rank and file wounded
[illegible] rank and file wounded
1st Battalion Rifle Brigade.—2 rank and file wounded
Total.—8 rank and file killed, 1 sergeant, 18 rank and file, wounded; 1 rank and file missing.

J. B. BUCKNALL ESTCOURT, Adjutant-General

RETURN OF NON-COMMISSIONED OFFICERS AND MEN KILLED, WOUNDED, AND MISSING, FROM 21ST TO 24TH DECEMBER, 1854, INCLUSIVE

KILLED

19th Foot.—Private James Edwards
30th Foot.—Privates Thomas M'Grath, John M'Neil on
47th Foot.—Privates James Graham, Thomas Weiss, Thomas C Bennett, Hugh M'Cosspon, John Mason

WOUNDED

3rd Foot.—Privates James Hawkins, slightly, Isaac Jennings, Thomas Neale, severely.
39th Foot.—Private Charles Smith, slightly
[illegible] Sergeant James Atkins, slightly; James Patinghan, severely.
47th Foot.—Sergeant [illegible] severely
57th Foot.—Private William Egan, Christopher Carroll, severely
68th Foot.—Private John Laughlin, James Nugent, slightly.
1st Battalion Rifle Brigade.—Corporal Richard Brooks, severely, Private Charles Bailey, severely.

MISSING

[illegible] Private [illegible] ward Buckingham, returned in last return

J. B. BUCKNALL ESTCOURT, Adjutant-General

THE QUEEN'S THANKS TO THE ARMY IN THE CRIMEA.

The following Despatch from his Grace the Duke of Newcastle, Minister at War, has been published in General Orders, and read to the troops serving in the Crimea:—

War Department, Nov. 20, 1854

My Lord,—I have the honour to acknowledge the receipt of your Lordship's despatches, Nos. 83 and 84, of the 13th and 23rd of October

I have submitted to the Queen the interesting reports with which your Lordship has furnished me in the despatches of the commencement and subsequent progress of those vast operations in which the Allied armies and fleets of her Majesty and of the Emperor of the French, in conjunction with those of the Sultan, are engaged against the stronghold of their common enemy; and I am commanded by her Majesty to express to your Lordship, and, through you, to the army under your command, the high satisfaction with which she has received the intelligence, no less of the energy and determination in which the fire of the Allied batteries was opened, than of the energy and determination with which that fire was subsequently sustained. The unfortunate occurrence of the explosion of a magazine in one of the batteries, which took place at an early stage of the operations, must doubtless have prevented any immediate effect of a decisive nature being produced on the enemy's works; but her Majesty rejoices to find that the energetic and persevering efforts of the French commander enabled him to overcome the temporary check which this disaster appears to have imposed upon the exertion of the forces under his command.

Her Majesty is fully sensible of the motives which induced your Lordship to secure the co-operation of the combined fleets in the attack upon the enemy's works at the mouth of the harbour, simultaneously with the fire from the batteries on the land side. The aid which, so far as they were enabled to render it, was [illegible] afforded by the naval to the exertions of the land forces is highly appreciated [illegible] Majesty; and I am further commanded to express the great [illegible] with which Her Majesty has received the intelligence communicated by [illegible] of the cordial assistance afforded by the sailors from the fleet, [illegible] Captain Lushington and Captain Peel, in the land [illegible]

The [illegible] sympathises with those who, during the progress of the [illegible] of present despatches, have been wounded in the service of their country, and has received with sincere sorrow your report of the loss of those of its gallant soldiers and sailors who have been killed. It is impossible that upon one of such great magnitude and difficulty, more especially upon the vigilance of the enemy and the powerful means of [illegible] at his disposition, should [illegible] be unattended by loss; and [illegible] cannot but rejoice that under the continued exposure to the inclemency [illegible] the season, the loss during the period included in the returns of casualties enclosed in your despatches, is not so great as might have been anticipated. I reserve the honour to be, my Lord, your Lordship's most obedient humble servant.

NEWCASTLE

Field Marshal the Lord Raglan, G.C.B., &c

The following have also been published in General Orders:—

Extract from a Letter of the Duke of Newcastle to Lord Raglan, dated November 24, 1854.

I take the present opportunity to assure your Lordship of the satisfaction with which I have received the testimony borne by Major-General Sir Colin Campbell in his report concerning the conduct of the 93rd, to the assistance rendered by the Royal Marine Artillery and Royal Marines, in opposing the advance of the enemy's cavalry in the action before Balaclava of the 25th of last month.

War Department, Nov. 23, 1854

My Lord,—I have the honour to acknowledge the receipt of your Lordship's despatch, No. 85, of the 1st of October, which reached me the 17th instant.

I have lost no time in submitting to the Queen the names of those officers whom Lieutenant-General the Earl of Lucan considers as entitled to [illegible] mentioned for their services in the action of the 25th of October in front of Balaclava, and whom your Lordship commends to my notice; and I have received her Majesty's commands to desire that your Lordship will convey to each of the officers in question the high approbation with which her Majesty regards their valour and excellent conduct on that action. I have the honour to be, my Lord, your Lordship's most obedient and humble servant,

Field Marshal the Lord Raglan, G.C.B., &c.

NEWCASTLE

MISS NIGHTINGALE.—The following letter, written by Mrs. Frances Nightingale, mother of Miss Florence Nightingale, has been addressed to Mrs. Bennett, whose son now lies in Scutari Hospital, having been severely wounded in action:—

Embley-park, Romsey, Nov. 30, 1854.

We are very sorry to hear from Mr. George, of Romsey, that you have a son at the hospital at Scutari, particularly as you have it not in your power to send him the comforts and necessaries he requires. I hope your son is not dangerously wounded. As to his being taken care of, and having every comfort and consolation under his circumstances, I think I can make your mind easy. We hear very often from my daughter Florence, and every letter she writes breathes the kindest feelings. She has been received, and how everybody is helping them with comforts for the poor soldiers. At first the wounded came in so fast that things sufficient could not be provided for them; but since my daughter arrived there fourteen more surgeons sent by Government, and 40 nurses, and stores have poured in, all have improved from day to day. The three head doctors, who are good, experienced men, have divided the wards, and the sick and soldiers are all arranged in comfortable beds, and, my friends say, look cheerful and calm. The hospital is very large, clean, and airy; there are two chaplains, who read prayers twice a day, and eight o'clock; and an excellent clergyman from Dorsetshire (Mr. S. Godolphin Osborne), who devotes himself to comforting the patients. Besides the large kitchen, which supplies the general food, the nurses have another kitchen, where nurses are always preparing some of the delicacies and nourishing things, such as jelly, and arrowroot, and soup, and broth, and chickens, for those who require them. The soldiers are so grateful, and bear their sufferings so patiently, and comfort themselves with such propriety, that it is quite a pleasure to help them. I will mention your son to Miss Nightingale, and will get some account of him for you; but perhaps you may have heard from him, as there are two gentlemen in the hospital who bear Bennett's name, and letters for the wounded men to their friends. May God comfort you under your trial is the earnest hope of your well-wisher,

FRANCES NIGHTINGALE.

AMBIGUOUS PRUSSIA.—At a levee held on the morning of New-Year's-day, at his palace in Coblentz, the Prince of Prussia told the assembled officers that various portions of the army were already fully prepared for war, and it might easily happen that very soon the whole of the army might be called to arms. "Should that be so, he would repeat to them what he had said to them last year: it was for the King to point out to them towards which side they were to front, and on which side they were to fight; it was for the army to think only how it could best preserve and increase its glory and honour. To attain this end every nerve must be strained, even in peace, that they might the better stand their trial on the battle field."

TAKING THE WRONG SOW BY THE EAR.—The French, having remarked an unusual activity among the garrison of the Quarantine Fort, were anxious to know the cause of it, and for that purpose determined to get hold of some Russian sentinel at the outposts. But it was no easy matter, the sentinels being usually on the alert, and taking good care to keep out of danger. At last a Zouave offered to furnish the article in question. That evening, as the sentinels heard a rustling among the bushes. He cried, "Who goes there?" but the only answer he received was a grunt. Thinks he to himself, "This is some fat pig that has deserted from the enemy. Bless me, if I could only get hold of it, and smuggle it into the fort, so that our officers may not lay hold of it!" With this view, he returns the grunt, the conversation becomes interesting to both parties, and at last the worthy Russian sees the object of his desires approach. He lays down his musket to seize it, but, oh horror! the treacherous beast turns the tables upon him, throws him down, and gags him in no time; then, with a low whistle, he calls five Zouaves to his aid, who carry off his victim to the French Camp in triumph.

SIR ARCHIBALD ALISON AT SEAHAM.

SIR ARCHIBALD ALISON last week opened the new Mechanics' Institution at Seaham Harbour, which has been built by the Marchioness of Londonderry for the use of the inhabitants of that seaport. A meeting, attended by the *élite* of the district, was held in the hall of the new building; Earl Vane in the chair. After some introductory remarks from the noble Earl,

Sir Archibald Alison rose and said, he had assisted at meetings in the great old cities of the empire—in London, Manchester, Glasgow, Edinburgh, and Aberdeen; but this was the first time he had been honoured to attend a meeting of a different description—a meeting which was called, not in an ancient and a frowning town—not, he trusted, in the effervescence of excitation, but in the commencement of it (Cheers). When they looked around them and saw this beautiful harbour and this flourishing country, and reflected what the site was twenty-five years ago, they were led to think that they were not placed among the earliest civilisation of England, but among the rising energies of America—on the shores of the Ohio, or on the banks of the Mississippi; for in no part even in this favoured land had been found, he believed, more rapid progress or more durable prosperity (Cheers). They would not forget, when they saw the present magnificent docks and harbour and all the symptoms of rising prosperity, that they were mainly owing to the determination and ability of one man (Cheers). He trusted that as one man had laid the foundation of the edifice, so many men would come in its superstructure. It was natural in meetings of this description to enlarge on the inestimable benefits of institutions of this kind in forming private character and in withdrawing from habits of idleness and in elevating and improving all classes of society. Far be it from him to throw any chill on such pleasing anticipations; they must all see in their experience many instances in which they had been realized (Cheers). It was in vain to say that they could separate the elevation of the middle and working classes from the general prosperity of the empire. The Constitution had given them a preponderating influence in the Government; they returned a decided majority in the House of Commons, and they must look for the foundation of the measures of the Government in the thoughts and feelings of the constituencies. Misdirected zeal, misdirected energy, was the prolific cause of misery in all the departments of the State, both in social and political life (Applause). There was another matter to which he would refer—taxation. He did not know if they were aware that half of all the taxes paid to the country—£26,000,000 a year—might have been avoided, if the advice tendered to the people in the country in former times had been followed. If the Sinking Fund existing at the end of the war had been kept up—if they had not repealed the indirect taxes which supported it—they would have had at this moment no National Debt. They would all have been paid off in 1845, and at this moment the nation would have been paying £26,000,000 less of taxes: £15,000,000 a year would have paid off £300,000,000 in 1845: £10,000,000 a year would have paid it off at this time. Since the peace they had paid off in the course of £40,000,000 a year, and yet, if they had kept £10,000,000 of that, they need now have had no National Debt at all. Why had the enormous benefit to the nation been lost? It was because the working classes were not instructed, and followed any person who offered to reduce the taxes. There was another matter which must be interesting to any person who heard him the present state of the war on the Continent. They could not look into the newspapers, or enter into any society, but they saw that this was the prevailing and pre-eminent point [illegible] society to all. There was hardly a family which had not either a [illegible] relation, or a friend exposed to the dangers in the Crimea. There was not an individual in the nation not interested in that great event of the family of their noble patroness there was one in the Crimea; of the family of him who addressed them there were two sons engaged in the same perilous enterprise. There were many families from whom the [illegible] of the vessels which conveyed our brave countrymen to the [illegible] away all the endearing memories of the past, and all the hopes of the future, and cast upon the ultimate issue of events a dark cloud, which no human foresight could fathom. Such was the interest of the war that it was of the last importance they should be united to the enemy with whom they had to contend. He was not an insignificant enemy. The Emperor Nicholas was over 70,000,000 of men, all devoted to war. Commerce, agriculture, science, literature, philosophy, were in little esteem; all the talent of the nation was devoted to war. Every young man of ability was sent to the military schools; in these school 80,000 young men were educated to the science of war, the ablest of whom were selected for the duties of diplomacy. At the head of the empire was a man of vast energy, stubborn courage, and great determination. He devoted the energies of the great empire to the objects of external aggression, and was actually supported by the whole Russian nation; every man, from the Emperor down to the serf, was impressed with the idea that it was their duty to be the conquerors of the world. The Emperor was now making war on the idea that he was merely giving vent to the national feeling. To him might be applied, with the alteration of a few words, the lines of a poet of the last century:

> No joys to him pacific sceptres yield,
> War sounds the trump, he rushes to the field;
> Behold surrounding Kings their power combine,
> [illegible]
> Peace courts his hand, but spreads her charms in vain.
> "Think nothing gained," he cries, "till nought remains,
> On Simbad's walls lift Russia standards high,
> And all be gained, while aught is left to buy."

Now, how was it that, in the course of a [illegible] great Power, there had made so sudden a transition from the exultation of victory to almost the despondency of defeat? They saw a great deal in the journals endeavouring to throw blame on this and that Ministry, on this and that General. He stood there neither to vindicate one Minister nor to vindicate one General or another. But he stood there to point out to his fellow-countrymen the errors—he might almost say the national crimes—which were now meeting with national punishment. They were now in a state of anxiety here on account of the state of the army in the Crimea. Why was it that the noble army which had done such great things had been exposed to such defeats? Just because it was one-half its proper size (Applause). Let them open the papers, and they would find the reason why the English were in a much worse position than the French army of 20,000 men was obliged to do the work of 60,000 men. While the French were only obliged to go into the trenches once in every four days, the English soldiers must go in every other night (Hear, hear," and applause). This of course weakened their force, and they are unable to bear the cold, wet, and privations which prevail in that inhospitable climate. If England, when the war broke out, had had 100,000 regular troops, 10,000 cavalry, and 3,000 militia, they would have gained a decided success; the enemy never after such severe blows had had 100,000 men to transport, they might have sent 40,000 to the Baltic and 30,000 to Constadt, and 50,000 to the Crimea and taken Sebastopol. Why, if 6,000 cavalry, instead of 700, had been at the Battle of Alma, they would have converted the defeat into a total rout, and the Russian army, broken and disorganised, would have been unable to defend Sebastopol. At the Battle of Balaclava, after the lapse of 430 years of the very anniversary of the battle of Agincourt, if there had been 2000 English troops, the valuable stores Balaclava contained would have been preserved, and supplies would have been carried up with perfect safety. 5000 English horses would have marched triumphantly through 10,000 Russians. The battle of Inkerman, destined to be immortal in the world, and to take its place with the battles of Marathon and Plataea—if there had been but 20,000 more English troops, while with the right wing we buried the Russian battalions down the heights, with the left wing we would have taken Sebastopol, and the two Grand Dukes would have come up to the theatre of action only to see the total destruction of their father's hopes (Applause). See now what a dreadful lesson they army had been brought into in consequence of the incessant clamour for reduction. If they would see the good effects of war, they would have only to call out their armies, and see the officers who had been trained in every luxury, and the soldiers accustomed to every comfort, enduring patiently every hardship and submitting to every privation, and ready every moment to lay down their lives for the country (Applause). But see also the good effect of the war on the nation. Let them look around, and they would see people of all classes—from the Queen to the peasant, even including the captive in his dungeon—sacrificing certain comforts and doing everything in their power to provide for the widows and children of those who had fallen in the cause of their country (Cheers). He would say one word of consolation for those who were left bereaved: the memories of those who were dear to them were enshrined in the recollection of a grateful country, their names would never be forgotten, and to them they might apply the beautiful lines of the poet—

> By fairy hand their knell is rung,
> By forms unseen their dirge is sung.
> There Honour comes, a pilgrim grey,
> To deck the bed of those who pray.
> And Freedom shall awhile repair
> To dwell a weeping hermit there.

A RUSSIAN PRIZE.—The *Vrouw Houwina*, a galliot, with a cargo of saltpetre, which cleared from London with a declaration that the saltpetre was intended for consumption in Portugal, has been seized in the Tagus by a French steamer. It was on its way to Hamburg, and was consigned intended for importation into Russia. The French vessels in the Tagus have now instituted a rigid search of all vessels leaving the river, as it is discovered that the Russians have organised, through false documents, a regular system of trade in the munitions of war.

SKETCHES IN JAPAN.

[We have been favoured, by a Correspondent, with the following interesting Narrative of a recent visit to Japan; and by two other Correspondents with the accompanying illustrative Sketches.]

ARRIVAL OF THE BRITISH SQUADRON AT JAPAN.

On the 7th September, H.M. Ships the *Winchester*, the steamers *Encounter*, *Barrosaute*, and *Styx*, anchored in the outer harbour of Nagasaki, Japan. They crossed over under sail only from Woosung, at the mouth of the river Yangtse-kiang, in six days. Under steam it might be done in two or three days. Several boats, pulled by twelve men each, met the squadron far outside the harbour. Two or three men, stationed on a wooden roof in the bows of the boats, waving white bundles of flags stuck on bamboos, seemed anxious to serve the ships away. But no notice was taken of their wild gestures, beyond the taking on board one or two written notices in Japanese, Russian, Dutch, and English, in which all comers were prohibited, on pain of punishment and peine, from entering the harbour. At noon the anchor was let go in twenty-six fathoms. The Captain of the Port, the Governor's Aide-de-Camp, and an Inspector of Customs came on board the flag-ship, attended by seventeen persons, each carrying two swords, which were of the finest workmanship, bright and sharp as a razor. They did not like them to be drawn or looked at, or even touched. The officers were shown into the Captain's cabin, where a conversation was begun through the medium of a Japanese named Otô, whom the Admiral had brought with him from Shanghae. This man had been wrecked in a trading junk more than twenty years ago. After many vicissitudes of life, including a visit to England, a temporary employment with the late Dr Gutzlaff, and other missionaries, he is now storekeeper to Mr. Beasley of Deshima, and has gained, worth a large sum of money. The Japanese waters, the Captain of the Port, he said, he had a wife and children at Shanghae, whom he feared remaining under the protection of the English flag. One of the Japanese said, "a sorrowful wife and weeping children." Otô merely replied, "I do not know." They inquired about the exact rank of the Admiral, and it was well the ships had been anchored according to the position they were. They took a letter from the Admiral to the Emperor of Japan's ministers, and asking for a place to land his men upon for exercise. They said they would forward it to the Emperor at Yeddo, that an answer might be expected in forty days. Meantime the English might enjoy the hospitalities of the port. The Governor could not receive the Admiral's visit nor visit him; the Dutch war-steamer (which lay close to the town, two miles further in than the Winchester, and had arrived a few days before her) was prohibited from all communication with the English, who were not to be suffered to land anywhere, and were surrounded with ten guard-boats; nor would the Japanese allow the Admiral to pass a line of junks moored across the mouth of the long narrow creek leading up to the town. For three weeks the four ships lay in this very unpleasant state, nor were such humiliating restrictions ever more patiently, nay, courteously, submitted to.

The scenery round the harbour is very beautiful. A range of hills encircles the swelling slopes which reach the shores, on these slopes terraces of cottages and neat-looking hamlets are gracefully scattered, amid verdant terraces and rich crops of every kind. The shore is indented with numerous pretty bays, and fringed with islets of bright green foliage. The water is deep, clear, blue, and smooth. The rise and fall of the tide is about ten feet, but no perceptible set or current attends the ebb and flow.

The Admiral expressed a wish to buy provisions for the squadron; but the Japanese said, their laws absolutely forbade any trade whatever. They would, however, supply water, and such fresh provisions and vegetables as were required; and on the 9th September three boats came alongside, bringing three pigs, forty-two fowls, eight sacks of pears and sweet potatoes, packed in rice-straw, weighing about a picul, or 133 lbs. each; several bunches of radishes and onions, and a basket of eggs. Some sand had also been asked for. Three boatloads of quarts gravel were sent in the first instance; this was rejected as unfit for scouring the decks; in a day or two three more boats came under, with clean, sharp, brown silt sand; each boat was attended by a guard-boat, which watched the delivery of the last grain. The Admiral asked to be allowed to haul the seine nets for fish in some retired sandy bay on the islands outside. He was not permitted to do so, but a supply of fish was to be sent. Six or seven baskets of good fish—bream, mullet, and soles—were received on the 22nd. An apology was made for the small quantity, which was just enough to supply the *Winchester* for one day. On the 26th were brought three baskets of sardines, which were sent to the *Encounter*, a second boat, full of vegetables, a few fowls, and a jar containing four or five pounds of fine tea, came as a present to the Admiral. The Japanese had taken care to ascertain the number of persons on board the four ships; and, seeing that the amount was a round thousand, their supplies were not profuse. However, they had been told the ships wanted nothing from them without payment, and had thereby come to say "How do you do!—what news about the Russian ships?—good-bye!" which seems to be a fair epitome of this first visit of a British naval commander-in-chief to the inhospitable shores of Japan. He was allowed to land for scientific purposes only, on a small piece of rock, or rather heap of shells, covered at high water; and even this, only after making a signal, on which this rock was surrounded with guard-boats. He did visit it once in his barge, attended by his whole staff.

When a supply of fish was promised, a strong wooden frame-work of great size was quickly constructed on the shore abreast of the flag-ship. On this a series of large thatched masses appeared in the evening. Next day they had developed themselves into a huge net, surrounded by enormous floats. This great net was moved by a number of men in military order, and placed in a kind of lighter, fitted with a wooden stage to receive it. We have seen how small were the proceeds of so large an apparatus.

One evening, when the weather was bad, the guard-boats went into shelter. A sort of smuggling boat came alongside. On being hailed, the crew answered "Fish." Two men came up the side, and quickly crouched down in the gangway, as if fearful of being seen from without. They offered boxes and other curiosities, saying the Russians had taken many from them. The Captain sent them away at once; nothing was suffered to be bought from them. The same thing was done at each of the other ships; and an idea arose that they were spies sent to test the sincerity and consistency of the professions made by the Admiral, that he would pay undeviating respect and obedience to all the laws and customs of Japan;—having asked if Quelpart Isle belonged to Japan, that he might give orders to men-of-war, which he might send there, to observe these laws and customs.

On the 26th the Admiral held an inspection of all the boats of the squadron, fully manned, but not armed. At ten o'clock, twenty-two boats, manned by 250 men and with twenty-one officers, assembled round the flag-ship. After forming line in close order, they made all sail. Then down all masts and sails, like magic, at the word of command. The awnings were all spread. The boats pulled, in slow time, round the squadron. They then formed in line abreast along the shore; and lastly raced home to the flag-ship. This must have been a beautiful sight from one of the hills overlooking the lovely harbour. All the Japanese guard-boats were on the *qui vive*. They could not tell what to make of it.

On the 27th, May, the Master of the *Winchester*, and Mr Bushnell, the gunnery Lieutenant, went away in a boat to sail round the islands, to sound and examine the passages and defences of the harbour. The result was no less important a discovery than that good coal existed in abundance, and was actually dug out in heaps of 200 or 300 tons, on the south end of the outer island, from two pits. The mouth of one was arched over with brick, and both were within fifty yards of the shore, where boats might load in four or five feet water. The Japanese were asked to send some of this on board. At first they professed ignorance of it. When they found that the Admiral had seen it, they said it belonged to some Prince, with whom the Governor of Nagasaki could not interfere.

On the 29th the squadron had been exactly three weeks in durance vile, when the Admiral sent for the Japanese authorities, and communicated to them by a letter to the Governor his intention to proceed at once to Yeddo. "He had complied with all formalities, tried every means, in vain. He conceived he had been subjected to such treatment as a nation of England's great power never had been used to; and he saw no alternative but to go to the principal seat of government." This announcement appeared to cause much dismay. The Japanese urged that the Governor had done all which his laws empowered him to do, and would have sent more liberal supplies had they been desired; that a reply from Yeddo would be sure to arrive in ten days; that if the Admiral were to go there now, he would lose time in going through all the formalities again. They were surprised the Admiral should be in such haste to leave a port where he was well treated. They were asked, "how it was possible to feel surprised that men who had been cooped up in ships in port for twenty-one days, without ever being allowed to put foot on shore, could feel otherwise than disgusted and anxious to depart?" They would ask the Governor. They were told that the Admiral would defer his departure for a few hours, if that would enable the Governor to solve the difficulties.

At nine o'clock the same evening the same officers came on board with a communication from the Governor, with an assurance that the Emperor's answer would arrive in ten days: that the Governor would find a small place, the next day, on which the English might land, since pulling about in boats was no exercise; this, although contrary to the laws, he would do on his own responsibility, that the people should not fall sick. They added that the refreshments sent hitherto were a private compliment from the Governor, which he was willing and desirous to continue: but that if general supplies for the squadron were required they might be ordered, and payment made through the Superintendent of the Dutch Factory at Desima.

The Admiral replied that he would remain ten days at the request of the Governor, and on the assurances given by him; in the due observance of which he would consult his best interests, as in giving them he had shown his good sense.

Next day the Captain and some officers landed to have a look at the place pointed out by the Japanese as the spot where the English might land for exercise. It was a miserable bit of land, about as big as the deck of one of the steamers. It was planted with sweet potatoes and a kind of vegetable-marrow, and was worse than any wretched lazaretto. It almost appeared as if they were joking in the matter. This was put right on their next visit. A small mound, with some trees on it, was given up; and the Admiral accepted it, landing small numbers at a time, under the charge of a Lieutenant. The Governor now sent off to say that he would be happy to make the necessary arrangements for the Admiral's landing to visit him at the Palace at Nagasaki; which took place on October 4.

VISIT OF SIR JAMES STIRLING AND SUITE TO THE GOVERNOR OF NAGASAKI.

The arrangements for the intended visit had been specially made. The Admiral was respectfully requested to fix his hour, to name his intended retinue, to specify whether he would land with or without a guard; and a kind of programme was laid before him of the meeting and ceremonial to be gone through. It was intimated to him that a communication from the Emperor was to be read to him, although the final answer to his letter had not yet arrived. At 9.30 October 4, five boats left the flag-ship, the *Winchester*, containing the Admiral and about fifteen of his officers. Although a little later than the time named, some delay or mistake had occurred in transmitting to the officer in charge of the entrance the necessary order. A boat was therefore sent in hot haste to stop the procession. The officer in her explained to the interpreter that his chief must perform the disagreeable operation of disembowelling himself if the boats were to advance. They were instantly stopped, and the three leading ones turned round, formed again in close order ahead of the Admiral. A few minutes removed the difficulty. A large boat came volunteering to lead the way. The sixteen boats receded, eight on each side, leaving open the centre of the passage. Twenty-five or thirty boats, with black, white, and red flags gaily flying, escorted the Admiral on each side, beating tom-toms, and keeping a sort of order. The distance from point to point where the line of junks was might be about 800 yards. These points were seen to be defended by twenty-one guns each; and were a formidable termination to a line of batteries and guns concealed among trees and brushwood. Inside these points the shores gently recede, and again approach, at the distance of a mile: a succession of beautiful views delighted the eye: picturesque positions displayed large military stations and encampments, ornamented with banners of bright colours; and the approach to the city of Nagasaki was of varied richness and beauty.

The Dutch factory, or prison, of Desima, is next passed on the right hand. A long rough wall, raised about six feet above the water, forms the front. On this stands a green paling, above which rise the staff angular dwellings and store-houses of the Dutch, facing the sea. Behind these a narrow creek runs, across which is thrown a melancholy-looking bridge, which is strictly guarded, and over which the Dutch residents are rarely allowed to pass. From the corner of this creek the cloth hangings begin to spread along towards the landing-place. They were marked with horizontal stripes alternately of blue and white hanging on poles. The landing-place was kept well clear by the Government boats. It was composed of long, rough, granite steps, without cement. The officers landed four and formed two lines, between which Sir James Stirling advanced towards two fat Japanese officials, who awaited him at twenty yards from the steps. They politely welcomed him, and said they were sent to convey him to the Governor's presence. The road was closed in on both sides with the dresses hangings—here twenty feet high—not striped, but marked with discs or circular shields, of 3½ feet diameter, bearing a peculiar fan-like wreath. Along these lines were stationed soldiers, at two or three yards interval, bearing on their left shoulders a matchlock enclosed in a red cloth case, and having a double coil of slow-match cord hanging on the butt-end of the stock. The procession advanced along an ascending road, broken by small flights of low steps occasionally. At a distance of 150 yards from the boats this road turned sharp to the right, and soon opened into an oblong open space, surrounded by guard-rooms, in front of which sat or rather squatted the guards, four long spears close beside each. Two stands contained ten very long spears in each: one set had round black tufts, the other a large bunch of black feathers on each. Out of this open space was a large gate hung by five massive copper hinges, on a frame made of pine wood, 14 inches by 12. The gate was hard wood, 4½ inches thick, unpanted. On each side of this gate stood a guard-room, within a smaller court. The side opposite the gate forms the front of the Governor's palace. It is a low and gloomy-looking old building, showing, in various places, marks of recent repairs. A small hall, with a guard-room at the farther end of it, opened into a corridor 9 feet wide, which led round the building; the doors of the rooms opening into it. Two of these rooms were pointed out as allotted to the Admiral and his suite. He passed on at once into a further room, where stood the Governor, having on his right the Inspector. Behind them were four young officers, holding sheathed swords in their hands by their points, the handles being above their heads. Two little stout officials were down on their knees and elbows, their heads leaning on the matted floor, and about two feet from the two great men. The Governor is called Mizuno Skugonokami: he is a quiet, intelligent, nice-looking man, about thirty-six years of age, and rather below the middle size. He addressed a few low, gentle tones to the abject beings at his feet, who scarcely dared to look up at his Lord, and who gave token of having comprehended each sentence by a sort of spasmodic "Ich, ich;" and, when the Governor ceased to speak, he kissed the matted floor several times before he repeated to Otô the Admiral's interpreter the Governor's words. Otô told the Admiral that the Governor offered his kind compliments, and was happy to see the Ad-

The dotted lines on Two-tree rock mark a passage which can be stopped with pontoons. This has always been considered as one island.

NAGASAKI HARBOUR.

miral and his officers; he hoped they were quite well and comfortable in Nagasaki.

Admiral: Tell the Governor I thank him for his civility; and that, owing to the supplies he has kindly sent, we are all well and comfortable.

The Governor had hoped to have received and communicated the answer from Yeddo to the Admiral's letter. He was sorry it had not yet arrived. He expected it in a few days.

Admiral: Tell the Governor that I will wait a few days in the hope of receiving the reply.

The Governor hoped that the Admiral would repeat his visit.

Admiral: I shall be glad to do so.

Exactly the same complimentary dialogue took place with the Inspector, through his abject mouthpiece on the floor, and then through Otô, the Admiral's interpreter. The English officers then bowed themselves out.

The Admiral and his staff took their seats in one of the rooms, the attending officers took their places in the other; in both, the exact number of arm-chairs required were placed ready. When the party were all seated, an armed official presented a cup of fine tea, in a circular japan waiter, with a round hole in its centre, to each of the English officers, kneeling. A tray raised six or eight inches was then laid before each, bearing a box filled with sponge-cake and bright-coloured sweetmeats. The box was ten inches square, and four inches deep, beautifully put together. A few sheets of cotton paper were laid with each, and some peculiar-coloured string to tie it up with. Each officer was asked to write his name on his box, in order that it might be sent to his ship as a slight memento of his visit. Between every two chairs were placed oblong trays, with fine tobacco of a light brown colour, a porcelain vessel with fire, and a smaller one to hold the ashes from the pipes, which were small brass heads as large as a marble fixed on cane stems about a foot long. The pipe, therefore, required to be refilled after a few puffs. The Japanese officers of the house walked about or sat outside the doors in the corridor. The rooms were low, separated by a partition which ran up about three-quarters of the whole height, surrounded by matted surface five feet high, and twenty inches wide, joined by hinges—every six panels forming one moveable screen, so that they might serve for various rooms and purposes—each panel was well painted and highly varnished. The ibis, the stork, and crane, appeared on some: while others had splendid groups of flowers. After a lapse of half an hour, the Admiral, his secretary, and the senior Captain, returned to the Governor's room, where a good deal of writing and talking was kept up for a couple of hours; at the expiration of which the Admiral returned to his sitting-room, saying, that if he had kept his officers waiting rather long, he had the pleasure to tell them the result of his interview was, so far as it went, satisfactory. The party then were served with more tea, and two thick round slices of a sweet plum dumpling in thin syrup. These slices were served in a basin of red lacquered ware with a cover like a saucer inverted, both of superior make; they were laid on the same black tray before used for the box of sweetmeats, and with them was a massive silver spoon, also a silver fork and a pair of new chop-sticks. No wine nor spirits of any kind appeared; and, although the diplomatic arrangements appeared to be faultless, the order perfect, and the polite dignity of the people unexceptionable, much cannot be said in favour of their *cuisine*. Nothing was seen of the Dutch—all communication with whom was prohibited. But one of the Japanese in attendance spoke Dutch, and acted, he said, as interpreter for them. The floors were all covered with fine matting, three feet wide, and in lengths of three yards, neatly joined and laid down over some elastic substance which made them soft and pleasant to tread upon. The Japanese left their shoes outside their houses and their boats. Seeing an English officer spit on the floor, one of the Japanese said in English, very slowly, "If—you—please—you—must—not—spit. Japanese—men—sit here." They are very cleanly in their dress and their dwellings, as may be judged by the way in which they keep their boats. At half-past two the party returned to the boats, and in three-quarters of an hour were on board the flag-ship; terminating very pleasantly an interesting visit, in which the only thing to be regretted was, that the view was strictly bounded by two lines of soldiers and screens of cloth—and that nothing could be seen of the people, their shops, their trades, arts, manufactures, or dwellings. A long period of patient management will be necessary to overcome their reluctance to hold any social or commercial intercourse with foreigners.

In four days after the Admiral's first visit to the O'Bungo, or Governor of Nagasaki, a second was arranged for the 9th of October. Five boats and about a dozen officers formed the procession, which left the flag-ship at 12.30. The reception, refreshments, and entertainment were exactly as before. The Governor and Inspector "hoped the Admiral and his servants were all well." They were quite well; and they "hoped the O'Bungo and all his were equally well."

The O'Bungo had received the Emperor's reply from Yeddo. It was unrolled in a long scroll, or series of scrolls. The purport of it was made known; the hearers were to retire, meditate upon it, and act accordingly. A third and final visit would then conclude the diplomacy. This reply acknowledged in courteous terms the compliment of the English visit and communication; expressed the high consideration cherished in the Imperial breast for the great English nation, the Queen, the Admiral, &c., regretted that necessity had arisen for war and its attendant horrors; explained that the Emperor's views of duty to his own subjects were such as to make him observe a strict neutrality. "He could not take either side in this serious quarrel without exposing himself to the wrath of the other party, and without drawing down awful calamities upon numbers of his poor weak people;" and the observations on these points were most just, sensible, and dignified. He had "commissioned the two principal officers of Nagasaki to make such a treaty in his name as the laws and the interests of his Empire permitted, and he was willing to concede to the English all the accommodations and advantages enjoyed by the most favoured nations, except the peculiar commercial privileges limited to the Dutch and Chinese nations."

The Emperor's letter was considered to be a very remarkable production. It was a close, reasonable, straightforward statement of duties and intentions, conceding all that could be expected; inspiring full confidence, and defining the principles by which future actions were to be guided. It required a long visit to go through, and accurately to obtain, the meaning of all that. While it was going on, the rain began to fall in great abundance. This gave occasion for the exercise of polite and kind attentions. The boats' crews—the band and

officers in charge of them—were all conducted to shelter in the Palace. It was now quite dark, the rain still pouring down. An umbrella was presented to every one of the party; covered barges were prepared; the Admiral and all his party returned, safe and dry, in Japanese Government boats, to the flag-ship at half-past seven o'clock.

Four or five days were spent in drawing up the treaty, and the Japanese officers frequently came on board several times in the day to adjust certain minor points. They often remained till nine o'clock at night, engaged in conference. All being ready on the 14th, the Admiral, attended as before, went to Nagasaki. The treaty was read to the Governor. About two o'clock it was signed in duplicate by the Admiral. It was then sent out somewhere; it is supposed to the Dutch Factory, probably with the view of ascertaining that all was quite correct. The Governor and his brother Commissioners then signed both parts; and the Ratification is to take place within a year.

A very fair dinner was served on tables somewhat after European fashion. The sweetmeats were of a finer kind, and presented on porcelain dishes. The dishes were sent on board for each officer, as the boxes had been on former occasions. When the time came for the return to the boats, it was quite dark; but the street or way was lined with men holding lanterns beautifully painted, all bearing the Government device. As the Admiral passed on, the lantern-bearers closed up; forming at last, round the landing-place, a circle of coloured light. The water was also covered with boats, each sporting several of these tasteful and elegant lanterns; producing altogether a novel and brilliant effect. The polite but unobtrusive hospitalities, the generous and delicate attentions, the admirable order, discipline, and good sense of this peculiar people, surprised and pleased their guests. Theirs was spontaneous kindness. What a marked improvement is here observable in the state of affairs. A few weeks before, the English ships were warned off, and scarcely permitted to approach the port in peace. After they had anchored they were surrounded by guards, and placed under strict surveillance—no landing, no purchasing supplies; evasions, delays, excuses, suspicion, etc. This unpleasant position was endured with patience, and gradually improved. Great care was taken that neither officers, nor men, nor boats, should transgress the limits prescribed, that no attempt should be made to trade or hold any communication with the people. Strict orders were wisely issued to this effect, and they were cheerfully obeyed. The treaty now made with Japan contains nothing about commerce, yet it opens the way, and prepares for future negotiation on this important point. It has been effected without violence or menace. It has occasioned no expense or inconvenience, but the contrary. The four ships found, in the fine harbour of Nagasaki a safe and salubrious anchorage at a bad season of the year. They were well supplied with fresh provisions and water, the health of the crews improved, nor was there a single death during the six weeks of their stay. The Japanese officers observed, and fully appreciated, the perfect order, cleanliness, and discipline prevailing, not only on board the ships, but in the boats and on the island; and often expressed their admiration of these qualities, as well as of the superior scientific and mechanical arrangements—not without an admission how much they had to gain and to learn by intercourse with Europeans. They were pleased with the deference paid to their laws, the respect shown for their rights. They are a remarkably acoustive, quick race of men; perceiving, almost intuitively, the least slight or rudeness, exceedingly delicate and subtle in their feelings, recoiling from rough or coarse treatment. Whatever they grant freely and with really good will they observe and act up to most thoroughly; whatever is extorted from them by menace may promise fair, but will not produce lasting or satisfactory results; and, it is highly probable that what has been quietly done by Sir James Stirling at Nagasaki, may exceed in durability and value the work done at Yeddo by the Americans, although that cost the world with a very loud flourish of trumpets indeed. There is another point of view in which the treaty now made seems important. The Japanese have been made to feel and to

understand that while they possess a prominent and insular position—brought by steam among the ocean highways of nations, with fine harbours, in which the fleets of nations may repose and repair—events may and must take place which will render their exclusiveness impossible. In the great crush of world-wide interests they must be made to act like other people, and "wheel into the rank" of civilised usage. They have now been told of the war between Russia and Europe, of the causes which combined to render that war inevitable, and the alliances which indicate a speedy termination of it. They understand why England, who did not intrude much upon them, has now to perform a duty to herself, and must see that no foe shall avail himself of her forbearance, to easconce in the so-lauded harbours of Japan the hostile man-of-war or treacherous privateer.

The day after the last interpreters were sent on board for all the officers of the squadron. To the Admiral an oblong case, divided into five compartments, each containing a cup, saucer, and cover, packed in cotton, these were the most delicate and beautiful specimens of porcelain. Four pieces of gold, of various colours, a box of black lacquer, beautifully inlaid and polished, and filled with sweetmeats, arranged in an elegant manner. A pair of pretty small dogs, in little boxes, cushioned neatly at the bottom: the dogs are active and well formed—white, with a few black spots, and wore red silk pelerines round their necks. And, lastly, a pair of enormous fowls, in a wicker cage. The Commanders got cups, box, and silks. Lieutenants, five cups and saucers each; other officers, ten plates, all of blue ware. These were stated to be a general present from the Emperor to the officers. A day or two before sailing, Sir James Stirling sent two revolvers to the Emperor and the Governor of Nedsiy, or Inspector; which were accepted and acknowledged by a special present to Sir James Stirling, consisting of a pair of porcelain vases, two large basins, and stands, two smaller basins, with covers, one black lacquer inlaid cabinet, in a frame, a flat box of similar materials and workmanship, and a jar of saki. These presents were pronounced to be of surpassing beauty.

On Friday, October 20th, exactly six weeks after their first arrival, the ships left the harbour of Nagasaki. They were escorted out to sea by a guard of honour, boat-gun tom-tom-ing, and showing demonstrations of good-will and respect. The strong north-east monsoon supplied them with wings, and brought them in six days to Hong-Kong, where the letters and newspapers of nearly three months awaited the anxious voyagers.

The whole of the supplies purchased from the Japanese on public account and for the officers' messes, amounted to about £600, and was paid for by Navy bills through the Dutch. The bill for the private messes was made out as follows:

Note of Provisions sent off to Her Britannic Majesty's squadron, under the command of H. E. Sir James Stirling, for the use of the officers.

(3 thalers [Japanese] = 1 D.G.; 1 katty = 59 Dutch lb., or 1 lb. avoirdupois.)

[Articles which cannot be supplied: Sheep, fowls, geese, bacon, pork, pepper, curry powder, and flour.]

CORNELIS DONKER, Secretary-Lieut. of the Dutch Forces.

To such readers as wish to know the market prices at Japan, this bill will be interesting. The articles were all of first-rate quality, and correct to an egg. The Japanese were previously aware of the existence of the ILLUSTRATED LONDON NEWS. They asked to see some of the pictures. This said they had heard of it at the Imperial Court. We cannot tell to what many-man-of-war allusion, and asked to be shown a drawing of her. They were much pleased when the found the fine engraving of the *Duke of Wellington* in one of the Numbers. It afforded a gratifying proof of the wide-spread appreciation of this remarkable publication, to see a number of the Japanese officers squatted in the Governor's corridor, poring over a file of the ILLUSTRATED LONDON NEWS which the English officers had brought, and were endeavouring to explain; and the Japanese readily understood the majority of the Engravings, which thus produced a national benefit across half the circumference of the globe.

LITERATURE.

A MONTH IN THE CAMP BEFORE SEBASTOPOL. By A NON-COMBATANT. Longman and Co.

The author of this little volume is a Templar, who, making the most of the long vacation, undertakes a journey to the Crimea and back, instead of the usual annual lounge to Paris, or the German watering-places. He does so in a laudable spirit of inquiry, considering that the only satisfactory mode of finding out what our gallant fellows are really doing and suffering in that distant and dismal encampment is, to pitch one's tent for a few weeks amongst them. "Their own letters, deeply interesting as they are, owing to a kind of 'freemasonry' existing, do not supply all the information that is wanted;" and "even 'our own correspondent,' who now-a-days does such excellent service in this respect, leaves something to be desired. He is obliged to be so clever, so busied with the depths and general bearings of things that he cannot fill to large and many gleanings for a plain man to pick up." Non-Combatant as he is, his gleanings have more to do with the economy of the camp than with the business of the siege, and his book will therefore disappoint those who might look to it for a connected account of the arduous undertaking. Well-intentioned, casting the cares of his professional campaign behind him; provided with a luxurious kit and plenty of letters of introduction to some of the crack officers in the army; going also at a time when the sea was not young and full of promise when the weather was not too cold to enjoy, nor influences had damped the military ardour of our troops so conspicuously displayed at Alma, at Balaclava, and at Inkerman, he treats the whole affair almost as a "lark, or grand field-day, the serious episodes being then scattered. Nevertheless, there are many observations which show practical shrewdness, and suggestions about camp life and soldiers' equipments which are not unworthy of attention even at head-quarters.

Upon the subject of the medical department, with its undeniable shortcomings, "Non Combatant" indulges in the luxury of permanently increasing the medical staff of an army to the extent necessary to meet a temporary emergency, and yet sees the cruel absurdity of leaving numbers of the sick and wounded to perish for want of timely, constant attention, accompanied by the administration of ordinary comforts; and he suggests, as a palliative or intermediate course, the appointment, temporarily, of a lower-paid grade of men, to come to the rescue in cases where medical or surgical aid is not immediately wanted or available

I heard a story the other day (he writes) about a soldier who, after some bloody affair, lay on the trenches, dying in the last stage of cholera. A couple of men passed by with a stretcher, exclaiming that there was clearly no use in picking *him* up. "Don't you be in a hurry," gasped the poor soul, "I'm not dead *yet!* I daresay I should do well enough, if I could only get something to eat!" So strenuous are the efforts to resuscitate, and they carried him off. But I hope his recovery did not depend on the speedy administration of the treatment he himself indicated; for, pending the demand at that moment for the scalpel and the saw, "something to eat" was the last thing he was likely to get. Now, there are few men, however slight their knowledge of medicine, who could not be of use in such cases as this. They might apply friction; put on hot flannels, and mustard poultices; they might, in short, administer a hundred simple remedies which would save valuable lives; and that with no better skill than they could pick up from the general instructions which, of course, would be issued to them by the regular Medical Staff.

He describes some noticeable points of difference between the campways of the French and ours; of which we can only glance at a few With respect to tents: every French soldier carries his little piece of a tent on his back, three or more of which may be fastened together, and thus they escape the risk of having to bivouac in the open air, as our soldiers did on their first landing. True, this adds a little to the weight the soldier has to carry, so as to interfere with the speed of a forced march, whilst the tent produced does not afford one quarter so much comfort and space as a bell tent. In the important matter of the preparation of food, the French soldier, as the Frenchman generally, appears to have much the advantage of us. With them, one man cooks for twelve, the office falling by rotation; giving all the increased advantages attendant upon division of labour and aggregation of material and resources. The English soldier cooks for himself as they best can; and the consequence is discomfort and waste. Again, for carrying water, instead of our clumsy little wooden canteen, the French soldier carries a certain shallow tin canister, curved so as to fit the shape of the body, and with two convenient orifices in it for use in filling the vessel and in drinking from it

The author's account of an open-air church parade is graphic and striking:

The Chaplain, with his dark velvet [illegible] and his moustache and beard, reminded me of [illegible] priests. Many [illegible] scarcely placed in position before the loud rush of round-shot from the fort was heard, again and again, in our ears, causing sundry dislocations of the square—the men grinning and swaying about at each whirr in a kind of jocular disorder. Nothing was left for it but to move off. So we took up our ground a few hundred yards lower down; and here—though a fleecy little cloudlet, which announced its birth in a thunder-clap, showed that a shell had burst above us, not very far off to our rear—the service was conducted to a close. Everybody, of course, stands upon these occasions throughout the ceremony. To obviate fatigue, however, the Litany was read by the Commander of the Chapel. The Chaplain preached extemporaneously, and with so excellent a voice that, though the wind was blowing his surplice about, it did not drown his tones. I was amused by his British *sang-froid*. The reverend gentleman neither noticed the pyrotechnics in his sonorous pastoral sermon, nor am I to be seen present; but stood with his back to the fort, and preached on some every-day text, and never changed his voice, or turned his head, in compliment to shot or shell

We are told upon the authority of a Polish deserter that Menschikoff "had given out that our triumph at the Alma was entirely due to our superiority in fire-arms; and that we could only be effectually opposed with the bayonet." This story, ridiculous as it sounds, received some colour of probability from what was observed by one of our sentries stationed close enough to overlook part of the interior of Sebastopol, namely, a body of infantry practising charging at word-of-command bounds—practising, moreover, *objective* as they did so." We should be inclined, however, to take the story with a slight qualification, and in an opposite sense. The probability is that Menschikoff was practising his men to compete with us in our own mode of fighting—the bayonet charge, in which we had been so destructively conspicuous at the Alma.

The Non-Combatant had a glimpse of the battles of Balaclava and Inkermann, but not so comprehensive, nor from a point sufficiently near, to give him a satisfactory general notion of either. When the last affair took place he had already broken up his camp, and was on board H.M. ship [illegible] preparing to start on his return home; and that he was a good hand, and preserved his regard for the Commissariat to the last, will be found in the remark with which he winds up his account of that long and murderous day:—"As I had to return in time for dinner, I could not, as some of my friends did, go over the field that evening." And so, wishing him good appetite, we close his gossiping, amusing pages

HISTORY OF THE IRISH BRIGADES IN THE SERVICE OF FRANCE. By JOHN CORNELIUS O'CALLAGHAN. Vol. I. Dublin: M. H. Gill and Son.

The Irish Brigades in the service of France belong to a troublous and transition period. Their origin dates from the expulsion of James II., in the English Revolution, in 1688, and their end came with the French Revolution, and the rise of the Guillotine, little more than a century afterwards. The Colonels of the three regiments of which the Brigade consisted are of some of the noblest families in Ireland; indeed Mr. O'Callaghan claims for them a Royal pedigree—Justin M'Carthy and Daniel O'Brien having been lineal descendants, respectively, "from Dean-Mumhain, South Munster, or Desmond, and Tuath-Mumhain, North Munster, or Thomond, by whom, for 900 years previous to the Anglo-Norman invasion of Erin in the twelfth century, Mumhain, or Munster, is related to have been ruled;" whilst the origin of the family of the Hon. Arthur Dillon is ascribed to a Prince named Lochan Diolmana, or Lozan Dilmana, of the Royal house of O'Neill, who, early in the seventh century, having slain his cousin, Colman Rinidih, was obliged to fly to Gaul. We may add, that the historian himself appears to have been of Royal descent, a note informing us that "the great founder of the name of O'Callaghan, who reigned in the same county (Tipperary), or at Cashel, its metropolis, as King of Munster, died in 954;" only 900 years ago. Indeed, for the number of illustrious names, and of family papers and local annals referring to them cited, the present work is a marvel of patient industry, and has obviously been a labour of love

Of the Brigade in its military capacity—of the numerous wars in which it took part—Mr. O'Callaghan does not say much leaving that duty to whoever may undertake the history commenced by the late Matthew O'Conor. Mr. O'Callaghan's is chiefly a personal history, and, besides those comprised in the King of France's Brigade, he commemorates many distinguished Irishmen who fought during the same century in other continental services—those of Spain, Austria, Russia, &c. Those who take interest in such details will find an inexhaustible store of entertainment in these pages

The commands of the Brigade, and of the regiments composing it, were a valuable property in the hands of the Royal sedans to whom they were given, the Colonels, in addition to receiving higher pay than native-born officers of similar rank, having a perquisite of a sol in the livre (equal to five per cent), as well from the appointments of all the officers as from the funds for the maintenance of their respective regiments. Mortly after the formation of the corps, however, the extra pay as Colonels was resigned, the gallant sons of Erin, after their defeat at Limerick, consenting to take the same pay as French soldiers—a trait of generosity which drew forth "King James," by an Act Parliament under his hand and seal he made a solemn promise he would pay them with their actual pay wanted, to make it full English, whenever God was pleased to restore him, and so made it his own and his Crown's debt."

The Irish Brigade not only formed a powerful force against the Sovereign in Europe, but made part of the expedition which went over to assist the American colonists against the mother country a proceeding (however we may now look upon the merits of that quarrel) which his French Majesty openly called in "King James," by an Act of

NEW BOOKS, &c.

By order of the Committee,

January 8, 1855. GEORGE MIDDLETON, Secretary.

THE HON. ARTILLERY COMPANY of LONDON (the most ancient Corps of Volunteers in England) is open for the admission of gentlemen residing in the metropolis and its environs, who are willing to give a portion of their time to military exercises.

The Company is empowered by Royal Patents and Warrants from her present most gracious Majesty Queen Victoria, and Majesty's royal predecessors, to train persons to the use of arms and to the practice of military evolutions and exercises.

The company possesses an extensive drilling ground, a [illegible] gallery 230 feet long, an armoury-house, arms, and every facility for efficient military training.

The Officers are selected from the Company, and hold her Majesty's commissions.

Gentlemen under twenty-one years of age are admitted as Cadets, but must produce the consent of their parents or guardians.

Members have to pay an annual subscription of One Guinea, an entrance fee, and to provide themselves a dress and undress uniform.

The expenses of the Band, Arms, Ammunition, &c., are defrayed out of the funds of the Company.

Gentlemen desirous of joining can obtain further information on application, by letter, to the Adjutant, Armoury-house, Finsbury

Ladies' gold watches, 8 guineas; gentlemen's, 10 guineas, strong silver lever watches, 4l 4s.

DR DE JONGH'S LIGHT BROWN COD-LIVER OIL. Prepared for Medicinal Use in the Laden in ss, Norway.

Pale Pale Pale Pale

Prescribed by eminent Medical Men as the most effectual REMEDY for CONSUMPTION, BRONCHITIS, ASTHMA, GOUT, RHEUMATISM SKIN DISEASES OF THE SKIN, GENERAL DEBILITY, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS

PURE AND UNADULTERATED

The excellence of this Oil consists in its purity and entire freedom from a disagreeable taste and smell, and its immediate, regular, and certain effect in many instances where large quantities of other Cod-Liver Oil have been taken with little or no benefit. The process of preparation secures the preservation of a much larger proportion of iodine, the principle of bromine, and other valuable chemical properties, than is found in the Pale Oil. Much of the Pale Oil sold, in the endeavour to correct its repulsive flavour or rather its tastelessness, is not frequently, if not entirely, deprived of those virtues which are the very essence of this [illegible] Oil. All who have used Dr. de Jongh's Oil [illegible] that it is not necessary when taken or [illegible] to [illegible] Lemon juice, or any other [illegible] as is [illegible] and [illegible] have further remarked that its [illegible] is [illegible] and [illegible] in [illegible] cases, as it [illegible] the [illegible] quantity goes three times as far

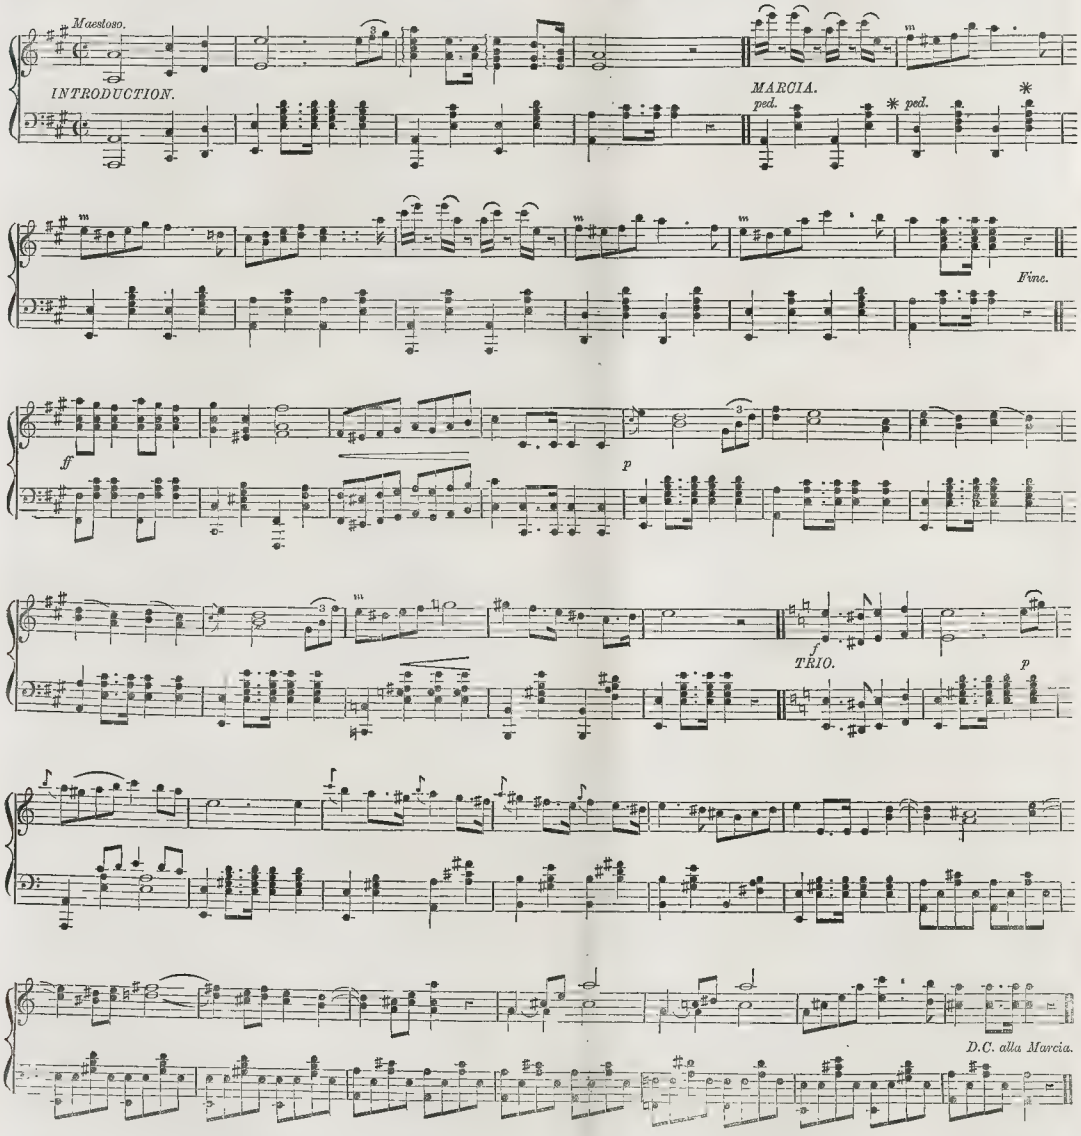
Sold in London by Dr. DE JONGH'S Sole Agents and Consignees, ANSAR, HARFORD, and CO., 77, Strand. Sent by them, Carriage Free, to all parts of the country, or, on receipt of a remittance of 10s., four half-pint bottles forwarded. Carriage Paid, to any part of England. May be obtained in the Country of respectable Chemists and Venders of Medicine. Half-pints (an ounce), 2s. 6d., Pints (twenty ounces), 4s. 9d., Quarts (forty ounces), 9s., Imperial Measure.

CAUTION.—For above thirty years Mr. SHERIDAN and Co. have been compelled to caution the Public while reference to the various imitations of their EVER-POINTED PENCIL-CASES.

The celebrity which this article obtained when the letters patent were first granted has steadily and uninterruptedly increased, and the exertions of the fabricators have been directed to [illegible] excellence in [illegible] and [illegible] [illegible] [illegible]

MARCH,

COMPOSED BY HER EXCELLENCY THE WIFE OF OMER PACHA.



NEW MUSICAL PUBLICATIONS.

TO ARMS! England's Patriotic Appeal to her Sons against the Russian Despot. Composed by STEPHEN GLOVER Purday.—UNFURL THE FLAGS OF LIBERTY. Written by IAGO GWILYM; composed by W. BELL. Tolkien. NEVER GIVE UP! Written by M. F. TUPPER, Esq.; composed by HARRY MACKENZIE. Purday.

The titles of these songs indicate their subject. They are among the thousand and one loyal and patriotic effusions to which the present state of public affairs has given birth; and it is sufficient to say that they are among the best things of the kind that we have met with.

I'M AN ELFIN SPRITE. Song. The Poetry by Dr. DORAN; the Music by ALPHONSO MATHEY. Lonsdale.—THERE IS JOY. Song. The Poetry and Music by SOPHIA ELIZABETH YOUNGE. Shepherd.

The first of these songs is light, fanciful, and elegant—quite fairy music. The accompaniment is simple, but contains some happy traits of harmony and modulation. The second song is exceedingly pleasing: the fair authoress has evidently a talent both for poetry and music; and we recommend her composition to those who prefer the unaffected expression of natural feeling to exaggerated sentiment and laboured attempts at originality.

DEAR EDWIN, MUCH 'TWOULD GRIEVE ME. Ballad. The Melody and Words by Dr. MORISON; the Pianoforte Accompaniments and Symphonies by Sir HENRY R. BISHOP. Jullien and Co.

This is a pretty ballad, about a shepherd youth who leaves his betrothed to seek his fortune in "a land of gold," and, having gained it, returns to his home and his bride. The melody, which is simple and unpretending, is graced by Sir Henry Bishop's imaginative and expressive accompaniment.

A TREATISE ON COUNTERPOINT AND FUGUE. By L. CHERUBINI. Translated by MRS. COWDEN CLARKE.—A TREATISE ON CHOIR AND CHORUS SINGING. By F. J. FETIS. Translated by the Rev. THOMAS HELMORE, M.A.—NOVELLO'S ANALYSIS OF VOCAL RUDIMENTS, BY QUESTION AND ANSWER. J. Alfred Novello.

These books of instruction are calculated to be very useful to the musical student. Cherubini's "Treatise on Counterpoint and Fugue" is a work of European celebrity, and the most valuable extant on the subject of which it treats. It may, indeed, be said to stand alone; for the previous works on counterpoint and fugue—such as that of Marpurg are tinged with the heavy pedantry of the old school, and are adapted to antiquated forms of the art. Cherubini's work contains the principles and rules of counterpoint as applicable to the practice of modern music; and we look upon its study as being indispensable to every one who aspires to the character of a composer. It is not, we must observe, an elementary work; it is intended for the advanced student, and presupposes a knowledge of the tonal system and the rudiments of harmony, the power of reading music with facility and some acquaintance with classical compositions; but the student who is possessed of these attainments will find it a sure guide through the more profound and intricate paths of the art. Nor is it to the young composer only that such a work is of value. The study of composition is of importance to the amateur, even should he never think of becoming a composer; for a knowledge of the principles and methods of an art is essential to the true and thorough enjoyment of its masterpieces. The uneducated ear may derive a certain pleasure from a grand fugue in the "Messiah;" but how immensurably greater is the enjoyment of those who are able to understand its structure, perceive the resources of art, and follow the processes of mind employed in its development! Without a knowledge of the art, it is impossible to comprehend and feel the genius of the artist. This work is the commencement of a serial publication, entitled "Novello's Library for the Diffusion of Musical Knowledge," which (as the publisher announces) is "to consist of a variety of standard Treatises on the Art of Music, written by the most esteemed English and Foreign Masters, at prices which will place them within the means of every student." There is a previous English edition of Cherubini's work; but this new edition is equally complete, and is sold at one-fifth of the price.

Fétis's "Treatise on Choir and Chorus Singing" is likewise a work of very great value. M. Fétis is the most eminent among the musical literati of the day; and this treatise, which is marked with his usual ability, is upon a subject hitherto neglected—the instruction and discipline of choral bodies. We have conductors and chorus-masters (witness Mr. Costa and Mr. Hullah), who train their tuneful forces with ability and success; but the methods of doing so have never (till this work of M. Fétis) been reduced to a system founded on rational and artistic principles. This the distinguished author has now done most effectually; and his work, published in a cheap and easily accessible form, ought to be used as a handbook by directors and teachers in every choral society, every church and place of worship, and every school where music forms a branch of education, in the kingdom.

Novello's "Analysis of Vocal Rudiments" is a tiny volume, containing much useful matter in small compass. It is a manual to be used in teaching young beginners; and we cannot describe it more justly than by quoting the lines from Shakspeare which form the motto on its titlepage:—

> I must begin with rudiments of art,
> To teach you gamut in a briefer sort,
> More pleasant, pithy, and effectual
> Than hath been taught by any of my trade
> And there it is in writing, fairly drawn.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand aforesaid.—SATURDAY, JANUARY 13, 1855.

THE ILLUSTRATED LONDON NEWS.

No. 724.—VOL. XXVI.] SATURDAY, JANUARY 20, 1855. [WITH A SUPPLEMENT, SIXPENCE.

AMERICA AND THE WAR.

THE public opinion of civilised Europe is so decidedly hostile to the Czar, and the sympathies of the wise and the good are so strongly expressed in favour of those who are engaged in the herculean task of punishing his aggression and setting limits to his ambition, that it sounds strange to European ears and more especially to English ones—to hear that the great and free people of the United States of America are favourable to the cause of Russia, and pray for the humiliation of Great Britain. But, when the first feeling of surprise naturally caused by such an announcement has passed away, Englishmen as naturally ask themselves whether it can be true? and if true, what can be the reason of a state of opinion so inconsistent with the traditions, the consanguinities, and the free institutions of such a country as the United States?

It is unfortunately beyond a doubt that there is a party, or the dregs of a party, in America which hates England. This party, which we do not believe to consist of native-born Americans, or to have any deep root among the "Know Nothings," is principally composed of Irishmen, or of the sons of Irishmen, who preserve that fierce hostility to this country which the late Daniel O'Connell, and his successors, the Smith O'Briens, the Mitchels, and the Meaghers, so mischievously inculcated. In Ireland itself this feeling has died out. The old hatred is extinct, or so nearly so, as to count for nothing. The famine year, and the unparalleled efforts made by the British Government and people to mitigate its calamities, administered the last blow to the expiring monster of Sedition. But the Irish who emigrated prior to and during that period of miserable agitation and sectarian bitterness carried away with them the feelings prevalent in the Old Land—to brood over, to nurse, and to exasperate them in the New. The New York press, or that portion of it which speaks loudest, and trumpets itself most pertinaciously in Europe as the organ of American sentiment, is, to a considerable extent, conducted by politicians of this class. England and Ireland are happily rid of them, and wish them no further punishment than the chance of revisiting the country of their birth, to see with their own eyes the good which their absence has done it, and the benefits which have resulted from the bold and humane legislation of the last seven years. If Irishmen in Ireland furnish heroes for Alma and Inkerman, and throb with as generous and sincere an ardour in the war against Russia as ever animated English, Scotch, or French, there is no occasion for distress of mind if Irishmen, or pseudo-Irishmen, in America proclaim "that they do not love Russia more, but hate her less, than they do England." These writers are not true Americans, and do not speak the sentiments of that great and free people. They speak for themselves alone, and will not influence the opinions or the acts of leading American statesmen.

But this is not the only class in the Republic which sympathises with Russia. Wrong begets Wrong; and Bad Principle is the parent of Bad Feeling. The Republic is in its hot youth. It is full of energy, of impulse, and of ambition. It feels itself destined in the natural course of events to be one of the greatest States that ever existed on the globe; and longs for extension of territory. It covets Mexico, it would like to have Canada, and no inconsiderable numbers of its people have made up their minds, *coute qui coute*, to possess themselves of Cuba. People who openly advocate so glaring a wrong as the seizure of Cuba see nothing iniquitous or unnatural in the attempt of the Czar to appropriate Constantinople and the Turkish Empire. In their eyes such an attempt is but sharp practice, to be looked on with pleasure by a sharp people, and "clever go-a-headism," to be approved by the "smartest nation in creation." The result is one which they do not particularly desire for itself, but for the encouragement which it would afford to their own lawless longings for the fair island which Spain so justly, but inconveniently, determines not to part with. The lust of dominion is unhappily a vice which is not peculiar to barbarous and despotic States. If it were, we should hear of no encouragement to Russia from the other side of the Atlantic. If Republicans were as wise in practice as in theory, enlightened and free America would be unanimous in support of Great Britain and France in their disinterested and generous struggle against the wicked aggressor and disturber of the world's repose. But while we admit the existence of this pro-Russian feeling among our brothers in blood, and the coheirs of our language, our religion, and our institutions, we should guard ourselves against the injustice of imagining that such sentiments are universal or even widely prevalent among them. Besides, the feeling is one that is not likely to outlive the first signal reverse which shall befal the arms of Russia. With the triumphant capture of Sebastopol the admiration of the American friends of the Czar will droop and cool; and when he has accepted terms of peace, which must of necessity be terms of greater or less humiliation, his summer flatterers will discover in the winter of his discomfiture that he has been

INSPECTION OF THE EAST MIDDLESEX MILITIA, WELL-WALK, HAMPSTEAD. (SEE NEXT PAGE.)

rightly served after all, and will seek to free their consciences from the reproach and their character from the odium of ever having spoken in his praise, or breathed a wish for his triumph. They will shout applauses at the names of England and France, and will dwell with pride upon the fact that they, too, have French and British blood in their veins, and catch, if they can, a reflex from the glory which they did not win. All this is natural; and need excite neither surprise nor regret in this country.

There is, however, another—and, we believe, a far more influential class in America which desires to intermeddle in the war now raging in Europe, and to turn it to account in the party politics of the Union. They allege that the United States are a great nation, and as such deeply interested in putting an end to a war which interrupts their commerce. They desire peace on the same grounds that the trading interests of Gr at Britain and France demand it; but, as their national honour is not involved, they look upon the war—as Mr. Sturge or Mr. Bright may look upon it—as a nuisance to be removed *à tout prix*. In this spirit they have begun to talk of offering their mediation between the contending parties. Such an offer, if accepted, would not only flatter them with the hope of peace, but would give the United States a footing in European politics, and exalt their importance in the general comity of civilisation. But their objects are too narrow and too selfish to meet with approval in Europe. An offer of intermediation such as is proposed—however well meant it might be—would be simply an impertinence. The only negotiators that the Allies can admit into their councils are negotiators prepared, if need be, to support their opinions by the whole weight of their arms and the whole amount of their resources. If the United States, like Austria or Sardinia, were—in the name of right and justice, and for the interest of civilisation and humanity, imperilled by Russian violence and aggression—to offer to accede to the treaty of the 2nd of December, 1854, and to accomplish all its duties and stipulations, we should hail such an act as the grandest moral triumph of our time. The Americans would be welcomed to the World's Congress at Vienna with the acclamations of every friend of human liberty and progress. But on no other terms can America be admitted into the councils of the Allied Powers. They want and will accept no such intermediation. For the United States they will continue to feel the utmost deference and respect, but they will manage their own business and defend their own honour. The one might be injured, and the other would most certainly be imperilled, by any new negotiator, however well disposed, who did not enter into the dispute with arms in his hands. We do not anticipate such an offer from the United States of America. Short of that the Allies have nothing to ask but the good wishes and favourable opinion of their best and most enlightened citizens. These, we believe, are already on the side of Great Britain and France, whatever may be said to the contrary by Filibusteros, or by Irish immigrants who consider Smith O'Brien a wise man, and John Mitchel a real friend of Ireland.

THE EAST MIDDLESEX MILITIA.

THIS fine Regiment was embodied, and ordered to its rendezvous at its head-quarters, Maryon House, Hampstead, on the 26th of December, since which it has been at daily drill on Hampstead-heath. The Regiment now consists of between six and seven hundred men, and is daily augmenting its numbers by enlistment. Colonel Wood has been its commander for upwards of forty-five years.

The illustration on the preceding page shows the Inspection, by Colonel Wood, at the Well-walk, Hampstead.

To induce the men to refrain from intemperate indulgence as much as possible, and otherwise for their benefit, a room has been set apart for their accommodation at the Hegginary, Hampstead, as a news and reading-room, which is supplied with newspapers, &c., gratuitously, and tea and coffee at cost price; and we are glad to be able to state that the men billeted about Hampstead avail themselves of the privileges thus accorded them.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The Emperor and Empress last week visited the constructions that are being erected in the Faubourg St. Antoine for the reception of 300 of the daughters of the labouring class, which is the one that almost exclusively inhabits this quarter. It may be remembered that at the period of the Empress's marriage, the city of Paris requesting to be allowed to offer her a diamond necklace, her Majesty desired that the sum it was to cost should be applied to this purpose. The Emperor and Empress were received by the Préfet de la Seine, and, attended by the architect, they passed in review the whole details of the buildings, which are on a most extensive and commodious scale. The workmen employed in the establishment, and those of the quarter in general, greeted the Imperial guests with repeated cries of "Vive l'Empereur!" "Vive l'Impératrice!" It is said that two additions are to be made to the Empress's household, in the persons of Madame de la Grange, daughter of one of the members of the *Corps Legis latif*, and whose husband is *écuyer* to the Emperor, and the Comtesse de Labédoyère. It is decided that the Prince Napoleon returns to France on the 25th inst.; his health continues in a very precarious condition.

The exterior works of the Palais d'Industrie are nearly, if not quite, completed, and the scaffolding will in a few days be removed. The difficulty of giving places to the crowd of exhibitors is becoming daily more evident. A question has arisen whether the different states of the Zollverein are to be represented separately, or to be confounded in one, as in our London Exhibition. Saxony, it appears, particularly deserves to stand alone, on the plea that its productions, though few, are superior to those of almost any other of the States: its specimens of linen are, it seems, peculiarly beautiful, and it wishes to have the credit of its name attached to them.

A speculation is being organised by the proprietors of the Palais d'Industrie. As it is forbidden to sell any of the articles exhibited within the precincts of the Exhibition, 1800 temporary shops are to be by them erected in the Allée d'Antin, close to the building, where the owners of the different objects can sell them. Each of these shops is to be let for forty pounds for the season.

It is stated that MM. Ingres, Scheffer, Horace Vernet, Paul Delaroche, and Delacroix have all the intention of sending various specimens of their genius to the Great Industrial Exhibition.

The gigantic speculation, the Diner de l'Exposition, undertaken by the Société Gastronomie, opened its doors on Monday for the reception of guests. The building has two entrances—one in the Rue Lafitte, the other in the Rue Lapelletier, opposite the Grand Opera. Our space does not permit us to give a description of this prodigious culinary monument; suffice it to say that the open fireplace alone can roast a hundred and ten head of fowl or game at once, and all the rest is in proportion, and that with luxury and comfort a wonderful economy is combined.

A most interesting piece of intelligence for the literary world, is the announcement, as yet only *officieux*—not official—that M. de Lamartine is about to produce his "Memoires." It appears that a weekly review, in the course of formation, has offered the celebrated poet and historian the sum of sixty thousand francs for the work in question, but desiring that it should be confined within the limits of two volumes. M. de Lamartine has, however, replied that six would be barely sufficient to contain the matter he proposes to publish, and therefore declines the proposition. The first volume is to give the correspondence of the principal members of his family, more especially of his father, who was in the Garde du Corps under Louis XVI.

M. Henri de la Madeleine, a young writer of great promise, and one of the editors of the *Revue de Paris*, is collecting, for publication, the Correspondence of the unfortunate and gifted Comte de Raousset Boulbon, whose singular history, whose varied talents, and tragic end, render any notice of him a subject of peculiar interest and curiosity.

It appears that the King of Prussia, having the desire to give to the public the letters of Frederick the Great, has employed emissaries to obtain from the collectors of autographs in France all that can be acquired of that Monarch. A large number have already been forwarded to the King by M. Feuillet de Conches, one of the greatest autograph-collectors in France.

The Queen Pomaré, whose approaching visit to Paris we last week announced, is to lodge during her stay with the wife of Admiral Bruat, who made the acquaintance of her Majesty during the time that the Admiral commanded the station of Océanie. It appears that the august lady in question is perfectly ready to conform to the usages of European society and costume in the main, but that she considers the use of shoes and stockings a barbarism not to be tolerated by a woman who respects herself, and she therefore appears at in Parisian dresses and *coiffures*, but with her feet unshackled by any of these inconvenient appendages.

The reception of M. Berryer at the Academy is fixed for the 25th inst. As M. Guizot has been appointed Director for three months, on him will devolve the duty of introducing the new member.

PROGRESS OF THE SIEGE OF SEBASTOPOL.

The *Euphrate* steamer, which left Constantinople on the 8th inst., arrived at Marseilles on Wednesday morning, with news from the Crimea to the 3rd inst. The French batteries were daily approaching nearer Sebastopol, but the weather had been so bad that very little firing had been exchanged between the belligerents. The various accounts still agree in stating that a tremendous final struggle was about to take place. A telegraphic despatch from Admiral Bruat, dated 5th January, mentions that there had been a heavy fall of snow, but the sun shone again brightly, the thermometer was at two degrees below freezing point, and northeasterly winds prevailed, which would favour military operations by drying the ground.

Omer Pacha was at the Camp of the Allies on the 5th inst., where he concerted measures with Lord Raglan and General Canrobert as to the campaign. On the 6th the Turkish Commander returned to Varna, where he would immediately assume the direction of the operations entrusted to him. Six steamers, under the command of Achmet Pacha, have been constantly employed in going between Varna and Eupatoria.

The Russians appear to be rather alarmed at the new turn of affairs The presence of the corps of Omer Pacha in their rear at Eupatoria, and the extreme difficulty in conveying their troops in a country where roads no longer exist, or are rendered impracticable, evidently disturb their projects. The country in the neighbourhood of the Russian army is exhausted; and the Tartar population, alarmed at the requisitions made on them, have driven off all their flocks into the mountains The Russian line of observation is very extended. The Twelfth Division, under General Liprandi, occupies the valley of the Belbec; two other divisions extend themselves from the Tchernaya to the Katscha, and another division remains at Simpheropol, which they are occupied in fortifying The cavalry is watching Eupatoria. It is said that General Osten Sacken has called for large reinforcements; indeed, that he has declared that he want at least 40,000 men to enable him to resist. The united force of the Allies will soon be about 130,000 men, including the Turks at Eupatoria If the important diversion undertaken by the Turks can be first effected before the arrival of Osten-Sacken's reinforcements, he will find himself with the enemy in his front and rear. At all events, the demand for reinforcements proves the apprehensions which the Allied troops before Sebastopol occasion. The following letter from Odessa, dated January 2nd, gives a melancholy picture of the state of the Russian army:—

Prince Menschikoff can with difficulty feed the troops around him, and yet he incessantly demands reinforcements, more especially since he has ascertained with certitude that a Turkish corps, 50,000 or 40,000 men strong, will be landed at Koslov (Eupatoria). The Turks will play there the *rôle* performed a short time ago by Liprandi, in his position to the rear of Baiaclava. As the operations of the Allies were checked and hemmed in by Liprandi, so will the movements of Menschikoff be restricted and hampered. Every vulnerable point is therefore being looked to, and the works of defence around Perekop and Simpherepol are being recommenced with vigour.

The forces which are being dispatched to Prince Menschikoff are anything but choice troops; all those that could be spared here and in Bessarabia are already in Sebastopol. If the troops already at the onset of their march have no disposing aspect, what a scene of misery must they present on arriving at their destination! It is impossible to describe the extreme hardships over which these poor fellows must triumph. Hitherto waggons were employed in transporting them; but that is now utterly impossible, as the frost has not even improved the condition of the roads. I am assured that above ten per cent of the expeditions sink on the road from hunger and exhaustion, never again to rise; and that of those who are happy enough to arrive, a large portion are received into the hospitals.

THE SORTIE OF THE 20TH OF DECEMBER.

There certainly never was a siege of such grandeur as the present with fewer remarkable incidents. With the exception of the advance of the army in the rear on the 26th October, and the great sortie on the 5th inst., no movement of any moment has been attempted by the Russians to raise the siege. They have confined themselves to occasional surprises in the trenches, which end usually in a little skirmishing and the loss of a few men on both sides. The conformation of the ground is very favourable for such attempts; the whole is intersected by ravines, so that with a little caution the enemy may creep along and come within a few yards of the Allied troops without being observed: besides this, most of the ridges on which our lines are situated are covered with brushwood, which helps to conceal the approach of infantry during the night

On the night of the 20th ult. one of these attempts was made on several points of the English line. On the right, where one of the fresh regiments was on picket, they succeeded in carrying away some blankets, but on the left they did rather more damage. In front of the left attack there is an earthwork thrown up for infantry, which runs down towards the great ravine forming the continuation of the military harbour of Sebastopol, which divides the town proper from the so-called military town This ravine is the boundary between the English and French positions. In order to guard this point the sentries of the French and English outlying pickets ought to be in constant communication with each other. Somehow or other this appears not to have been the case in the present instance, and the Russians must have been well informed of the fact, for, following the ravine, they succeeded in coming close to the sentry on the extreme left, bayoneted him, and penetrated into the earthwork before they were recognised as Russians. In order to deceive the sentries they commanded in French, which ruse was so successful that they killed and wounded sixteen men—among the former Major Möller, of the 50th and carried away eleven men and two officers, Captain Frampton and Lieutenant Clarke, as prisoners. They were, however, after a short skirmish, driven back by the 34th before they could do any further mischief.

THE RUSSIANS IN THE DOBRUDJA.

Considerable excitement was created at Vienna and Paris in the beginning of the week by the announcement that a large Russian force had entered the Dobrudja. A despatch from Ibrails, of the 12th, stated that the invading army consisted of 20,000 men, and that 15,000, with 50 guns, were advancing towards Baltschik. Later accounts deny that the affair was on so large a scale. They represent the Russian irruption into the Ottoman territory as a mere feint, with a view to detain the Turkish troops which were on their way to the Crimea. In official quarters at Vienna it is affirmed that whatever affair may have taken place was one of outposts, or, at most, a reconnaissance. Still it is considered strange that the moment when Russia is engaged in pressing her pacific propositions on the Cabinet of Vienna, with the object of preventing Austria from proving, by acts of hostility in the field, the sincere and serious character of her alliance with France and England, should be that chosen by her to invade the Ottoman territory again, and to impose on Austria the necessity of defending it.

THE FRENCH £20,000,000 LOAN.

Saturday being the last day for receiving subscriptions to the national loan (it closed at five o'clock), the crowds at the Mairies, even in the more distant quarters of the city, were proportionably great. In one quarter in particular—the Place St Sulpice—the line of persons established there the whole of that very cold morning, and who had very probably passed the greater part of the night in the same spot, in order to secure an entry to the offices at the hour of their opening, was most numerous. It is said to have resembled the *queues* which are formed at the entrance of the more crowded Paris theatres on the evening of some remarkable piece, or of the appearance of some popular actor—not, however, the *queue* of one theatre, but of several joined together. The pressure was so great to get places near the door of the Mairies that several common street-messengers (*commissionaires*) are said to have made 300f. by selling the places they succeeded in occupying after a night passed in the open air. Many of those places were sold for 30f., and some even reached 100f.

From the provinces the accounts are that the peasants flock into the towns, with drums beating, to subscribe. Many of them seem to be under the impression that their subscriptions are intended for the personal benefit of the Emperor himself; and they thus hasten to prove their devotedness to his rule by confiding to him their savings. The ancient Monarchical parties—Legitimist and Orleanist—who had, both in the origin of the first loan of 250,000,000, and of the present, predicted its failure, and denied its progress, until facts showed the contrary to be the case, now profess themselves unable to explain such a phenomenon except by the existence of a cupidity or inordinate desire of gain, by which they allege the nation was uncontaminated in the purer days of the last reign. The few Republicans whom France still boasts are not more successful in their attempt to explain the remarkable fact. The supporters of the present *regime*, on the contrary, point to it triumphantly in evidence of the devotedness of the nation to the Bonaparte dynasty, or to the person of the Emperor, as, in truth, the most complete vote of confidence that has ever been given to any Government as an approval of all its acts; and, while comparing it to a second vote for the establishment of the Imperial Government, they challenge their opponents, Royalists and Republicans alike, to produce anything like so substantial a manifestation under the Bourbons, or under the Republic. It may be remarked that with the more patriotic motive which influence the subscribers is mixed up the natural desire to profit by the advantages which are offered by the loan. But we must not forget that great pecuniary advantages were also offered under the Republic of 1848 to those who might be disposed to relieve it from the financial difficulties which pressed upon it; and yet, although the moment was most critical, and though a Finance Minister of the day was urged to fill in this way the exhausted coffers of the State, and thus test the Republicanism of the nation, he did not dare to make the appeal which is now made, and he admitted that if he did he could scarcely get a score of people to listen to it. The grand total of the subscriptions as reported by the *Moniteur* as amounting to 2,175,000,000 francs, or about £87,000,000. Under these circumstances the applications of large capitalists, and those transmitted from London, which amounted to 150,000,000 francs, cannot be entertained. As the course of the Money-market, and the current of the precious metals, have of late been exceptionally affected by the French loan, the fact is invested with considerable importance. The astonishing success of this financial operation is the subject of general comment, and attests in a striking manner the vastness of the pecuniary means lying at the disposal of the two great nations of Western Europe for the prosecution of the war. If Sir Cornwall Lewis be reasonable to reason, there is no fact since the war began better calculated to induce him to pause in his violent career than the eagerness with which this French loan has been taken up as contrasted with the miserable failure of his own attempts to raise money.

The large mercantile and monetary houses in London which opened subscription lists have given notice that they are ready to pay back the deposit of ten per cent to the subscribers. The following is one of the notices issued:—

Messrs. Baring Brothers and Co. beg to inform the subscribers on their list to the French Loan of 500,000,000f., that having received advice last evening from Paris of the whole loan being taken by the individual applications in France for 80Of. thereof, they will be in readiness to make to other parties. Messrs. Baring Brothers and Co. are therefore ready to pay back the deposit of ten per cent on and after to-morrow, the 18th inst., between the hours of eleven and three o'clock, at their counting-house, No. 8, Bishopsgate-street Within, on production of the receipt given for the same

8, Bishopsgate-street Within, Jan. 17, 1855.

Messrs. Rothschild and Sons have also commenced repaying the ten per cent received by them

As the subscribers on this side to the new French loan will not participate in its distribution, all those and the speculators who have sold for its coming out will either have to buy back or obtain the stock from Paris. The effect of this circumstance has been to force up the Scrip here to 4¾ to 4¾ prm.

THE VIENNA CONFERENCE

A telegraphic despatch from Vienna, dated January 17th, states that, on the 16th, Baron de Bourqueney and Lord Westmoreland received, by telegraph from Paris and London, instructions to open the Conferences, and that the despatches to that effect were on their way. The belief in the sincerity of Russia, however, has not increased lately.

As regards the disposition of Austria, the *Journal de Constantinople* of the 8th inst. states that, at a great diplomatic dinner given by M. Bruck, Austrian Internuncio, M. Bruck gave as a toast, "The Sultan and his brave army of the Danube, who are the admiration of all Europe." "There," the Internuncio exclaimed, "they have, in every action, defeated the Russians; they have taught the Russian Court that they were able gloriously to defend the rights of Turkey against Muscovite ambition. Like the Western Powers, Austria was willing to fight for the rights of Turkey and of justice, whatever might be the result." And he stated, in conclusion, with remarkable energy, that Russia was no longer to be feared—she must yield. The emotion of the guests was extreme; and the Grand Vizier warmly thanked the Internuncio.

THE SARDINIAN TREATY.

The *Constitutionnel*, the *Indépendance Belge*, and some of the Italian papers, circulate various reports, more or less detailed, respecting the part which Piedmont is to take in the war. So far as can be ascertained the essential conditions of the treaty of alliance between Piedmont, France, and England, which was signed on the 10th inst., are as follow:—"Piedmont will supply 15,000 men of all arms, with a large park of field artillery; the expenses of transport will be defrayed by France and England. A loan of 30 millions for each year the war lasts will supply the Sardinian Government with the means absolutely requisite for keeping its army on a war footing, while France and England both engage to render the conclusion of the loan as easy as possible, both as to the conditions and the execution of the agreement. The Sardinian division will join the English. The command of it will probably be entrusted to General La Marmora, the present Minister of War, to whom the army is indebted for its entire reorganisation.

THE FOREIGN LEGION

The Swiss newspapers report that the military service of England is already very popular in Switzerland, and recruits are presenting themselves fast. Nothing like the capitulations into which the Swiss Cantons annually entered with foreign states is to be expected now, but as long as our agents take care to proceed with discretion they will have no reason to complain of want of success.

The *Journal de Geneve* reports:—"Enlistments for the Foreign Legion in the pay of England are proceeding very actively in Berne, and the police have not hitherto interfered to prevent them; on the contrary, many of our functionaries consider it fortunate for the country to get rid of a considerable number of young and robust men, who are either unable or unwilling to earn an existence by working. I cannot tell you if overtures were made to the Federal Council on the subject; but, if I am to judge by the result of the enlistments thus practised underhand, there is no necessity to embarrass the Federal Council by an application for leave to recruit in Switzerland, the operation succeeding perfectly well without it."

The Senate of Lubeck has just issued a prohibition of foreign enlistment in that free town. Prussia has published prohibitions in Treves and Magdeburg.

WAR BURDENS ON POLAND.

Letters from Cracow give a melancholy picture of the state of things in Russian Poland. The greater part of the weight of the war appears to be thrown on the shoulders of that unfortunate country. Measures are being taken for hermetically closing the long line of frontier towards Germany, and cutting off all communication As present the frontier guards allow travellers to pass into Poland, provided their passports are *en règle*, and

their names are not to be found in the list of the proscribed; but it is very difficult to get out again, as that comparatively but few persons take advantage of the permission, and those only on business of the last importance.

Overwhelming as are the forced contributions of provisions for the troops and provender for the horses which the inhabitants of Poland have actually have to make as their quota of the war expenses, they may be considered light in comparison with those to which the provinces of Podolia and the Ukraine are subjected. Those of Podolia alone amounted to more than four millions of silver roubles during the past year; and these forced contributions will never be paid for. Several thousand waggons, which, with the necessary number of horses and drivers, were required by the Government in the month of September last for the transport of provisions, baggage, and soldiers, have not only not yet been returned, but have actually never since been heard of. They may have been sent to Siberia, or be sticking at this moment in the impassable sloughs of the Crimea. In many of the frontier towns of Podolia—for instance, at Kaminitz—hundreds of waggons are kept in readiness to be loaded at a moment's notice with the public treasury, archives, and books, and carry them to a place of safety more inland. These waggons are relieved every fortnight.

Recruiting is carried on in Poland to a much greater extent, and with more oppressive severity, than in Russia Proper. The third levy in particular was most heavily felt, so that when it is completed Poland will have but few men left capable of bearing arms. More than 60,000 men have been raised in Poland during the past year, of whom, however, the fourth part were carried off in the hospitals by epidemics and disease before they were able to join the regiments for which they were destined. The cholera still ravages the unhappy country, but it is typhus which has decimated the ranks of the recruits.

DRILL INSTRUCTORS FOR THE KHAN OF KOKAN'S FORCES.

The *Mofussilite*, received by the last Overland Mail, states that the Khan of Kokan has applied for drill instructors; and Government has allowed of such being permitted to volunteer from the artillery and infantry of the frontier regiments. Whether this means the regular troops on the frontier, or the Punjaub force, is not stated. It is not of much importance, however, whence the volunteers are to come: for, if drill instructors are really to go to Kokan, there cannot, we imagine, be any foundation for the report that the Russians have already established themselves in the country; and the report that an alliance has been formed between the Khan and the British is probably correct. Native officers and men volunteering are to receive half their present pay for five years from the British Government, and at the expiration of that time are to be allowed to return to their regiments, counting the period of their absence as service, if they do not like the service of the Khan.

AMERICA.

The steam-ship *America* arrived at Liverpool on Wednesday morning, from Boston and Halifax, after a somewhat protracted voyage, having left Boston at noon on the 3rd inst., and Halifax on the morning of the 5th. The delay was occasioned by strong easterly winds

The Congress at Washington resumed its sittings on the 2nd, when Senator Mayall, of Maine, spoke in opposition to the reciprocity treaty: esteeming it to be entirely to the advantage of the British American provinces, and intimated his intention of introducing a bill which would mutually benefit both the United States and Canada.

Mr. Sumner's proposition to offer the mediation of the United States for the settlement of the Eastern war is said to be gaining strength every day. It is viewed with much favour by the Russian Legation at Washington, and there is reason to believe that if the mediation is tendered it will be promptly accepted by Russia. It is said that Mr. Mason, Chairman of the Senate Committee on Foreign Affairs, is favourably disposed on the subject, and that Secretary Marcy will be very glad to draw up a despatch tendering the mediation, if it shall be authorised. The Washington correspondent of the *Pennsylvanian* says, under date December 27th:—"Mr. Clingman's mediation resolutions will pass the House, and the question is already discussed how will the President send across the Atlantic to pour oil on the troubled waters of Europe? Will it be a commission of one, two, or three? The names of Van Buren, Tyler, and Fillmore are seriously mentioned here in connection with the proposed peace commission. The whole country would endorse their pre-eminent fitness for the delicate work.

By way of New Orleans advices from Mexico to the 19th ultimo had been received. General Santa Anna has been elected President by nearly a unanimous vote. Reports were prevalent at the capital of additional victories of the Government troops over the insurgents; and it was likewise stated that General Alvarez had approached within eighteen leagues of the city.

HAYTI.

The steam-ship *America*, from Boston, arrived at Liverpool on the 17th inst., by which we have news from Hayti to the 18th December, stating that the population was greatly excited from the law lately made to increase the duties on goods from Europe, as well as upon the coffee exported from the country, which is calculated greatly to restrict the commerce of the island, already at a low ebb. The impolitic measures advised by Chancellor Delva are sensibly diminishing the well-merited popularity which Emperor Soulouque has been enjoying for the last two years. The island is very healthy, and the ports into market very freely; and had it not been for this increase of both import and export duties, business would have been very brisk this season.

INDIA AND CHINA.

Letters and advices dated Bombay, 14th of December; Calcutta, 4th of December; and Hong-Kong, 27th of November, have been received.

Friendly relations are now established between Dost Mahomed and the Government of India; and it is reported that a British Envoy is to be sent to Cabul, and one of the Dost's sons to the Governor-General

Nothing is known of the strength of the invading Russian force on the Jaxartes, except that it has hitherto been strong enough to beat off every attack that the Khanate of Khokand has been able to bring against it; and that the chief of the patrimony of Baber and the successor of Mahmoud of Ghuznee have been under the necessity of asking us for help to resist it; but there can be little doubt that this force is numerically weak, and that it has counted on the co-operation of the Persian army at Merve for its ulterior objects. The prevailing impression is that our alliance with the Dost will be a sound one. The Bombay Correspondent of the *Times* remarks that "the Dost's dominions extend north to the Hindoo Koosh; and we could easily, from our enormous force in the Punjaub, spare a couple of brigades to reinforce his army at Balkh, together with any support that would be necessary; and the appearance of our flag on the north of the Hindoo Koosh would raise the Usbecks against the Russians, and compel them at once to a disastrous retreat. We might then, after a military promenade, retire ourselves. We never have had such an opportunity of raising our *prestige* in Central Asia and in India on the ruins of that of Russia, or of opening to British commerce so important a trade as that with Central Asia

The Burmese embassy has arrived at Calcutta, and been received with great pomp. There are to be reviews and sham fights on a most extensive scale, state railway excursions, and everything else calculated to give the Ambassador as high an idea as possible of British power

The Bombay papers state that orders had been received for the immediate dispatch of four Queen's regiments from India to Turkey, viâ Egypt The 10th Hussars were to march from Kirkee to the Presidency, where they were expected in a fortnight; they would proceed direct to Suez, and thence march across the desert. It was not supposed that any difficulty would be experienced in covering the distance of eighty-six miles from Suez to Cairo in four forced marches. They will then proceed down the Nile by boat to the railway terminus, and may probably be at Alexandria within a fortnight of their reaching Suez The 14th Dragoons were expected to follow, and the 80th and 43rd Foot were understood to be under orders. The Hussars will hardly be there before the beginning of March, nor can the other troops be expected early than June, considering the great deficiency of steam conveyance at Bombay for large bodies of men on long voyages. India can easily spare the troops named, in point of number, but greatly in excess of what the act of Parliament allows, as well as of the country requirements in periods of profound peace.

The city of Shanghai continues to be held by the rebels.

Pekin gazettes are to the 22nd of October, and report the further successes of the Imperialists. Several towns in the Hopih province have been retaken by them, one being the provincial city Wuchang.

Following up the late expedition against the pirates, Rear-Admiral Sir James Stirling dispatched on the 11th Nov. a large force, consisting of her Majesty's steamers *Encounter*, *Barracouta*, and *Styx*, accompanied by the United States' chartered steamer *Queen*, and two small steamers of the Peninsular and Oriental Company, to destroy a stronghold of the pirates at Coulan, a place to the southward of Macao, and which was perfectly successful, having also burnt fifty piratical junks. The principal force of the pirates, when it was known that the steamers were cruising, went up the river, and are presumed to have joined the Imperial force. At Ningpo a large number of junks were detained in port from fear of the pirates.

MR. COBDEN AT LEEDS.—THE WAR.

On Wednesday afternoon Mr. Cobden, M.P., visited his constituents at Leeds. It had not been displained that the object of the hon. member's visit was to address the electors on the subject of the war. The Peace party, being favourable to his views, took in hand the management of the meeting, and by placards and other means for several days previously very extensively spread abroad their sentiments; and, in short, left no means untried to turn the popular feeling into the peace current. The meeting was first convened to be held in the Music Hall, but its incapacity to accommodate the large masses who flocked there soon rendered necessary an adjournment to the exhibition room of the Coloured Cloth Hall-yard. The meeting was one of the largest political assemblies ever congregated in the borough, and included many of the leading men of all parties. Between 5000 and 6000 persons were present, and most of them remained through a protracted meeting, in defiance of a coating of snow and very intense cold

Alderman Carbutt, a leading West Riding Liberal, and chairman of Mr. Cobden's committee at the last election, presided

The Chairman, in the course of some introductory observations, said that in taking the chair he was placed in a somewhat anomalous position, for it was the general practice to elect to the chair a gentleman whose opinions more or less harmonised with the promoters of the meeting. He, however, had the misfortune to differ on this occasion from their worthy representative, Mr. Cobden. So strong was this feeling that when Mr. Cobden communicated to him in the first instance his desire to address a public meeting in Leeds on the aspects of the present war, he informed a number of Mr. Cobden's friends, who came to the unanimous opinion that it was not desirable, at the present juncture of affairs, that a public meeting should be held upon the subject. Mr. Cobden had, however, determined to come; and, though they might differ from his opinions, none of them could doubt the sincerity of Mr. Cobden's convictions (Hear, hear). He knew that in coming amongst them he was coming to oppose the current of public opinion, and they therefore must admire his honesty and his manliness ("Hear, hear," and uproar). In addition to his being one of the members for the West Riding, the great services which he had rendered to the country gave him a paramount claim to a patient and a candid hearing, which he hoped they would accord to him. Clamour never put down the voice of truth, but clamour and persecution might give strength to a bad cause, and, if they determined not to hear Mr Cobden, the conclusion that would be arrived at in Russia would be, that they dared not hear him

During Mr. Cobden's speech he was continually interrupted with cries of "Adjourn, adjourn!" and a motion was proposed and seconded, that the meeting should be adjourned to the Cloth Hall-yard. At the close of Mr. Carbutt's remarks the meeting was adjourned to that place.

Mr. Cobden, who was received with partial applause, began by stating that he had come there to explain his opinions regarding the war, because he understood that a majority of his constituents were opposed to the views which he advocated. He would not go into a history of the war. We were in it, and the question now was how to deal with it. He quite agreed with those who said that if England was to have a war it could not be a little one. She must carry it on with vigour. That, however, required money; and then came the most important question of all How were the supplies to be raised?

I think (said Mr. Cobden) that the Government, and even Mr Gladstone, the Chancellor of the Exchequer—much as I respect his character—have rather lent themselves to the delusion that they could indulge the people of this country with a cheap war. Mr Gladstone told us he wanted £10,000,000, and we intend that sum. You have had an opportunity of judging how that money has been spent, and you can form some idea of what will be wanted to carry on the war as it must be carried on if it should continue.

If they were determined to carry on the war with vigour, they must make up their minds to pay for it, and that must either be done by a loan or by additional taxation. He was opposed to loans, because the money could be raised too easily that way. He held that the greater the difficulties in obtaining money to carry on a war the better for the country, as it would make Government all the more careful not to quarrel with other nations. As regarded the peace question, he was not in favour of peace at any price. He had been urged by the members of the Peace Society to disavow their doctrines on that head, because, unless he did so, he should lose all influence with practical minds in the advocacy of peace principles. He then went on to discuss the policy of the war, and the way in which it has been conducted, both of which he condemned in the strongest terms.

I think (said Mr. Cobden) that the expedition to Sebastopol was a mistake. It has, indeed, been acknowledged to be a mistake so far that it was a leap in the dark. I think the practical question for Englishmen is how you are best to get out of that mistake. If you are going to fight it out there, then I say the course indicated by our Government is the most unwise and ruinous you have in view (Hear, hear). You must raise enormous armies. You must find an immense amount of treasure; and you must carry on the war in the Crimea on a very different scale from what you have done hitherto ("A good sense in that"). But I think there is another way by which your brave men may be removed from that position in which, by a mistake, they have been placed; and I think, without consulting our own pride, and without looking too much to exaggerated hopes and expectations, we are bound in all fairness to consider the position of those brave men, and we are bound not, if we can help it, to throw any obstacles in the way of restoring peace to those countries, and restoring those men to their homes (Hear, hear). I would further have those brave men, when brought home from Sebastopol, to be received with all honour as if they had succeeded in their enterprise (whether you may depend on it they have suffered ten times as much in their abortive effort to take that place as they would have done had they succeeded in taking it by a *coup de main* (Cheers). Now, is there no reason to suppose that there is a possibility of effecting a safe and honourable peace? Is there not ground for supposing that, at the present moment, the Governments of Europe have approximated in their negotiations to such a state of things as would render it possible to arrange the terms of an honourable peace? And now I would address a word to my friends behind me. They propose, I believe, to submit to this meeting a resolution calling for the vigorous prosecution of the war ("Hear," and cheers). I have told you frankly that if the war is to be carried on it must be carried on in a very different spirit and on a very different scale from what it has hitherto been. But I would put it to my friends around me, and I put it to this meeting, as representing so important a community, whether you may not be throwing an obstacle in the path of peace—whether you may not be frustrating the objects which the Government may now have in view in order to effect a peace—by passing in the midst of this important constituency such a resolution as I understand has been prepared? (Loud and general cries of "No, no!") My own impression, drawn from those public sources of information which are open to us all, is that attempts are now being made—which are not unlikely to prove successful, if they are not thwarted by the public opinion of this country—to arrive at an honourable peace, and I ask you and my friends behind me to consider well before you say or do one single thing that can by possibility impede the progress of these pacific negotiations

As for destroying Sebastopol, of what use would that be? In less than ten years Russia would come to Baring Brothers, in London, for a loan, and would build up Sebastopol with more skill, and in greater perfection (Hear, hear). Do the fears of those who spoke of danger to England from Russian aggression As for the increase of territory, about which so much was said, England was far more to blame than Russia. He concluded by urging them not to commit themselves to the passing of any resolutions which might hinder the negotiations for peace.

Mr. G. Marshall then moved the following resolution:—

That, in the opinion of this meeting, the war in which England and France are now engaged with Russia is a great contest upon which depends the momentous question of the latter Power upon the Turkish empire, and is intended to create a spirit of aggrandisement on the part of the Czar, which threatens the independence of other nations, and this meeting is of opinion that the war ought to be prosecuted with the utmost vigour until safe and honourable terms of peace can be obtained

He was greatly mistaken if the meeting would allow this question to remain as their honourable member Mr Cobden had left it

Mr. Edward Baines seconded the resolution. He was sure, as regarded the interests of peace, that the resolution now proposed would have no unfavourable effect upon the Government. But there was another party to be consulted before they could have peace, and that was the Emperor of Russia. It was not by a resolution in favour of peace, but by a strong army being sent to the Crimea, that they could work upon the mind of the Czar (Cheers). The true plan was to be slow in going to war; but, once engaged in a just war, to prosecute it with such vigour to an issue that their enemy would not be likely to renew it again. He regarded the as a great and important crisis, when a league was being formed which might affect the destinies of Europe for ages to come. For the last century and a half the attitude in which Russia had presented herself to Europe was that of an ambitious, encroaching, and selfish Power, while she was at the same time the most despotic, intolerant, and barbarous of European nations. Nothing was therefore more to be deprecated than that Russia should acquire a predominant influence among the Continental Powers.

The following amendment was proposed by the Peace party amidst much disapprobation:

That this meeting, without giving any opinion on the origin or conduct of the war, earnestly desires that the present negotiations for peace may be carried to a successful issue, and the further evils of a protracted contest spared to this country, to Europe, and to the world.

(Cries of "No, no!")

Mr. R. M. Milnes, M.P., supported the resolution. He hoped that no sham peace would be made, but one of permanent character, so that the expense of keeping up a large standing army for fear of war breaking out might be avoided, and such a peace would be best procured by showing a firm confidence in the justice of the war in which this country had engaged (Applause)

Major-General Thompson, in a facetious speech, condemned the way in which the Government had entered upon and conducted the war, and called upon the meeting to show their common sense by voting for the amendment.

The amendment was then put to the meeting, and negatived by an overwhelming majority, and when the original motion was submitted to the show of hands only a very few were exhibited against it.

LOANS AND TAXES

To the Editor of the ILLUSTRATED LONDON NEWS

Sir,—Under the heading "Loans and Taxes" you have a remarkable communication from a Correspondent in your Number for Jan. 6. No doubt it is highly proper for a journalist to admit the discussion of such a subject in his pages; and Mr. Gladstone himself could scarcely have desired a more ingenious argument than your Correspondent has introduced: at the same time it is, if I mistake not, most fallacious.

It is quite true that borrowing by the Government does not increase the wealth or material means of the nation, unless the borrowing be effected from foreigners; yet it is perfectly ridiculous to argue that borrowing does *not throw* any part of the burden on posterity. In the first place, if the money be borrowed, it comes only from those who have surplus cash to spare, and who immediately receive a claim on the Government as security; which claim being transferable, not only do the parties in question lose nothing by the transaction, but probably affect a profitable investment of their surplus capital, while the remainder of the community, the non-leaders, are merely passive in the transaction, and in no way whatever affected for the worse.

Take the opposite case, of providing *means by taxation*. Here the entire amount comes out of the pocket of the community, and the entire community is rendered deeply poor, except so far as they save the amount by retrenchment in their several expenditures; and thus the bulk do, or at least attempt to do; the consequence of which is, that every man in the way affects his neighbour's trade—the grocer the shoemaker, and the shoemaker the draper; while persons of fixed incomes affect the trade of all; and thus a universal depression is produced, as at present. Look at France and England. Both have had a bountiful harvest, both are engaged in a heavy war expenditure; yet the trade of the one is prosperous, highly prosperous, and of the other universally depressed. I am not now speaking on the question as to whether the payments for a war expenditure should be provided by loans or taxes. I am merely confining myself to your Correspondent's argument whether there be *any present difference* to the community. And I contend there is the greatest possible difference, and that is the real cause, above all others, why France is now prosperous, and England depressed. The one is providing the means out of taxes, and the other by loans. In the one case the people are endeavouring to save the money out of expenditure, and thereby every man is decreasing his neighbour's trade; while, in the other case, each man is carrying on his expenditure as usual, and many are even increasing it by the profit they receive from the extra Government expenditure. But if this be not the true view of the case, why does your Correspondent deplore the effect of the taxation, to which we have been subjected during the last twenty years, in order to pay the interest on former loans? Why deplore this if loans do not throw the burden on posterity! In this he is inconsistent with himself. Again I repeat I am not arguing the question of the policy of Loans *versus* War Taxes, but merely whether loans do or do do not throw the burden on posterity; and, in order to sustain this position in the affirmative, I need only cite a few extracts from your Correspondent's own communication:—"What writers call throwing part of the burden of the war on posterity means dooming it to taxes on knowledge and liquid and cleanliness; to taxes on varying and uncertain incomes; to surcharges, appeals, summonses, and distraints, such as have for so many years plagued us and impeded our progress, put up our comfort, and lessened our power." * * * "The interest of all loans, however, being paid by the annual produce of taxes, become a property in taxes proceeded from parents to children." * * * "The present loss to the industrious classes, merely to enrich a few moneyed capitalists, would be very great; and the evils of taxation, as continued beyond the period of war, to pay the interest of the loan, would be to our *posterity, as we have found it*, nothing short of a dire curse."

Can anything be more conclusive that your Correspondent does consider that loans do throw the burdens on posterity, notwithstanding his specious argument to the contrary?

In a future Number, by your permission, I will take the liberty of saying a few words on the true policy to be pursued on this subject.

Jan. 16, 1855. I am yours truly, M.

LOCKHART'S JEU D'ESPRIT ON LORD ROBERTSON.—His Lordship was one of the few intimate friends whom the late Mr. Lockhart, of the *Quarterly*, had in Scotland. They knew each other both as rising young advocates and brieflless barristers, and the proud and sensitive Lockhart, who wished, it was said, after the death of his great father-in law, Sir Walter Scott, to drop all acquaintance with Scotland, Abbotsford, and all Scottish companions, preserved and cultivated the friendship of the jovial Patrick. There is a story current to the effect that the latter, after perpetrating the enormous folly of writing and publishing in his old age—two successive volumes of verse, happened to visit London and to dine with the editor of the *Quarterly*, to whom the second volume was dedicated. The humorist had become unusually garrulous, and, regretted that, after his death, his host should honour him—not with a biography—but with an epitaph. Lockhart extemporised the following felicitous couplet:—

Here lies the Christian, Judge, and Poet Peter
Who broke the laws of God, and man and metre

AN IMPORTANT CABINET COUNCIL.—A Cabinet Council (summoned to meet at two o'clock) was held on Tuesday afternoon at the Foreign Office. The Ministers present were the Earl of Aberdeen, the Lord Chancellor, the Duke of Argyll, Viscount Palmerston, the Earl of Clarendon, Sir George Grey, the Duke of Newcastle, the Chancellor of the Exchequer, Sir James Graham, Sir Charles Wood, Earl Granville, the Right Hon. Sidney Herbert, and Sir William Molesworth. Lord J. Russell arrived at the Foreign-office about an hour after the Ministers had assembled, and joined his colleagues. His Lordship arrived at the London-bridge terminus of the South-eastern Railway in the afternoon from Paris, and immediately proceeded to the Foreign-office. The Council broke up at a quarter before seven o'clock. Viscount Palmerston arrived in town on Tuesday morning from his seat, Broadlands, Hants, for the purpose of attending the Cabinet Council; and the Duke of Newcastle came from Windsor Castle, to be present on the same occasion.

SUDDEN DEATH A remarkable instance of sudden death took place on Tuesday evening in the vicinity of the terminus of the London and North Western Railway at Euston-square. Mr. Ralph Carr, county magistrate of Middlesex, shortly before five o'clock left his town residence, 4, York-terrace, Regent's-park, to proceed to the London and North-Western Railway, for the purpose of returning to his country house at Pinner. When he left home he was in his usual health and spirits, being an exceedingly hale and hearty man. On reaching half-way down Melton-street, Euston-square, on his way to the station, he was observed suddenly to stagger and fall upon the pavement. The unfortunate gentleman was instantly conveyed into a surgery near which he fell, but life had ceased. The body was conveyed to the dead-house of St. Pancras workhouse, to await a coroner's inquest.

A HERO.—The following incident is related of a private in the 92nd Regiment, which left Edinburgh this week. A soldier's wife had come up from the country. Not without heroic exertions, probably, she had come possessed of money sufficient to purchase her husband's release, and to buy him off was the object of her visit. The poor fellow looked with the intensest solicitude at his young wife and their only child, and his eyes filled; but, brushing away a tear, he exclaimed that he never could bear to be branded as a coward by his companions, and to the East he must go

THE DISORDER AT BALACLAVA.—The War-office has at last turned its attention to the evils to which we have adverted in another article, arising from the want of proper persons at Balaclava to overlook the vast quantity of goods lying at the above port. A communication has been forwarded from the War office to the directors of the London and St. Katharine Dock Companies, requesting them to provide a number of men who are to be dispatched to the Crimea, and who are to be engaged in unloading the vessels upon their arrival, and in placing the various articles in store rooms that will be built for the purpose. Above 600 men will be required. The wages will be 24s. a week, with rations for the labourers; and £2, with rations, a week, for the foremen; and the men will be under an engagement for three years. The largest number that have offered their services, and above 100 have been approved of. Some of them will be conveyed immediately in the vessels that are bound for the Crimea, and the whole of them will as fast as possible be shipped to that destination, as their services are most urgently required.

THE PROJECTED VISIT OF THE FRENCH EMPRESS.—The name of *La France* is to be given to one of the first-class men-of-war now building, to commemorate the cordial and warm intimacy that now exists between this country and our allies the French. The great screw three-decker the *Marlborough*, of 131 guns, building in Portsmouth dockyard, will be the vessel selected to receive this name. She will be ready for launching in March, and it is said that the Empress of the French will, with the Emperor, be present at the launch, and perform the ceremony of naming this splendid ship.

We understand that it is the intention of her Majesty to confer the vacant blue ribbon upon the Earl of Aberdeen.—*Globe*.

THE Court of Directors of the East India Company have appointed, as a temporary measure, the Right Hon. Sir James Stephen, K.C.B., LL.D., Professor of History and Political Economy at Haileybury College.

SKETCHES AT EUPATORIA.

EUPATORIA.—EAST ENTRANCE, AND WORKS THROWN UP BY THE FRENCH.

EUPATORIA.—ROCKET AND GUN BATTERIES.

THE ALLIES AT EUPATORIA.

GENERAL RAGLAN was blamed by many newspaper critics for having left a small garrison at Eupatoria, after landing in the Crimea, but the importance of taking up that position begins to be seen now by most people When the Allied forces landed on the 14th of September, the town surrendered at discretion, giving up all its stores of cattle and provisions The 20th Regiment was ordered to take up its quarters there, accompanied by 2000 Turks and 1000 Zouaves. At a later period a number of French engineers were sent to Eupatoria, and a considerable body of French infantry. The former have been employed for some weeks past in erecting redoubts and other defences, in the anticipation of a more serious attack than any that have yet been made by the bands of Cossacks who hover about the vicinity, ready to make a razzia upon the flocks and herds of the peaceful Tartars, when they think they can venture with safety.

The landing of the Turkish army under Omer Pacha, which commenced about the middle of last month, was to be finished about the middle of January, by which time it is said than no less than 40,000 Turks will be assembled at Eupatoria. With such an army, comprising a fair proportion of cavalry, Omer Pacha is likely to give the Russians some trouble

The Sketches we have given in this week's publication will show how the town was fortified, when they were taken, some weeks ago. We

CHASSEUR DE VINCENNES | ZOUAVE IN UNDRESS, WITH BURNOUS OR CLOAK. | ZOUAVE. | GRENADIER, WITH CAPOTE TURNED BACK. | GRENADIER IN UNDRESS. | FUSILIER IN FULL DRESS | GRENADIER, WITH CAPOTE AND KEPI (COMMON CAP).

FRENCH INFANTRY OF THE LINE.

learn, however, that in December French and English engineers were busily surveying the place with a view to erect a new chain of forts round it. The following letter from an officer on board one of her Majesty's vessels lying off Eupatoria, speaks of frequent skirmishes with the Russians, in which the latter always seem to come off rather badly :

H.M.S. ———, Eupatoria, 13th December, 1854

Dear Mr. ———As you profess yourself not bored by my letters, I will just write you a few lines by this post, and I am very happy to say that I have no more commissions to pester you with.

We are going on very quietly here, I was about to say peaceably, for we have very few warlike demonstrations. The Russians come in about five times a month, and then we have a banging match, with tremendous losses to them, and scarcely any to ourselves

They muster now about 3000 sabres and about 18 guns. They will not dare to come down now, for the main body of the Turks, to the number of 40,000, are coming here (4000 have arrived)—cavalry, artillery, and infantry—under no less a personage than H.H. Omer Pacha.

We shall be able to meet these gentry on their own ground, outside the town. Up to this time, we have been obliged to keep strictly behind our redoubts.

I will just send you a Sketch of our present defences, &c. (See Engraving.)

Yesterday we had intelligence from Sebastopol of another sanguinary battle between the Allies and the Russians, somewhere about the same place as that of Inkerman, of famous memory.

THE EARL OF ELGIN GIVING THE ROYAL ASSENT TO BILLS PASSED BY THE CANADIAN LEGISLATURE.

THE LATE GOVERNOR-GENERAL OF CANADA.

ON Monday, the 18th of last month, the Earl of Elgin finished his career as Governor-General of Canada. The Engraving represents his Excellency giving the Royal assent to upwards of ninety bills, passed by the Provincial Parliament during the session then about to adjourn. The chief of these measures were the Clergy Reserves and the Seignorial Tenure Bills. Both of them were subjected to protracted discussion, but they were finally passed by very large majorities, and with the concurrence of, at least, nine-tenths of the whole Canadian community. The settlement of these two important questions, which have agitated the public mind of Canada for several years, and which, but for the wise course taken with reference to one of them by the British Parliament in 1854, might have led to serious differences between the mother country and the colony, has thus happily wound up the sagacious administration of Lord Elgin; and it is a significant fact, as illustrating his Lordship's foresight and wisdom, that these measures should have been carried through Parliament by the Conservative party, which, until a very recent period, had violently resisted their progress.

At a later period of the same day his Excellency received the following joint farewell address of both Houses of Parliament. It was voted unanimously in the Legislative Council or Upper House. There were eleven dissentients in the Legislative Assembly; three being avowed American Annexationists connected with Montreal; seven, "Red" Lower Canadians; and only one, a Mr. MacDonald, connected with Upper Canada.

May it please your Excellency,—

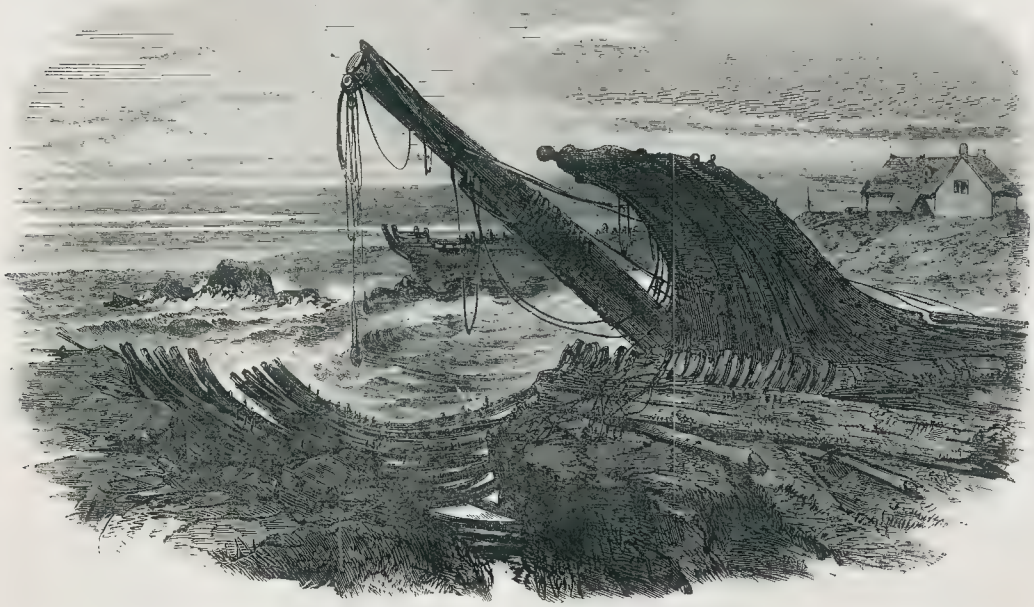
We, her Majesty's dutiful and loyal subjects, the Legislative Council and Commons of Canada, in Provincial Parliament Assembled, humbly beg leave to approach your Excellency for the purpose of expressing our sincere regret at your Excellency's retirement from the Government of this colony which you have for so many years administered with honour to yourself and advantage to the country, and to congratulate your Lordship on the improvement of the happiness and prosperity of the province which has attended the able discharge of the high trusts reposed in your Excellency by our gracious Sovereign, and in the dignities which have been conferred on your Lordship, as marks of her distinguished favour, and in appreciation of the services rendered by your Excellency to her Majesty's Crown. And further, to assure your Excellency that we shall ever feel the highest esteem and respect for your exalted character and an anxious solicitude for your future welfare and happiness, and that we sincerely hope your Excellency may long live to enjoy the favour of your Sovereign and the approbation of your country.

JOHN ROSS, Speaker Legislative Council.
L. V SICOTTE, Speaker Legislative Assembly.

The reply of Lord Elgin was as follows:—

Gentlemen of the Legislative Council, and Gentlemen of the Legislative Assembly—

The expression of your approbation and regard at such a moment, is in the highest degree grateful to me. I am conscious that I brought to the discharge of the functions of Governor-General of Canada few qualities except an earnest desire to do my duty to my Sovereign and the people of the Province



THE LAST OF THE WRECK OF "THE CHARLOTTE," OFF THE CAPE COAST.—(SEE NEXT PAGE.)

and a just appreciation of the magnitude and importance of the trust confided to me

If any success has attended my endeavours, it is mainly due to the fact that I have been, throughout, enabled to co-operate cordially with the other branches of the Provincial Parliament, and with the public men enjoying their confidence.

The testimony which you bear in the address to the improvement which has taken place in the happiness and prosperity of the Province, is of the greatest value. I pray God that Canada may advance with an accelerated speed in all the lines of progress, material and moral, during the years that are to come, and that this magnificent province may continue to furnish an example of the noble purposes to which powers of self-government may be turned by an enlightened and high-minded people.

On the following day, the 18th, the Governor-General received the farewell address of the Corporation and citizens of Quebec; and in the afternoon Sir Edmund Head was sworn in as successor to Lord Elgin.

On Friday, the 22nd, his Lordship finally quitted Quebec; and, although the hour of his departure was fixed for a little before eight a.m., and the thermometer stood at twenty degrees below zero, the whole of the troops of the garrison lined the streets to the wharf on the St. Lawrence; and several thousands of the inhabitants, including all the principal persons in the city, their ladies, and families, were present, to offer this their last mark of respect to a Governor who had endeared himself to them by his straightforward and honourable impartiality, by his earnest zeal for Canadian interests, and by his warm-hearted and never-ceasing hospitality every section of political parties.

Amid deafening cheers, intermingled with cries, such as "God bless you, Lord Elgin," and with his friends surrounding him to the very water's edge, his Lordship embarked, and the boat moved away from the shores. During his journey through the United States to New York, Lord Elgin was everywhere received with the most marked cordiality; and he would have been entertained at a public dinner at New York, but for a misunderstanding, by which it was supposed he would not arrive there until a couple of hours before his sailing for England. A large number of leading gentlemen, residents of the city, waited upon him, and escorted him to the place of embarkation.

We understand that his Lordship has prepared a very interesting despatch, in which he reviews the extraordinary progress—material, social, and political—which Canada has made since he assumed its Government eight years ago. It will also, we believe, dwell at considerable length upon the important results which cannot fail to flow from the Reciprocity Treaty that he has lately effected for the free interchange of the products of the British-American provinces, and of the United States, one with the other.

THE WRECK OF THE "CHARLOTTE."

A CORRESPONDENT, who witnessed the last of this unfortunate wreck off the Cape coast, has favoured us with the Sketch of the sad scene engraved upon the preceding page. The full details of the wreck were given, with two Illustrations, in our Journal for December 30. The Sketch, taken by Mr. Oliver Lester, represents "the last" of the ill-fated ship—its masts and timbers drifted upon the rocks upon the shore, whereon the melancholy catastrophe was witnessed by thousands who vied with each other in their endeavours to render assistance, but were scarcely able to succour the persons on board.

CALENDAR FOR THE WEEK.

SUNDAY, 21.—3rd Sunday after Epiphany.
MONDAY, 22.—St. Vincent. Lord Byron born, 1788.
TUESDAY, 23 W. Pitt died, 1806. Duke of Kent died, 1820.
WEDNESDAY, 24.—Frederick the Great born, 1712.
THURSDAY, 25 Conversion of St. Paul
FRIDAY, 26.—Brazil discovered, 1496. Dr. Jenner died, 1823.
SATURDAY, 27.—Mozart born, 1756.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 20, 1855.

BELIEVING as we do that the Emperor of Russia has been encouraged to make war, and to persist in it, by the speeches of Mr. Cobden, Mr. Bright, and the members of the Society of Friends—which he erroneously imagined to express the sentiments of the British people—we are glad to see that the large and influential constituency of the West Riding have emphatically disavowed participation in the peculiar sentiments of their representative. At the meeting held at Leeds, on Wednesday last, Mr. Cobden reiterated his well-known opinions on the subject of the war, and met with a reception which may well make him doubtful whether he will ever again enjoy the distinguished honour of representing the largest and wealthiest constituency in the kingdom. Mr. Cobden is an admirable debater. It is impossible to hear or read his speeches on any subject and fall asleep over them. If he does not convince, he startles or exasperates; and if he cannot always instruct he invariably manages to interest, his audience. But his speech on Wednesday had not the usual heartiness. He had no public enthusiasm to animate him; no sympathetic cheers to encourage and inflame his eloquence. Of all his public displays, it was the most ineffectual. Mr. Cobden, the Democrat *par excellence*, who is of the "voice of the people" when the voice of the people happens to be in accordance with his own, but who speaks of the same people with most aristocratic scorn when it does not ratify his arguments, or dares to dissent from his doctrines, has come to the conclusion that his countrymen possess "an immense amount of pride, arrogance, and conceit;" and his address at Leeds was a lecture upon this subject. The burden, if not the text, of his discourse was that everybody and everything is wrong—except Mr. Cobden. No reasoning pleases him but his own. No event—past, present, or prospective—gives him the least satisfaction to remember or to anticipate. The Emperor of Russia is wrong for commencing the war; the Sultan is wrong for being a despot, and for ruling over Mahomedans; Louis Napoleon is also wrong for being a despot, as well as for retaining a portion of the Sultan's African dominions in Algeria; England is wrong in making herself the judge and arbiter of nations, and fighting battles with which she ought to have nothing to do; and has sinned more heinously even than Russia during the last hundred and fifty years as an aggressive and conquering power;—the Ministry is wrong—collectively and individually in everything that they have done or attempted to do; and Lord John Russell and Lord Palmerston are more particularly wrong than the rest, in having spoken favourably and respectfully of the Emperor Nicholas at a time when they were fully aware of the "secret and confidential correspondence," and of the Emperor's plan to kill the "sick man" and give England a share of the plunder to be expected of him; the functionaries in every department of the State and the Government are wrong; the Generals in command are wrong;—the Admirals are wrong;—the press is hopelessly wrong;—and the people are stupidly led astray. Though Mr. Cobden did not in precise terms claim to be infallible, he took care to impress upon his constituents that he never expressed a wrong opinion or advocated a wrong policy upon any great question, foreign or domestic, that has come before the public or the Parliament since he travelled in Russia and emerged into public life with a pamphlet. The country may well ask what this Mentor and guide of the nations requires in the present state of affairs? To make Mr. Cobden Premier? No! To make him Commissary-General in the Crimea, and Mr. Bright a General of Division—as Mr. Monckton Milnes suggested? No! Mr. Cobden advises Peace, and Peace only; and, lest he or his constituents should imperil the blessing, he earnestly recommends them—after having congregated in thousands, to hear him, and to learn how arrantly wrong they and everybody else had been—to go quietly home, and to express no opinion on the subject. But Mr. Cobden does not so ardently long for peace, because he agrees with his friend Mr. Bright and the Society of Friends, for he took especial care to assert that they also are wrong like the rest of the world, and that he "never avowed, uttered, professed, or entertained" their fundamental doctrine that war under any circumstances is contrary to the precepts of Christianity. His opinions have not even the negative merit which those of Mr. Bright and Mr. Sturge may claim, for Mr. Cobden believes war may at some time be necessary and honourable. But that time has not arrived. We ought not, he thinks, to make war against one despot, with a second despot for our ally, a third despot for our client, and a fourth despot for an ally sought but not yet obtained,—especially in a cause which does not interest us, and in which we had no moral or legal call to interfere. The men of Leeds and the West Riding entertained nobler and juster sentiments than these, and the amendment of Mr. Cobden's friends, expressing no opinion on the origin or conduct of the war, but merely stating a desire of immediate peace, was rejected by a large majority; while the original resolution stating the opinion of the meeting that the war was a great contest forced upon the Allies by the outrageous aggressions of Russia, and ought to be prosecuted with the utmost vigour until safe and honourable terms of peace could be obtained—was carried by acclamation. Manchester stultified itself by coming to no decision upon Mr. Bright's courageous but falsely-reasoned and mischievously-intended letter to Mr. Watkin; but Leeds and the West Riding have refused to act so unworthy a part. They have spoken out as became a great and intelligent constituency, and have given a proof to the Czar that Mr. Cobden and Mr. Bright no longer speak the sentiments of the people of England. These gentlemen will not, as they hope, disgust their countrymen with the war; but we hope they will disgust the Emperor Nicholas with it; in which case the people of England may, after all, be very much obliged to them.

THE old question, "What is be done with our criminals?" is continually recurring. It is not many weeks ago since public attention was directed to the subject—by the refusal of an important colony to relieve us of the burden of looking after them, and by the notorious failure of the "ticket-of-leave" system; and now a voice has been raised from the Bench of Justice, demanding to be heard on that interesting branch of the subject—the means of reforming youthful criminals. Justice sometimes reaches—but almost invariably fails to amend—criminals of tender years; and Mr. Baron Alderson, whose recent address to the Grand Jury of Yorkshire, of which we have reprinted a considerable portion in our Supplement of this day, is not the first of the enlightened administrators of the law who has come to the conclusion that law has hitherto been wrongly employed in its efforts to punish, "and that the cheapest as well as the most humane mode of treating criminals is to reform them." The learned Judge is strongly in favour of the establishment of reformatory schools; a mode of proceeding which was admitted by the late excellent Mr. Rushton, the stipendiary magistrate at Liverpool—a man who, from his position, had a more accurate knowledge of the extent of juvenile crime than can well be gathered by the superior judges. The Act of Parliament 17 and 18 Victoria, cap. 86, permitting the establishment of reformatory schools, and regulating their connection with the State, does not appear to be so generally known as it ought to be; and Mr. Baron Alderson has, therefore, done good service by drawing the attention of the Grand Jury of Yorkshire to the powers therein conferred. We can add nothing to the forcible words of the learned Judge, and can but solicit a careful perusal of his observations from that larger body of the public which gathers all its knowledge of law and social politics from the newspapers. We agree with his Lordship that reformatory schools, such as he so well describes, are as necessary appendages to every good gaol as the doors or the locks, and far more effectual.

THE QUEEN'S COMMENDATION OF THE FRENCH ARMY.

General Canrobert has issued the following "General Order" upon the receipt of the Queen's despatch relating to the conduct of the French troops at the battle of Inkerman:—

[Translation.]
GENERAL ORDER.

The Commander-in-Chief is happy to have to communicate to the troops the expressions, most honourable for our arms, in which her Majesty the Queen of England appreciates their conduct at the battle of Inkerman.

The Queen has remarked with graceful satisfaction the vigour with which the troops of her ally, the Emperor of the French, came to the assistance of the divisions of the English army engaged in so unequal a combat. Her Majesty is profoundly sensible of the cordial co-operation of the Commander-in-Chief, General Canrobert, and of the valiant conduct of that distinguished officer, General Bosquet. She beholds in the cheers with which the soldiers of the two nations mutually encouraged each other during the action proofs of the reciprocal esteem which this campaign and the trails of bravery it has produced have given rise to on both sides.

Her Majesty the Queen of England could not praise in a more flattering manner the attitude of the army at the battle of Inkerman. In marching to the aid of our brave allies we fulfilled a duty which they themselves would fulfil towards us with that valour we know they possess, and so many proofs of which we have witnessed with our own eyes.

Head-quarters before Sebastopol, Dec. 28.

The Commander-in-Chief, CANROBERT.
(Countersigned) The General Chief of the Staff

Among the invalids who arrived at Chatham the other day from the Crimea was Sergeant-Major Silver, of the 8th Hussars, who excited some curiosity owing to his dress: he wore a Russian coat and cap, which he took two days after the battle of Alma from a baggage-waggon, which they fell in with belonging to the Cossacks.

LATEST INTELLIGENCE.

THE WAR IN THE CRIMEA.

The latest news from the Crimea is of the 10th inst., at which date nothing of importance had occurred before Sebastopol.

A letter from Constantinople, of the 8th instant, in the *Pays*, furnishes some fresh details of the late events in the Crimea. As regards the skirmish between the Turks and the Russians at Eupatoria, the affair is described as an attack on a Russian convoy carrying provisions and military stores to the *corps d'armée* of General Liprandi. This convoy, which was escorted by a strong body of Cossacks, is said to have been surprised by a column of Turks in the neighbourhood of Eupatoria, and fell into the hands of the latter, with several hundreds of horses belonging to the cavalry killed in this rencontre. The success of the Turks deprived the Russian army of the supplies it expected.

A column of Riffemen has taken possession of the important position of Camara, near Balaclava, after driving out the Russians who occupied it. The enemy in this affair experienced severe losses. The were completely put to the rout, and fled precipitately, burning their forage and tents. The loss of the Russians at Sebastopol and the neighbourhood, during the last days of December, is estimated at more than 6000 men.

FRENCH REINFORCEMENTS.

Eighty-two officers and 2053 rank and file of the Imperial Guard embarked on Thursday from Marseilles for the Crimea. General Niel, Colonel de Faubert, Aide-de-Camp to General Canrobert, and two Protestant clergymen, took their departure from Marseilles on the 16th, in the *Gange*.

THE SARDINIAN CONTINGENT.

The *Opinione* of Turin, of the 15th inst., states that the departure of the Piedmontese troops for the Crimea will take place on the 28th of February. According to that journal the contingent is to consist of 20,000 men, 15,000 of whom will embark on that day, and the 5000 others are to form the reserve.

THE VIENNA CONFERENCE.

Private letters from Vienna say that Prince Gortschakoff has instructions to accept everything, and accede to all the Allies may demand, *except the reduction of the Russian fleet and the occupation of the Russian territory.*

THE COURT.

The Queen and the Prince continue in the enjoyment of excellent health. Her Majesty has received a succession of distinguished visitors during the week just closed.

His Serene Highness Prince Nicholas of Nassau arrived on the 12th instant, and remained at the Castle until Monday last. His Serene Highness Prince Ernest of Leiningen has also been on a visit, and took leave on Tuesday; and on the same afternoon the Earl of Cardigan arrived, on a visit to her Majesty.

The Duchess of Wellington has succeeded the Viscountess Canning as Lady in Waiting to her Majesty; and Lord Rivers and Mr. Ormsby Gore have succeeded Lord Byron and General Sir E. Bowater as Lord and Groom in Waiting.

His Excellency the Count Walewski, French Ambassador, and the Countess Walewska, returned to London on Wednesday, from a visit to her Majesty, at Windsor Castle; and in the afternoon paid a visit to the Earl of Clarendon, at the Foreign-office, Downing-street.

We regret to learn that the venerable Countess of Carlisle has been attacked by severe illness, and that but slight hopes are entertained of her Ladyship's recovery.

The Earl and Countess of Erroll left town on Monday for Slaines Castle, Aberdeenshire. We are happy to learn the noble and gallant Earl is recovering from the wound he received the battle of Alma.

The Earl of Lichfield has arrived in town from Scotland. His ordship is still very weak, but we are happy to learn that he is progressing satisfactorily towards recovery.

Viscount Melville, who has recently returned from the East Indies from active duties with his corps, has left town for Edinburgh to assume the command of that district, in the room of General Napier.

We are happy to learn that accounts were received in town on Saturday, from Paris, which announce that Lady Harriet Elliot (daughter of the Earl of Minto) is mending better. Lord and Lady John Russell returned to London on Tuesday.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS. *Rectories:* The Rev. E. T. Austen to Barfreystone, Kent: the Rev. H. H. Knight to Newton Nottage, Glamorganshire; the Rev. J. W. Millard to Shimpling, in Norfolk. *Incumbencies:* The Rev. G. Venables to the newly-consecrated church of St. Paul, Chatham; the Rev. W. O. Long to St. Paul's Church, Bermondsey; the Rev. R. V. Sheldon to St. Matthew's, Liverpool; the Rev. J. Boyle to Stranshall, Staffordshire.

NAVAL AND MILITARY INTELLIGENCE.

LIEUTENANT GLYN, OF THE "BRITANNIA."—The following despatch has been received from Vice-Admiral Dundas—

Britannia, in the Dardanelles, December 30, 1854.

SIR,—I beg you will be pleased to lay before the Lords Commissioners of the Admiralty the following statement I consider it my duty (as it may have escaped the observation of their Lordships) to submit for their favourable consideration before I resign the command of the naval forces in the Mediterranean. Early in July last, Lieutenant Henry Frederick Glyn, of the *Britannia*, accompanied by his Serene Highness Prince Ernest of Leiningen, and thirty picked seamen of the fleet, were detached on service to Rustchuck, on the Danube, for the purpose of organising the Turkish gun-boats, and throwing a bridge across the Danube at that point. This work was most effectually performed by the great exertions and ability of Lieutenant Glyn and his Serene Highness, who were frequently exposed during these operations to the harassing fire of the enemy. His Excellency Omer Pacha rendered his due thanks in person to those officers; and the bridge, which is still standing, has been of great assistance to the Turkish army. It may be necessary to add that both Lieutenant Glyn and Prince Ernest, with their men, suffered materially in health from fatigue and the unhealthy season in which these operations were obliged to be undertaken. Medals were offered to these officers from the Turkish Government, but which they declined; and I trust my words will consider their services to be deserving of promotion.—I have, &c.,

J. D. DUNDAS, Vice-Admiral.

The Secretary of the Admiralty

In consequence of the importance, at the time, of the above service, and the very praiseworthy manner in which it was performed, Lieutenant Glyn has been promoted to the rank of Commander.

On Monday morning the *Levant* paddle-wheel steamer sailed from Greenhithe with the last detachment of navvies and 25 horses for the Crimean Railway. For the horses there is three months' fodder on board, together with a portable stable and fittings. There are also several portable houses sent out for the accommodation of the men; and carts, waggons, and trucks for the works. When the railway is completed, the waggons are to be drawn up each ascent with chains or rope by a steam-engine stationed on each hill. As the first and second vessels with men on board are reported to be fast on their way to Balaclava, we may expect soon to hear of the wished-for beginning of the line.

GOVERNMENT have engaged the following steamers as regular transports, in addition to those already engaged—viz., the *Emily, Imperador, Iberian, Retriever*, and the *Rajah*. The screw-steamer *Amity* arrived at Southampton on Sunday, to take out wooden huts to the Crimea for the English army.

A CANADIAN BRIGADE.—The latest accounts from Quebec state that some gentlemen of the colony, and some members of the Assembly, were seriously contemplating the raising of a Volunteer Brigade—not, as might be supposed, for home duty, but for service in the Crimea. One gentleman, indeed, Mr. Rankin, is said to have offered to raise a thousand men at his own expense. Canada is to have a brigade to be formed by the two provinces; the other wing to consist, of course, of the descendants of our gallant allies.

THE LONDON MILITIA.—The Lord Mayor, as Lord-Lieutenant for London, has received her Majesty's warrant to embody the whole of the City of London Militia forthwith. The body will assemble, in the first instance, in the Artillery-ground, and when complete will be sent to do garrison duty wherever her Majesty's Secretary of State for the Home Department may appoint. It is supposed that the first visit will be to the Tower. On former occasions they generally took the duty at Deptford, or Greenwich, or Woolwich.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, JAN. 18.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Melted Snow in Inches.
	Inches.	°	°	°	°			Inches

„ 18	30.107	33·0	21·8	27·9	— 8·5	75	N.E.	0·01

Note. The sign + denotes above the average and the sign – below the average.

The reading of the barometer decreased from 30.55 inches at the beginning of the week, to 30.02 inches by the afternoon of the 16th; increased to 30.15 inches by the 17th, and decreased to 30.03 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 30.263 inches

The mean daily temperatures have varied from 1·6 above to 9·6 below their average values. The mean temperature of the 17th (27·3°) is the lowest on that day since the year 1839, when it was 21·2°, and that of the 18th (27·9°) is the lowest since 1838, when it was 21·2°.

The mean temperature of the week was 32·7°, being 3·2° below the average of the corresponding week during thirty-eight years.

The range of temperature during the week was 18·7°, being the difference between the highest reading, 40·6° on the 13th, and the lowest, 21·8° on the 18th

The mean daily range of temperature during the week was 8·4°.

Snow fell on the 16th and 17th to the depth of about an inch on the level ground, and produced 0.27 in. when melted.

The Weather during the week was fine, and the sky at times nearly free from cloud. *Fog* was prevalent all day on the 12th.

JAMES GLAISHER.

Lewisham, Jan. 19, 1855.

HEALTH OF LONDON Within the week ending January 13, the births of 881 boys, and of 825 girls, in all 1706 children, were registered within the metropolitan districts. The average number deduced for the same week in the ten preceding years was 1446. The number of deaths within the same period was 1465, being an increase on the previous week of 62. The mortality of London is still high, as it has been for a long time. The excess above the corrected average for the week was 145. No less than 300 deaths are referable to diseases mainly affecting infants: 19 are referred to small-pox, 25 to measles, 63 to scarlatina, and 65 to hooping cough. Influenza is on the increase; bronchitis is fatal, and caused 30 cases; pneumonia carried off 139 persons, and consumption 150. In the week 680 persons died under 20 years of age, 193 between 20 and 40, 226 between 40 and 60, 288 between 60 and 80, and 63 at ages exceeding 80 years.

INCREASE IN THE ASSESSMENT OF MIDDLESEX.—At the meeting of the Marylebone Vestry, on Monday, Mr. Greenwell, the vestry-clerk, presented a notification he had received from the magistrates of the county of Middlesex, stating that the magistrates had prepared a new basis or standard for a fair and equal county-rate. The effect of this will be to increase the assessment of the county upwards of another million per annum. The following are a few of the increased assessments of the principal parishes:—St. Marylebone, increased from £987,548 to £1,025,600, or an increased assessment of £37,462; St. Pancras, from £855,612 to £724,500, increase £68,888; Paddington, from £316,000 to £426,000, an increase of £113,000; St. George, Hanover-square, from £5,252 to £916,500, increase £88,168; St. Luke, City-road, from £163,980 to £166,000, increase £12,020; St. Mary, Islington, from £209,944 to £267,000 increase £127,156, St. John, Hackney, from £164,688 to £237,320, increase £7,151; St. Mary Abbots, Kensington, from £117,624 to £248,500, increase £5,876; St. Luke, Chelsea, from £109,230 to £222,250, increased assessment of £2,120. The parish of St. James, Westminster, is left at its present assessment of £121,918; and St. Martin's-in-the-Fields at its present assessment of £278,200. St. Clement Danes, at its present assessment of £1 21, St. Paul, Covent garden, at its existing assessment of £44,5 2, and St. Ann, Soho, is increased from £1,252 to £20,000; whilst St. Margaret's and St. John's is increased from £232,296 to £237,856, or an increase in the assessment of £5,560. This document, showing a total increase on the county assessment of £878,836, was signed by Mr. C. Wright, the clerk to the justices. Mr. Greenwell, the vestry-clerk, in answer to a question put to him, by the operation of the law, an increase of the county valuation had the effect also of increasing the amount paid for police rate. The assessment for the police rate was based upon the county valuation. On the motion of Mr. Clement George, seconded by Mr. Nicholay, a committee was appointed to investigate and report upon so extraordinary an increase in the county assessment, and to wait on the magistrates for the purpose.

GENERAL SIR DE LACY EVANS.—A meeting of some of General Sir De Lacy Evans's friends and former political supporters in Westminster took place on Monday evening, at Beaufort-buildings, for the purpose of taking into consideration the propriety of welcoming and congratulating him on his return to England. There were present on the occasion Mr. Prout, Dr. Bainbridge, Mr. Pouncey, Mr. Joseph Parkes, Mr. Geering, Mr. Walker, Mr. Wilkinson, Mr. Hastings, and various other gentlemen representing the several parishes of Westminster. An address, embodying the sentiments of the meeting, was read by Mr. Prout, the chairman. It contained an eloquent *résumé* of the long, various, and valuable services of the General, both as a soldier and a politician; and expressed a fervent hope that in a short time his health would be so far re-established as to enable him to resume his parliamentary duties. The chairman stated that he had received a note from the General, in which he said that it was his intention, if possible, to be in town by the end of this week, and that he would then probably receive the deputation on Monday. After an interesting discussion, it was decided that a committee should be appointed to make some verbal alterations in the address, and that those present should be again called together to form a deputation to wait upon the General on his arrival in London.

IMPROVEMENTS NEAR THE HOUSES OF PARLIAMENT. Some alterations have just been completed in Palace-yard, which will tend very much to the convenience of members and others attending the Houses of Parliament, as well as those who have business to transact in the courts of law. To a person wishing to cross, no place presented so many difficulties as Palace-yard, arising from the number of vehicles which were constantly being driven backwards and forwards during the Parliamentary session and the sitting of the courts. The west, or exposed, side has now been railed in, with the exception of two openings, one for the entrance and the other for the exit of vehicles. Several dozens of lamps have been erected in the centre and at various other parts of the yard, so that the difficulties in the way of the architect's progress—difficulties so well known to those whose duties call them to the spot at night will be removed. On the south side of the yard a large and substantial shed, though not very ornamental, has been erected as a shelter in rainy weather for members' horses.

SMITHFIELD-MARKET.—The new cattle-market will shortly be opened. By the Act of 1851 it is declared that from the time to be fixed by the Secretary of State for opening the new market Smithfield-market is to cease to be a market for the sale of cattle and horses. The question will then arise as to what will be done with the open space. The authorities of St. Bartholomew's Hospital have urged upon the Government to keep the space open for the benefit of the inhabitants and of the patients of the institution. The law officers have been consulted as to the right of the Crown to the open space, with the view to its appropriation. It appears that the site on which the market now stands was granted by a charter of King Charles I., and no buildings were to be erected or permitted by the charter. The stipulation, it is considered, will not be binding after the removal of the market. The law officers are of opinion that the soil of the market will belong to the Crown, and it is subsutted whether it will not be proper that her Majesty's pleasure should be taken as to the appropriation of the portion of the market-place to which the title of the Crown extends after the market has been removed under the provisions of the Act of 1851, either as an open square or garden, or in some other manner equally conducive to the health and enjoyment of the public.

MR. PARE'S BUST OF THE EMPEROR OF THE FRENCH.—The Duke of Hamilton, the Marquis of Breadalbane, and the French Ambassador and Countess Walewska, and several other notabilities, have visited the studio of Mr. Patric Park during the last week, to inspect the bust of the Emperor Napoleon III, just executed in marble by that artist His Excellency the French Ambassador gave very gratifying testimony to the truth of the likeness, and to the beauty of the bust as a work of art.

AUSTRIAN FINANCE.—Despatches from Vienna state that Baron Bruckmgurtner, the Minister of Finances and Commerce, tendered his resignation on the 11th. It has been accepted. Baron Bruck, whose name is certain to turn up whenever an Austrian Finance Minister is displaced, is spoken of to succeed him. Baron Prokesch, who was formerly Ambassador at Constantinople, is popularly named as Baron Bruck's successor as Ambassador to the Sublime Porte.

THE JEWS IN POLAND.—The recruiting amongst the Jews, and the carrying off (for the military schools) of Jewish children aged from eight to ten, cause amongst that class of inhabitants in Poland indescribable terror and desolation. In all the towns and villages near Kielce nothing but weeping and lamentation are to be heard.

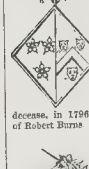
OBITUARY OF EMINENT PERSONS.

THE QUEEN DOWAGER OF SARDINIA.

MARIA THERESA, QUEEN DOWAGER OF SARDINIA, the widow of the gallant unfortunate Charles Albert, died at Turin, on the 12th inst. Her Majesty was the second daughter of the late Ferdinand III., Grand Duke of Tuscany, and was sister of Leopold II., its actual Grand Duke; she was an Archduchess of Austria. She was born the 21st March, 1801, and became, the 30th September, 1817, the consort of Charles Albert, who resigned the Crown of Sardinia, and died an exile in Portugal in 1849. Her Majesty leaves issue of this marriage two sons—viz., Victor Emmanuel II., present King of Sardinia; and Ferdinand Maria Albert, Duke of Genoa.

MRS. HAMILTON.

THIS lady, who died on the 1st inst., in Bryanston-street, Portman-square, was ELizabeth, widow of the late Governor Henry Hamilton, of Dominica, brother of the Right Honorable Sackville Hamilton, and grandson of Gustavus, first Viscount Boyne—which title was conferred upon him for his distinguished valour and eminent services at the battle of the Boyne under William III. Henry Hamilton, Mrs. Hamilton's husband, was Governor of Canada, Bermuda, and Dominica. Mrs. Hamilton was the daughter of Major Wm. Lee, of Bolney-court, Oxfordshire, and was descended maternally from the ancient family of Cuninghame of Kilmaurs, Scotland, founded by Warnebald, who settled in Cunninghan in the twelfth century. The chief line of this ancient race—the Cuninghames of Kilmaurs, Earls of Glencairn—became extinct at the decease, in 1796, of John, fifteenth Earl of Glencairn, the friend and patron of Robert Burns



SIR GEORGE WOMBWELL, BART.

SIR GEORGE WOMBWELL died on the 14th inst., at his town residence, George-street, Hanover-square He had retired to rest on the previous night at ten o'clock, apparently in his usual health and cheerful spirits, but in the morning, when his servant went to call him, he found his master dead. Sir George was born 13th April, 1792, the eldest son of Sir George Wombwell, the second Baronet, by Lady Anne Bedgeyer, his first wife, daughter of Henry, second Earl of Faucenberg, and grandson of Sir George Wombwell, Chairman of the East India Company, who brought back into the family the ancient estate of Wombwell, and was subsequently created a Baronet in 1778. The gentleman whose death we record married, 23rd June, 1824, Georgiana, second daughter of the late Thomas Grey Hunter, Esq., of Croyland Abbey, county Lincoln, and leaves four sons, by the eldest of whom he is succeeded.

T. D. SKUTE, ESQ.

THOMAS DEANE SKUTE, Esq., late of Branshaw-hill, in the county of Hants, was for many years a magistrate and Deputy-Lieutenant of the county of Hants, for which he served as High Sheriff in 1821. He married Charlotte, daughter of Lieut.-General William Neville Cameron, E.I.C.'s service, by Charlotte his wife, second daughter of Sir William Gordon, seventh Baronet, of Embo, county Sutherland, and has left issue five sons and six daughters

Mr. Shute died at his residence, 19, Chesham-place, Belgrave-square, on the 24th ult., after a short illness, aged sixty-two.

LORD ROBERTSON

THE Hon. Patrick Robertson, Lord Robertson, a distinguished Judge of the Court of Session in Scotland, died at Edinburgh on the 10th inst. Lord Robertson was son of the late James Robertson, Esq., of Edinburgh, Writer to the Signet. He was born in Edinburgh, in 1794: he passed Advocate in 1815 The clearness of his intellect and the readiness and versatility of his powers soon won him great practice at the Bar. His keen humour, readiness, and success as counsel in civil actions, and especially when acting for the defence, were proverbial. Robertson was chosen Dean of the Faculty of Advocates in November, 1842. A twelvemonth afterwards, on the resignation of Lord Meadowbank, he was promoted to the Bench of the Court of Session. He was elected Lord Rector of Marischal College and University of Aberdeen in 1848.

Lord Robertson's convivial renown was early established. It is now nearly forty years since his friend Lockhart (whose he outlived only a few weeks) wrote of him thus:—

The last of two or three Presidents, Mr. Patrick Robertson, a young counsellor of very rising reputation and most pleasing manners, made his approach to the chair, amidst such a thunder of acclamation as seems to be reserved for the cheeks of the Bacchantes when Silenus gets astride on his ass, in the famous picture of Rubens. Once in the chair there was no fear of his quitting it while any remained to pay homage to his authority. He made speeches, and in the merit of which consisted (unlike epic poems) in their having neither beginning, middle, nor end. He sung songs in which music was not. He proposed toasts in which meaning was not. Hot over everything that he said there was flung such a radiance of sheer mother-wit, that there was no difficulty in seeing the want of meaning was not involuntary want. By the perpetual dazzle of his wit, by the cordial flow of his good humour, but above all by the cheering influence of his broad, happy face, seen through its halo of punch steam, he contrived to diffuse over us all, for a long time, one genial atmosphere of unmingled mirth

Robertson is commemorated by Lockhart in many parts of his "Life of Scott." Robertson having ever been the dear friend and boon companion of the author of "Waverley."

REAR-ADMIRAL SIR RICHARD O'CONOR, K.C.H.

THE death of this gallant officer occurred on the 10th inst., at his residence 7, Westbourne-terrace, Hyde-park. Sir Richard was the second son of the late Sir Patrick O'Conor, of Cork, and grandson, maternally, of John Thery, Esq., of Castle Thery, in the same county. He entered the Navy September, 1793, and was, consequently, more than half a century in the service. The rank of retired Rear-Admiral he obtained in 1850. In 1813 he accompanied the expedition to Canada, assisted in the actions of Lake Ontario, and superintended the naval yards on the great Canadian lakes. In 1814 he was Flag Captain to Commodore Sir J. L. Yeo at the siege of Oswego, and was entrusted with the direction of the boats and gun-vessels employed in landing the troops. In 1815 he attained Post rank, and in 1836 was nominated a Knight Commander of the Guelphic Order. Sir Richard O'Conor married Hannah, daughter and coheir of John Rose, Esq., an eminent merchant and East India Director, and had one son, an officer in the H.E.I.C.S., and three daughters, of whom the eldest married a Swiss nobleman, and the youngest, Emily-Clarce, was married, four days only before her father's death, to Maurice James O'Connell, Esq., eldest son of James O'Connell, Esq., of Lakeview, Killarney.

SIR A. F. BARNARD, G.C.B., G.C.H.

GENERAL SIR ANDREW FRANCIS BARNARD, Lieutenant-Governor of Chelsea Hospital, was son of the Rev. Henry Barnard, by his wife, a daughter of Dr. Robertson, and was grandson of Dr. Barnard, Bishop of Derry, mentioned in Goldsmith's "Retaliation." Andrew Francis Barnard was born in 1773, and entered the British Army, as Ensign of the 90th Foot, in 1794. He first saw active service at St. Domingo, from April to August, 1795; and he accompanied the expedition under General Sir Ralph Abercromby to the West Indies, and was at the reduction of Morne-Fortunée. He went to the Helder in 1799, and was present in the various them on the 27th of August, 10th of September, and 2nd and 6th of October of that year. Barnard subsequently shared in the glory of the Peninsula; at Barossa he was severely wounded; he was present at Ciudad-Rodrigo, at the battles of Salamanca and Vittoria, and at Nivelle (where he was again wounded), and at the siege of Bayonne. During the last four years of the Peninsular strife Barnard commanded the 1st Battalion of the Rifle Brigade. He received a third wound on the field of Waterloo. The Duke of Wellington had such high opinion of Barnard's martial talents that, on the capitulation of Paris, he appointed him Commandant of the British division occupying the French capital. In George IV., in 1821, Barnard was appointed a Groom of the Bedchamber; and in 1826 was made Equerry to the King. On the accession of William IV. he was appointed Clerk-Marshal in the Royal Household, and for many years prior to her decease he was Clerk-Marshal to Queen Adelaide. He was Knighted and created a G.C.B. in 1840, and became a General in 1851. Sir Andrew Barnard was also Colonel of the 1st Battalion of the Rifle Brigade On the death of General Sir George Anson, in 1849, Sir Andrew was selected by the Duke of Wellington to be Lieutenant-Governor of Chelsea Hospital. The gallant General had a great number of Crosses, English and foreign Sir Andrew died at his residence, Chelsea Hospital, on the 17th inst.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

MARY RUSSELL MITFORD—has just been taken from among us in the sixty-ninth year of her age, and the forty-fifth year of her authorship. She herself has told her story to the public so recently, and the main features of her life have still more recently been narrated in the columns of this Journal, that we shall content ourselves on this occasion with but a very few words about one whose name will live while there is a love left among Englishmen for transcripts of rural life drawn with such a convincing air of locality, that they make their way at once to our most pleasing recollections and kindliest sympathies. Her first work was a volume of poems, published in May, 1810, price seven shillings. The volume took. Even the *Quarterly* reviewers,

> Those clippers and hewers,

dealt more than kindly with the youthful poetess. From this period, till within a very few years, her literary career was one course of progress and improvement. She will not live, however, by her poetry. "Rienzi" is her best play, but "Our Village" is the work by which she will survive. Some one called her, not unhappily, "a healthy Hannah More." Goldsmith's "Village" is tinged throughout with a touching melancholy; Crabbe's "Village" is one that no cheerful person would wish to live in; but the "Village" of Mary Russell Mitford is truly English—true to English life and English scenery, and one in which the healthiest mind will find inciden nts to delight and scenes to solace and improve.

On the 16th of December Miss Mitford wrote to a friend:—"This is a day I never hoped to see—my sixty-eighth birthday." We name this because the *Athenæum* gives her age as sixty-six, an error which has been copied by several of our contemporaries. It has been hitherto only known to a few that last autumn her Majesty the Queen, on her return from the Highlands, sent Miss Mitford a present of £50, as a testimony of her respect for her genius, and sympathy with her then great physical sufferings. Miss Mitford, we understand, was advised that her Majesty did not wish the fact to be made public; and therefore, it was only communicated to a few private friends. But, death having done his work, there is no reason why a circumstance so honourable to the Royal heart should be any longer concealed. It is another instance of how truly the Queen of England sympathises with literature, and of the happiness she feels when she is unostentatiously doing good. The funeral took place on Thursday, at Swallowfield; and it was her particular desire that, like her life, it should be free from pomp or ceremony. She was quietly borne to the grave by some who shared and enjoyed her bounty; followed only by the Rev. Mr. Harness, her executor; and her medical attendant and friend, Mr. May, of Reading; and her faithful man and woman servant.

We have been silent on the subject of an alleged discovery of an unpublished novel by the Author of "Waverley," (in it is said) Sir Walter's own handwriting. The truth is, we put no kind of belief in the assertion when we first heard of it, nor do we give it any kind of credence now that we have made some inquiries about its truth. Who could believe that a complete unpublished novel existed by the best known author of his age, who sent whatever he wrote to press as soon as it was written?—and by one who had so many inducements to turn whatever he possessed of the kind immediately into money. The intimate friend of Sir Walter's whom we have consulted on the subject observes, pointedly enough, "I consider the recent story of a newly-discovered romance by Scott as a much greater fiction than any of his own." We must have other proof than has yet been afforded before we can give our belief to so unlikely a supposition. We will put the owner to the test. The gentleman still lives—Mr. George Huntly Gordon—who acted as Scott's amanuensis, and who actually transcribed for the press *thirty* volumes of the Novels and Tales, and "Life of Napoleon," from the Author's original manuscripts. Let the manuscript be shown to Mr. Gordon, and, if Mr. Gordon says it is in Scott's handwriting, the manuscript should be published forthwith, and the tale tried by its own merits. Scott's alleged letter of gift, and which is printed, is only a clumsy imitation of Scott's natural style. Is it not strange that this long-heralded discovery should have been made public immediately after the death of the person who was best able to settle its genuineness? The manuscript correspondence of Sir Walter, we have authority for stating, shows up to 1827, no trace whatever of an unpublished tale from his own pen. We have had Byron forgeries—is not this a Scott forgery?

Peter Robertson is no more! And who was Peter Robertson? hundreds will ask inquiringly, to whom his name is entirely unknown. Can we answer the question? Peter was a Lord of Session in Scotland—Dean of Faculty, Jeffrey the critic, were paper-lords, like Peter)—a lord among Edinburgh wits, and a wit among London lords. This conveys something; but, alas! how little of Patrick or Peter Robertson! Peter was in Edinburgh society what Dick Burnett was among the wits of London in Queen Anne's reign, and what the late Mr. Luttrell was in Whig society during the Whig importance of Holland-house. Peter was a fellow of infinite humour, a laborious but poor poet, a man who united (what a rare union!) English wit with Scotch humour. How will he live (what a rare union!) English wit with Scotch humour. How will he live (what a rare union!) English wit with Scotch humour. How will he live

REVIEW OF THE CRIMEAN CAMPAIGN.

(Accompanied by a Map.)

In the interval of comparative inaction between the first abortive attack upon Sebastopol and the renewal of active siege operations, we naturally turn to review the history of this grand enterprise; to criticise the policy of those entrusted with the conduct of it; to inquire how far accident may have influenced the result; and, at the same time, to speculate upon the probable events and issues of the future. With a view of aiding these inquiries we have produced a Map, on a sufficiently large scale, of the country between the mouths of Alma and the harbour of Balaclava, with the course of the march of the Allied armies marked, as well as their halting-places; the spots on which actual engagements have taken place; and the principal features of the siege works, and of the intrenched camp of the besieging army, at the present time. In the discussions upon the siege operations themselves, and various incidental matters connected with them, we have from time to time taken our full share; and in the interests of truth and impartiality we have also fairly recorded the opinions of competent authorities who have written on the subject. Thus, in our paper of the 6th instant, we brought under the notice of our readers an admirable chapter by General Sir Howard Douglas; and this week we light upon an ably-written article in the new number of the *Quarterly Review*, which, though published anonymously, is evidently from the pen of a man of no small experience and authority. With our map before us, let us now accompany the Reviewer in a critical retrospect of some of the principal incidents of the Campaign of the Crimea. In doing so we will pass over many precedent and collateral matters—as the inadequacy of the invading force, the lateness of the season at which the expedition was commenced (points already sufficiently enforced), and also the mistake of omitting to destroy Odessa as a military dépôt—a dépôt whence the reinforcements were hurried which well nigh destroyed our army on the day of Inkermun We will say nothing of the omission to occupy the Isthmus of Perekop, as a preliminary to the siege (an omission of less importance, by the way, if accounts of another read of communication having been constructed with the main land to the east be correct); we will pass over the transport and landing of the vast Allied army, so admirably planned and executed by Sir E. Lyons, and come at once to the day of Alma as the point of departure

The terrible slaughter at the battle of Alma, and particularly the heavy loss sustained by the British, is too vividly in the recollection of all to need recapitulation. According to the Reviewer, this excessive loss was attributable to a departure from the plan of attack originally agreed upon by the French and British Commanders, which change itself was owing to the urgent representations of the former, after the operations of the day had commenced. The plan of attack, by his account, was that one French division, under General Bosquet, accompanied by a part of the Turkish contingent, advancing along the western or seaward slope of the line of the ships, should force the heights, and turn the enemy's left flank; the remainder of the French army, when this was accomplished, attacking that part of the Russian centre which rested on the high ground above the village of Almatouk; and that "the English, retaining their inland position, were to wait beyond the village of Burliuk until the French had established themselves on the heights, and were then to turn the Russian right, avoiding as much as possible the fire of the centre batteries. It was after the French had scaled and formed on the heights, and previous to their attack on the left centre of the Russians, that "Marshal St. Arnaud, perceiving that fresh columns of infantry and batteries of heavy artillery were being brought against him, and fearing to be overpowered by a vast superiority of numbers, sent most urgent requests to Lord Raglan to advance without further delay. 'We are massacred'" declare his Aides-de-Camp, in the somewhat exaggerated language of our allies. The moment appeared critical. Regardless of the overwhelming masses of artillery in front, and no longer adhering to the original plan, the British Commander gave the order to move forward" So says the Reviewer; and that the Light Division, the first to attack, broken by the irregular ground, by the burning of the village, and the fording of the river, were not allowed to halt before the completion of the hill: to which last "grave error" is to be attributed the severe loss suffered by three regiments—namely, the 7th, 23rd, and 33rd. All this implies more or less of condemnation of those who had the conduct of affairs; and the writer distinctly charges that "the attack on the Russian centre, instead of persevering in the original plan of turning the right flank," "must be attributed to the urgent messages of the French Commander-in-Chief, whose known character for exaggeration might have justified some hesitation before the original plan of attack was completely abandoned." This version of the affair may be true to a certain extent, or it may be altogether erroneous; but certainly, as far as the original plan of operations is involved, it is at variance with Lord Raglan's own account (Despatch, September 28), which distinctly states that the English were "to attack the right *and centre* of the enemy's position," and adds nothing of any modification of the plan when in course of carrying out

The omission to follow up the successes of the day by pursuit of the enemy, which would have converted their flight into a complete rout, was mainly owing to the want of cavalry and field artillery. But even in the advance upon Sebastopol the Reviewer attributes to the French Commander the delay of an additional day. "Lord Raglan," he says, "desired to march in one day to the Belbec; but Marshal St. Arnaud now objected. The armies therefore halted on the Katscha, and on the following day (the 24th) encamped on the left bank of the Belbec."

We now come to the point where the original plan of the siege—that of an attack on the north side—was abandoned, and the famous flank movement made which brought the Allied forces to their present position on the south of the town. And here again the Reviewer attributes the controlling authority to Marshal St. Arnaud, and gives a version of the motives which influenced him, which does not exactly tally with the account given by Lord Raglan. By Lord Raglan, the alteration of plan is attributed to the fact that "the enemy had established a work which commanded the entrance of the river, and delivered its use for the disembarkation of troops, provisions, and material;" whereas the Reviewer states various strategical reasons as the grounds upon which Marshal St. Arnaud supported this movement:—as that his troops could not encamp on the left bank of the Belbec so as to gain a position to open regular approaches without being exposed to the Russian batteries which commanded the river; that the fleet would have to remain off the Katscha, and disembark on an exposed coast the stores and siege train; the road thence, "which we had no available means whatever to protect, being at the same time exposed to the attack of an enemy in our rear;" adding, "the reason, we believe, which finally determined the flank march was that insisted upon by Marshal St. Arnaud—the inability of his army, from its exposed and comfortless position, to resist." This view, we must add, receives confirmation from the despatch of Admiral Hamelin, dated 27th September, off the Katscha: that the sinking of the ships across the mouth of the harbour of Sebastopol and "the external works recently thrown up round Fort Constantine" (works, in combination with other), capable of enfilading the approaches on the northern side) "had determined the sudden change of route." However, upon whatever grounds undertaken, that bold flank march through a thickly-wooded and difficult country to the east of Sebastopol was effected by which we reached Balaclava on the 26th. On the way, at Mackenzie's Farm, our van fell in with the rear of the Russian army, put them to the rout, taking from them much valuable spoil, including Menschikoff's carriage and effects. But it was not till some time afterwards that the real origin and nature of this affair was understood; and it became known that the two hostile armies, in ignorance of each other's movements, had actually been changing places. Prince Menschikoff, after his defeat at Sebastopol, had united with his army to the south of Sebastopol, where, after a short breathing time, he again set out northward towards Bagtchesarai, or Simpheropol, with the intention of taking the Allied army in the rear, in their supposed position on the north of Sebastopol. "The Prince was withdrawing to Simpheropol, and the explanation he has since given of his object, at that time misunderstood, is undoubtedly the true one. From the very beginning he appears to have overrated the force of the Allies. He believed, as was natural enough, that we should not have left with his army to the south of Sebastopol, where, after a short breathing time, he again set out northward sufficient strength to interrupt reinforcements and supplies which he was daily expecting from the north. He reckoned upon reaching Simpheropol, as we had reckoned upon reaching Balaclava, unperceived, and from thence, when sufficiently strengthened, threatening our rear and compelling us to raise the siege. The plan was neither ill-devised nor ill-executed. Our movement, as it proved, was more successful, and has probably saved our army from utter destruction."

There is no doubt that the enemy was completely taken by surprise by this movement; that the place was quite unprepared for defence on the south side; and the Reviewer argues that, if it had been vigorously attacked at once, it might have been taken by a *coup-de-main*. We quote the passage, which gives the *pros* and *cons*:—

On the appearance of the Allied armies on the heights a panic prevailed in Sebastopol. Steamers and boats of every description were seen coming to and fro in the harbour; long lines of carts, carriages, ladies on horseback, and a crowd of persons on foot, were observed hurrying along the road leading into the interior. Property of almost every kind appears to have been removed from the town. Almost every deserter and prisoner who has since fallen into our hands declares that, had the Allies at once entered the place, little or no defence would have been attempted, and that the inhabitants were utterly at a loss to account for our inaction. Sir John Burgoyne, it is believed, was of opinion that the place should be summoned to surrender, and that, in case of refusal, we should be justified in at once proceeding to the assault. Several of the ablest and most experienced officers in the British army (amongst whom may be mentioned the late Sir George Cathcart), and, we understand, in the French army also, thought that a *coup-de-main* would be successful, and would be attended with comparatively but small loss. The reasons assigned against this summary proceeding were, that it was inconsistent with humanity thus to treat a town which was filled with women and children; that to assault a place which would fall by a regular siege could never be justified in case the attempt should end in a reverse or a disaster; and that, even if we took possession of the southern part of the town, we could not hold it for any length of time, under the guns from the opposite forts, and from the ships. Such reasons appear to us, we confess, to be inconsistent with the state, resources, and numbers of the Allied armies, and with the time and mode in which we had entered upon this campaign. Had they been valid, it was more than mere chance and want of foresight to throw an army into the Crimea without a reserve or the means of carrying on a regular siege; for it was only the possibility of taking the place by a *coup-de-main*, as we have already observed, which could justify the expedition.

We will not describe in detail the subsequent delays complained of by the Reviewer; we arrive at the main and important fact that three weeks elapsed after the arrival of the Allies on the heights before their batteries were ready for the attack; and that, in the meantime, the Russians made unparalleled exertions—men, women, and children working in common to defend the south of the town; that, in fact, all the works which the Allies have hitherto been besieging were those constructed in that interval after their arrival. When the extensive and solid nature of these new works was pointed out to the chief British engineer, he is said to have replied, "that they were only built to be knocked down again." The difficulty of knocking them down, however, has since been but too well established. The first day's acquaintance of the combined land and sea attack dispelled the too confident expectations of the besieged. Why, "the Reviewer asks, "could we not watch the fall of that day without a heavy heart? We had failed, and a long and terrible struggle was in store for us. We had foolishly underrated the enemy's resources, and had allowed him to put forth his strength. An occasional explosion, a few broken batteries, and a slackened fire, might cause, for a time, the enthusiasm of our men, but it was too evident to all reflecting persons that we had entered unprepared upon a gigantic undertaking."

The fatal error, rendered unavoidable by our insufficient numerical force, of attacking the place only on one side, instead of investing it all round, which has been so often pointed out by ourselves, and has been strongly urged by Sir Howard Douglas, is also commented upon by the Reviewer; who, in proof of the fatal results of the deficiency in quantity and inferiority in power and quality of our material guns too few and too weak, shells which would not explode, &c. One passage on this head shall suffice. It refers *inter alia* to a point which we have not before seen mentioned:—

But with what means at our command had we undertaken to besiege a stronghold almost unequalled for its strength and the extent of its resources? History scarcely presents an instance of a more ill-digested scheme! We had brought with us a siege-train of sixty guns, including mortars, nearly all of a calibre inferior to those of the enemy. The French had a larger number, but they were of brass, and consequently inferior for all purposes to those of the besieged. In order to arm even three batteries we were compelled to dismantle our ships and to employ our seamen. More than 800 rounds can rarely be discharged from one gun, on account of its inability to burst and the enlargement of the vent. Few guns, indeed, will bear more than 400 rounds. As it up the first day we had fired above 100 rounds from each gun, if we had continued at this rate, in less than six days our batteries would have been disabled. The amount of ammunition available for a small fleet is soon expended, and was expended in about five days. Some of the most useful guns had only been supplied with one hundred and twenty rounds each. The number of our artillerymen was so inadequate to the working of the siege guns that we were compelled to cease our fire during the night; and thus the enemy was able to repair undisturbed the damage done to his earthworks during the day. Even to keep up a moderate fire from sunrise to sunset, and to leave the proper relief for exhausted, the officers and gunners were only every alternate night hours off duty while, deducting nearly an hour, the time required to go from the camp to the trenches, left but six hours' rest and repose—an amount of labour which human nature could not long endure.

The neglect to defend the eastern extremity of the plateau whereon our army is encamped, which laid us open to two attacks (one resulting in the memorable, but costly, victory of Inkermann), has been pointed out again and again; and, in now alluding to it, it is only to direct the reader's attention to the precise spot in question, which is marked on the map. The scene of the previous battle of Balaclava is also indicated. Our purpose in all that we have said upon the subject is to put correct information as materials for history, and not to take any share in the party quarrels, the scenes of crimination and recrimination which have agitated and still agitate the public mind on this subject. We need hardly add, therefore, in conclusion, that in citing some of the principal points in the able article which we have just had under consideration, we have avoided touching upon those passages in which strong opinions of the conduct of Ministers and other individuals are expressed. That serious errors have been committed in the course of the campaign cannot be denied; but this is not the moment to discuss at whose door they lie.

COMPLIMENTS BEFORE SEBASTOPOL.—Some time ago the *Stromboli* was sent in towards the batteries of Sebastopol with a flag of truce, in order to take back a Russian artillery officer in exchange for Lord Lieutenant. Sir Edmund Lyons took advantage of this opportunity to send as a present a cheese to the Russian Admiral, with whom he had been acquainted in former days. On the 13th ult. the compliment was returned. A formidable-armed boat came out from the town and brought a deer as a present back to the Admiral, together with a letter from the Russian Admiral, in which the passage occurs, that "The Russian Admiral remembers with pleasure the time of his acquaintance with Sir Edmund, and expects not to have seen him for so long, except the other day, when he came in rather close with the *Agamemnon*."

THE DUKE OF CAMBRIDGE.—On Monday afternoon the Duke of Newcastle forwarded letters to her Royal Highness the Duchess of Cambridge, at Cambridge House, from His Royal Highness the Duke of Cambridge, now at Malta. The Royal Duke has removed to that island to see what effect the change of air may have on his debilitated health, which at Constantinople was on the day before the battle of Inkermann. His Royal Highness fully intends to remain at Malta to try and recruit his health, in order that he may return to the British army in the Crimea immediately after its restoration, as he will not hear of coming home until all other means have failed. His Royal Highness was compelled to keep his room when the last letters were dispatched.

RUSSIAN SPIES.—It is impossible to hear of such surprises as that of last night without being struck by the idea that the camp police is not quite so well organised as could be wished. It seems that the Russians get very good information about everything going on in the Camp. Who knows, for instance, that the night's Service, 2,000; Sir John Pennefather's Service, 2,000; Charles Kemble, £10,000; Mr. Morrell, ink manufacturer, Fleet-street, £20,000.—The late Mrs. Grooby, of Swindon, relict of the Rev. James Grooby, has left the sum of £1,000 to be equally distributed among to the Church Building Society, £2000; Clergy Society, £2000; Clergy Orphan Society, £2000; Society for Promoting Christian Knowledge, £2000; Church Missionary, £1000, and other liberal bequests; and that a new window of coloured glass, with Scripture subject, be placed in the chancel of Swindon church, in memory of her lamented husband, for twenty-five years the Vicar.—The Rev. J. B. Storry, M.A., Vicar of Great Tey, Essex, has bequeathed £100 to each of the following institutions: British and Foreign Bible Society, Church Missions to Africa and the East, Society for Promoting Christianity amongst the Jews, and the Society for Poor Pious Clergymen; and to the Essex and Colchester Hospital, £50.

MUSIC.

THE production of Mrs. Mounsey Bartholomew's new oratorio, the "Nativity," at St. Martin's-hall, on Wednesday evening, under the direction of Mr. Hullah, created extraordinary interest. The appearance of a work of this severe and elevated class, from the pen of a female composer, was an occurrence absolutely unprecedented; and Mrs. Bartholomew's high and long-established reputation as a thorough artist gave every reason to anticipate a successful result. This expectation has not been disappointed. The "Nativity" is a work of very great beauty and considerable grandeur. It possesses, moreover, originality and independence of style; it is not, like most of the recent productions of this class, a string of reminiscences of modern composers, especially Mendelssohn. Mrs. Mounsey has nourished her mind by an extensive study of the great masters of all ages and countries; and it is especially to be observed that she has not neglected the composers, both ecclesiastical and secular, of her own country. There is an English character about her music which, in these days, when most of what is called new music in this country is only German music at second-hand, gives it novelty and freshness. This English character, too, makes the music akin to the poetry to which it is adapted—enabling the singer to speak every word with its true emphasis and accent, a merit in vocal music as great as it is rare.

The libretto is by the composer's husband, Mr. Bartholomew, a gentleman well known in the musical world as the friend and literary assistant of Mendelssohn. The subject is indicated by the title; it is a connected series of Scriptural passages, selected from the Prophets and the Apostles, relative to the advent and birth of our Saviour. It is compiled with great taste and judgment. The oratorio is short—not more than one part, and occupying little more than an hour in performance, though it was longer on Wednesday evening, owing to a circumstance which must have been gratifying to the composer—the number of pieces that were encored. The principal singers were Mrs. Endersohn, Miss Hudziri, Miss Blagden, Miss Palmer, Mr. Allen, and Mr. Weiss, all of whom acquitted themselves laudably; and Mr. Hullah's well-trained choristers sang with their usual clearness and precision. The finest parts of the work were the airs and concerted movements for the principal voices. The recitatives, written in a plain and simple style, were frequently grand and solemn, but they were somewhat deficient in elaboration, and in that profundity of combination and richness of effect which choral music requires. The orchestral accompaniments were ingenious and beautiful, showing great skill in that difficult branch in the art. The performance was most successful. The hall was crowded to the doors; the principal pieces were encored; and, at the conclusion, the fair composer, being loudly called for, was led into the orchestra by Mr. Hullah, and greeted with loud applause from every part of the Hall.

WORCESTER AMATEUR CONCERT.—On Tuesday evening the amateurs of Worcestershire gave a concert in the New Music-hall at Worcester, for the benefit of the Patriotic Fund. The room was approdately decorated with festoons of laurels suspended from the pillars; conspicuous above the orchestra were the monograms "V. N.," the words "Alma" and "Inkerman," tastefully executed in flowers and wreathed in laurel; while over all floated the national flags of the Allies. The audience numbered nearly five hundred of the *élite* of the city and county, among whom were noticed the Mayor of Worcester, Earl Beauchamp, Lady G. Lygon, Lady M. Coventry and party, Lord Sandys and party; the Bishop of Worcester and Mrs. Pepys, Lady Ward and party, the Dean of Worcester and Mrs. Peel and party, Sir Edward Hulse, Sir T. Pakington and Lady Pakington, Lady Keane, Hon. and Rev. J. Somers Cocks, Hon. and Rev. W. Talbot and Mrs. Talbot; Sir E. Lechmere and Hon. Lady Lechmere, Sir A. Campbell, Lady Wimington, Lady Pigott, Sir C. and Lady Hastings, Major Wakeman, and the officers of the Worcestershire Militia, &c. It would be invidious to criticise the efforts of amateurs in aid of such a cause, but among the solo performers the songs of the Hon. Mrs. D. Ward, Mrs. Pipcock, and Miss Sandys excited the greatest and most deserved applause. The choruses, especially the music of "Macbeth," were given with great effect and precision—thanks to the careful training and able conductorship of Mr. Dove, who has devoted the greatest pains to the rehearsals. The accompaniments of Mr. Aspley left nothing to be desired. Mr. Hargreaves concluded the entertainments. We expect that a large sum will be realised.

THE THEATRES.

PRINCESS'.—The version of M. Casimir Delavigne's tragedy of "Louis XI.," which was produced on Saturday, is by Mr. Dion Boucicault, and has been accomplished in the most admirable manner. Whatever was feeble in his author has been strengthened; whatever was diffuse has been abridged; and where more development was wanted, that has been lavishly and skilfully supplied. In this manner an effective French tragedy has been made a more effective English one. The Royal hero of the poem is particularly one of those historical individualities that are especially suited to the purpose of fiction, and has attracted the attention of Sir Walter Scott, as well as that of the French dramatist. The character of this extraordinary monarch may be regarded under many aspects. M. Delavigne, however, in his dramatic portraits, has taken but one side of the historical—the perfidiousness and hypocrisy of the King, with the irritability arising from disease and remorse, without those decided qualities of political prevision and determination by which, with all the evil of his nature, he was appointed to be a benefit to the State over which he governed. He keeps out of sight, too, the wrongs Louis had suffered from the Barons, whom he had sought to oppress, and heaps upon his memory as actual guilt the suspicions of the chroniclers. The dramatist selects his points with skill, and prefers those which impart consistency to the picture. We have in the drama, therefore, the feasible but politic Monarch, opposed by *Charles the Bold*, in the person of the *Duke of Nemours*, put on his defence and escaping from danger by the force of cunning, which, in his case, is made to be the wisdom of the coward, and those fortuitous events of which the unscrupulous are never slow to take advantage. *Louis* is also portrayed as dastardly and superstitious, trusting in religious ceremonials, expecting miraculous aid, pleading for absolution on confession without repentance, and in his last moments making a contract with Deity for forgiveness. All these points were powerfully delineated, all eminently dramatic, and some of them no doubt from being thrown into relief by the genius of the actor, and the prestige of his reputation, to carry them safely through. Here is, indeed, the great actor's true triumph that he can soar above the conventionalities of the stage, and gain a decided success for a difficult creation, and one in which the attributes that the religious sentiment of an audience is touched, and trembles along the line of impulse. Mr. Kean did this, and therefore we use the word "genius" advisedly; and the more so, because in the wonderful effort that he made he had no model, and was left to his own unaided resources. It is thus that original characters test an actor's powers and add to his reputation. Old parts bring him into comparison with older performers, and no one has suffered more from the charge of imitation than Mr. Kean. But a large portion of *Louis XI.* must be indebted for nothing to any prototype whatever; and is full of truth, nature, and force. The whole man was there: with that underlip expressive of perpetual pain, those tottering limbs, and that feeble voice, occasionally all the more emphatic in its cries of agony—with its remorse, its suspicion—the paternal love and love—the feelings of the man, the instincts of the Monarch: with all its contrasts, moral and physical—we repeat, the entire design of the poet in this masterly portrait was unreservedly developed by the actor. Had his part been written for Mr. Kean, it could not have suited him more exactly. Well, too, was he supported—by Mr. Ryder in *Coitier*, and Mr. Mellon in *Tristan L'Hermite*: the former being the most important. The physician who exercised such mysterious influence over the mind and conduct of so subtle a Monarch, is a unique character, and requires special qualities, which Mr. Ryder brought to its performance. Mr. Graham, in *Comines*, also was effective; as were, likewise, Miss Lesley as the *Dauphin*, and Miss Heath as *Marie*: Mr. Meadows was excellent as the Barber-Minister, *Oliver le Daim*. The appointments of the drama were picturesque and appropriate; but we are happy to add that it depends much more upon its intrinsic merits as a poem than as a stage spectacle. We have no doubt of its continued success, and welcome it as one of the public taste, the results of which cannot but be beneficial to the best interests of the theatre. The skill with which the tragedy has been adapted to the English stage is altogether admirable—such, indeed, that we are inclined to name the adaptation not only a translation, but an apotheosis of the original. Foreign masterpieces may thus be allowably placed on our English boards; and, were the practice confined to them, there would still be "ample room and verge enough" for native talent. The house was crowded, and at the conclusion Mr. C. Kean was summoned before the curtain, and experienced an ovation which must have been as gratifying as it was well merited. Mr. Kean has as yet done nothing so well calculated as this performance of *Louis XI.* to ensure him what may rightly be called *fame*, as distinguished from mere reputation. In most of its qualities, moreover, it is unapproachable, being in that *sui generis*; and Mr Kean, in relation to them, must remain "himself alone," until the stage be forgotten.

ST. JAMES'S.—MR. H. Spicer's "Alcestis" was produced on Monday with distinguished success. With us the subject of this charming play, as treated by Euripides, has ever been "a thing of beauty and joy;" and in this its modern form—though filtered through divers French versions, operatic and dramatic—the beauty of the original idea still convenes, notwithstanding the objections that may be validly entertained against the variations in its treatment. Racine and Alfieri, as well as some inferior French adapters, have all tried their powers upon this fine and exquisitely pathetic theme; but hitherto it has been a stranger to the English stage. Miss Vandenhoff has been selected as the fittest representative of a classic heroine, and justified by her admirable acting the judgment by which she had been chosen. The action is divided into three scenes, separated by the fall of the curtain. The first exhibits the tale of *Apollo's* relations with *Admetus*, sets forth his love for *Alcestis*, as also his excessive love of life, his wife's sympathy with which feeling is very beautiful. The second act exemplifies her devotion, her resignation, her death: brought into contrast with her husband's inhospitality towards *Hercules*, and the revels of the strong man in the house of the widowed. This contrast is exceedingly well managed; nor must we omit here to praise Mr. Stuart for the broad and classic style in which he realised the situation. The third part exhibits the affectionate victim in her tomb, and also the triumph of *Orcus*, or Death in his proper person, insulting the group of mourners. But *Hercules* enters, and subdues the exulting Shadow, who, being vanquished, consents with an oath to restore *Alcestis* to her husband. Then follows the gathering of the guests, which she is brought into contrast with her husband's hospitality towards *Hercules*, and the revels of the strong man in the house of the widowed. This contrast is exceedingly well managed; nor must we omit here to praise Mr. Stuart for the broad and classic style in which he realised the situation. The third part exhibits the affectionate victim in her tomb, and also the triumph of *Orcus*, or Death in his proper person, insulting the group of mourners. But *Hercules* enters, and subdues the exulting Shadow, who, being vanquished, consents with an oath to restore *Alcestis* to her husband. Then follows the gathering of the guests, which she is brought into contrast with her husband's inh

FARMYARD IN SNOW-TIME.—DRAWN BY E. DUNCAN.

THE DISS CORN-EXCHANGE

This handsome edifice has recently been erected through the liberality of Mr. Thomas Lombe Taylor, who has placed it at the disposal of the public under the following interesting circumstances:—

For a long time the want of a commodious Corn-Exchange had been felt by the farmers of the wealthy agricultural district around Diss; when Mr T. L. Taylor, who is lord of the manor of that town, conceived the design of erecting one for their use, and of attaching to it reading rooms and a library. The building is not only admirably adapted to its purpose, but beautiful in the harmony of its proportions, and its ornamentation. The design is by a young architect of Diss, named Atkins, by whom also the carpenter's work was executed. The workmen employed in the other departments were also inhabitants of Diss, with the single exception of the Ransomes, of the neighbouring town of Ipswich, who supplied the finely-wrought iron girders of the roof.

NEW CORN EXCHANGE, AT DISS.

It is [illegible] a contemporary, no slight proof of the diffusion of [illegible] throughout the country that a population of between two and three thousand souls affords means capable of designing and executing a work of such beauty and utility.

The opening of the Corn Exchange took place earlier than it was intended, in consequence of the desire of some young musical amateurs of Diss to give a concert for the benefit of the Patriotic Fund. Application was accordingly made to Mr. Taylor for the use of the Hall; when volunteers, vocal and instrumental, presented themselves in unexpected numbers, and a concert of sacred music was speedily arranged. The orchestra was composed of between eighty and ninety performers, and among them were the contractor, builder, and many of the workmen employed in its erection.

FARMYARD IN SNOW-TIME.

Here is a farmyard, but one of the old sort, before model high farmers and agricultural associations had learned to double produce at the sacrifice of the picturesque. These improvers would pull down that vast wooden barn with its thick thatched roof, gutterless of spouted eaves, now snow-covered, but stained with many a tuft of grass and sheet of moss, and all alive with squeaking mice and chattering sparrows, in spite of the nightly efforts of the pair of cream-coloured owls, which, from time immemorial, have made their nest in the topmost corner of the rafters. For wood they would substitute brick or stone, and exchange the slow thud, thud of the thrasher's flail for the continuous whiz of a steam-driven machine. That shed where the long-coated bullock now so picturesquely stares and starves would be exchanged for a warm feeding-box. Of the group of live stock that are so patiently waiting their mouthful of fresh straw, there is scarcely one that would pass muster under the critical eye of a modern amateur in Short-horns or Herefords, Devons or Ayrshires, or West Highlanders—unless it be among the poultry, for geese are still geese, not larger or finer than in the days of our youth, if they have not positively degenerated.

No one who has had the good fortune to pass a wintry week in a hospitable farm house of the old sort can fail to recognise its picturesque truth. Well, in these times, when mouths grow so much faster than corn-fields that we cannot put up with slovenly farming for the sake of picturesque beauties, it is a consolation to know that, under any cultivation, a full harvest of corn, or a stack-yard re-thatched with snow, have beauties of their own, and that the best farming will leave ample subjects for our painters of rural life and rural scenes.

DEATH OF MISS MITFORD.

The author of "Our Village" died at Swallowfield Cottage, near Reading, on Wednesday week, in her 68th year. Of her literary life we gave an extended memoir, with her portrait, in the Illustrated London News, No. 679, April 22, 1854; and we have, in another column of the present Number, noticed her decease.

Swallowfield is a picturesque village, partly in Berkshire and partly in an insulated portion of Wiltshire. The road thence to Arborfield is delightful. Lofty and thickly-grown hedges overshadow the whole way; and ever and anon the thatched cottage peeps from beneath a canopy of trees. Amidst such scenes of rural beauty the author of "Our Village" passed from her long suffering, leaving her numerous works, which teem with holy thoughts and healthful beauty; a few of which were written in her cottage at Swallowfield. The locality is not of "unlettered fame," for at Swallowfield-place, the manor-house, Lord Clarendon is said to have written his "History of the Rebellion." The association of the place with Mary Russell Mitford and her writings is, however, of a more kindred interest.

Scarcity of Labour in Ireland.—It is a remarkable fact in the history of Ireland to hear serious complaints coming from the province of Connaught, in the month of January, of the great scarcity of labour; yet so it is. The farmers can with difficulty procure hands, and then only at such wages as have never before been paid in the middle of winter. If such be the case now, what will they do when spring requires a vast augmentation in the number of labourers? And worse still, when the next harvest requires to be reaped? There is a remedy for the present and the apprehended embarrassment. Let wages be raised to such a standard as will enable the peasant to support himself, and he will not emigrate, nor will he assist in either the Line or the Militia for the mere sake of earning a livelihood. It was all very well when the Irish labourer could [illegible] potatoes, which he grew them not on his own holding) at about 2d. per stone, to offer him 5d. or 6d. a day at this period of the year; but now, when potatoes are 8d. a stone, and all other descriptions of provisions proportionately dear, 1s. a day will not procure him as much as the lower rate had done formerly. Then there is the tempting pay of the Militia, 2s. 2d. a day, in opposition to the farmer. This sum must be awarded to the finest and best labourers in the country will don the new and attractive uniform.

Our Gallant Guerillas.—Our sharpshooters have had a most exciting and dangerous time of it. They go out with their Captain, Gerald Goodlake, of the Coldstreams, and fight entirely on their own book. The other day they started down the ravine which leads to the harbour of Sebastopol, and, after an intensely exciting stalk of four hours, they got past the line of Russian sentries, and came upon a picket of four times their number, who were cooking and smoking. They attacked them with great success, killing and wounding several, and were only obliged to retreat by a sortie from a breastwork in their rear. Captain Goodlake had a very narrow escape, as he was left with a sergeant, and had to cut his way through them, luckily with no more damage than a bullet through his coat. He was, as you know, always a right good sportsman, and is quite in his element with this guerilla warfare. This has created a great sensation here, as they got within 200 yards of the harbour and town of Sebastopol, and nearer than any Englishman (not prisoner) has reached since we landed on the Crimea. —*Private Letter from the Camp.*

SWALLOWFIELD COTTAGE, NEAR READING, THE RESIDENCE OF THE LATE MISS MITFORD.

THE SOUTH SEA HOUSE, THREADNEEDLE-STREET.—THE QUADRANGLE

THE SOUTH SEA COMPANY, AND ITS HOUSE.

THE history of the South Sea Company is of too interesting a character for us to part with its "House" without a passing record of its foundation. The building, of which we engrave the handsome quadrangle, is not, however, the house in which the Company originally assembled. This was a smaller building in Old Broad-street, long known as the "Old South Sea House," the site of which is now occupied by the City Club-house. The present edifice was erected in 1723-27, in Threadneedle-street, chiefly through the increase in the Company's business, consequent upon the creation of the first portion of the South Sea Annuities. It is a massive brick and stone edifice, remarkable for its strength and solidity, and for the size and loftiness of its rooms—one of which, originally used as the Transfer-office of the old South Sea Annuities, on the first floor, has been much admired for the beauty of its ceiling and decoration. The Court-room is also handsome, and contains fine full-length portraits, by Sir Peter Lely, Ramsay, Lawrence, and Beechey, of the Kings of the Brunswick dynasty; the Sovereign, from George I to his late Majesty, having held the office of Governor of the Company. The room has also the Royal arms, and those granted to the Company, finely carved; the patent, by the way, bears the signature of Sir John Vanbrugh.

The South Sea Company originated in an attempt to reduce the National Debt, in the reign of Queen Anne, into a more regular form. The first proprietors of the Company being the holders of a large portion of the floating debt of the country, viz., Army, Navy, Transport, and Victualling Debentures, chiefly resulting from the long wars under the Duke of Marlborough, when Harley, Earl of Oxford, the well-known Minister, conceived the project of incorporating these national creditors into a Joint-stock Company, to whom should be given as an inducement, the privilege of trading to the South Seas. An Act of Parliament to this effect (9th Queen Anne) was accordingly passed; and a Royal Charter granted, bearing date Sept. 8, 1711, whereby the before-named proprietors were formed into a Corporation for ever, with the style of "the Governor and Company of Merchants of Great Britain Trading to the South Seas and other parts of America, and for Encouraging the Fishery." A fixed rate of interest on their capital was guaranteed by the State.

ARMS AND EMBLEMS OF THE SOUTH SEA TRADE.—FROM THE COURT-ROOM.

An Act passed in 1720 (George I) by which the Company was permitted to increase its capital and take in subscriptions, for the purpose of its trading and financial purposes, was the origin of the famous South Sea Scheme—when the extravagant expectations that were formed of enormous profits to be gained by the Company's trade in South America and treaty with the King of Spain induced the public eagerly to subscribe and the stock to rise, until, in June of the same year, it reached the extraordinary price of 1000 per cent: as is proved by Stock receipts now extant. Subsequently its fall was as rapid; and the follies and excitement of the mania, and the ruin following the discovery of the fallacious hopes of the gold-seekers of the period, form an instructive chapter in Mackay's "Popular Delusions;" they were also illustrated by caricatures of the period by Hogarth.

Perhaps, however, the most curious memorial is in the Company's well kept ledgers of this period existing in the library, and which would give mute evidence of the rage with which all classes of the community were seized for stock-jobbing; among the names are many celebrities of the time. The admirable picture by Ward, now in the Vernon Gallery, could have been no exaggeration of the speculative warfare of Change-alley in the days of the "Bubble."

On the consequent reverses, the House of Commons undertook the settlement of the Company's affairs, and instituted a rigid inquiry into the conduct of the originators of the scheme. Various measures of relief were adopted, and one-half of the Company's Stock divided from the fluctuations of the trade, and formed into annuities with fixed interest. In 1733 the other portion of the Stock was again divided by the formation of a second description of the South Sea Annuities; the remainder being left as the Company's trading capital, still existing, and known as "South Sea Stock."

The trade carried on was not attended with any signal success, and has

NEW WORKS, AT HAMPTON, MIDDLESEX, FOR THE GRAND JUNCTION, WEST MIDDLESEX, AND SOUTHWARK AND LAMBETH, WATER COMPANIES.—(SEE NEXT PAGE.)

so long ceased that it would seem scarcely possible to imagine, from its long continued state of quiescence, that in this House large public sales were once held, and an active mercantile business carried on connected with the Company's exports and imports, and their factories and forts abroad; when the words "For Sale by the Candle," or "By Auction, at the South Sea House," was to be found at the top of many a bulky catalogue of merchandise, and in advertisements in such ancient newspapers as flourished in the times of the first and second George; when the arrival and departure of the Company's ships—the *Royal George* and *Royal Caroline* among them, called in honour of the reigning family—were chronicled as events of interest and importance.

Upon the termination of the Company's trade, the business consisted only of the management of transfers and dividends of their Stock and Annuities—the latter gradually diminished by purchases by the Commissioners for Reduction of the National Debt; until last year, when, by the operation of an Act introduced by the present Chancellor of the Exchequer (who, in introducing the subject, April, 1853, spoke in very favourable terms of the manner in which the South Sea Company had managed this portion of the Public Debt), their Annuities were provided to be paid off by the Company before the 1st June last, or to be at once converted into new Stocks created by the Act (viz., 16 and 17 Vict., c. 23); Mr. Gladstone using the South Sea Annuities as an experiment for founding, as he stated in addition to, a Three per Cent Half per Cent Stock. The same Act provided for paying over to the Corporation the amount of its Stock; thus leading to the winding-up of the Company—now about to take place; and to the sale of its House—now advertised.

We have engraved the Quadrangle and the Arms from the Court-room. The latter are thus described:—

AZ. a Globe, whereon are represented the strait of Magellan and Cape Horn, all proper; in the sinister chief two herrings haurient in saltier ar. crowned or, on a canton the united arms of Great Britain, of the second. Crest: On a wreath a ship of three masts, in full sail, all ppr. Supporters: On the dexter side the emblematic figure of Britannia, with the shield, lance, &c., all ppr.; on the sinister, a fisherman completely clothed, with cap, boots, fishing-net, &c., and in his hand a string of fish, all ppr. Motto—*A Gadibus usque Auroram.*

IMPROVED SUPPLIES OF WATER TO THE METROPOLIS

IT will be recollected by all who have paid attention to the agitation of this important question that from it resulted, in 1852, the passing of an Act, of which, however, it may be useful to subjoin a summary of its principal provisions.

It subjects all the Companies to the provisions of the Water-works Clauses Act of 1847, and to the supervision of the Home Secretary. It indicates the source whence water may be taken, and prescribes the mode of supply. The rates which companies may be charged are reduced from 50 to 75 per cent with respect to the Companies which had Parliamentary scales; and the reduced scale is applied to those which had previously been unlimited in their power of charging.

The capitals on which the Companies may pay dividends were revised and reduced (in some cases very considerably), the principle understood to have been adopted by the Committee being, that no outlay other than that on works then in use, or thereafter to be used, should form part of such capital.

Parochial authorities to have power to demand a supply for poor tenements on stipulated terms.

The works for this purpose which the Act enforced on the Companies required, as appears from a Parliamentary Return, an outlay of £1,250,000, and the actual expenditure will exceed £2,000,000.

The time prescribed for the execution of the new works varied for the different Companies; but, with respect to the three to which, for the present, our remarks are confined, namely, the West Middlesex, the Grand Junction, and the Southwark and Vauxhall, the limit was three years from the passing of the Act.

When the Lambeth Company, in 1848, applied for an Act to change their source of supply from Hungerford to Ditton, seven years were allowed by Parliament for the change; and the construction of the works actually occupied four years, namely, from 1848 to 1852. The Committee on the bill of 1852 had allowed five years, which was, however, on account, perhaps, of the urgency of the matter, reduced by the House to three. As soon as the bill was passed, the Companies above named (having severally obtained private Acts, enabling them to comply with its provisions) entered into contracts to carry the requirements of the Legislature into effect. These contracts were all to be completed within two years, or nearly one year within even the short period allowed by the Act.

The three Companies named have their new works contiguous to each other, on the north bank of the Thames, immediately above the village of Hampton: 29 miles above Vauxhall-Bridge, 6 miles above Teddington Lock, 1¼ mile above the confluence of the Mole, 1¼ mile above Hampton Lock, and at the eastern or lower extremity of a portion of the stream extending many miles, singularly free from even the slightest influence by which its water might be injuriously affected. From this point the water is brought by the Companies to their several works for deposit, filtration, and distribution by three great mains—two of 36 inches and one of 33 inches diameter. These mains are together capable of bringing 60,000,000 gallons in the twenty four hours—a volume of water equal to the contents of a river 30 feet wide, 3 feet deep, and flowing at the rate of a mile an hour.

As far as the village of Twickenham the mains lie side by side; there the Grand Junction main diverges through Isleworth and Brentford to the works of that Company, near Kew-bridge. The mains of other companies being taken under the bed of the Thames at Richmond, separate at Sheen. The West Middlesex main goes through Mortlake to their reservoirs of deposit and filtration at Barn Elms, on the Surrey bank, opposite to, and connected by a main under the Thames with, their works at Hammersmith. The Southwark and Vauxhall main continues through Putney and Wandsworth to the site of that Company's works in the new park at Battersea. The length of the mains respectively is as follows:—The Southwark and Vauxhall, 7¼ miles, or 23,000 yards: the West Middlesex, 8½ miles, or 15,000 yards; the Grand Junction, 7½ miles, or 13,500 yards. The aggregate area of the sites of the works of the three Companies, at Kew Bridge, Hammersmith and Barn Elms, and Battersea, is 120 acres.

The progress made in the execution of the works enumerated, to the present time, is as follows:—

The reservoirs and filter-beds at the works of all the Companies are completed. The engine and boiler houses at Hampton are roofed in, and ready to receive the machinery, a considerable portion of which is on the ground, and now laying.

The length of mains laid on is as follows:—The Southwark and Vauxhall Company, 12,500 yards; the West Middlesex Company, 14,500 yards; the Grand Junction Company, 7500 yards.

In this statement of the mains laid is comprehended the portion of the two 36-inch mains laid under the bed of the Thames at Richmond an engineering work of no little difficulty, but which has been accomplished with complete success.

It would of course be desirable, but it is obviously impossible, to state the precise period when all the works we have described will be completed; but, as we have already stated, no doubt can exist of their completion within the time allowed by Parliament.

Upon an impartial view of the facts stated in the foregoing brief summary, it would be difficult, we think, to maintain that Parliament had shown any want of due regard to the interests of the public, or the Companies any lack of zeal and energy in carrying into effect the requirements of the Legislature.

The daily delivery of water to London during the last few months has fallen little short of 100,000,000 gallons.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The numerous failures lately announced have been productive of considerable distrust and embarrassment. They appear to have chiefly resulted from over trading to our colonies in Australia. Money has been in good request, and the supply has continued tolerably abundant.

On Monday Consols were firm, but no material change took place in the quotations. Bank Stock was done at 211½. The Three per Cents Reduced were 92 to 91⅞; the Three per Cents, 92⅛ 91⅜ 92; Consols for Account, 92⅛ 91⅜ 92; and the New Three per Cents, 92⅜ to ⅝. Long Annuities, 1860, were 4⅛; Ditto, 1859, 4⅛. India Stock, 225; India Bonds, 1½ to 1⅝, and Exchequer-bills, 4s. to 7s. prem. Exchequer Bonds marked 99¾. The business transacted on the following day was rather extensive:—The Three per Cents Reduced realised 91⅝ ⅞ 92; the Three per Cent Consols, 92 to 91⅞ 92; Consols for Account, 92⅜ ⅛ 92; New Three per Cents, 92 ½; Long Annuities, 4 1-16; Bank Stock, 210½; India Bonds, 1½; Exchequer Bills, 4s. to 7s. prem., and Exchequer Bonds, 99⅝. On Wednesday the market was steady: The Three per Cents Reduced were done at 92⅜ ⅛ 92; the Three per Cent Consols, 92⅛ ¼, Consols for Account, 92⅛ ⅜; the New Three per Cents, 92⅜ ½; Long Annuities, 4⅛. Bank Stock was dull, at 211 to 209½; India Bonds, 1¼; Exchequer-bills, 4s. to 7s. prem.; Exchequer Bonds, 99⅝ ¾. The English Stock Market was very quiet on Thursday:—Consols were 92 to 92⅛ 92 for transfer; and 92⅜ ⅜ ½ for the Account. The New Three per Cents were 92⅝ ¾; and the Reduced Threes, 92 to ⅝. Bank Stock, 210 to 211; Exchequer bills, 4s. to 7s. prem.

The Foreign House has been firm, and Turkish Bonds have advanced to 77½. Peruvian Four-and-a-Half per Cents have been quoted 71½; Mexican Three per Cents, 21½; Spanish Bonds, 44; Sardinian Five per Cents, 85½; Dutch Two-and-a-Half pc, Certs, 62 ex div; Dutch Four per Cents, 92¼; Russian Four-and-a-Half per Cents, 91 ex div; Ditto, Five per Cents, 103½; Austrian Five per Cents, 85; Brazilian Five per Cents, 97½; Buenos Ayres Six per Cents, 85; Granada One-and-a-Half per Cents, 18½; Spanish Passive, 4½; Ditto, New Deferred, 18¾; Venezuela, One per Cent Deferred, 9¾; French Rentes, Four-and-a-Half per Cents, 96 97 exchange, 96. These are the highest quotations paid in the course of the week.

The business doing in the Railway Share Market has been tolerably extensive, and the quotations almost generally exhibit a tendency to improve. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 20½; Birmingham, Wolverhampton, and Stour Valley, 96½; Ditto, Four-and-a-Half per Cent, 100½; Ditto, New Deferred, 18½; Eastern Counties, 8½; Eastern Union B Stock, 21; East Lancashire, 74; Edinburgh and Glasgow, 57½; Edinburgh, Perth, and Dundee, 20; Great Northern, 91 ex new; Great Southern and Western (Ireland), 80; Great Western, 68¾; Ditto, Shrur Valley, 89; Lancashire and Yorkshire, 75½; London and Brighton, 107½; London and North-Western, 103; Ditto Eighths, 1⅛; London and South-Western, 84½; Manchester, Sheffield, and Lincolnshire, 28½; Midland, 70½; Ditto, Birmingham and Derby, 41½; Norfolk, 51½; North-Eastern Berwick, 77; Ditto, Extension, 14½; Ditto, Leeds, 139½; Ditto York, 74½; Oxford, Worcester, and Wolverhampton, 32; Stockton and Darlington, 36.

LINES LEASED AT FIXED RENTALS.—Wear Valley, 51½.

PREFERENCE SHARES.—Great Northern Five per Cent, 115; Ditto, redeemable at Ten per Cent, 108; Ditto, Four-and-a-Half per Cent, 100½; Ditto, Five per Cent, 23; Great Western (Chester), 71¾ ex. div.; North-Eastern (Berwick Four per Cent), 91½; Oxford, Worcester, and Wolverhampton, 114.

FOREIGN.—Antwerp and Rotterdam, 6⅛; Belgian Eastern Junction, 1⅛; Eastern of France, 3⅜; East Indian, 21⅛ ex. int.; Ditto, Extension, ⅝; Grand Trunk of Canada, A issue, 5⅜; Great Luxembourg, 3; Ditto, Obligations, 3⅜; Great Western of Canada, 16; Northern of France, 30½ ex int.; Paris and Lyons, 38½; Rouen and Havre, 22.

Mining Shares have been rather flat. On Thursday Imperial Brazilian were done at 3⅛; Cobre Copper, 10⅜; Ditto, Gold, ¼; English and Australian Copper Smelting Company, 1; Santiago de Cuba, 3⅛; United Mexican, 2.

Friday Evening.

Consols have been very flat to-day, and prices have not been supported. The Three per Cents have been done at 91⅞ 92 to 91⅝; the Three per Cents Reduced, 92⅜ ⅝ ½; and the New Three per Cents, 92½ ⅝ ½. India Bonds, 12s.; Exchequer Bills, 4s. to 7s. prem. Foreign Bonds and Railway Shares have been heavy.

THE MARKETS.

CORN EXCHANGE (Friday).—Moderate supplies of English wheat: 2240 quarters—have been received up to our market this week, constwise. Fresh up-loads to our granaries from private ware-houses, and also of foreign, have been small. There was more firmness in the demand for all kinds than on Monday, and in some instances late rates were exceeded; but the business doing was very moderate. We had rather a slow sale for foreign wheat; importers, however, were firm, and prices were supported. We add a very full inquiry for barley, at Monday's decline in prices. Malt of all kinds was heavy; but we have no further decline to notice in the quotations. There was a moderate inquiry for oats and flour; but both kinds and peas were very dull.

ARRIVALS.—English wheat, 2240 barley, 5170 malt, 2630; oats, 2710; flour, 1370. Irish, Oats, 160. Foreign Wheat, 7180; oats, 12,870; flour, 650 sacks.

English: Wheat, Essex and Kent, 68s. to 68s.; ditto white, 70s. to 78s.; Norfolk and Suffolk red, 64s. to 66s.; ditto white, —s. to —s.; rye, 44s. to 48s.; grinding barley, 30s. to 34s.; distilling ditto, 34s. to 38s.; malting ditto, 36s. to 38s.; Lincoln and North malt, 66s. to 70s.; brown ditto, 62s. to 68s.; Kingston and Ware, 70s. to 74s.; Chevalier, 74s. to 78s.; Yorkshire and Lincolnshire feed oats, 25s. to 27s.; potato ditto, 28s. to 30s.; Youghal and Cork black, 25s. to 25s.; ditto white, 28s. to 30s.; Sligo, Limerick, and Galway, 24s. to 25s.; ditto white, 28s. to 30s.; Scotch potato, 25s. to 27s.; Dundee, Aberdeen, and Peterhead, 25s. to 27s.; Scotch feed, 24s. to 25s.; ditto white, 26s. to 28s.; Dublin and Belfast, 25s. to 27s.; ditto white, 28s. to 30s.; Waterford, Cork, and Limerick, 25s. to 27s.; ditto white, 28s. to 30s.; Scotch beans, 34s. to 36s.; ditto pigeon, 36s. to 38s.; harrow beans, 34s. to 36s.; Lincoln and Essex ditto, 36s. to 38s.; grey peas, 34s. to 36s.; maple ditto, 36s. to 38s.; white ditto, 36s. to 38s.; boilers, 40s. to 42s. per quarter. Town-made flour, 56s. per sack. Seconds, 52s. per ditto. Essex and Suffolk ditto, 50s. per sack.

Foreign:—Wheat, [illegible] per imperial quarter. Barley, [illegible] per imperial quarter. Oats, according to [illegible] per imperial quarter. Flour, according to distance, the quotations have a downward tendency.

Barley, [illegible] sowing, 72s. to 76s.; Baltic, crushing, 66s. to 68s.; Mediterranean and Odessa, 66s. to 70s. Hempseed, 34s. to 36s. per quarter. Coriander, 18s. to 19s. per cwt. Brown Mustard seed, 12s. to 16s.; white ditto, 9s. to 10s. Tares, 9s. to 12s. per bushel. English rapeseed, £23 to £26 per last of 10 quarters. Linseed Cakes, £6 10s. to £6 15s. per 1000. Rapeseed Cakes, £5 15s. per ton. Canary, 48s. to 50s. per quarter. Hempseed, 34s. to 36s. per quarter. Coriander, 18s. to 19s. per cwt. Brown Mustard seed, 12s. to 16s.; white ditto, 9s. to 10s. Tares, 9s. to 12s. per bushel. English rapeseed, £23 to £26 per last of 10 quarters. Linseed Cakes, £6 10s. to £6 15s. per 1000. Rapeseed Cakes, £5 15s. per ton. Canary, 48s. to 50s. per quarter. Hempseed, 34s. to 36s. per quarter. Coriander, 18s. to 19s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 10d. to 11d.; of household ditto, 8d. to 9½d. per 4 lbs. loaf.

Imperial Weekly Averages.—Wheat, 73s. 9d.; barley, 34s. 9d. [illegible] 37s. 4d.; rye, 45s. 6d.; beans, 46s. 5d.; peas, 43s. 5d.

The 37 Home Counties.—Wheat, 73s. 3d.; barley, 34s. 4d.; oats, 25s. 11d.; rye, 46s. 9d.; beans, 47s. 9d.; peas, 46s. 8d.

English Grain sold last week.—Wheat, 59,928 barley, 10,034; oats, 22,915; rye, 271; beans, 4565; peas, 1791 quarters.

Corn.—The public markets held this week have gone off slowly, at about stationary prices. Prospects the demand is steady, at full quotations.

Oatmeal.—Has changed hands this week, and prices have been fairly supported. Mild to fine brown Manitoba has sold at 28s. to 29s. 6d.; low to mild pale ditto, 30s. to 33s. 6d.; good, fine, and white Dantzic, 28s. to 29s. 6d.; mild to fine, 27s. 6d. to 28s. 6d. per cwt. Refined goods have sold slowly, at from 42s. to 46s. per cwt. In Irish [illegible] sugars about the transactions have been limited.

Coffee.—The sale has not been large. Prices, however, have been supported. Good ord. native has realised 45s. 6d. to 46s. 6d. per cwt.

Rice.—The demand is steady. In prices we have no change to notice.

Provisions.—About an average business has been doing in Irish butter, at late rates. Fine Friesian is in request, and is firmly held for. Low qualities are held at full quotations. In the value of English we have no change to report. The bacon market is steady on former terms. Prime Waterford, Limerick, and Cork is in good request. Mild to fine is dull. Rest of provisions command full prices.

Tallow.—Although the stock is small, the demand is heavy, and prices are still droping. P.Y.C., on the spot, has sold at 59s. 9d. to 60s. down to 58s.; and for February and March, 58s. to 58s. 6d. per cwt. Rough fat is [illegible] Mottled Yorkshire and Scotch at 3s. 9d. per 8 lbs. Quarter [illegible] Town tallow candles are [illegible] per cwt. Rough fat is [illegible] Mottled Yorkshire and Scotch at 3s. 9d. per 8 lbs. Quarter [illegible] Town tallow candles are [illegible] per cwt.

Hay and straw.—Meadow hay, £3 to £4 12s.; clover, ditto, £3 5s. to £5 15s.; and straw, £1 17s. to £2 5s. per load.

Roots.—The trade for all kinds has been a very sluggish state, at about stationary prices.

Potatoes.—Although the supplies are very moderate the trade is dull, at prices varying from 80s. to 120s. per ton.

Smithfield (Friday).—The supply of beasts on sale here, to-day, was but moderate. Most breeds moved off slowly, but we have no alteration to notice in the value of the best, which met with a ready sale, at the full currency of last week. The Scotch trade ruled dull, at Monday's currency. Very few calves were on offer, and the demand for them ruled heavy, at late rates, the best being worth as per 8 lb. There was only a limited inquiry for pigs, at late rates. Which could have dull to sale, at from £4 to £19 each, including their small cart.

Per 8 lbs. to sink the offal:—Inferior beasts, 3s. 4d. to 3s. 6d.; second quality ditto, 3s. 8d. to 4s. 0d.; prime large oxen, 4s. 2d. to 4s. 4d.; prime Scots, &c., 4s. 6d. to 4s. 8d.; coarse and inferior sheep, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 2d.; large coarse woolled lambs, 4s. 4d. to 4s. 8d.; prime Southdown ditto, 5s. 0d. to 5s. 4d.; large coarse calves, 4s. 0d. to 4s. 4d.; prime small ditto, 4s. 6d. to 4s. 8d.; large hogs, 3s. 8d. to 3s. 10d.; neat small porkers, 4s. 2d. to 4s. 4d.; suckling calves, 22s. to 28s.; and quarter lambs, 5s. 0d. to 6s. 0d. per head. Beasts, 2,750; sheep, 18,740; calves, 170; pigs, 260.

Newgate and Leadenhall (Friday).—Such head of meat changed hands slowly, as follows:—

Per 8 lbs. by the carcase:—Inferior beef, 3s. 0d. to 3s. 8d.; middling ditto, 3s. 4d. to 3s. 6d.; prime large ditto, 3s. 8d. to 3s. 10d.; ditto small ditto, 4s. 0d. to 4s. 2d.; large pork, 3s. 8d. to 3s. 8d.; inferior mutton, 3s. 6d. to 3s. 8d.; middling ditto, 3s. 8d. to 4s. 10d.; prime ditto, 4s. 8d. to 4s. 4d.; veal, 3s. 8d. to 4s. 4d.; small pork, 4s. 10d. to 5s. 4d.

Corks (Friday).—Chester Mids. 29s., Holywell, 22s. 6d., New Tredfield, 17s. 6d.; Garforth, 21s.; Bradley, 22s. 6d.; Leeds, 23s.; Hough Hall, 24s. 6d.; Kelton, 25s.; Tees, 25s. per ton.

Hops (Friday).—The amount of business doing in our market is but moderate, yet, in most instances, prices are well supported. This week's imports amount to 43 bales from Rotterdam, 168 from Antwerp, 186 from Hamburg, and 1 from Boulogne.—New H d and East Kent Pockets, £14 0s. to £21 0s.; New Weald of Kent, £14 10s. to £16 0s.; New Sussex, £14 10s. to £15 10s. per cwt.

On the 4th inst., in Dublin, Caroline Susan, the wife of Sir R. G. Booth, Bart., M.P.

THE POMPEIAN COURT AT THE CRYSTAL PALACE.

IN many respects the Pompeian is the most attractive, as well as the most interesting, of the various Courts in the Crystal Palace. It speaks of an age centuries anterior to the Christian era. A people of the highest civilisation and most refined habits, whose dwelling-place was overthrown and buried beneath the ashes of a volcanic eruption within a century after the commencement of that era; and which has remained buried ever since, up till within comparatively a few years ago. In the words of the "Guide":—"For upwards of sixteen hundred years the cities continued undisturbed beneath the ashes and lava of Vesuvius, when the spirit of the last century curiously with respect to them was stirred, inquiry commenced, and excavations were attempted. As in the more recent case of Nineveh, but with still more satisfactory results, success at once crowned investigation. The material that had preserved the remains of Pompeii had also preserved them. That which had robbed them of life had also perpetuated their story in death. The cities were redelivered to man so far undecayed that he obtained actual visible knowledge of the manner of life of one of the most remarkable people that ever lived. In the case of Pompeii, the knowledge thus obtained the visitor is indebted for the reproduction of the Pompeian house before which he now stands—a habitation of the time, complete in every respect, from the outer walls to the most insignificant object in domestic use."

We now enter this model of an ancient dwelling, so real in appearance that one might almost fancy oneself in a villa home of our own day. Entering the door, we pass through the narrow *prothyrum*, or passage, on either side of which are rooms devoted to porters and slaves, and on its pavement the words "*cave canem*" (beware of the dog) meet the eye. It is the usual notice engraved on the threshold of these Roman houses. Emerging from the passage, we are at once in the *atrium*, or outer hall, of the villa—the principal room in the house. It is (like most of the apartments of the palace, by the architectural designs alone; the attention is also secured and charmed by the decorations. The bright-coloured walls, the light, fanciful character of the ornaments, the variety of patterns, and the excellent method of arrangement, all tend to render the interior not merely attractive, but also to demonstrate with perfect correctness the taste and refinement of the Pompeian people. The centre of the ceiling, constitutive some of the beautiful features that give individuality to Pompeian houses, and cause them to differ most essentially from every other style.

This centre was open, and admitted the light of the building common to all visitors. The opening above is the *compluvium*, and the marble basin beneath, the *impluvium*, which received the rain that fell from the roof. In the actual houses at Pompeii, the size of the *impluvium* corresponds, of course, with the opening above. In the Crystal Palace Court the *compluvium* has been widened in order to admit more light into the court. The flooring consists of tesselated pavement; and near two other doorways leading into the *atrium* is inscribed the well-known word, "*Salve*" (welcome)—announcing the propitious hospitality of the owner

The rest of the apartments each have their special purpose—the *cubicula*, or bed-rooms; the *ales*, or wings, for the transaction of business with visitors; the *tablinum*, or withdrawing-room; the *exactum-auctorum*, or counting-house of the family archives, pictures, and objects of art—and, finally, the *tractivium*, or dining room, with three couches on three sides of the room, whereon the host and his guests recline as they partake of the luxuries of a *cuisine* in vogue two thousand years ago.

(Continued on page 64.)

ST. LEONARD'S (SHOREDITCH) SUNDAY AND NATIONAL SCHOOLS

THESE Schools were established by the parish of St. Leonard, in 1822, for the education of 800 children, and, under the patronage of the late Duke of York, were, for a long time, one of the most flour shing institutions of this large and populous parish. Latterly, however, from want of funds, it has been impossible to carry on the establishment efficiently. The population of the parish is 120,000. It is surrounded by the populous parishes of Pethnal green, Whitechapel, Spitalfield, St. Luke's, and Clerkenwell; so that it has become impossible for St. Leonard's to educate its masses without extraneous aid. The urgency of the demand upon the public was thus powerfully enforced by the Bishop of London, in his Charge, last year:—

Little has yet been done for some of the most populous and destitute parts of the metropolis. Look, for instance, at the great parish of Clerkenwell, where

AMUSEMENTS, &c.

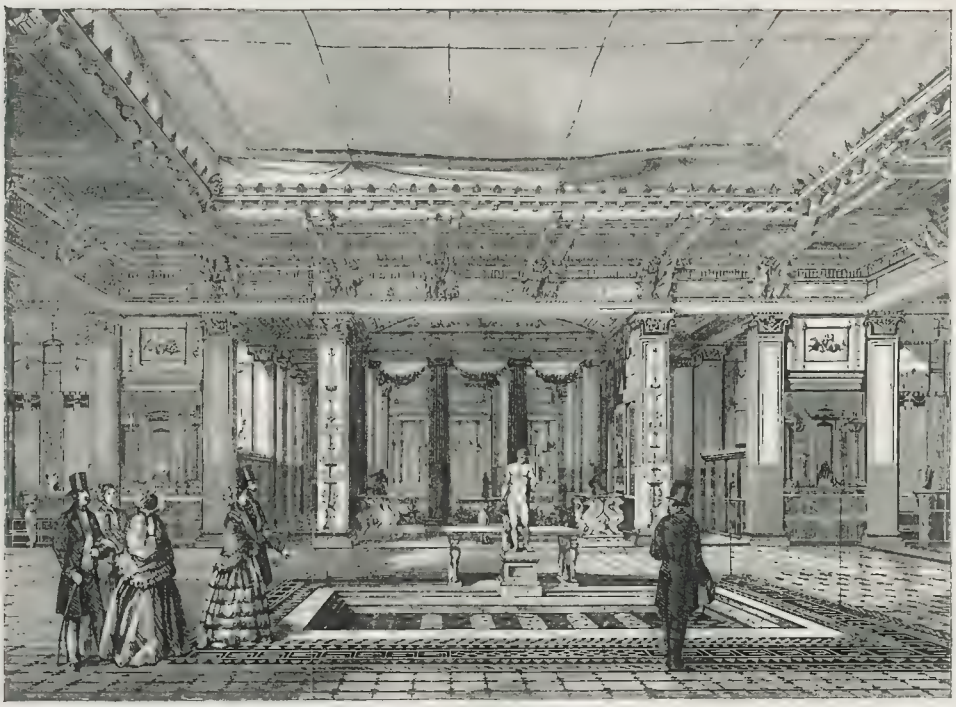
The process of prepa ation is the most delicate one which little or no boiling



THE POMPEIAN COURT, AT THE CRYSTAL PALACE.—(SEE PAGE 62.)

(*Continued from page 62.*)

additional church-room is required for 21,000 [illegible] in St Leonard's, Shoreditch, is a deficiency of 43,000; in St Mary Newington, 22,000; Whitechapel, 30,000; Stepney, 40,000; St Luke's, 15,000; St James's, 15,000; St George-in-the-East, 18,000; Bethnal-green, [illegible] 20,000. These numbers are taken from Mr Mann's tables, omitting all figures below 1000. The myriads of our labouring population are really as ignorant of Christianity as were the heathen Saxons at Augustine's landing, are as much beyond the influences of the means of grace to bring them into practical acquaintance with its doctrines, and will the dingy territories of this alienated nation are to be called by aggressive Christian agency, we cannot reasonably look for that more general attendance on religious ordinances which, with many other blessings, would, it is anticipated, certainly succeed an active war of such benevolent hostilities

With the object of aiding the funds of the charity, a musical entertainment was given at the School-house, in Grove-walk, Hoxton-square, on Tuesday evening, the 9th inst., under the direction of Mr Smythson. The rooms were tastefully decorated for the occasion, and were brilliantly lighted with gas and lamp devices. Pianofortes were lent by Messrs. Broadwood, Collard, and Kirkman. The programme included a selection of popular airs, which were well sung, and ably accompanied; commencing with "God Save the Queen," and closing with "Rule Britannia," the air of "Partant pour la Syrie" being called after "God Save the Queen." The Vicar churchwardens, and overseers were present. The performance was fully attended, and we are happy to learn that the result is a handsome addition to the funds

The principal object of this benevolent movement in St. Leonard's is to raise for the Schools an endowment fund, it is hoped, of £1000. Four Bishops have subscribed £5 each; and Lieut.-Colonel Wilbraham has sent from the Crimea the sum of £10.

In connection with this movement the school children, 400 in number, have had a public breakfast, and a collection; the parents, a tea party and concert; the subscribers, the Concert we have Illustrated. Eight hundred persons were present; and the entertainment was repeated on Wednesday.

We have only to add our earnest hope that the great object of the School Committee will be carried out by aid of these festivals and gratifying scenes of rational recreation.

MUSICAL SOIREE IN AID OF ST. LEONARD'S (SHOREDITCH) SUNDAY AND [illegible] SCHOOLS.

THE SANDPIPER.

(From a Correspondent.)

WILL you allow me, through the medium of your Journal, to make known the occurrence (for the first time in this country) of Bartram's Sandpiper (*Totanus Bartramius*)? It was shot on the 12th of December, 1854, about three o'clock in the afternoon, in a ploughed field between Cambridge and Newmarket. Some farm labourers, who were engaged in thrashing near the spot, observed a strange bird flying round in large circles over the adjoining field, and uttering a whistling cry at short intervals. It frequently alighted, and ran along on the ground like a corn crake. One of the men thought he could catch it with his hat, and gave chase; but the bird, as soon as he came near, rose, and flew round whistling as before. On seeing that it did not fly away, the son of a gamekeeper, who lived close by, went into his father's cottage for a gun, and came out and shot it. He sent it to me a few days afterwards, calling it a whistling plover.

Through the assistance of Mr Alfred Newton, of Magdalene College, I was persuaded that it could be no other than Bartram's Sandpiper, described by Wilson in his "Birds of America;" and, on referring to the figure given in Mr. Gould's "Birds of Europe," this opinion was abundantly confirmed. It is an extremely graceful bird, and has been remarkably well stuffed by Mr. Savill, of Cambridge.

Its length is 12¾ inches; expanse of wing, 24½ inches; height, 8¼ inches. The colour and markings are very like those of the skylark, on a large scale, especially about the head and neck. The tail (which is 3½ inches in length), is very like that of the common snipe.

I send you a drawing of the bird, and remain, &c.,

FREDERICK TEARLE.

Trinity-hall, Cambridge.

We have been favoured by Mr. Gould, F.R.S., F.L.S., with the accompanying communication:—

20, Broad-street, Golden-square, January 13th, 1855.

I am in receipt of your note containing a drawing of a Bartram's Sandpiper, lately killed in Cambridgeshire, and also the accompanying letter from Mr. Tearle. This is only the second instance that has come under my notice of its occurrence in England, and the species must now be included in our fauna. The other British specimen was killed in Warwickshire a year or two ago, and is now in the collection of Lord Willoughby de Broke. Continental writers have long noticed Bartram's Sandpiper as an occasional visitor to Europe; but the only instances of its having been found in England are those above mentioned. I have lately received, from the Directors of the Museum at Sydney, in New South Wales, a specimen of this bird which had been killed near Botany Bay. This is the first, and at present only known, instance of its capture in Australia. The species is evidently a great wanderer, its true habitat being the northern portions of America, from Canada, throughout the United States, to Mexico; in all which countries it is very common. It is a bird of very peculiar form, resembling in some respects that of the members of the genus *Glareola*, and in others the *Tringa*. Its habits also partake of those of the birds of both those groups. The peculiarity of its form has caused it to receive many generic appellations—among them, *Tringa*, *Totanus*, *Actiturus*, *Tringoides*, *Bartramia*, and *Bulliga*. Of these, perhaps the term *Actiturus* (proposed for it by Prince Charles Lucien Bonaparte) will be the one adopted, in which case the bird will stand as *Actiturus Bartramius*, *Bonap.* An interesting account of the habits and economy of this bird will be found in Audubon's "Ornithological Biography" vol. iv., p. 24.

JOHN GOULD.

SANDPIPER (TOTANUS BARTRAMIUS), SHOT IN CAMBRIDGESHIRE.

CAPTAIN PERCY WILLIAMS AND THE RUFFORD HOUNDS.

THE Rufford Hunt is situated in a part of Nottinghamshire much more to the taste of the lovers of landscape-painting than of fox-hunters. But, as the best farmers are to be found in the most unfertile districts, so two of the worst hunting districts in England—Whaddon Chase (now abandoned by Mr. Selby Lowndes, in favour of Warwickshire) and Rufford Forest—have produced, under the care of two accomplished and enthusiastic sportsmen, Captain Percy Williams and Mr. Lowndes, two packs of hounds of very superior hunting qualities; and, in the case of Captain Williams, by personal attention, with very limited subscription.

The Rufford Hunt, bordered by the Quorn, the Belvoir, and Burton, includes part of South Notts (formerly hunted by the celebrated Squire Musters), Sherwood Forest (where Robin Hood, a still more celebrated hunter, chased the wild red-deer), and nearly all that beautiful woodland district known as the "Dukeries" in which the parks of Clumber, Welbeck, Thoresby, adjoin, and extend into Derbyshire, as far as Hardwick Hall, one of the many seats of the Duke of Devonshire. The Rufford is an extremely wild, rough country, divided locally into Clay and Forest. When foxes can be forced out of the forests into the open, the runs lie either across open moors, without a tree, or over well-fenced fields of wheat and roots in a high state of cultivation. The best time for seeing these hounds is after Christmas. Early in the season the bed of half-decayed leaves are very much against holding scent.

The kennels are in Rufford-park, on the Earl of Scarborough's demesne, two miles from the pretty village of Ollerton, seven miles from Tuxford station, on the Great Northern Railway.

The following are the principal meets. In winter and frosty weather the Forest is often open when the Clay is unridable from the snow:—

Beesthorpe Hall (clay), three miles from Newark.
Berry Hill (forest).
Bildworth Dale (ditto).
Clipstone (ditto).
Clown (clay).
Cocking Moor (ditto), four miles from Ollerton.
Epperstone (ditto).
Fox and Hounds, (part forest and clay)
Hardwick Hall, six miles from Chesterfield.
Keelham (clay), two miles from Newark.
Kirklington (ditto), three miles from Southwell
Labour-in-Vain (forest)
Langwith (uncertain).
Laxton (clay), two miles from Tuxford.
Lound Hall (forest and clay), half-way between Retford and Ollerton.
Norwood (clay), one mile from Southwell
Ossington (clay), seven miles from Newark.
Oxton (clay), seven miles from Nottingham
Oxton Warren (forest), seven miles from Nottingham.
Park Hall (forest), four miles from Mansfield
Rufford Abbey (forest), two miles from Ollerton.
Thoresby Park (forest).
Thurgarton Priory (clay), near Southwell and Fiskerton stations
Upton (clay) } two miles from
Walesby (forest) } each station
Wellow-green (clay), one mile and a half from Ollerton
Winkburn (clay), seven miles from Newark.

The subscription was last winter increased from £1600 to £1890 a year, for four days a week—a sum barely equal to the expenses. Captain Percy Williams has been Master and huntsman since 1841; and, during a period of thirteen years, has never missed going out and returning with the hounds, except for a short time, when he was confined to his room with a broken collar-bone. He began with one hound; and, in forming his pack from draughts, was obliged to get rid of thirty couples for vice in the first season. At present the pack is as remarkable for its perseverance and steadiness from riot as for its docility. The first Whip, Jack, began as a boy, feeder's help in the kennels. His predecessor went as huntsman to Lord Henry Bentinck.

It is worth remarking, by way of contrast with some crack packs, that oaths and foul language are never heard in or out of the field from the Rufford servants, addressed to either hounds or strangers.

Nottinghamshire was famous as a stag-hunting district before it was divided among the four packs which now occupy it.

Gilbert, Earl of Shrewsbury, writes to his wife, in the time of James I., a letter dated "Rughford, 21st August, 1616, about eleven of the clock," in which, after acknowledging the receipt of twenty lemons, and twenty cowcumbers, and explaining how he disposed of them, he says he "went to Hatfield, accompanied by my two nephews, and killed three staggs with my bow, but it is as hard to kill fat deere in this forest and Hallamshire, as easy in Hatfield. Here I mean to tarry to Saturday night, and then to Welbeck, on Monday to Wingfield, and there three or four, or five dayes, it drynke last, then to Sheffield, and so to Tankersley, and so run up and down that circle so long as we stay." Although the drinking has gone out, we are happy to say that the hospitality still continues.

According to Cecil, one of our best modern authorities on hunting, a part of Nottinghamshire was regularly hunted by Theophilus, Earl of Lincoln, in 1667, and this establishment was mentioned by his grandson. But these we think must have been stag-hounds. The next master of hounds in the county was Lord Castle-

FOX-HUNTING.—CAPTAIN PERCY WILLIAMS, AND THE RUFFORD HOUNDS.

ton, of Sandbeck, who hunted the district until his death, in 1723; when he was succeeded by Thomas, third Earl of Scarborough, who also hunted the country until his death; when a pack was maintained by subscription, until it passed into the hands of Mr. Francis Foljambe, and there remained until 1788, when Sir George Saville established a pack at Rufford, in the kennels they now occupy. These hounds were afterwards removed to Sandbeck, by Lord Lumley, afterwards Richard, Earl of Scarborough, and hunted the country now occupied by Mr. Lumley

The Rev. John, Earl of Scarborough, better known in his time as "Black Jack the Master," again established a pack at Rufford.

Lord Henry Bentinck came next, and was followed by Lord Galway; after which the hounds were sold, and, as already observed, Captain William, who had recently left the 9th Hussars, undertook to get up and manage a subscription pack. The Earl of Scarborough, in whose park the kennels and the cottage stand, and Earl Manvers subscribe liberally.

The Rufford kennels are old fashioned, but roomy and airy, and in a good situation. There is no positive deficiency except in the boiling-house; that seems as old as the time of Black Jack; and there is a waste of at least sixty per cent in fuel, and fifteen or twenty per cent in oatmeal, which might be saved every year by a good steaming apparatus.

A fixed agricultural steam-engine, of about four-horse power, would be an economical addition to every two first-class kennel. The engine would pump water, cut chaff, split beans, and chop up horse-flesh if required. The boiler would supply steam for all the boiling and washing of the establishment at half the expense of open fires

CHINA.—BRITISH AND AMERICAN VISIT TO THE PEI-HO RIVER

(From a Correspondent)

THE Pei-ho (called by the Chinese the Teen-tsin) river has been little visited by foreigners. Before the China war it was comparatively unknown; and, since the peace, only one vessel, the *Reynard*, in 1850, has left us any record of a voyage to those regions. It may not, therefore, be uninteresting to give a short sketch of the recent expedition to that locality by the British and American Ministers, Sir J. Bowring and Mr. R. M. McLane.

When the British treaty with China was made, in 1842, it contained a clause that all privileges granted thereafter to other nations should be also enjoyed to their fullest extent by Great Britain; and in the American treaty, made some time afterwards, was inserted a clause authorising a revision of the compact, after the lapse of twelve years; so that England now claims the benefit of this concession, in itself a most reasonable one, when it is considered that at the time when it was made the trade of China and foreign intercourse with that country were but in their infancy, and that increasing commerce and enlarged communication could not fail to alter most materially the position of the two countries, and to force upon the attention of both many modifications essential to their mutual well-being. This circumstance—twelve years having expired in August last since the ratification of our treaty—and the accumulated grievances that the disorganised state of the country, the faithlessness, the annoyance, the insulting demeanour of the local mandarins, and their absolute refusal of redress, had at last rendered unbearable, was what, in all probability, originated this expedition. But of this we cannot speak with confidence, inasmuch as the causes of the visit, and the negotiations which have been the result, have been in like degree kept secret for the present.

The expedition left Shanghae river on the 11th October, and on the 15th arrived at the mouth of the Pei-ho—having experienced the most delightful weather, which continued without a single break until their return to Shanghae, more than a month afterwards. Such dates, and such delightful bracing weather—the air only cool enough to be agreeable, the sun only hot enough to be pleasant—such freedom from accident or misfortune, have been seldom the lot of mortals as this season of the year in those latitudes, and completely belied the sad forebodings with which we took leave of us with misgiving, advised a treble supply of monkey jackets and comforters, and looked up for us the best recipes for frost-bitten toes and fingers.

The fleet consisted of her Majesty's steam-ship *Rattler*, and a small vessel of 70 tons, hired for the occasion, and decorated with a British ensign and pennant, called a *lorcha*, and named the *Chusan*; one of the American steam-frigate the *Powhattan*, a leviathan of near 3000 tons; the *John Hancock* screw steamer, of 800 tons; the schooner *Fenimore Cooper*, also of the United States' navy, of about 100 tons; forming, altogether, a very respectable fleet. Having kept company all the way up in brotherly style, the subsequent proceedings were conducted in a like fraternal manner; the ships and boats were at the service of either Minister, as might be most useful; their stores and provisions were freely passed from one ship to the other, as each had most need; and the well trained band of the *Powhattan* played "God save the Queen" quite as often as "Hail, Columbia," or "Yankee Doodle."

After due consultation between the Ministers, their respective secretaries were sent on shore to open negotiations; and this proved to be no light matter, for the difficulties of navigation were added to the usual impracticability and impossibility of Chinese diplomatists. The lorcha, drawing but little water, and cunningly following in the wake of inward-bound junks, reached the river in safety; but the schooner, being of deeper draught, was soon fast locked in the mud, whence she was finally extricated only after several days' labour, and all the assistance that the ships could render. At last, however, they joined her little consort in the river, at a distance of about ten miles from the larger vessels, which dared not, on account of the shallowness of the water, approach nearer, though the *Hancock* was able to come in about half this distance to the bar on which, at spring tides, there is little more than ten feet), and thus to become most useful in towing boats and delivering the frequent messages that passed between the Ministers and their delegates.

On the 3rd November, a Commissioner having been sent by Imperial command to the forts at the mouth of the river, and tents having been erected and furnished, and all due preparations made for an interview, the two foreign Ministers proceeded on shore, accompanied by about 200 marines and sailors, and the band of the frigate. The procession consisted of about eight boats, which pulled towards the place of landing in quick and separate divisions. The marines drew up and formed two lines, through which the Ministers and their suites, in full uniform, accompanied by numerous American and English officers, marched in due form to the tent where the Imperial Commissioner and his attendant Mandarins were in waiting to receive them; the band meanwhile playing the national airs, and the marines presenting arms, to the great satisfaction of numbers of gaping Chinamen, who came as near to the fun as the well-plied whips of the Celestial police would allow. What passed at the meeting is among the *arcana Imperii*, which time alone will bring to light. But we are able to say, upon good authority, that the déjeûner which was served during the conference, and which, as in other places, is supposed to be a potent aid to diplomacy, was of the first order.

The Commissioner was a mild-looking man who had seen his 63rd summer, but vigorous, sharp in his remarks, and courteous in his manners. The next in rank was a younger man, a Tartar of a most intelligent and astute countenance, who sate quietly, made few remarks, but told, by the brightness of his eye and the frenkel expression of his mouth, that he was far from being an unconcerned spectator or auditor of what was passing around him. The other two attendant Mandarins were the Intendant of Circuit and the Military Commandant of the district—the former a petulant-looking old gentleman: the latter [illegible] fellow, who immediately attracted [illegible] by his good-humoured face, his free physical [illegible], and then piled up in large heaps on the river banks. The grapes are most delicious, and the apples and pears require only proper culture to be as fine as those of Europe. The climate, if our experience of it is to be taken as a sample of its whole, is most delightful; though in the winter, as the river is frozen over annually so hard, say the natives, as to bear carts and horses, it must be rather too cold to be pleasant. The adjacent coast is said to produce coals in large quantity, and the natives seem civil and well-disposed towards foreigners, and desirous to trade.

We [illegible] this visit may do something towards extending [illegible] a larger reciprocation of benefits—commercial [illegible] with this most interesting people, the Chinese—so [illegible] susceptible of good, so ripe for its bestowment, so checked and [illegible] by a Government which, under the guise of paternal authority, endeavours to place as it were a wall of fire between the people and all that would exalt them in the scale of freedom and happiness

[The Sketch which accompanied this letter will be engraved next week.]

ON THE REFORM OF YOUTHFUL CRIMINALS BY MEANS OF REFORMATORY SCHOOLS,

Under 17 & 18 Vict., c. 86, being part of the Charge of Mr. Baron Alderson to the Grand Jury of Yorkshire at the Winter Assize, 1854

PRELIMINARY NOTICE. BY MR. BARON ALDERSON.

I HAVE been induced to print the following observations, which formed the concluding part of my Charge to the Grand Jury of the county of York at the late Winter Assize, in the hope of drawing attention to the very valuable work of Mr Combe, on the Principles of Criminal Legislation," which I have read with great interest, and, I hope, with some advantage.

Without agreeing entirely with the speculations of that gifted writer, I must candidly say that I think his work contains most valuable materials for careful thought, and observations which every sincere reformer of our criminal population ought to weigh well and deeply consider

I wished also to call the attention of the influential body whom I was then addressing to the Act of last Session, which (*me judice*, if I may presume to say so) does so much honour to the labours of the Parliament of 1854

30th December, 1854.

CHARGE.

And now permit me, in conclusion, to advert to a topic which does not seem out of place on an occasion in which we are called together at what used to be in this county, when I first knew it, an unusual period of the year for the purpose of administering the criminal law. We have in that period over which my experience extends—the interval between 1811 and 1854—a great and apparently permanent increase of crime. Whence does it arise? How is it to be diminished? These are questions of no light importance to us all.

It is not my intention to discuss the former of these questions, to which I am really at a loss to give any sufficient answer; there being in truth various causes probably conducing to produce this sad result. I would rather desire to direct your thoughts to the second, which is one (to me, at least) of far greater interest. How is this increase of crime to be met, and, if possible, repressed?

To this question, if you ask it, you always receive one answer, "By improving the education of the people." True enough, no doubt, but labouring under one difficulty—that this usual cautious leaves us in general no wiser than we were before. For the real question is, "What is that education which is to produce this effect?" You will remember that we are speaking of that class of our population alone out of which the criminals come. This consists of individuals of as various characters and dispositions as possible. Now, to educate some of these properly would be to apply a process which would be useless—perhaps worse than useless—to others. Our punishments ought, no doubt, to be directed towards this object of reformation; but how far are we at present from any scientific discrimination in our punishments! We do but administer, so to speak, stronger or weaker doses of one and the same specific. Six weeks' hard labour; three months' hard labour; nine months; and the like. But what is all this, except to imitate the quack, who, for each varying disease (say fever, gout, paralysis, or the like), says, "Take my medicine; five pills for the first, ten for the second, and so on." We laugh in scorn at such folly; but are we wiser ourselves?

It may, however, be said—and I admit the value of the answer, and with some additions to it would admit its complete truth—that the discipline of each goal may supply the variety of medicine adapted to each individual case. A judicious governor, a humane and intelligent chaplain, may supply what is wanted. And so they may: but then in practice—and I wish to call your attention to it—there is this difficulty; we do not suffer these judicious and kind men to have sufficient time effectively to do this. Crime, believe me, is a disease—a chronic disease—in most of our criminals. Some eminent physiologists in modern times have even connected it with a defective organism of the brain. Without discussing this, which might lead me into doubtful disputations on the questions of mind with the organism of the body, let me remembering that those who hold this do, God be thanked, also hold that moral training and religious influences do also react on and materially affect even the bodily organs—I shall amply call your attention to the practical result, that if this be so, and if crime partakes in some sort the nature of a disease, you must carefully examine in detail its symptoms, and give full time for the remedies, if they are to be effectual, to operate. And this brings me to the observation, that to punish with short terms of imprisonment young or first offenders is by no means a humane course, even with a view to them only—I fear that must be admitted—is the chance of reclaiming them. Will you let me call your attention to the facts detailed in the book before me—"Combe on Criminal Law," p. 22. The author of that very striking and intelligent work says thus:

> In 1835 the late Mr. William Brebner, Governor of Glasgow Bridewell, framed a table, founded on an average of ten years' experience, to show the effects of first sentences for different periods of confinement, of which the following is a copy:—
>
> Of Prisoners sentenced for the first time to 14 days' confinement, there returned to gaol for new crimes about 75 per cent
>
> | | | |
> |---|---|---|
> | 30 days | 60 | " |
> | 40 days | 50 | " |
> | 60 days | 40 | " |
> | 3 months | 25 | " |
> | 6 months | 10 | " |
> | 9 months | 7½ | " |
> | 12 months | 4 | " |
> | 18 months | 1 | " |
> | 24 months | None | |
>
> But this last was not for want of cases, for
>
> During the ten years (which ended on the 25th December, 1825) 91 persons were committed for the first time for two years, of whom not one returned. Mr Brebner did not assert that [illegible] were permanently reformed; [illegible] elsewhere [illegible], that when prisoners came back two or three times, they went on returning at intervals for years; *and that many of those who were committed for short periods for first offences were subsequently transported or hanged.* In that prison strict discipline was maintained, but the prisoners were trained to industry, and educated with something like a paternal regard to their welfare after liberation: and he described the salutary effects of the prolonged confinement partly to dread of renewed punishment, and partly to the habits of order and application acquired in gaol.

I have read this passage as it affords materials for serious thought. You will observe that the increase of the severity of punishment for the first offence is *invariably* followed by a less percentage of recommittals. You will observe also the startling consequence, that after coming back two or three times they returned, at intervals, for years, and that many who received small punishments at first ended with capital conviction. Do not, therefore, I beseech you, try at your sessions to gain a character for that spurious humanity, which is real cruelty, by neglecting to punish effectually at a time when the impression on the criminal, if ever, may be really made. But severity in an extended duration of imprisonment, though essential, is but one remedy, and a bad one, if not accompanied by proper discipline afterwards. What should this be? And first let me speak of the youthful part of the criminal population. I read from a report as to the Redhill establishment—a farm of 130 acres, devoted to this object (Combe, 77—79). The passage is as follows—it is taken from one of the returns made to the Government

> Two main objects (says Mr. Tufnell) were contemplated by the removal of the Institution from London to the farm at Redhill. First, it was thought that agricultural work afforded more likely means for the reformation of habits, and for implanting an industrial character, than manufacturing occupations, in which children must necessarily be massed together in considerable numbers. Secondly, it [illegible] by facilitating the classification of the inmates. It was intended, in [illegible] keeping them in one large [illegible] to separate them into distinct families or households, each under one head, who should be responsible for all the members of the family. It was thought that more individual superintendence and more kindly domestic influence might thus be substituted for the ordinary mechanical and formal discipline that necessarily prevails when large numbers are congregated together.
>
> The boys who compose the school, 178 in number at the date of my visit, may be divided into three classes. First, there [illegible] the voluntary class, who come entirely of their own free will, on [illegible] youths tired of a life of vice and crime, and wishing to reform. Secondly, there is the compulsory class, being boys who have been sentenced to transportation, and have received a pardon, conditional on their submitting to the reformatory discipline of this school. Thirdly, there is a class sent by their parents or immediate relatives for reformation, and who may be said to be compulsorily detained, so far as the parental control may be exercised, however, by very few parents, who are individual and has been convicted, except a few received as children of convicted parents; and in two or three instances boys have been admitted simply to save them from the consequences of a common assault, after which they had become addicted.
>
> The inmates are divided into four separate households, which are in a great measure kept distinct, each under a Superintendent, responsable only to the resident chaplain, who is supreme director of the institution; subject, of course, to the committee, who meet every fortnight. Two of these households consist of fifty each; one embraces sixty of the older lads, and the fourth contains twenty lads employed in the garden, cowhouse, and farmyard, who are selected for others at the beginning of each month. The class of sixty is considered too large, and it is intended to diminish it, and to add to the farmyard class of twenty. As it is considered that the chief cause of the past offences and immorality of the inmates is the want of steady habits of industry, by far the greater portion of their time is devoted to hard work, in which they are generally engaged from nine to ten hours daily. Each lad receives for his labour a payment, varying from 1d. to 3d. per week, according as his work is well or ill performed; but wherever it is possible he works by task. This latter mode appears by far the best for inculcating industrious habits: and I can bear testimony to the energy and good-will with which the labour appears to be performed. Many of them, during my visit to the school, were engaged in brick-making, which is one of the most laborious occupations to which a labourer can be put; and I never witnessed a heartier exhibition of unremitting industry. While at work they are scattered over the premises in small parties, under industrial superintendents; at being deemed an important object to prevent the congregating in large numbers, which, with this class, often leads to immoral conversation. Every day but two holds school for three hours on the mornings in each fortnight, in addition to the evening reading, and to the extra schooling of very wet days, when the usual employments on the farm are interrupted.
>
> The punishments consist of confinement in light cells, and of flogging; which last, however, is very rarely inflicted, not oftener hitherto than once in five or six months, and only for disgraceful offences.
>
> I attended the school during the hours of instruction, which is imparted directly by the masters, with no aid from monitors or pupil-teachers, which are unapplicable to schools of this description. The masters appear competent to their work, but owing to the neglected state in which most of the lads enter the institution the standard of acquirement is very low. Of 150 who were admitted last year, fifty could neither read nor write, seventy could read and write a little, and only thirty could read and write well.
>
> There are a few youths of superior education, but these are by no means the best conducted; and all the teachers concurred in opinion that those whose intellectual capacity was the highest were by no means those who gave the least trouble, or were the most trustworthy, but rather the contrary."

On this the chaplain writes:—

> Judging from the boys received in the Philanthropic, their criminality does not arise from want of school instruction. I have had as many good scholars as bad ones; and most of those unable to read and write have been at school, or rather have been sent to school, and put in the ordinary paths of what it has been the fashion to call education. But in all these has been no restraining or impelling force even to keep the boy at school, far less to regulate his habits and associations during the hours when the school is not open to him, and when his parents are mostly employed and absent from home

I beseech you all, gentlemen of the Grand Jury, to observe this: for this it is, I venture to assure you, which constitutes the true difference between the education which really restrains from crime, and that mere knowledge (not education) which only gives the criminal greater power to execute his criminal purposes.

Mr. Tufnell proceeds to say:—

> On these grounds it is obvious that little or nothing is to be learnt from an ordinary school examination of the youths in this institution. The school is therefore all industrial, and the intellectual superintendents, and their time is chiefly taken up not in giving literary information but in managing the tempers, reforming the habits, and generally regulating the dispositions and behaviour of those who are placed under them; in other words, their duty is to impart education in its highest sense, and on this, as it appears to me, dependence is very properly placed for attaining the object of the society, the reformation of juvenile offenders.

He then proceeds to give us the results of the most interesting experiment:—

> The number of youths that have been received at Redhill, since the school opened in 1849, is 461, up to the 1st June, 1853. Of these, 289 have been discharged in the following ways: 157 have emigrated either to Australia or America; one has been sent to sea; seventy have been apprenticed or assisted to employment in England; and sixty have been discharged at their own request, or as unimprovable, or have deserted. Of this latter class, however, several have been afterwards tried and subsequently reformed, the good seed sown in them while in the walls of this institution having at a later period produced its fruit. [illegible] success that attends the operations of this society may be optimated at [illegible] of the whole number of criminal boys received seventy-five per cent are reformed and become honest and industrious members of the community; twenty-five per cent relapse into their former courses, at least for a time, though several of these eventually shake off their evil habits and turn to the paths of honesty and respectability.

Now, if such results as these, or any thing like them, can be attained by reformatory schools for young criminals, you will by promoting them have done much for humanity, as well as for the public in addition to the sentence of imprisonment for fourteen days at the least (thus you see confining its operation to offences already punishable with imprisonment), to direct such offender to be sent at the expiration of his sentence to one of these certified Reformatory Schools, to be named in such Act by the managers of which may be willing to receive him: and to be there detained for a period of not less than two years and not more than five years, and such offender shall be liable to be detained pursuant to such direction.

There are then provisions for defraying the maintenance of such criminals—by the Government in the case of poor boys, wholly or in part; and in other cases by the parents of the criminals themselves, to a limited amount in relief of the Government. All this seems to me, most usefully and admirably provided. And thus my recommendation in an earlier part of my observations with respect to the necessity of a long imprisonment, even to the extent of two years, will be made less apparently severe and more effectual by substituting fourteen days' imprisonment and two years' detention in a Reformatory School, for this long imprisonment. All you will have to do will be to provide the building and to devise, with the advice of the Secretary of State, proper regulations, and to be at the charge of maintaining the necessary officers. The criminals will be at the charge of the Government.

I have spoken hitherto of young offenders, but the same principle, *mutatis mutandis*, is true for the adults also. An adult convict is but an overgrown wicked child, who has erred from inherently vicious dispositions, defective instruction, or early habit. And he may be treated with the same discipline a child grown larger and stronger; but the same method of reforming him must be, as for children, to change his habits to excite his powers (dormant, as yet, of moral restraint) by the use of them, to strengthen his conscience, however, with kindness. Depend on it he has a heart, though at present encrusted over and insensible from misery, perhaps, and vice

Try to touch that heart; let him feel that, though you punish, you do it for his good; and not from any feeling of revenge, or mere unreasoning vengeance, and cultivate what still is left of moral power originally possessed by him. Quench not the smoking flax of his agonized repentance, and you will have a good chance of success even with him. But treat him firmly: do not spare to make him suffer for his offence. While he remains in prison you have power to resist temptation. In this, as it seems to me, the evil of penitentiaries, which are solely dependent on the effect of separate imprisonment, consists. The defect of mere separate imprisonment is this, that the patient is by it too often *subdued*, but not *reformed*. He still wants the strength which is alone can give him, to fit him for a return to the world from which he has been shut out for a long period He is, perhaps, convalescent, but not cured; and it ends too often in a fatal relapse. Besides, it is a discipline which does not suit all; some require to be tried, pursuant to be supported, for this reason there should be some prison or penitentiary in the which, after separate confinement, the prisoner should carefully and gradually be accustomed to work in common with others before his ultimate discharge. For the most part he should be subjected to hard labour, solitary or otherwise: for labour is the best remedy and security against relapse. Not, as I think, to be unaccompanied with some profit arising from that labour and given to the criminal. God governs us all by rewards as well as punishments: why should we not, as however remote a distance, try to follow the course of His government, which always the wisest and best?

I have now, perhaps at too great a length, offered some suggestions on these important subjects to you; I wish you to turn them in your own intelligent minds. All I may say is, that I am not at least to think about them will conduce to settle your minds on the question, and that will be a great good attained. By discussion we shall make an approach to the truth. I commend the subject to you, hoping that at least you will take into consideration what the Legislature has done, and may have laid before you as to the institution of Reformatory Schools throughout the length and breadth of the county. I believe them to be as necessary appendages to every good gaol as the doors, or the locks, or the treadmill: and far more effectual

Note The connexion of Reformatory Schools in each county with the gaols is of more importance than at first sight would appear. For unless it be so, there will be a great difficulty in carrying the late Act practically into effect; as it is framed at present, the sending the young criminal to the school is to be part of the sentence at the Assize, or at the hearing before the magistrate.

Now the criminal is to be sent to a school where the managers *are willing to receive him*, and the school is to be named in the sentence. How is a Judge to ascertain this during his stay (sometimes very short) at the Assize town?

It might be remedied by altering the Act and enabling the Judge to do this by safe current rule. But if the School were, so to speak, part of the gaol the information would be always at hand, and no difficulty could arise.

* For this latter class a payment—usually 5s. a week—is asked; but in case of poor parents much less is taken.

LITERATURE

THE ENGLISHWOMAN IN RUSSIA. By a LADY. Murray.

The Englishwoman the authoress of this volume has just returned from a residence of ten years in Russia, where, moving in what is called the best society, and chiefly, as we apprehend, in the capital, she had ample opportunities of observing the manners and conduct of all sorts of people in public and private capacities, from the Emperor downwards. The result is a humiliating picture which we regret to consider can be true in the 19th century; and in which, seeing the deep ingrained vice of the colossus, we can see little hope of change. Fraud and peculation, combined with oppression of those under them, is the rule with public functionaries of all grades and classes; and so little is thought of it, or rather so recognised a condition does it seem to be, that in St. Petersburg, under the very eyes of the Court, and, of course, with its sanction, a stage play is enacted to crowded and delighted audiences, the material of which consists in the development of the whole ramified system of bribery and corruption which exists in all official departments. And sorry we are to add that the sons of those in office do not end here: civil police, under the semblance of guarding the lives and property of the public, are frequently themselves robbers and assassins; the most frightful crimes of their doing every now and then coming to light. But they are good spies and trainers, and that is all the Czar cares for: indeed, the deeper their abasement and profligacy, the better they may be supposed to be adapted to their degrading work; and so they are left to amuse themselves as they list at the expense of the public, until they are found out; and then, for being found out, they are punished signally.

In private life, in society generally, the same lax morality prevails. Where in every assemblage of three one is sure to be a spy, conversation is impossible, except upon the most trivial and worthless subjects: and gambling, intoxication, and demoralising dissipation of all sorts, engross the time of the upper classes; whilst the lower are all slaves, mere machines and chattels in their hands. What are we to think of an old lady having all her female serfs hair shaved off (a mark of disgrace attached to the country), in order to pay her card debts out of the proceeds; of another lady knocking her waiting-woman down with a chair, and knocking two of her front teeth out of head, for having answered her impertinently; of a female serf being sold for a hundred roubles and an old piano; of a master sending a coachman to the police to be flogged (a punishment inflicted at night and in a secluded spot, in order to avoid disturbance by the victim's cries) whenever the fancy takes him, and of the said servant next morning crouching to the ground and humbly thanking his master of a master for the correction so bestowed upon him; or of a serf being threatened with being sent for a soldier, and remaining in trembling awe for the bare idea for two years afterwards, finally, of serfs being paired off by dozens at a time in "marriage" (saving the blasphemy of so using the sacred term), just as cattle would be matched with the pretence of consulting their own wishes in the matter; or, in short, of the hundred examples given in these pages alone of the horrible tyranny, and the total abnegation of moral feeling, under which the great mass of the Russian population exists; and what hope can we entertain of amendment in the condition of such a community, except at the expense of some dire catastrophe? After giving a vivid but temperate picture of their wrongs, the authoress says:—"Men and women in name, and children in their thoughts and ideas, they are carried off, or having fled from the scene, and women being obliged to do all the labour, even to working on the roads. In short, "the numerous conscriptions levied since the Russians entered the Principalities have taken away not only the worthless slaves but the very flower of the estates, and great was the dissatisfaction even openly expressed by the proprietors. 'Notre Empereur se trouvera en face de son peuple,' said one of them; from which an inference may be drawn. On all sides universal disapprobation was heard: but they were careful not to lay the blame on the Czar, so their anger was vented on the English and Lord Palmerston, whom they still persist in saying was the prime mover of all, and on whom, of course, their own Government are glad to throw the odium."

Of the sort of stuff the Czar's "children" are whom we have to encounter in the Crimea two brief passages will serve to illustrate:—

When the young men are taken for soldiers, their relations do not even expect to see them again. One morning a poor woman came to me crying most bitterly, saying that her two nephews had just been forced from her house to go into the army. I tried to console her, saying that they would return when the war was over, but this only made her more distressed. "No, no," exclaimed she, in the deepest accents, "they will never come back any more; the Russians are beaten in every place." Until lately the lower classes were always convinced that the Emperor's troops were invincible, but it seems, by what she said, that they have got to know something of the truth. A friend of the Rescript in St. Petersburg informed me that he had "gone to see the recruits that morning, but there did not seem to be much patriotism among them: there was nothing but wails and tears to be seen among the unlucky wretches who were fit for service, whilst the rejected ones were frantic with delight, and bowed and crossed themselves with the greatest gratitude." The most distressing scenes may be seen in the streets among the bands of recruits—they, their mothers and sisters, or wives, all weeping together as they walk along; for the women, with innate tenderness, accompany them for many miles out of the town, travelling, until the very last moment, to bid the objects of their affection adieu for ever, whilst the latter, in entering the Russian army, like the condemned in Dante's "Inferno," leave all hope behind.

And again, with an honest fervour worthy of a woman's heart, she writes:—

Every morning, look out of the window at what hour I would, hundreds, nay thousands, of raw recruits, torn from their villages perhaps a thousand versts off, were tramping wearily along, with all their worldly riches in bundles at their back, with dresses wet and muddy, and faces stricken with grief, as they marched in the direction of the palace in order to receive the Emperor's approval. I knew not what the feelings in that man's breast can be as he scans the downcast countenances of so many miserable wretches, and then sends them down to the seat of war, ready and ready for nothing else than to be food for cannon, and the prey of vultures and jackals. Does he ever reflect that for each life he thus sacrifices for his ambition he will be called to account and stand arraigned as a murderer before the judgment-seat of God, who has committed them into his hands that he may be the protector and not the slayer of his people!

The feeling of hatred entertained by Russians of all ranks against the English ever since the declaration of war, and particularly since the affair of Odessa, is manifested in a variety of petty ways, too contemptible to notice; and in the midst of their impertinence they are as boastful as ever.

The upper classes (writes the authoress) were equally enraged against us, and even in society they sometimes could not restrain the impotent rage and fury of anger and spite within the bounds of politeness and propriety. One day I called on a lady of rank, and I had scarcely sat red the room ere she began to attack me in a rather violent manner concerning the present war. It was in vain that I assured her that I knew nothing at all about it, and that I was an alien of our Government. "Ah," said she, "you pretend to be very cool and unconcerned now, but you will tell another tale when you see the Russian flag flying over the Tower of London!"

And she adds—

The beastings of the Russians are intolerable. To hear them talk you would think that, like the Khan of Tartary, their Czar bids all the Kings of the Potentates of the earth to eat their dinner; and if Sebastopol, Petersburg were demolished by the Allies, and Moscow in ruins, they would still declare that they were invincible. If their Emperor is not exactly the brother of the Sun and Moon, he is Heaven's First Lieutenant at the very least. Perhaps this fanaticism be is a remnant of their Asiatic habits, which may possibly shortly be cured by European remedies.

The worst circumstance in the case, as regards the prospects of peace, is that, even if the Czar were personally disposed to draw in his horns, his enslaved people, whom he has excited to run a muck against the Western Powers, would not let him go back

"He would be too glad to do so, and an intelligent Polish gentleman to the authoress, "but he dares not. He has raised a legion of demons that he cannot lay. Why, what would the proprietors say? What would the raised serfs say? And what would become of him if he were thus publicly to acknowledge that he is in the wrong! No! Now that he has advanced so far, he is obliged to continue, and leave the till he has drawn to be dishonoured by those that come after him."

In the above remarks we have chiefly restricted ourselves to various points of deep import in connection with the present crisis and the future destinies of this large but rotten State. Those, however, who turn to the book itself will find it to abound in sketches and incidents of every shade and hue, told in a lively and graphic manner. By way of relief we will indulge in a little bit of green-room gossip about the Czar in his character of patron of the drama:—

The French theatre is extremely good; all the best artistes from Paris are engaged for the season at enormous salaries. We were informed that his Majesty once said to the director that "he was one of his best friends, because he amused society." A great deal more was perhaps *sous-entendu* than the mere words expressed. It is certain that, as long as the Government can get the people (that is the upper classes—there are no "people" in Russia) to intrigue and quarrel about the merits of an actress or a singer, instead of thinking upon what great events are passing around them, it is safe enough, and [illegible] were being transacted, Mdlle. Rachel was imported; I [illegible] the exact amount she received, but the diamonds and jewels with which she was presented were of enormous value, and her performances, the Czar's generosity, and her *conduct* furnished all the nobility and gentry with a fruitful theme of conversation. As the climax to all the compliments paid this actress, the Emperor did the *Empress* the honour of presenting Mdlle. Rachel to her, and gracefully led her to his Consort's presence. Mdlle. Rachel, in return, wrote a flourishing letter to the Emperor (a copy of which was shown me), containing innumerable high-flown compliments on his might and power, and she spoke of the tears of gratitude she shed on her return to her lodgings, &c. It was handed round with about as much reverence as we should do an autograph epistle of Shakspeare or of Alfred the Great. Doubtless, the great tragedian laughed heartily at it all, and thought the Russians a set of dupes.

We promise the reader who takes this volume in hand, that he will not be disposed to skip over many pages of it till he comes to the end of it. It will well reward perusal.

LIGHTS AND SHADOWS OF AUSTRALIAN LIFE. By MRS. CHARLES (LACY) Hurst and Blackett.

Mrs. Clacy has already written one of the best books of *fact* on the subject of Australia, and she has now written one of our best books of *fiction*, derived from Australian sources. Along with many of our contemporaries, we have paid our tribute of warm approbation to her excellent work, "A Lady's Visit to the Gold Fields of Australia," and now we have occasion to speak not less approvingly of her "Lights and Shadows of Australian Life."

This book is a collection of Tales, descriptive of the features, both physical and moral, of those distant regions. "They are all founded," says Mrs Clay, "upon facts that have occurred in real life; the greater portion of them having fallen within the personal knowledge of the author. Whatever faults, therefore, of matter or manner they may possess, they can safely lay claim to the one merit of truth." That they possess this—the greatest of all merits—is unquestionable. Mrs. Clacy has already shown her thorough knowledge of our Australian colonies and their inhabitants; and her pictures, moreover, contain the strongest internal evidence of their general fidelity. It is impossible to read any one of these tales without feeling convinced that every scene, every description which it contains is drawn directly and fault[illegible] from nature and from the life. But this is very far from being the sole merit of these Tales. The fictitious narrative which forms the framework of the pictures are happily devised, and full of interest. Mrs. Clacy's style is animated and attractive; and the book, through a most pleasing medium, conveys a large amount of important information and instruction

THE ART OF TRAVEL; or, Shifts and Contrivances available in Wild Countries. By FRANCIS GALTON. Murray.

This little compilation will be useful to the class of travellers to whom it is addressed. The contents are various; including water—how and where to find, and how to carry; food and camp fixing; housekeeping generally; food and cookery; clothes and personal requisites; as to finding one's way across country, and fording rivers; capturing and taming wild cattle; self-defence against marauders; and how to catch a Tartar and secure him when caught

WAR OBITUARY.

ADAMS (Major-General Henry William), C.B., died at Scutari on the 19th December, from the effects of the wounds he received at Inkerman, just seven days after he was raised to the rank of Major-General, for the distinguished gallantry and ability he displayed throughout the operations in the Crimea, while in command of the Brigade of the Second Division, composed of the 41st, 47th, and 49th Regiments. Few officers ever died so beloved and lamented by his comrades. He had been in the Army more than thirty years His first commission bears date 31st July, 1823. The rank of Lieutenant-Colonel he attained in 1840. At that time he was in the Royal Scots Fusiliers, which distinguished corps he commanded throughout the Chinese war—at the first capture of Chusan, the storming of the heights over Canton, the taking of Amoy, the second capture of Chusan, the storming of Chinkiee, and the fall of Ningpo. The 49th Regiment, which was likewise actively engaged in the same scene of warfare, was shortly afterwards returning to England, and Lieutenant-Colonel Adams exchanged into it. Subsequently he served with that regiment in England, Ireland, and the Mediterranean. General Adams was the second son of the late Henry Cadwallader Adams, Esq., of Anstey Hall, county Warwick, by Emma, his wife, eldest daughter of Sir William Curtis, Bart., Lord Mayor of London in 1795. Of his brothers, George Curtis Adams is a commander in the Royal Navy; Frank, Lieutenant-Colonel of the 28th Foot; and Cadwallader, Captain in the 49th. General Adams's only surviving uncle is Mr. Serjeant Adams, the Assistant Judge of the Middlesex Quarter Sessions. The Adamses of Anstey are a very ancient family, and can be authentically traced to Simon Adams, parchiet, who died in 1443, leaving property in the city of London to the Skinners' Company. General Adams married, Nov. 28th, 1843, his cousin, Catharine, daughter of the late Rev. Thomas Coker Adams, Vicar of Anstey; but has left, we believe, no issue.

RIDDELL (William), Surgeon of the 95th Regiment, died on the 28th of November, at Scutari, of remittent fever, brought on by incessant attention to the sick and wounded, and by exposure on the heights near Sebastopol. He accompanied the Staff all through the battle of the Alma, and was also present at other engagements.

BUTLER (Captain Henry Thomas and James Armar). The hero of Saltrin and his equally gallant brother, Captain H. T. Butler, Deputy-Assistant Adjutant-General in the East, who died a soldier's death at Inkerman, have gained such lasting renown, and excited so much public interest, that we deem no apology necessary for the following additional and authentic details concerning them. They were the sons of Lieutenant-General the Hon. Edward Butler, uncle and heir presumptive of the present Earl of Carrick, and derived their descent from a common ancestor with the illustrious house of Ormonde. There is a beautiful incident in the life of James, Duke of Ormonde, which may be well applied in the present instance. When some one was offering obtrusive condolence to the Duke on the death of his all-accomplished heir, the gallant Earl of Ossory, Ormonde, with a smile replied, "Sir, I would rather have my dead son than any living son in Christendom." The following letter of the Duke of Cambridge has not been published:—

CONSTANTINOPLE, December 2nd, 1854.

SIR, Having been prevented by press of business and indisposition from writing to you sooner, I feel that an apology is due to you on my part that I have not sooner performed a painful and most melancholy duty. You will readily understand to what I allude—your gallant and most amiable son was attached to the First Division during the whole period of our army being in the field. He was, therefore, under my constant observation; I had many opportunities of judging of his talent and of his worth. It was, therefore, with deep grief that I saw him fall at the battle of Inkerman on the 5th of last month. He is deeply regretted by all who knew him, and by none more than by myself; but his death was gallant, and I trust not painful. I can easily understand what your feelings must be to hear of his loss, after your recent bereavement, when another gallant son has fell in the performance of his duty, and in a distinguished a manner. I shall not, therefore, further trespass on your moments of sorrow and grief than to inform you of my deep sympathy.—I beg to remain, Sir, yours very truly

(Signed) GEORGE.

Lieut.-General the Hon. H. E. Butler

CHAMPION (Lieut.-Col. John G.), of the 95th, died at the hospital, Scutari, on the 30th November, from a wound received at Inkerman, when in command of his regiment. This gallant soldier was the eldest son of the late Major John Cary Champion, of the 21st Royal Fusiliers, by Elizabeth Herrie, his wife, younger daughter of William Urquhart, Esq., of Cromarty and Craigston, county Aberdeen, a descendant of one of the most distinguished families in Scotland. He was born at Edinburgh, 8th May, 1815, and gained his commission twenty-four years ago at Sandhurst. In 1831 he was appointed Ensign in the 95th, and from that period to the glorious conflict at Inkerman, served uninterruptedly with his regiment at home, in the Mediterranean, Canada, and India. He availed himself of every opportunity in leisure hours to prosecute researches in the natural history of those countries. An accomplished botanist and zoologist, he made large collections of the different objects of interest, and it was his custom to forward them to the public institutions at home. Few and the British Museum profited largely by his liberality; and the names of "Rodolei Championi," "Rhododendrum Championæ," "Bythus Championi," &c., will long preserve to the votaries of natural science the memory of one who did so much for their favourite pursuit. He embarked as Senior Major of the 95th with them last April, for the Crimea, and joined General Pennefather's Brigade, in the Second, or Sir De Lacy Evans's Division of the army. At the Alma, when Lieutenant-Colonel Webber Smith was wounded, the command of the 95th devolved on Major Champion, and he received the thanks of Lord Raglan for his conduct, in a despatch to the Duke of Newcastle, dated 31st of October. Major Champion conducted the command of the 95th during all the subsequent harassing operations. On the 25th of October, when the Russians made an attack on the Second Division, they were met by a resistance from the pickets commanded by Majors Champion and Dunn—so skilfully conducted as to elicit the warmest praise from his General, Sir De Lacy Evans, in his despatch published by Lord Raglan; and this dashing affair was considered by his army to have been a service in which his ability as an officer was eminently displayed. The prolonged and gallant defence of these pickets not only saved the lives of many, but enabled the second Division to turn out in such order as to ensure the complete defeat and ignom[illegible] rout of the Russians. On the morning of the battle of Inkerman Major Champion entered the field in support of the the 41st Regiment, with a wing of the 95th. They were met and repulsed the enemy. They were then desired to hurry to the assistance of the Grenadier Guards, at a battery where the enemy pressed them hard. Consequently, these brave men (Guards, 41st, and 95th) drove the enemy down the hill, after a long and most deadly struggle, hand to hand, and the ammunition all expended. It was towards the end of this struggle that Major Champion (then we believe, senior survivor) proposed to some of the band of heroes to mount and charge over the battery—which they did in style; and he then received his death-wound from a musket-ball through the breast and lungs.

GODFREY (Lieutenant Arthur William) of the 1st Battalion of Rifle Brigade, died 27th November, in camp, on the heights before Sebastopol. He was second son of John Godfrey, Esq., of Brook-street House, Kent, by Augusta Isabella, his wife, daughter of John Ingram, Esq., of Staindrop, county Durham; was born 9th March, 1829, and entered the Army the 3rd December, 1845. He was a direct descendant of Peter Godfrey, Esq., of Hodsford, in Kent, eldest brother of Sir Edmundbury Godfrey, Esq., murdered in 1678, in the evil days of Titus Oates.

MÖLLER (Major John Claus), of the 50th, was killed at a sortie made by the Russians from Sebastopol on the 20th ult. "The enemy (we quote Lord Raglan's despatch) were met with great gallantry by Lieutenant-Gordon of the 88th Regiment, who, when supported by the covering-party of the trenches, under Lieutenant-Colonel Waddy, of the 50th Regiment, succeeded in once driving them back; but here, I regret to say, the loss was severe, Major Möller of the 50th, fell mortally wounded, and I am concerned to say is since dead." The gallant officer entered the Army 18th June, 1841, and obtained the Majority of his regiment 3rd March, 1854

RICHARDS (Captain Edwin), of the 41st Regiment, killed at Inkerman, was eldest son of Captain Edwin Richards, R.N., of Ravensden-house, county of Carlow, grandson of the late Solomon Richards, Esq., of Solsboro, county of Wexford, and nephew of the Rev. S. Richards of that place, who is the head of one of the oldest and chief families in that county, and of the same in Ireland. He was born 14th September, 1826, partly educated at the Royal Naval School, New-cross, and finished his education at a military college near Bon, Prussia; presented with his first commission as Ensign in the 41st Regiment, without purchase, on 23rd February, 1849, by the late Duke of Wellington, in consideration of his father's services, promoted to his Lieutenancy by purchase, 27th December, 1850, and to his Company by purchase, 28th March, 1854. He served with his regiment in Ireland, Ionian Islands and Malta, till they embarked from Malta for Turkey in the spring of the present year. He was left at Varna with the dépôt, when the regiment embarked on the 1st September for the Crimea, on which occasion he thus describes his feelings in a letter:—

The 41st embarked yesterday with the rest of the Division, and here am I, miserable, unfortunate wretch, left with the sick men of the brigade. I feel as if I would go mad [illegible] are no doubt for the Crimea, and will have hard fighting. [illegible] men of each brigade throughout the Army has been left behind; and, unfortunately, I am the youngest in mine. I went to Generals Adams and Pennefather, and neither could do anything for me: they were both very civil; but said it fell to my lot, and they could not with justice try to keep any one [illegible] General Adams wrote me a very kind letter about it. My brother officers are as much disgusted as I am about it, but that does not make me less miserable. There is, however, a Captain of the —— sick at Constantinople; and the General said if I could effect an exchange with him I might go on; so there is some chance.

On the 14th Sept. he was still left at Varna, and wrote:—

I hope there is a chance of my getting on before long; but am I not unfortunate in being left here? I do not think, if sentence of death had been passed on me, I could have felt more horrified than I did when I received the order to remain with the dépôt. It was done at the last moment, after we had received the order to embark, and were all in the highest spirits

He did at length get an officer to exchange with him, and went on to the army before Sebastopol the last week in September, and was as happy as the greatest boon had been conferred on him. From that time he took his part in the trenches and pickets, and all the works of the siege; was in the battle of the 26th October, when Sir De Lacy Evans's Division so signally defeated the Russians; thus describing it in his letter of the 27th October:—

We had a pretty hot affair yesterday for about an hour and a half: it ended by our driving the enemy back with a loss of 1000 killed and wounded on their side, and only 58 and 5 officers on ours. They did very well, indeed, when opposed to our pickets, who always wear great-coats; but when we come on in our shirt-sleeves, yelling like savages, they could stand it no longer. I believe there is something in the colour which frightens them. I do believe we are the kindest enemy in the world. It is wonderful to see the attention we pay to the wounded Russians, and our surgeons take as much pains with them as with our own. The enemy are certainly not to be despised. Two of their battalions advanced yesterday like men, under a heavy fire of our artillery, to within 200 yards over the line of Alma yet; but still I cannot grumble, as I am the only Captain who managed to get away from the dépôt at Varna yet.

The last letter his family received from him was on the day after. They had read the account of his death at the battle of Inkerman. It was written in pencil, and dated "Near Sebastopol, 3rd November, 1854," in which he wrote:—

I am on picket to-day, and have not time to say more than that I am still alive and well, and in possession of my usual number of arms and legs. On the 1st November the enemy on Sunday morning before [illegible] light. Edwin's company was ordered out to strengthen them; but before he had advanced far he was surrounded by Russians. Refusing to surrender himself a prisoner, he fought with four of his opponents, killed two with his sword; thus dying the noblest and most glorious death a man can die—without pain—shot through the body, and stabbed by several bayonet wounds, he suffered no pain, as the wounds must have been instantaneous. The Colonel (Carpenter) was killed, poor Edwin's subaltern killed, and several others of his regiment. It was an awful day. After eight hours' fighting, most of it hand to hand (under the fire of about 30 pieces of heavy artillery), we drove the enemy from the hill, which Edwin and others had so gallantly died in defending. Edward and I went over the field as soon as we could stir from our posts to look for poor Edwin; but he had been brought in, and was buried with four other officers by the Chaplain of the Second Division next morning.

SANITARY ORGANISATION OF THE FRENCH ARMY. It would appear, from the *Moniteur Officiel*, that the medical officers of the French army are not the only ones to whom praise is due for maintaining the soldiers in their efficient and healthful state. There is at the seat of war a thoroughly skilful and well-instructed body of men, highly paid and favoured. This body—which is not military, but only administrative—is entrusted with all the administrative services of the army. In the name of the commander of the hospitals; it regulates the provisioning of the army; it controls the pay, the expenses; it enters into contracts in the name of the State. The supply of food and the sanitary care of the hospitals thus bring into existence the "military intendants," who had complete control over all that concerns locality, *matériel*, and *personnel*. To them is referred all that relates to marches to be made, conditions to be executed, referred all that relates to marches to be made, conditions to be executed, referred all that relates to marches to be made, conditions to be executed, subsistence to be furnished to the troops. Under the actual *régime* the Surgeons-in-Chief exert but an indirect action upon the *personnel* of the sanitary department. Their province is rather consultative than executive, and all their decisions are submitted to the consideration of the intendants. The intendance, which is not medical, draws its general medical affairs—that is to say, the officers of the military medical corps, upon the installation of hospitals, the subdivision of the patients. They have referred to them questions relating to health, sanitary measures, the supply of food and the alimentary preparations, the allotment of hospital *matériel*, and the supplementary prescriptions, the influence of hospital *matériel*, and the supplementary prescriptions, the allotment of hospital *matériel*, and the supplementary prescriptions, the allotment of hospital *matériel*, and the supplementary prescriptions, the influence of the medicines. By means of their position they may exert considerable direct influence upon the distribution of the medical men. It is their duty to investigate epidemics, and to calculate the probable sanitary resources.

RUSSIAN ACCOUNT OF THE CAUSE OF THE WAR. A Constantinople letter gives, as from a Russian [illegible] the following explanation of the origin of the present war:—"The Turks massacred the Russian Bishop and several Russian priests at Jerusalem. God, in his wrath, sent a squadron of angels to carry away the tomb of Christ, which remains at this moment suspended in the heavens, and he commits to the Czar to avenge the Pagan sacrilege. When the Emperor Nicholas shall enter Jerusalem a conqueror, as, by the aid of Russia, he certainly will do, Christ's tomb will be restored to its place. The phalanx of angels will line the road along which the conquering Russian army will pass, and will present arms to them. Then the Czar will be master of the whole world, which will renounce its errors and become converted to the orthodox faith." This story is implicitly believed by the Russian serfs.

FRENCH CONCERT IN THE HALL OF THE MAISON DIEU, AT DOVER, IN AID OF THE PATRIOTIC FUND.

GRAND FRENCH DEMONSTRATION, IN AID OF THE PATRIOTIC FUND, AT DOVER.

A VERY gratifying instance of the generous sympathy of the French character has just occurred at Dover, where a large party of musical gentlemen from France have given, under the patronage of the Mayor of the town, a musical performance in aid of the Patriotic Fund. The festival took place on Thursday (last week), when the afterpart of the day was observed as a general holiday, and the town throughout the day was a scene of gay sights and joyous excitement. At an early hour the French colours were hoisted at all points; and the sun, breaking through the mist which heralded a fine day, saw the "red, white, and blue" of *la belle France* and old England lovingly commingling. From the Town-hall and other public buildings immense tricolors were flying; the shipping in the harbour was gaily decorated with the flags of all nations, the French predominating; while from private houses in almost every street might be seen the ensigns of the two countries with appropriate mottoes and devices, including a large display of the initial "N." wreathed with laurels. Lines of flags extended across many of the streets; and thoughts of the holy cause in which the armies of England and France are engaged were occasionally inspired by the sight of a Turkish colour flying in company with its defenders.

The members of the band of the municipality of Calais (numbering forty-seven) and the Choral Society of St. Omer (numbering forty-two performers) arrived at Dover on Thursday morning, at five o'clock, by the packet *Ondine*, and proceeded to the hotels where accommodation had been provided for them. At ten o'clock they assembled at the railway station, and having formed into procession (the French band displaying French and British ensigns), they left the terminus at half-past ten, preceded by the band of the Royal Staffordshire Militia, and marched to the Market-place, where the French band played several airs, which were enthusiastically cheered by the people. At eleven o'clock the visitors were received by the Mayor and Corporation, in the old Town-hall; and were addressed by the Mayor, to whom M. de Marsilly, the head of the Calais deputation, replied. A déjeûner was then served; after which the procession re-formed, and visited various parts of the town. In the afternoon the band dined at the Ship and Lord Warden hotels, and were met by several of the town authorities.

In the evening the concert took place in the great hall of the Maison Dieu, which had been characteristically decorated for the occasion

The Board of Ordnance readily supplied a quantity of *matériel* from the Armoury for military emblems; the town of Calais furnished a number of their national flags and emblems; and the officials of the South-Eastern Railway and others also poured in liberal contributions of flags. The orchestra was erected at the north-east end, over which appeared an elegant device, having as its centre the initials "N. V.," partially surrounded by "Alma, Balaclava, and Inkerman," in a semicircular scroll, and based with the singularly-appropriate motto of "Our Honour, our Sympathy, our Hopes, are one!" Portraits of Queen Victoria, the Emperor Napoleon, and the Empress Eugénie, graced the back of the orchestra; and motto, device, and portraits were surmounted by the arms of England and France, and a splendid military trophy, interspersed with stars of swords, French and English flags, laurels, &c. Fronting the orchestra, at the south-western entrance, a commodious gallery was erected for the accommodation of 250 visitors. The front displayed elegant military devices, and the upper part was decorated by flags, most tastefully grouped. On either side of the hall flags, evergreens, and military stars were skilfully arranged, which displayed to great advantage the numerous portraits belonging to the Corporation. The whole hall was surrounded by gas jets, which when lighted gave a magnificent effect to the venerable edifice.

The concert commenced at seven o'clock, when the hall was crowded with company, the majority of the ladies displaying the tricolor in their dress. Upwards of 1100 tickets were issued. The programme consisted of a selection of grand military, vocal, and instrumental pieces, which were admirably performed. At the conclusion of the first part a general call was made for "Partant pour la Syrie," which the band immediately played, and followed by loud cheers, and shouts of "Vive l'Empereur!" The concert terminated with "God Save the Queen," by the Choral Society; after which three cheers were given for Queen Victoria by the French band, *à la basse*. The Mayor proposed a similar compliment for the Emperor and Empress of the French, which was followed by "Victory and Success to the French and English nations;" "The Ladies of England and France." The company then retired, highly gratified with the entertainment.

LORD RAGLAN'S QUARTERS NEAR SEBASTOPOL.

THE accompanying Sketch of the head-quarters of the Commander-in-Chief in the Crimea is taken from the camp of the Heavy Cavalry Brigade. The place is about half-way between Sebastopol and Balaclava, and is, therefore, most favourably situated for Lord Raglan visiting the English lines, which he does daily, if we are to rely upon the information contained in numerous letters from private soldiers. The assertion in the *Times*, that his Lordship is hardly ever seen in the Camp, turns out to be founded on false reports. The following extract of a letter from a private soldier is only one out of numbers of a similar kind:—

Notwithstanding the severity of the weather Lord Raglan has been out of doors daily, at different parts of the Camp, so much so that some of his Aides-de-Camp have remonstrated with him, saying he had better allow them to do the work for him. He has been known frequently to give a hard-worked private his own bread, and even to let some poor soldier have a good suck at his brandy-bottle. The men venerate him, but rail against the Government for not giving him proper means to enable him to make them more comfortable

It is a singular fact that the letters of private soldiers from the Crimea are characterised by a much manlier and more hopeful spirit than those of their officers. The latter have furnished many sad illustrations of their want of the essential qualities of good soldiers—the power of undergoing hardships and fatigue without murmuring. Taking them throughout they have shown themselves much inferior to the men.

HEAD-QUARTERS OF LORD RAGLAN SKETCHED FROM THE CAMP OF THE HEAVY CAVALRY BRIGADE.

DESIGN FOR A MONUMENT TO THE OFFICERS AND SOLDIERS WHO FELL AT THE BATTLES OF THE ALMA, BALAKLAVA, AND INKERMAN.

MEMORIAL OF THE WAR.

THE custom of raising memorials to the dead—which dates from the earliest antiquity—can scarcely be more legitimately honoured than in recording the fate of those who have fallen in defence of liberty. The fate of our brave troops who have been slain in the war in the Crimea, suggests a fit opportunity for the exercise of this noble feeling of humanity; and, in this spirit, a Correspondent has proposed the accompanying design for a Memorial, which bears "Alma, Balaklava, and Inkerman;" to be inscribed also with the names of all the officers and soldiers killed in these battles, accompanied by the following lines:—

THESE FOR THEIR NATIVE LAND IN BATTLE TRIED
THEIR ARMS, AND SCATTERED ALL THEIR FOEMEN'S PRIDE.
BRAVELY THEY FOUGHT, AND NOBLY SCORNED TO SAVE
THEIR LIVES, AND FOUND MAN'S COMMON LOT—THE GRAVE.
FOR US THEY FELL, LEST OUR FREE NECKS SHOULD FEEL
THE FOUL REPROACH OF RUSSIA'S DESPOT HEEL.
NOW DOTH THEIR COUNTRY ON HER LOVING BREAST
INSCRIBE THEIR DEEDS, AND CONSECRATE THEIR REST;
AND CRY, WHILST POINTING TO EACH HONOURED NAME,
READ, YOUTH OF ENGLAND READ—AND DO THE SAME!"

The object of perpetuating the heroism of these brave men bespeaks the best feelings of our nature, and will it is hoped, be not lost sight of by their countrymen, grateful for the patriotic services of the slain, and anxious to perpetuate the memory of their good deeds for the imitation of posterity.

By order of the Lords of the Admiralty the Russian prisoners captured in the *Atlantic*, condemned as a lawful prize in the port of Leith, have been released, and permitted to enter themselves as merchant seamen, to navigate British vessels to Australia, giving their parole not to bear arms against England or France during the present war.

THE VALLEY OF INKERMAN.

INKERMAN.

THE scene of the sanguinary struggle at Inkerman is a site of considerable historic interest, independently of the prominence which it will occupy in the future records of the war.

Inkerman is a village and seaport of the Crimea, lying thirty-five miles south west of Simpheropol. Its name is Turkish—from "In," cavern, and "Kerman," fortress; the place having numerous caverns cut in its rocks, supposed to be the works of the monks in the middle ages. The place is described in the travels of Pallas, Clarke, and Demidoff, but we prefer the most recent account, viz., from Mr. Scott's "Travels"—a second edition of which popular work has just appeared:—

We are rowing up the bay of Inkerman. Passing on the right hand the Careening Harbour, some ancient chambers, and a chapel cut in the rock, now used as a powder magazine; and, from time to time, the beautiful arcades carrying the aqueduct over the inlets of the bay; and, on the left, the ruined village of Actiar, the navy baking-house, the white cliff, and the lighthouse; at length we swept into the "Tchernaia-Retchka," here running through a marshy flat of its own depositing, covered with rank vegetation, the prolific mother of miasma. Disembarking at a little bridge, we walk through the 900 feet of tunnelled aqueduct, and then visited the great limestone quarries, whence most—would that we could say all!—of the material of the immense works of Sebastopol were procured. Returning to the valley of Inkerman, here narrowed by two approaching mountains, we found their perpendicular sides completely dotted over with perforations of various shapes and sizes—the doors and windows of the queer abode of the Taures, who fixed their homes where eagles well might build their nests. Near to the entrance of the tunnel we had passed through, and on the face of the western mountain, we entered a small open ing leading to a flight of stairs on the right and left of which were cells; those on the one hand receiving light from holes cut through the surface of the cliff, those on the other being dark and gloomy. Having traversed a passage about fifty feet long, we reached a church or rather the remains of one; for a portion of the living rock in which all these works were cut had fallen, and carried with it half of this curious crypt. Its semicircular vaulted roof, and the pillars in its corners, indicated it to be of Byzantine origin; while a Greek sculptured cross, in the centre of the roof, told that it was a temple dedicated to that religion. The altar, and any sculpture which might have existed near it, are gone, and have long since been burnt into lime, or built into some work at Sebastopol. Beyond the church we found a large square apartment, entered by another passage, and looked over the valley of Inkerman. A few more cells, resembling those on the stairs, composed the whole of this series of excavated chambers; the arrangement of which at once proclaimed them to have been a monastery. These were the cells, the refectory, and the church

There is nothing remarkable in their construction as a work of art; yet there is an absence of that roughness and simplicity which exist in many of the caverns of the opposite mountain; and which indicate their being of a much earlier date than these.

Descending to the valley, we crossed the bridge, to examine the caves of the more perpendicular wall of rock which faced us; and which above, below, on every side was pierced with openings. Entering one of them, we got upon a stone stair, and, passing some small chambers, arrived at a gallery which led to a most interesting church. On each side of the nave are four square pillars and pilasters, from which spring arches forming side aisles to the transept. The altar is in an "apse," and over it is sculptured the Greek cross of four equal arms. The roof is vaulted; and the arches round; thus being of the same style as that we had previously examined. Its total length is rather more than twenty-three feet by nearly eighteen in width. Going out by another door, we came upon a flat-ceilinged oblong chamber, about eighteen feet by thirteen; descending from which was another flight of stairs, leading to more small caverns, probably the cells of monks. Returning through the church again, and examining more particularly the gallery, at the end of which formed a portico, we found it lighted by a triple semicircular-headed window, and on its right hand some sarcophagi, still containing human bones. There is also a small chapel near, which appeared to be connected with the tombs. We now followed the eccentric windings of another stair, passing through and into many dens and caverns, all likewise excavated in the solid rock, until at last we emerged from the lower regions, and reached the mountain top. Here were the ruins of a great fortress or castle: on examining which it was clear that the whole had not been erected at the same epoch; but that certain parts had been merely repairs or additions to an original building. It is quadrangular in form, situated at an angle of the mountain, which formed the boundary on two sides; the other two being defended by a ditch and strong wall, flanked with towers. We could trace the foundations of houses in parallel lines, shewing the direction of the only street it contained. There was one very large reservoir, entering into which were the ends of earthenware pipes, leaving no doubt of its having been used as a cistern for water. The only other opening into it was from the top; but that was much enlarged, from a portion having lately fallen in. The face of the ditch opposite to the walls was also pierced by many caverns. And all along the edge of the mountain, on each of its sides, were entrances leading to chambers, in such numbers that we only attempted to visit a few, but still enough to prove that some consisted of whole suites of apartments, while others were smaller, and many had only a single chamber. Connecting them is a labyrinth of galleries, and staircases innumerable. There were also holes for fires in the centres of some of the rooms, and the chimneys could be traced; while excavated recesses served as places for beds. The workmanship of most, and especially of those left on the southern face of the mountain, was rude enough, the marks of the masons' chisels being still upon the sides. All were [illegible] We could find no inscriptions either in Latin or on the walls of the castle; but the caves bear the stamp of greater antiquity than the [illegible]

The observations and researches of "De Montpéreux" fully establish the fact, that the mountain caves of Inkerman were the work of the Taureans, and established there the Bosphorian colonists of Cherssonesus called on Mithridates for [illegible] against Skilorens, the King of the Tauro-Scythes. Diophantes, the [illegible] by Mithridates, at once recognising the strength of the position, [illegible] edge of the treasure, and relied it Dpatorion, in honour [illegible] A [illegible] dia replaced a more ancient one, or whether any [illegible] would to decide with certainty, as no inscription [illegible] resemblance to a proof that this castle was [illegible] possessors would have hardly destroyed it. [illegible] ary have the appearance of much greater use than others, it may be fairly presumed that portions of the citadel of Mithridates are still there. Now, as the limits of this fortress are circumscribed, consisting, as can be traced by the foundations, of a single street, it cannot be doubted that a garrison occupying the heights would take advantage of the rocky dwellings [illegible]

[illegible] middle of the first century the Tauric Chersonesus was overrun by the [illegible] bes of Alains, a people who [illegible] fixed residences, and were therefore very unlikely to undertake so difficult a task as to cut their abodes in the solid rocks. They were overcome by the Goths in the middle of the second [illegible] and 200 years afterwards hordes of Huns came rolling from the [illegible] west, and the Goths were driven to the strong positions of their mountains. The Huns did not, however, remain to take permanent possession of the country, but passed on to seek a wider field for their adventurous passions. It is probable that, at the time, the number of caves at Inkerman were increased. For a whole people, driven into these isolated fastnesses, would, as a matter almost of certainty, have found it necessary to cut their accommodation; and this might have been the period when the caves in the face of the most were made.

In the meantime the light of Christianity had shed its benign influence over the Goths, their form of worship appearing at first to have been exceedingly simple. In the reign of Justinian I. a Bishop was appointed, for whom they had to petitions to that Monarch. As monasteries already existed throughout the East, where they had been especially encouraged by the instrumentality of his mother Helena, it is more than probable that those of Inkerman were excavated in his reign. The monks always chose strong positions, to guard their little community from the danger of sudden attack, as well as to afford an asylum, in case of necessity, to their fellow-religionists. The architecture of the caves, and the style of architecture of these cavern churches agrees with that period. Whether the Goths were at any time followers of the doctrines of Arius is uncertain, but they did not come under the government of the Greek Church before the year A.D. 847. Under the Comnenian Emperors, and the Princes until 1475, when the Eupatorion of Diophantes, after other names, had become Theodori, was taken from Mohammed II., and called, by the Turks, Inkerman, from "In," cavern, and "kerman," fortress; the Cimeo of Strabo being applied to the locality, and not to the antechapel place. It is certain that the Genoese never held this fortress; and, according to Bronevius, Greek inscriptions and other sculpture still remained in the time of the Turks. These Greek Princes appear to have left the Genoese unmolested; indeed, they were not strong enough to take up an offensive position against that people, who were, therefore, benefited by such industrious and peaceable neighbours; especially as they followed agricultural pursuits, and did not interfere with commerce, which was the monopoly of the adventurous Italians. "De Montpéreux" gives the translation of an inscription which he had seen, whereon the name of "Alexis, Sovereign of Theodoro and the neighbouring country of the sea," is mentioned, and which bears the date of A.D. 1427. After the Turkish conquest, the fortress of Theodori was allowed to fall into disrepair by the garrison, and was finally abandoned to become what it is at present, only a deserted and interesting mass of ruins.

We again descended to the valley to examine the stupendous quarries in the same mountain whence the stone was taken to build the ancient town of Chersonesus, and then proceeded to the southern side, in which most of the oldest caves existed. Nearly the whole of these, however, have partly fallen, from the [illegible] to the [illegible] excavations for getting the stone for the walls of Sebastopol, and parts [illegible] must have formed the face of the rock now only presented a number of square recesses and indented lines, the backs of chambers, passages, or staircases.

THE RUSSIAN FRIGATES "AURORA" AND "DWINA."—Accounts from Calcutta, of the 5th of December, state that the Russian frigates, the *Aurora* and *Dwina*, had been captured by a combined English and French squadron. These accounts, which are only neither because they are already gaining currency in London, are certainly incorrect. It might be proved that they are a mere echo of false news which for a time circulated in England.

THE TRANSPORT SERVICE.—Mr. W. S. Lindsay, M.P., when addressing a meeting of friends at Tynemouth the other day, observed that with regard to the management of matters connected with the transport service France was greatly in advance of us. We had proofs of the inability at the Admiralty—we could hardly find a more able man than Sir James Graham but, when he told them that the same system was now in operation to which we were pursuing ages, they would not be surprised at the difficulty and confusion which prevailed. The form of the charter-party was *verbatim* the same as in the days of the Dutch war, whereas the French adopted a simpler form. Had it been used in the merchant service, being in this respect, therefore, a great step in advance of us. These were facts the recital of which might give offence to some, but he thought it his duty to the country, and though it to the country. Again, France had a responsible head, to whom all might appeal. If a merchant had occasion to send a message by telegraph to the Minister of War, requesting to know, for instance, what goods were to be shipped in a certain vessel, there was an answer by the same rapid medium by four o'clock in the afternoon. But if you wrote to the Admiralty (much nearer), the probability was you would not get an answer in a week, and sometimes five weeks elapsed before an answer was returned. This was not the fault of the men, but the system; there was no responsible head responsible to the House of Commons, and though it to the country. Messages were sent from the Admiralty to the War-office, from the Ministry of War to the Ordnance, from the Ordnance to Deptford, and then came back, the source from which they originally proceeded! A change, therefore, must be made in this respect before they could reasonably hope matters should improve. They had also excellent men as subordinates, but the staff must be increased. At Deptford they had the same staff as during peace, which rendered it impossible for the men to get through the work; and he ventured to say that, if £10.000 had been disbursed in clerks at the commencement of the war, some hundreds of thousands would have been saved to the country.

CRIMEAN ARMY STOVE AND LANTHORN.

AMONG the numerous modes devised for adding to the comforts for our Camp in the Crimea, the invention of a Stove by Price's Patent Candle Company is entitled to special notice, as well for its ingenious adaptation to the peculiar requirements of the case, as for the generous spirit in which the offer has been made to the War Department of the Ministry.

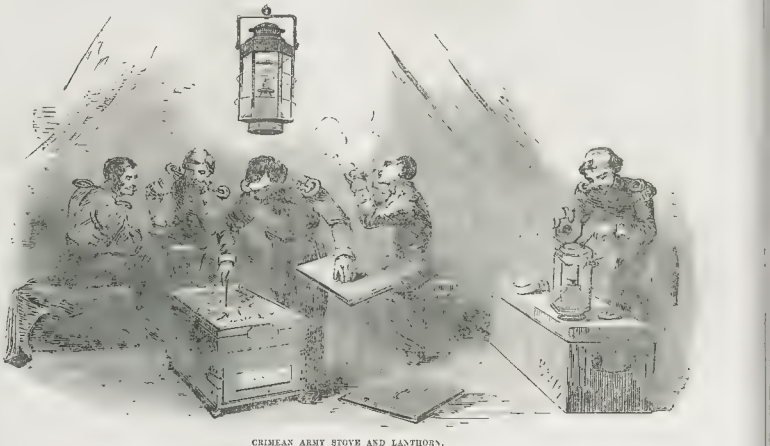
The Company have offered to supply to Government 4000, or any less number, of the above stove, with a proper quantity of cocoa-nut fuel for them; the stoves to be delivered at the rate of 200 a day; with any required quantity of Cooking Lanthorns, and candles for burning in them—all to be charged at the cost paid by the Company.

These stoves will bake 3 lbs of bread every hour, besides warming a tent. The lanthorns, besides giving light, will boil a pint of coffee in half an hour. The Company and individual members of it have already sent out as their contribution £600 worth of candles, lanthorns, &c.; and further subscriptions received from shareholders and their friends will be laid out in a number of stoves and a quantity of cocoa-nut fuel, which are to be dispatched by the next ship sent out by the Crimea Fund Committee. Any person wishing to send out a stove and fuel to friends in the Camp will be allowed to purchase them upon the same terms as the Government, at the cost price. As their manufacture is not part of the Company's regular trade (having been invented only for the present emergency), they are not supplied on other terms.

A mark of generous sympathy with the army was recently shown in connection with the making of the stoves at Wolverhampton. A manufacturer, owing to the pressure of the case, asked his men to give up their holidays, and make stoves through the Christmas week; to which the men cheerfully assented; and Messrs. Thornycrofts offered to keep their great mill open, to roll the small quantity of iron that would be required.

The Lanthorns were designed to give light only; but for our soldiers in the Crimea the following auxiliaries have been added, enabling them to boil water or cook a ration of meat when no fires can be lighted:—1st, three bent wires riveted to upper side of reflector; 2nd, round cooking dishes with covers. If you want to boil water without lighting a fire, open the lid of the Lanthorn, place your canteen on the wires at the top of the reflector, and the flame of the candle will boil a pint of water in half an hour: the canteen or vessel holding the water should be wiped quite dry on the outside before placing it on the flame. A ration of meat may be cooked in a similar manner by means of the small round cooking dishes with covers, which have been provided and sent out with the Lanthorns. A piece of steak will be well cooked in half an hour, and, when once put over the candle and covered up, no attention is required till the meat is done.

The Stove consists of the following parts:—A square sheet-iron box, with door and ventilator, a cover for ditto, two gratings, a baking-pan with cover, two tins to hold the cocoa-nut fuel. For baking: Place one of the gratings on the bottom shelf, let the baking pan with cover rest upon the top shelf, put the cover on the box or Stove, open the door and place two cakes of cocoa-nut fuel each in a tin upon the grating in bottom shelf, light the twelve wicks, and shut the door: in less than half an hour the stove will be at a proper baking heat. If the top of the Stove be covered with a coat or a blanket, the heat will be got up sooner, and it will bake more rapidly: be careful that the baking-pan be on its own cover, as well as that belonging to the Stove. For boiling: Remove the baking-pan, and let *one* of the gratings to carry the saucepan rest upon the middle shelf, on the bottom place the other grating, upon which put one or two cakes of cocoa-nut fuel in tins as before, and light the wicks. For warming a tent: Remove the baking-pan, and upon the bottom grating place one tin of cocoa-nut fuel, light the wicks, and cover the Stove. Six lights will be found better than twelve, if the Stove is only required for warming



CRIMEAN ARMY STOVE AND LANTHORN.

THE NEW ROAD TO THE CRIMEA.

The Crimea, at present the scene of hostilities, is a peninsula situated at the extreme south of the Russian Empire, and connected, as most of our readers are aware, with the continental territory by the Isthmus of Perekop. Across this Isthmus, it has been generally understood, all Russian troops must be marched to the relief of their comrades before Sebastopol; and great stress has naturally been laid upon the expediency of blockading or occupying this important passage. The isthmus itself is but a narrow strip of land, and is traversed by a wall of masonry from sea to sea. The only access to the peninsula is through an arched gateway in this wall; and thus (according to a note in one of the best and most recent maps of the country in question) the possession of this fortified line effectually closes the Crimea against an enemy. Now, at this moment "the enemy" advancing from the north is no other than the Russian reserve, which may ultimately prove to be 200,000 or 300,000 men. If, therefore, the Isthmus of Perekop could be occupied, the Crimea and its fortresses would be at the mercy of the Allies on the single condition of dealing satisfactorily with the Russians actually in Sebastopol or the vicinity. No further reinforcements could be brought up. The Crimea would be "invested" far more completely than Sebastopol itself, and the whole peninsula, rather than the principal town, would be in a state of siege. Such has been hitherto the prevailing belief, and various plans have been accordingly suggested for bringing to pass a result so desirable. Turks were to be landed at Perekop and put in possession of the line; gun-boats were to be stationed along the shore; and, altogether, it was argued that a pass so easy both to occupy and defend might be made our own with great advantage to the Allied cause. Even if we could not absolutely keep out the Russians, we should, at any rate, be accurately informed of their coming, and could certify the strength of each reinforcement, and the time of its approach, for the benefit of Lord Raglan's army. These schemes, it now appears, would, one and all, have been perfectly useless. It now turns out that some time ago the Russian Government constructed across the shallows of the Putrid Sea another great military road to the Crimea, so effectually that it is actually the better road of the two, and so quietly that Western Europe never heard a word about the matter.

If the reader will take any ordinary map of the Crimea he will see that to the east of the Isthmus of Perekop there extends a species of narrow inland lake, known as the Putrid Sea, which is separated from the Sea of Azoff by a curious dyke like strip of land, running up from the eastern corner of the Crimea, and almost, but not quite, touching the Russian continent at a point called the Straits of Genitsch. It is possible for troops advancing into the Crimea from the interior of the Empire to leave the Isthmus of Perekop in their rear, to march along the coast of the Putrid Sea, to cross the Straits of Genitsch, and then, by toiling along the whole length of the dyke-like strip above mentioned, called the Isthmus of Arabat, to enter the Crimea a few miles north of Kaffa. This route was actually taken by a Russian general in the last century, and it still forms a commercial road between the eastern parts of the Crimea and the Continent. Some nine or ten years ago, however, a road was commenced upon bridges and viaducts across the Putrid Sea itself, and was completed a considerable time before the outbreak of the present war. At what points the communication between the two shores has been effected we cannot precisely say; but they approach each other so closely in many places, and the whole sea, besides being narrow, is so full of shoals and shallows, that many facilities for the undertaking were no doubt discovered. According to recent information, foundations were probably laid at favourable points of the shoals, and bridges then carried from one point to another, till the communication was complete. The road itself, now that it is finished, is said to be the best road available for the passage of troops and stores from Russia to the Crimea. For troops moving from Odessa the Perekop route would, probably, be preferable, but for reinforcements arriving from the south-east of the empire and the country of the Cossacks the route across the shallows would be more convenient. In this case the distance between Simpheropol and the interior would be much shortened, and it is not improbable that both routes may have been recently employed when it was desired to surprise the Allies with an overwhelming superiority of force suddenly brought up.

A HINDOO ARGONAUT.—The *Bombay Times* says Rajah Issan Chandersing, Secretary to the British Indian Association, made a balloon ascent on November 22nd, at Jumroo Candy, where his palace is situated. The balloon was constructed under his own directions, and he managed the descent entirely by himself.

THE HOSPITALS AT SCUTARI.—A considerable change is taking place in our band of nurses, in consequence of the arrival of fifty new ones, under Miss Stanley. Miss Nightingale and Mrs. Bracebridge have gradually established the original band of nurses here, and this in spite of many and serious difficulties. What we all feared would be an impossibility has been admirably accomplished, and will, I doubt not, be continued with success. I think that the only way to secure future success is the plan proposed and now carrying out, which is not to establish a separate band of nurses, but to take in as many of the fresh ones as can be profitably employed. Miss Stanley, acting under Miss Nightingale, takes charge of a certain number in the General Hospital, and though it is impossible that all can be at once employed, yet in time all who are fit for the work will be brought into use. Several have been sent home from Miss Nightingale's original band, from ill health and other causes; three of the sisters have gone, three nurses, and five nuns. These latter had been closetered nuns all their life, and their being thrown at once among such a busy scene has made their stay unadviable, on the other hand, the other five nuns who came with them, are found to be most valuable and experienced nurses. It cannot be expected that out of ninety nurses rapidly selected, all should be fit for the work, while Miss Nightingale's judgment will enable her to select a strong band of really efficient nurses in a very short time, and this from actual observation of their work. She looks mainly to the working powers of her band, and, with unrivalled working powers herself, soon marks who are fitted for this most difficult work. We have now [illegible] nurses under the [illegible] work in the [illegible] Hospital, one Protestant Sister and one Roman Catholic nurse, not one more than is needed, since the sick is a large number for one man to see and speak to, and almost impossible for him to know personally: but I hope more will be spared of the many who are coming. There are four regular services and Holy Communion is administered every Sunday. Besides these, services are held at the General Hospital, and on board each hulk, and in various corners of the barrack where a few of the invalids can be got together. The books we hear of as being sent out from the religious societies come in very slowly, but, perhaps, it is not time for them yet. The books and papers from the War office come regularly, and are much used. It is very pleasing to see the groups of men collected round the stoves to hear one man read, or a poor fellow with one arm gone steadying a paper or a book with the other, and I am glad to say that the most frequent book in their hands is the New Testament. Copies of the Queen's letter to Mrs. Herbert have been made and distributed, and also posted on the walls in several places. One of the clergy went into various wards and read the letter, ending with the prayer "God save the Queen," to which the response was almost startling: so hearty and vigorous from the lungs of sick and dying men came the sincere "Amen!"—*Letter from Constantinople.*

JONATHAN BECOMES SUSPECTED.—Dutch politicians and merchants are beginning to view with apprehension the threats of the American press. "Hitherto," says the *Vienne Zeitschrift*, "we have been accustomed to look only upon England as that dangerous Power which threatens our Colonies; but for some time past we have been warned to keep a sharp eye on the conduct of America. The treaty with Japan, the affair of Captain Gibson, the pretensions to Curaçoa, the taking possession of Bird Island, as well as many other circumstances, admonish us that it is our duty not to neglect these warnings."

RECRUITING FOR THE CAVALRY

A ROOM at the Hampshire Hog, Charles-street, Westminster, is the place represented in the Sketch at page 72. In the foreground is a Light Cavalry sergeant about to give the shilling to a new recruit, who has not been frightened by all the melancholy stories he has heard about the dreadful hardships endured by the cavalry in the Camp before Sebastopol. Perhaps he fancies that by the time he has been properly drilled the worst part of the year will be over, so that, even if he should be sent to the Crimea in spring, he will just arrive in time to enjoy the fine weather which comes round in a few months.

In the background another sergeant is measuring the stature of a young military aspirant, who seems to have drawn himself to his full height for frightened by all the melancholy stories he has heard about the dreadful hardships endured by the cavalry in the Camp before Sebastopol. Perhaps he fancies that by the time he has been properly drilled the worst part of the year will be over, so that, even if he should be sent to the Crimea in spring, he will just arrive in time to enjoy the fine weather which comes round in a few months.

In the background another sergeant is measuring the stature of a young military aspirant, who seems to have drawn himself to his full height for frightened by all the melancholy stories he has heard about the dreadful hardships endured by the cavalry in the Camp before Sebastopol. Perhaps he fancies that by the time he has been properly drilled the worst part of the year will be over, so that, even if he should be sent to the Crimea in spring, he will just arrive in time to enjoy the fine weather which comes round in a few months.

In the background another sergeant is measuring the stature of a young military aspirant, who seems to have drawn himself to his full height for the purpose of showing that the room is the head-quarters of a recruiting party, without any description, and that the various members of it are busily engaged in their vocation. The Hampshire Hog has long been "a noted house" for cavalry recruits. Excellent samples of the different horse regiments now in want of "a few young men of good character," as the handbills have been saying for so many years, may be seen, at any hour of the day, inside and outside the above-named tavern, amidst crowds of young men attracted to the spot by the talk about the war, or by having companions who have enlisted, or who intend to do so if possible.

RECRUITING FOR CAVALRY, CHARLES-STREET, WESTMINSTER. (SEE PAGE 70.)

SHIPPING OF STORES AT THE TOWER.

OWING to the enormous quantity of stores ordered to be sent to the Crimea, no less than 100 extra labourers were employed in the Storekeeper's Department at the Tower on Tuesday, exclusive of all the soldiers who could be spared from military duty, to deliver military and warlike stores, and ship them on board lighters and other craft for conveyance to Woolwich, Sheerness, and Portsmouth, for the Crimea. The stores consisted of fur and other warm clothing, watertight cowhide boots, great-coats and blankets, horse clothing, Minié rifles, rifled carbines, pistols, sabres, and cutlasses.

No less than 500 barrels of winter boots, each containing thirty, have already been shipped from the Tower-wharf, to be put on board the transports at Woolwich for conveyance to the Crimea. These boots are made for the upper leather to reach to the hip, perfectly waterproof, and are met at the tops by a waterproof cape, the ends of which strap to the trunk of the boot, completely shielding the wearer from all outward moisture.

Notwithstanding the extraordinary exertions of the Board of Ordnance, it is not expected that the whole of the fur clothing can be dispatched to the Crimea before the latter part of the ensuing week.

When such is the difficulty of sending off the stores from the Thames, where there is plenty of room, and where there are so many hundreds of clerks and labourers, all straining every nerve to forward the work, it is easy to understand why so much loss of life has been caused by the want of proper arrangements for landing the stores at Constantinople, and in the crowded harbour of Balaclava. The following instance of the way in which stores have been kept back, to the great injury of our army, will show what grounds there are for complaint:—

Some time ago Mr. Waterhouse, on behalf of the tea-merchants of London, offered to supply the hospitals at Scutari with tea and sugar gratuitously. The Duke of Newcastle wrote back, thanking them, but stating that supplies had been sent to the sick and wounded. If sent, they never arrived, as Mr. Osborne stated publicly that at the time the offer was made there were but six pounds of Government tea in the hospital stores. The following letter to Mr Waterhouse, from an invalided officer at Scutari, (dated British Camp, Dec. 20), shows that even at so late a period as Christmas the promised supplies had not arrived:—

Sir,—Your handsome proposal to forward tea, &c., and the reply it met with have, by chance, been read by me in a foreign paper. I write a few words to thank you as an individual. I have but time to tell you, as a regimental officer, that, had your offer been accepted, in all probability many lives would have been saved—gallant hearts have lived to fight another day. The commonest comforts are altogether out of the reach of the poor soldiers. Tea and sugar, bread, butter, procurable at most of the French regiments' "cantine," are not to be had for love or money by our men, whose pay is due to them since their debarkation in the Crimea. I have seen how readily they will buy when by chance they can get a little tea at the exorbitant price demanded by stewards of vessels, at 5s. per lb.* I have supplied, from a small stock, men under amputations, none being in hospital. The reply given in England differs, alas! in too many instances, from that of these on the spot. Wait is the word now ever in the men's mouths.

A full meal—a change—warmth, cleanliness, and dry shoes, are unknown Now, with snow and wet, we hear of increasing supplies.

* In comparing this with the price at which tea is sold in this country, it must be remembered that here we have to pay a Government duty of 1s. 6d. per lb. No doubt the tea to which the officer refers could have been well supplied at 1s. 6d. per lb.

THE ILLUSTRATED LONDON NEWS.

No. 725.—VOL. XXVI.] SATURDAY, JANUARY 27, 1855. [WITH A SUPPLEMENT, SIXPENCE.

THE RE-ASSEMBLING OF PARLIAMENT.

CAN this great and free nation carry on a mighty war to a successful issue in the blaze of publicity? Is the fullest liberty of speaking and writing consistent with a state of warfare? Can a Commander-in-Chief, with newspaper correspondents in his camp, detailing his every movement, divulging to some extent his plans, criticising his conduct, exposing to the world his weaknesses, and informing his enemy of much that an enemy ought not to know, cope on anything like equal terms with the forces opposed to him by a Despot inexhaustible in resources, uncontrolled by any human check, having absolute power, and carrying out his own objects in silence and secresy? Can the Parliamentary system of Government, with its virulent party animosities, its diffusion of powers and authorities, and its uncertainties of Ministerial tenure, be trusted with the conduct of a war against one of the most formidable Empires of the earth, in which there are no such elements of change to supersede to-day the authority of yesterday, and in which concentration and centralisation act on the grandest scale, and in the most rapid and effective manner? These are but a few of the questions that thoughtful men are asking themselves in the present critical condition of Europe and of our national fortunes, and to which a response will be sought in the deliberations of the British Legislature.

We have no fears for the result. Great as may be the inconveniences, resulting in certain cases from the license of opinion in the press, in society, and in Parliament, the advantages of the fullest liberty outweigh the evils a thousand times over. If the war have been mismanaged, it is right that the truth should be told, in order that the remedy may be applied. If our administrative forms are cumbrous, costly, and mischievous, he is a public benefactor who proclaims the fact—more especially if the accusation lead to the change of a bad and unworkable system for a good and an effective one. If any man in power have been incompetent (which some may have been), or dishonest (which we do not believe), his accusers should be invited to speak out, so that disgrace or punishment shall overtake him. If the system of promotion in the Army, and the sale of commissions, have given us subaltern and superior officers, ignorant of their profession, having no love for it, and destitute of all merit but that of personal courage—in which the private soldiers are their equals, if not their superiors—the truth ought to be told, that the system may be changed before irreparable calamity befall our arms or sully our hitherto spotless honour. In our nation men can dare to speak the truth. We are not, like ostriches, to hide our heads in a hole, and console ourselves in the delusion that, if we refuse to see a wrong, the wrong is not existent. The enemy is welcome to the knowledge of our shortcomings and failures, and to all the good that he can derive from it; for he will learn at the same time, or very shortly afterwards, that the common sense of the British people has devised a remedy for every proved abuse. The Aristocracy has done good service, and will do it again; and, if it be desirable to throw open the prizes of the Army to merit, and to place in the knapsack of the humblest soldier the chance of becoming a General or a Field-Marshal, the Aristocracy will not only yield to, but approve, the change. If our officers are mere dandies, who bought commissions for the sake of wearing the gaudy uniform—if they are men who like playing at soldiers in time of peace, but detest the real business of war, and demoralize themselves and the soldiers under their command, by grumbling, and whining, and railing at those above them, when they ought to set an example of stoicism, if not of heroism, the nation will find the means to dispense with their services, and to invite the middle classes to enter the Army, by offering to talent a fair field of ambition, and a sufficient pecuniary inducement. We say, therefore, let the grumblers and the growlers speak out; for the grumbler may, after all, be a patriot. Let faction say its say. Let the conduct of men in power and command be canvassed as freely as possible. Whatever truth there may be in such accusations will, by being told, produce a reformation. Whatever falsehood there may be in them will recoil in shame upon the heads of those who foolishly or maliciously invented it, or lent themselves to its promulgation, and will not tarnish the fame of men who, in a period of unexampled difficulty, have been placed at the head of the councils or of the armies of their country. Freedom is our life's blood; and if it sometimes result, from our system, that incompetency and red-tapism be found in high places, our freedom gives us the means of removing, as well as of discovering, the obstruction.

During the Session—which recommenced on Tuesday last—all these topics will be earnestly considered. The nation need not fear a more than usually factious discussion of them. Parliament, the very arena of faction, is far less factious than the press; and when Parliament begins to speak, the organs of party, following the lead of its chiefs, usually relapse into more sober behaviour. When Parliament is not sitting the perversion published in the morning may remain uncontradicted for weeks and months; but when the House of Commons is deliberating, the falsehood is comparatively harmless, for it may be demolished in the evening in the Senate of the country. Instead of complaining of publicity, what the nation in reality requires at such a crisis as the present is a greater publicity. The publicity of "leading articles" is not sufficient. We want the publicity of full debates and of Ministerial statements. If the one be the bane, the other shall prove the antidote. We are known to be a nation of grumblers; but, if we grumble, a sound common-

DECK OF THE FRENCH TRANSPORT, "L'EUPHRATE," OFF MESSINA.—SKETCHED BY E. A. GOODALL.—(SEE NEXT PAGE.)

sense forms the substratum of our character. If we grumble at the tax-gatherer, we pay him; and if we grumble at our hardships in the Crimea, or elsewhere, we conquer in spite of them. Such has always been our character, and such it will ever be. All England speaks in every man of us; and when we fight, all England fights in the person of every soldier. Such a people may make a mistake, but is never to be despaired of: for it will rise superior to them all, and gather strength from the encounter with its difficulties.

The Session—towards which the eyes and ears of all Europe will be directed with an interest and anxiety far beyond anything witnessed in recent times—opened with a calmness quite unexpected. It may have been only the calm which is to precede a storm; or it may have been the calm which is the concomitant of conscious power, and of a foregone conclusion, based upon reason and not upon passion. Whatever may have been its causes, the spectacle was remarkable. In the midst of a European war, assailed by one portion of the press as traitors, and by another as incapables; and, if neither traitors nor incapables, having enough on their hands to occupy all their attention and task all their energies, the heads of the various departments of the Ministry coolly announced a series of measures of internal reform of the highest interest to the social welfare of the people. A bill to promote Education in England and Wales, to be introduced by Lord John Russell; another, to amend the Law of Partnership, to be introduced by Mr. Cardwell; a third, to alter and amend the Public Health Act, and to provide, to some extent, Municipal Institutions for the Metropolitan Boroughs, to be introduced by Sir Benjamin Hall; and a fourth, to be introduced by the Chancellor of the Exchequer, to regulate anew the Stamp-duties on Newspapers;—such are among the measures which Parliament is to be called upon to sanction, whilst the war is still raging, and while the fate of Europe is weighed in the balance at Balaclava and Sebastopol. Parliament was not surprised at these announcements, but received them as things which it had a right to expect. Is this a proof of Ministerial strength, or weakness? Time will show. But until the motions that have already been placed on the paper for an inquiry into the conduct of the war shall have been fully debated, it will serve no purpose to hazard an opinion. We can but say that it looks like strength, and hope that it will prove so.

THE FRENCH TRANSPORT "EUPHRATE."

We have received from our Correspondent *en route* for the Crimea the accompanying spirited Sketch of the deck of the French transport *Euphrate*. This vessel was built for the Australasian and Pacific Mail Steam Packet Company, and has been bought for the Paquebots Poste de la Méditerranée:—

"We sailed (writes our Correspondent) from Marseilles on the evening of the 25th ult., with 490 men, drafts for the 6th, 12th, 27th, 28th, 31st, and 46th French Regiments serving in the East; besides several staff officers, and General Brunet, who goes out to the Crimea to command the 9th Division of the French Army. On the morning of the 27th we touched at Messina, to leave the mails, the Captain having orders to remain as short a time as possible. In the bay were several other steamer-transports full of troops. The accompanying Sketch was taken from the deck of the *Euphrate*, off Messina. On the 30th we were at Athens; on the 1st inst. we arrived at Constantinople, the day after the last mail, which sailed for Marseilles on the 24th ult. Among the passengers on board the *Euphrate* were Major Benson, 17th Lancers, and Mr. Black, who married Lord Byron's Maid of Athens."

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The unfavourable influence which the uncertain state of affairs exercises upon commerce here induces the Court to abandon the intention expressed by the Emperor of remaining in comparative retirement until matters shall assume a more favourable aspect. It being found that great balls are the fêtes most calculated to produce a favourable influence on trade, it is decided that a series of these will be given at the Tuileries during the season, and the Ministers and other high functionaries are invited to follow the example thus set them. M. de Morny, the Duc de Bassano, M. de Cambacérès, the Prince Murat, M. Drouyn de Lhuys, and various others are taking the hint, and giving balls, soirées, and concerts in pretty rapid succession.

On Monday took place the first ball at the Hôtel de Ville, which was organised with peculiar splendour, and with a regard to selectness which gave it a marked superiority in this respect. The long gallery leading to the Salle du Trône was decorated with eight views taken exclusively in the departments of the Seine. On the other side of the Salle du Trône on the ceiling of the Salle du Zodiaque, were placed four beautiful landscapes by M. Cogniet, representing the Four Seasons, and in the middle an Aurora of remarkable beauty. The long gallery was completely lined with bars of looking-glass, which produced a most singular and brilliant effect. The rest of the decorations bore no less the stamp of richness and good taste. So many precautions were taken to abridge, by judicious arrangements, the interminable weariness of the train of carriages conveying between six and seven thousand persons, and such strict measures adopted to prevent the sale, and transfer by other means, of invitations, that the two great ast drawbacks to the entertainment were, as far as possible, obviated, and altogether the reception was one eminently successful.

The sanitary condition of the capital and its environs is, we regret to say, in a bad state. Experienced physicians declare that the past year and the commencement of the present have been the most unhealthy they have witnessed for the last ten years

We do not recollect ever experiencing in any part of Europe that we have visited—certainly not in England or France—any succession of days so cold as the whole of those of the past week. Not only did water become solid ice in almost all rooms without fires, but the moisture that exuded from tiled and flagged floors congealed, and the dwellings of many of the poor and working class were thus floored with a coating of ice: The Seine, and most of the other rivers, have quantities of floating ice, and the snow, which fell thick and fast, to the depth of many inches, in no way diminished the rigour of the temperature. The cavalry guard usually placed at the Arch of the Carrousel were withdrawn in consequence of the intense cold

The weekly return of fires in the capital and its environs has been really frightful. One day last week there were no less than four-and-twenty, and no day has passed without a certain number occurring; indeed, this winter has been unusually prolific in these accidents, proceeding principally from the faulty construction or fitting of chimneys and stoves—an evil for which there ought surely to be some easy mode of redress.

As a valuable counterbalance to these disadvantages, reports from various parts of the provinces state the aspect of the grain crop, especially the wheat, promises a yet more magnificent harvest than that of last year, and it is hoped that the vines will be greatly benefited by the frost.

It appears that the health of the Prince Napoléon is so seriously affected as to cause a delay in his return to Paris, to which his physicians desire him to proceed only by extremely short journeys, with intervals of rest between.

On the 31st of this month a brilliant concert is to take place at the Salle Herz, for the subscription for the soldiers and sailors of the Crimea. The concert is to be given by the celebrated pianist Fumagalli, aided by Mdme. Bosio, MM. Bancardé and Graziani (of the Italian Opera), and by M. Jules Lefort, whose charming talent as a *salon* tenor gives him few rivals. He is to sing a romance composed for the occasion by M. Dufrêne, "En avant, les Zouaves!" M. Fumagalli, among other *morceaux*, will perform his grand fantasia on "Robert le Diable" with the left hand.

The reception of M. Berryer at the Académie de France, which was announced to take place on the 25th, has been deferred indefinitely—or, at least, the period for its occurrence is not known.

Already are the products that are to be displayed in the Palais d'Industrie beginning to be admitted. Some of the works of art have already been received; and there seems to be little doubt, notwithstanding the various reports circulated to the contrary, that the opening of the Exhibition will take place at the period named. The butchers of Paris have united to hire the Salle Montesquieu for the purpose of establishing a magnificent restaurant for the occasion.

The sudden influx of visitors to the Dîner de l'Exposition (of which we last week gave a notice) has been so enormous, that, notwithstanding all the preparations made for their reception, it has been found impossible, as yet, to organise the service of the *cabinets particuliers*, or to serve any but the public rooms. Measures are, however, being taken to meet this exigency, and it is expected that in another week the difficulty will be obviated.

The Theatre-Français is giving the new creation of Mdlle. Rachel, "La Czarine," by Scribe. The success is not altogether what was anticipated, nor does the celebrated tragedian seem so much at home in her rôle as in certain others, more especially those of the classic tragedy. Still, as a whole, the piece may be considered as a successful one. The Emperor and Empress, and the Prince Jérôme, accompanied by his daughter the Princesse Mathilde, were present at the first representation. But the theatrical production of the moment, that promises to secure the greatest popularity, is "Le Chien du Jardinier," at the Opéra Comique—the words by MM. Lockroy and Cormon, the music by M. Albert Grisar, whose well-established reputation as a composer of *opera-bouffes* has gained fresh laurels in this most lively and agreeable little production. The subject is taken from peasant life ("Le Chien du Jardinier" is the French version of the "Dog in the Manger"), and is admirably sung and acted by Faure, Ponchard, and Mdmes. Lefebvre and Lemercier. The *Nerві* is sprightly and amusing; and the music gay, original, and full of pleasing and uncommon effects.

THE WAR IN THE CRIMEA.

The Russian reports, which come down to the 14th, say that nothing decisive has yet been done. The state of the weather will account for this, as winter seems to have fairly set in. The Russians had made one or two sorties, but had not met with any success. A letter dated Kamiesch, the 8th January, states that the batteries of mortars established by the French greatly annoy the Russians, who have in great numbers retired to Simpheropol.

The *Courrier de Marseille*, of the 23rd inst., publishes the following letter, dated before Sebastopol, the 7th inst.:—

The weather has been frightful for some days, snow having fallen without intermission during four hours. But this was not the greatest inconvenience we had to endure. The sun appearing converted that snow into liquid mud, which now covers our Camp, and renders all the roads impassable. Towards evening the cold again sets in, which is endurable in our cantonments, but extremely painful to the men on duty in the trenches. It appears certain that a great portion of the corps of Liprandi, has marched in the direction of Eupatoria, for we no longer perceive as there on the neighbouring heights. The Russian General, it is said, intends to attack the Turkish division before it receives reinforcements from the army on the Danube But no fears are entertained for the security of the place, which has been put in a respectable state of defence by the French officers of Engineers and Artillery. The 12,000 or 14,000 men already landed there are, besides, more than sufficient to repulse the enemy

In the evening of the 3rd a strong division of Cossacks made its appearance in the vicinity of Balaclava. The Russian Generals, no doubt, intended to draw thither a part of our force, for, on the following morning, they sallied out of the batteries of the Garden, and attacked the French lines. Their attempt, however, was unsuccessful. They were vigorously, and vigorously driven back into the place. Omer Pacha, accompanied by Mustapha Pacha and some English and French officers, arrived on the 5th at the head-quarters of the Allies, where he was enthusiastically received. On the 6th Lord Raglan, Canrobert, Generalissimo to Lord Raglan and General Canrobert, a council of war, at which Admirals Lyons and Bruat assisted, sat for several hours As you may suppose, the result of that conference was held secret. However, from what I can learn, it is believed by the superior officers that Omer Pacha, at the head of an army of at least 50,000 men, reinforced by an Anglo-French Division, will operate, toward the close of the month, to the north of Sebastopol, keeping in check the Russian troops resting on Simpheropol and the reserves which may arrive from the interior of Russia. Prince Menschikoff appears determined not to risk any general affair, whether his army is still under the impression of its defeat at Inkerman, or that he relies on the inclemency of the season on our soldiers. This last opinion is evidently entertained by the Russian General, who is reported to have said:—Our troops may rest; Generals January, February, and March will fight their battles far better than they could." These are in reality the calculations on which the Russians always most confidently rely, for it is to them they are indebted for their most decisive successes. But, thank God! the situation of the Allied armies is such that they can bear without any great inconvenience the inclemency of a climate to which they are now inured, and it is little probable that the Russians themselves are in so favourable a condition. Moreover, under existing circumstances, eight days of fine weather may totally change the aspect of affairs. At the request of Lord Raglan, our interpreter has placed 10,000 cloaks with hoods at the disposal of the English army, which consequently now wears the French uniform.

OMER PACHA AT VARNA.

A letter from Eupatoria of the 3rd inst states that a body of ten thousand good Ottoman troops was then in that town, under the command of Behram Pacha and Tefik Pachu, the son-in-law of Omer Pacha On the 31st of December the battalion of sharpshooters landed, having been conveyed from Varna by the *Colorado*. This battalion consists of about 600 well-disciplined men. The town has been so well fortified by French and English engineers, that it can be defended against 100,000 Russians

Later accounts say that the whole of the Turkish contingent had arrived at Eupatoria, and that Omer Pacha was about to take the command of the army. An officer on board the *Inflexible*, in a letter dated Varna, January 9, says:—

On New-Year's-day we left this place for the Crimea with Omer Pacha, accompanied by the Commissioners, Colonels Simmons and Diez, Dr. Sturdza, and suite. On Wednesday morning his Highness landed at Eupatoria, and examined the defences of the place (where there are, I believe, about 10,000 troops, mostly Turks, with forty guns), and there he left Ingineer old Iskender Bey, the hero of Karakal. On Thursday morning we started again, and passing through the fleet lying off Kazatch and Kamiesch bays, where the Admiral saluted the Pacha, proceeded to Balaclava. The Master had intended to examine the coast on the way down, as it was said that the Russians were again in force on the Alma; but the snow fell heavily and continuously, and prevented our approaching the land. Immediately after we had anchored at Balaclava, Colonel Simmons rode up to the front to acquaint Lord Raglan and General Canrobert of the Pacha's arrival, and next day, the 5th, his Highness took part in the council of war which was held. On Saturday we left, and on Sunday evening the Pacha disembarked at this place We are to have the honour of carrying him again to the Crimea when he takes the field Meanwhile we are busily superintending the embarkation of his army, which is to proceed without delay

The same correspondent, writing on the 8th inst., says:—

The weather is still very cold; snow and frost during the day are not at all agreeable; but it is desperate work at night under canvas. We have no means of transporting our wooden houses, and the chance of getting them up before the summer is as far off as the summer itself. I was informed yesterday by two officers who had seen them that there are bales of sheepskin coats, to the number of 7000 or 8000, on board the *Golden Fleece* at Balaclava, sent from Trieste as a present to the officers of the army. The commander of the ship tells us that he is exceedingly anxious to get rid of them. But the Quartermaster-General's department have received no official letter about them, and will not receive them. They are, therefore, going to Corfu, as the ship is to sail in a day or two! There is not an officer who would not give £5 for one of them, and think himself fortunate indeed

NEGOTIATIONS FOR PEACE.

The statement of Mr. Cobden at the Manchester tea-party, that Government had made up its mind to conclude peace with Russia on such terms as would not satisfy the country, was not borne out by the explanation which Lord John Russell gave on Tuesday evening. The various accounts also which have been given of the interview between the Russian Minister and the representatives of the Western Powers show that no progress has yet been made, or is likely to be made, under present circumstances. It appears that, on the 6th instant, Prince Gortschakoff suddenly declared that he had orders to accept the Four Points (which had so recently been declared incompatible with the dignity of Russia), and that he was prepared to negotiate. On the 7th the different clauses of the interpretation put upon these Four Points by the Western Powers were slowly and distinctly read to Prince Gortschakoff, and at the end of each article he said, "I accept that in the name of the Emperor of Russia." But, when the reading was concluded, he said in a general way that he was not prepared to admit any excessive encroachment upon the independence of Russia. At the same time he said he was fully empowered to treat for peace, and desired that the negotiations might begin immediately. The Austrian Minister, M. Buol, then spoke. He congratulated the Conference upon the unanimity of feeling which prevailed, and supported Prince Gortschakoff's demand that negotiations should be opened at once. M. de Bourqueney then said, in the name of himself and Lord Westmoreland, that this was impossible, as they had not sufficient powers, and, moreover, nothing definitive could be done without the presence of a Turkish Plenipotentiary. The meeting then broke up, M. Buol requesting the French and English Ambassadors to obtain full powers as soon as possible. This narration is consistent with the remarkable telegraphic despatch which stated that Count Buol had "invited the representatives of France and England to treat for peace. There was an initiative taken by Austria, which was not acceded to. After the above conference M. Buol gave a large evening party, at which Prince Gortschakoff was present. The Austrian Minister appeared quite joyous, and spoke confidently of peace being at hand. M. de Bourqueney's conversation to the friends who pressed around him was in quite another tone. He said he must wait for instructions, and before instructions arrived Sebastopol would probably be taken.

The following communication, from a well-known trustworthy correspondent of the *Augsburg Gazette*, will show the Emperor of Russia's interpretation of the Four Points:—

As a complement of what I have already sent you on the present state of affairs, I now transmit the interpretation of the four guarantees, such as it was drawn up by Prince Gortschakoff himself, and which, when sent by him to St. Petersburg, before the conference of January 3, was accepted by the Emperor of Russia, as intimated by the telegraph. It was on this basis that a provisional understanding was come to in that conference. This draught, thus prepared by Prince Gortschakoff, was the groundwork of the Emperor of Austria's and of the King of Prussia. It runs thus: 1. The abolition of the exclusive protectorate of Russia in Moldavia and Wallachia, the privileges conceded to these provinces by the Sultan being placed under the guarantee of the Five Powers. 2. Free navigation of the Danube, according to the principles established by the acts of the Congress of Vienna concerning fluvial communications. Control of a mixed commission, invested with the necessary powers to remove all obstacles, now or hereafter, at the mouth of that river. 3 Revision of the treaty of July 13, 1841, in order to connect more completely the existence of the Ottoman empire with the European equilibrium. I do not refuse to come to an understanding in formal conference for peace, on the means which the Three Courts may propose in order to put an end to what they call the preponderance of Russia in the Black Sea, on condition that, in the choice of means, nothing be introduced calculated to affect the rights of sovereignty of my august master in his own territories. 4. A collective guarantee of the Five Powers (substituted for the exclusive patronage which some of them have hitherto possessed) for the observance of the religious privileges of the various Christian communities, without distinction of creed, on condition that the realisation of the solemn promises made in the face of the world by the greatest Christian Powers be a serious and conscientious work, and that the promised protection be a *bonâ fide* one, and not an empty word

The latest news from Germany are that the hopes of peace are becoming more and more faint. The transformation of the defensive treaty into an offensive one is proceeding actively at Vienna

Preparations for war are being continued with undiminished energy. On the 16th another note was sent by Count Buol to Berlin, calling upon the Prussian Cabinet to fulfil its obligations, under the treaty of April, to mobilise its army

The *Indépendance* of Brussels has telegraphic information that in this note Austria informs Prussia that, should she not obtain a majority in the Diet on the question of mobilisation, she will proceed under the 42nd article of the Federal Act, i.e., will accept the active alliance of such Germanic States as may choose to join apart from their federal obligations.

RENEWAL OF BLOCKADE IN THE BLACK SEA.

The following telegraphic despatch has been received at the Admiralty from Rear-Admiral Sir Edmund Lyons:—

Being informed that some trade consignments of munitions and contraband of war had taken place from neutral ports of the Mediterranean to those of Soudak and Kertch, the Admirals of the English and French squadrons have determined on establishing an effectual blockade of the principal Russian ports in the Black Sea, and to notify the strict enforcement of this blockade from the 1st of February, 1855 Steps have been taken to provide for sufficient force for that purpose. The principal ports which are to be blockaded, furnished with due authority for the purpose in the names of the two Governments

RUSSIAN REINFORCEMENTS FOR THE CRIMEA.

By consular reports from Galatz and Braila we learn that the march of troops from the Russian Danubian army to the Crimea, by way of Odessa, still continues. An infantry division, which was in garrison at Ismail, as also the reserves which were standing at Kischenef, Akerman, and Kiew, are advancing in forced marches to the seat of war. The whole reinforcement is estimated at about 40,000 men. At the same time that the Russian manifesto of the 28th of December appeared the Czar addressed a warlike proclamation to the army

A letter, purporting to proceed from St. Petersburg, dated the 10th, says that for some time past numerous relays are posted at intervals of four leagues between Moskow and Sebastopol for the purpose of conveying, as soon as the snow is frozen over, reinforcements to the amount of 40,000 men for the Russian army. The Russian papers affirm that they will have on the 15th of February an army of 160,000 men in the Crimea

According to the latest accounts, conveyance by sledges cannot be thought of in the Crimea, and even on a part of the steppes which are above Perekop, as a mode of transport of a permanent and regular nature, because the snow does not generally remain sufficiently long and with the requisite degree of solidity. Russians cannot, therefore, count upon the sledge in the interior of the Crimea, and it will not be possible for them to make use of it, except to a certain distance above Perekop.

A letter from Odessa of the 8th says:—

It is not to all that Russia is preparing for a long and obstinate war. A great many Lambs, but we will cite only one The buildings which were temporarily constructed last autumn at Odessa, in the government of Novogorod, because the storehouses and workshops of that military establishment, though more than large enough in ordinary times, were not considered sufficient, are about to be replaced by permanent constructions of such a nature as to prove they are not only intended as a protection against a *coup de main*, and even an attack of the enemy's fleets, but are intended to defy the more destructive effects of time

At St. Petersburg complaints are heard against Prince Menschikoff, who, strange to say, is accused by the Imperial *entourage*, and even by the people, of excessive prudence, and a total want of that perilous quality which sometimes impels a General to leave a good deal to chance. He is accused of being too faithful a disciple of General Koutousoff, who is said to have fought, in spite of himself, the battle of the Moskowa in 1812, which was disastrous to the Russians, and not to have displayed sufficient energy in preventing the French from penetrating into Russia. The people are beginning to get clamorous against the Prince, and discontented even with the Czar, who, they think, has already made far too many concessions. To more they will not listen. Osten-Sacken is again spoken of as likely to succeed in command, in the event of Menschikoff's removal, with Liprandi as his second. In case of a change, it is not certain whether the Prince will be summoned to St. Petersburg, or be left in the Crimea with the duty of defending the city during the assault, while Osten Sacken commands the army in the field. The letters repeat the assurance that the feeling of the population of St. Petersburg is decidedly for war.

A RECONNAISSANCE IN FORCE

On the night of the 29th ult. orders were sent from Sir Colin Campbell to the 79th Regiment, and to the four companies of the 2nd Battalion of the Rifle Brigade, commanded by Major Bradford, to be ready and under arms at half past six o'clock the next morning It was a cold but fine day; and at dawn all the troops were drawn out, and remained on the heights above Balaclava for some time, very curious to know what they were going to do. The demi-battalion of Zouaves encamped near the Marines were also out, and soon after seven o'clock the advanced guard of a strong division of French troops appeared in the valley on the left, and proceeded to

the hills lately occupied by the Russian redoubts. The French force consisted of about 8000 men, and it was accompanied by two squadrons of cavalry. As soon as they had occupied the plain of Balaclava, the Rifles and Zouaves were pushed on in front, preceded by cavalry skirmishers and videttes. Sir Colin Campbell was on the ground, with several of his staff, and, with General Bosquet, whose division seemed to furnish the bulk of the troops on the field, had the direction of the movements of the day.

The force was all in motion before eight o'clock, the Rifles and Highlanders turning to the right, and covering the flank of the little expedition as it marched on, or looked through the defiles of the hills which abound along the mountain chain on the left of the valley. As the force approached Kamara the Cossack videttes came in sight, retiring slowly, but the French pushed on rapidly, and the Cossacks retreated from the village, which has been in a ruinous state since the storm of the 26th of November, and the first French reconnaissance. The videttes fell back on a strong body of Lancers and Light Cavalry, which seemed disposed to await the shock of the French Chasseurs. The retiring and advancing cavalry skirmishers exchanged a few carbine shots before they fell in with their respective squadrons, and when the French had arrived within about 800 yards they broke from a trot into a gallop, and dashed right at the Russian cavalry. The latter met the shock, but made no attempt to charge upon the French, who broke them in an instant, and chased them right back to the infantry, who were assembled in three small bodies on the hills, close to the village of Tchourgoum. The Russians cut very feebly, and fought without spirit, so that the French had only a few men wounded. As the French approached Tchourgoum they were received with a brisk fire of shot and shell from some heavy field-pieces, to which their guns were unable to reply at so great a distance; but they soon pushed within range of the enemy, and the Russians again retired, and abandoned the village of Tchourgoum to our allies, as well as the line of cantonments and huts which they had constructed since Liprandi's advance in October. The object of this expedition was merely to beat up the Russian position, and to ascertain the strength of the enemy—it was not a reconnaissance in force, and there was no intention of bringing the Russians to an engagement. Had any such intention existed, it would have been unsuccessful, for the enemy retired with great speed, and fell back on the heights over the Tchernaya and the road to Mackenzie's-farm, covered by three artillery, which was not actually used, and quite sufficient to crush the fire of the light French field guns. Our allies at once burst into the village, but the Cossacks had been there too long to leave anything to plunder, and so the French set it on fire. At the same time they applied combustibles to the huts of the Russians, and soon the whole encampment was in a blaze, while great volumes of white smoke curling up into the air, and spreading in sheets along the crest of the hills, indicated the destruction of the village, and informed the Russians that they could no longer hope for snug quarters there. The huts built by the Russians were very commodious and comfortable. Each was capable of containing twenty or thirty men, and held an oven for baking at the end, which also warmed the room. The camp, though rather dirty, was well built, and in excellent order. The object of the reconnaissance having been accomplished, the expedition was halted, and the men set to work at once to avail themselves of the abundance of wood along the hill sides, and to make enormous fires, which almost obscured the retreat of the Russians. It was ascertained that they were very weak, and that they did not number more than 5000 or 6000 men. They appeared to march in broken masses up the steep and difficult roads leading to the heights over the Tchernaya. Two strong bodies of the enemy were, however, visible on these hills, nearly opposite to our right flank, towards Inkerman. They had a tall white flagstaff erected in front of their position, from which they hoisted one large red and one white flag when the French were entering Tchourgoum. Towards evening they lighted their camp fires, and it was evident that a considerable force still remained on the hills between the Tchernaya and the Belbec The French remained on the ground till it was almost dark, and then returned to their camp. The Highlanders and Rifles, who had made a very romantic march through some beautiful valleys on the right, returned without seeing any signs of the enemy, and did not fire a shot. The French lost two officers wounded (one since dead) and about twenty men put *hors de combat*. They took seventeen of the Russian cavalry and a few infantry prisoners

HOW THE FRENCH MANAGE IN THE CRIMEA.

The distance between the head-quarters of General Canrobert and the port of debarkation is between six and seven miles. An excellent macadamised road, with a trench on one side, and trees running beneath it, at intervals, has been nearly completed the whole way; and along this route may be seen constantly passing lines of mules carrying well-balanced packages of biscuit from Marseilles or Toulon, or other *convois militaires*, destined for the respective divisions of the army, and *equipages militaires* for the staff, also drawn by mules, bringing planks, chests, forage, and every description of army stores in the same direction. As soon as the brow of the hill overlooking Kamiesch Bay is arrived at, the spectator exchanges the comparatively dull monotony of which for the last two or three miles opium revenue of the year is only 1½ per cent of the whole Indian revenue. The Bengal Bank has again raised its rate of discount all round. Trade in India is dull, money is scarce, and freights are low.

The latest advices from China are dated Shanghai, 5th; Canton, 11th; and Hong-Kong, 12th Dec. The Imperialists have recaptured four towns in the north of China. The town of Canton is in great distress, and all business is stopped.

From Australia the dates are—Sydney, 20th; Melbourne, 25th; and Adelaide, 28th Nov. (nearly a month later than the latest previous advices). In Australia the predominance of imports over exports is excessive. The prices of wool are maintained. Supplies of tallow are active. Accounts from the gold fields are steady and satisfactory.

AN IMPORTANT CABINET COUNCIL.—A Cabinet Council (summoned to meet at two o'clock) was held on Wednesday afternoon at the Foreign office. The Ministers present were the Earl of Aberdeen, the Lord Chancellor, the Marquis of Lansdowne, the Duke of Argyll, Viscount Palmerston, the Earl of Clarendon, Sir George Grey, the Duke of Newcastle, the Chancellor of the Exchequer, Sir James Graham, Sir Charles Wood, Earl Granville, the Right Hon Sidney Herbert, and Sir William Molesworth. The Council broke up at ten minutes past five o'clock. *and the Earl of Aberdeen immediately left London for Windsor, to have an audience of the Queen.*

A CABINET COUNCIL was held on Thursday at the Foreign-office. The Ministers present were the Earl of Aberdeen, the Lord Chancellor, the Marquis of Lansdowne, the Duke of Argyll, Viscount Palmerston, the Earl of Clarendon, Sir George Grey, the Duke of Newcastle, the Chancellor of the Exchequer, Sir James Graham, Sir Charles Wood, Earl Granville, the Right Hon. Sidney Herbert, and Sir William Molesworth. The Council sat three hours. The Earl of Aberdeen left on Friday for the Cabinet Council for Windsor Castle, to have an audience of her Majesty. Another Cabinet Council was held yesterday (Friday) afternoon.

THE VARIOUS ROADS INTO THE CRIMEA. In reference to the statement, that Perekop is not the only road by which Prince Menschikoff could receive reinforcements, the *Kreuz Zeitung* enumerates a number of Russian military operations against the Crimea whilst in possession of the Tartars, and in which they gained access to the peninsula from the main land by other roads than along the Isthmus of Perekop. Thus in 1736 Field-Marshal Munich led 70,000 Russians through the Tartan to hope up to the lines of Perekop, where the Tartar Khan was waiting for him. By a feint they got possession of the Tartar forts, and this time marched through into the Crimea, though they subsequently retired for fear of being cut off by the Tartars from their base of operations. In the following year General Lascy, finding the Tartars posted in strength at Perekop, threw a bridge across the narrow strait of Genitschi, which separates the Sea of Azoff from the Siwasch, and thus attained the long spit of land, Zenieks, which runs at a little distance all along the east coast of the Crimea. Hearing, however, that the Tartars had posted themselves at Arabat, where the Zenieks spit of land runs out from the Crimea, he caused the Siwasch to be sounded, and found a spot so shallow as that, by means of fascines, &c., he on one day he could venture to lead his infantry across that floating bridge, while his cavalry waded through. After having laid the land waste, General Lascy led his forces back to Russia by way of a projecting headland on the north coast of the Crimea, called Tschongar, which runs up very close to the main land. In the campaign of 1738 the Khan of Tartary occupied all three points Perekop, that opposite to Genitschi, and that by Tschongar. There was, however, a ford discovered between Perekop and Tschongar which was easily passable when a west wind blew; profiting by a wind from this quarter, the whole army passed over in one flood and almost dry-shod. If their base be correct it would be necessary for the Allies to occupy not only Perekop, but the whole north and eastern coasts of the Crimea, if we would prevent the access of fresh reinforcements or out off the retreat of the Russians from Simpheropol To cover the sea of Azoff with gun-boats simultaneously with the occupation of Perekop would perhaps attain the same end The necessity of commanding at least the mouth of the sea of Azoff is evident from the facility there exists at present of supplies of provisions being introduced into the peninsula at the straits of Kertsch, and as a line of retreat the road to Kertsch and across the strait would possess but little value for the Russians, if we were to post any amount of shallow going gun-boats along the coast and across the straits.

AMERICA.

The steamer *Atlantic* arrived at Liverpool on Monday morning last, having left New York on the 10th instant.

Money matters were beginning to appear more favourable in New York, although there were still complaints of hard times

Political affairs were quiet, and the proceedings in Congress have been quite uninteresting. The proposed mediation of the United States in the European war appears to be shelved for the present in the Congressional Committee of Foreign Affairs

Some important recommendations are contained in the Governor of Massachusetts' Annual Message. He calls on the general Government to exercise a consolidating and ameliorating power over the elements of emigration. He asks the American authorities to dispel from popular use every foreign language; to print all public documents in the English tongue alone; to ensure that all schools aided by the State shall use that language; to disband military companies founded on and developing exclusive foreign sympathies; to discourage imported political demagogues, the broken-down leaders of insular agrarianism or Continental Red Republicanism; to Americanise America; to root the Bible in the common schools; to keep entire the separation of the Church and State; to nationalise before neutralise, and to educate before either. He further recommends an amendment of the Constitution, to the effect that no one of alien birth shall be qualified to vote by naturalisation until he has been in the United States twenty-one years, nor then unless he can read and write the English language.

Admiral Bruce has sailed from New York in the steamer *George Law*, on his way to California, to take command of the British squadron in the Pacific A public meeting has been held at New Orleans in aid of the Patriotic Fund

The intelligence from California is not of importance. Commercial affairs were quiet. Mining was still retarded by want of water

INDIA, CHINA, AND AUSTRALIA.

The steamer *Calcutta* arrived at Trieste from Alexandria on Wednesday, in 116 hours, having left that port on the 19th inst. The Marseilles portion of the Overland Mail was leaving Alexandria on the 19th. The following is a summary of the intelligence

The dates of advices are—from Calcutta 20th, Madras 24th, and Bombay 31st of December. The mission of the Burmese Ambassador, it is fully expected, will lead to a treaty. The tendency of the opium revenue of the year is only 1½ per cent of the whole Indian revenue. The Bengal Bank has again raised its rate of discount all round. Trade in India is dull, money is scarce, and freights are low.

The latest advices from China are dated Shanghai, 5th; Canton, 11th; and Hong-Kong, 12th Dec. The Imperialists have recaptured four towns in the north of China. The town of Canton is in great distress, and all business is stopped.

From Australia the dates are—Sydney, 20th; Melbourne, 25th; and Adelaide, 28th Nov. (nearly a month later than the latest previous advices). In Australia the predominance of imports over exports is excessive. The prices of wool are maintained. Supplies of tallow are active. Accounts from the gold fields are steady and satisfactory.

NAVAL AND MILITARY INTELLIGENCE.

THE NEW MORTAR VESSELS

On Tuesday the trials of Captain Julius Roberts's plans for mortar-vessels were concluded on board the *Drake*, and terminated in a satisfactory manner. The vessel was returned to the dockyard and carefully surveyed, and it was found that no portion of caulking, putty, or whitewash from deck, side or framework had started, and the bolts and ironwork (in the frame) and hull were found to be perfect, after all the severe trials to which they had been subjected, both on shore and on board

As it is said that the Russian ships which have thrown shells with such muchevrons effect into our trenches at Sebastopol were armed with mortars constructed on the principle suggested and tested by Captain Roberts so long sunce as 1847, an explanation of that principle may be acceptable to our readers.

The mortar, weighing upwards of five tons, oscillates freely, being suspended from a horizontal bar by two wrought-iron arms attached to the trunnions. It is kept at the usual elevation of 42° by an iron band passing round the muzzle and attached to the aforesaid arms. This band is so fitted that when the mortar is not in use it may be removed and the mortar lowered and stowed into a recess in the bottom of the vessel, thereby removing the top weight which vessels of so small a tonnage could not well carry on deck in heavy weather. The band is secured in its position by a small chain passing round the trunnions, or attached to a ring screwed into the mortar The whole system oscillates with the rolling of the ship, so as to secure a constant angle of elevation—an advantage never before attained But the most important advantage is, that the whole impulsive action is considerably diminished and rendered entirely vertical; the horizontal part, so destructive for vessels on the old system, being entirely removed. Thus four upright pillars support the whole, thereby leaving stowage for five times as much shell and powder, and saving about 25 tons of solid timber in the supports. The experiments on Tuesday were conducted in the midst of heavy snowstorms; and the mortar-bed, which should traverse easily so as to train the mortar in any direction, was frozen in its position. The frosty weather increased the severity of the tests to which the ironwork was subjected, and which it bore in a satisfactory manner In the first experiments the muzzle-band was made too slight, and broke. It was then replaced, with entire success, by a stronger band, five inches broad and one inch thick, padded, at Mr. Nasmyth's suggestion, with leather. On Tuesday, after the ninth round, the ring by which the muzzle-band is kept in place gave way, having been wrenched round on the previously day by the mortar falling from the crane in the dockyard. This defect was speedily remedied by a little spare chain, and the practice continued up to twenty-five rounds (which exhausted the ammunition) without the slightest derangement in the vessel or the mortar fittings

Thus has been effected one of the most important modern improvements in naval warfare; and, whatever may be said of the inefficiency of ships' broadsides opposed to stone walls, these engines of destruction, operating at the 4-5 distance of more than two miles, will produce a fearful effect upon the strongholds of our enemies. A large flotilla of these vessels, both French and English, is in process of construction, and Mr. Nasmyth has applied to the Government for permission to mount his huge malleable guns on the same principle

MILITIA FOR THE MEDITERRANEAN.—It is arranged that fifteen regiments of militia—selected from those most numerous and longest embodied—shall be permitted to volunteer immediately for garrison duty at Malta, Gibraltar, and Corfu. These regiments will release an equal number of the line, either for immediate transmission to the seat of war, or with a view to the formation of a corps of reserve at Malta, for the lodging and training of which accommodation is actively preparing, to the extent of 10,000 men. The regiments proceeding to the Crimea will be made up from their depôts at home to the full force of 1000 men each. The militia regiments will send out six companies each—600 men—leaving at home a depôt for recruiting and keeping up the available force. It is almost unnecessary to say that no militia officers or soldiers will be required to go to our Mediterranean colonies—even for garrison duty only—unless with their own free will, and that every care and comfort will be provided for their residence in those most agreeable and lively quarters Everything is arranged, and it is possible that many of them might have already embarked, had not our transports been engaged for the more urgent necessities of the war.

THE SICK AND WOUNDED AT SCUTARI. The Director-General of the Army and Ordnance Medical Department has been instructed to report to the Duke of Newcastle on the practicability of furnishing additional accommodation for the sick and wounded at Scutari, should the progress towards convalescence in each case. His Grace has also instructed Lord William Paulet, Commandant of the British Military Establishment in the Bosphorus, to appoint a committee to ascertain from every officer, and, if possible, from every private soldier, who may be admitted into the military hospitals in Turkey, the name and address of his nearest relative or friend, or, in the event of his death, the fact may be communicated to such person.

TRANSPORT OF CANNON OVER MUD. -The authorities at Woolwich have now under trial a vehicle constructed to meet the great difficulty in Balaclava—the transport of cannon over mud. The cannon is slung under a pole resting upon two high wheels, which as they revolve lay down a block or paddle, surmounted by an iron rail, and dovetailing at the extremity with a succeeding block, continuing the line. Thus the carriage lays down its own railway as it progresses, while the sleeper from which it recedes acts as a lever, and lifts up the wheels from the bed of mud. It is found that the carriage will transport the heaviest guns in this way through a perfect slough. There are also double, however, whether it will answer so well on rocky ground, as during the frost the resistance of the hardened earth drew out some of the bolts from the wheels; but it is thought that some modification of the paddles will overcome this impediment.

THE COAST GUARD. Returns are being prepared by order of the Lords Commissioners of the Admiralty specifying the number of seamen fit for active service who have been appointed by the Admiralty, and are now doing duty in the Coast Guard. The returns will show their respective ages, length of sea service, and also the period employed in the Coast Guard. Similar returns are ordered to be made of the men employed in revenue vessels, and of men employed in Custom house boats. It is stated that this is done with a view to ascertain the number of seamen the Government can command in the spring, when the fleets destined for the North Sea and the Baltic are about to be fitted out.

THE following Cavalry regiments will proceed to the Crimea early in the spring, when it is expected that each will be augmented to 800 sabres, exclusive of trumpeters and farriers, viz., 1st, 2nd, 6th, and 7th Dragoon Guards, 3rd Light Dragoons, 7th Hussars, and 18th Lancers. The following are the Infantry regiments under orders for the Crimea: viz., Second Battalion 1st Foot, from Corfu; 2nd Foot, from the Piræus; 12th Light Infantry, from Gibraltar; 31st and 48th Foot, from Corfu; 54th, from Gibraltar; 71st Highland Light Infantry, from Corfu; 82nd Foot, from Edinburgh; from Malta; 82nd, from Gibraltar; and the Third Battalion of the 1st Royals, 60th Rifles, and Rifle Brigade, which are now being raised. These regiments which are stationed in Malta, Gibraltar, and the Ionian Islands, will proceed to the seat of war as soon as they are relieved by the regiments of Militia which have volunteered for foreign service

ON Monday nearly 2000 hair beds and bolsters, 4000 pairs of cotton sheets, and about the same number of blankets, were put on board lighters at the Tower Wharf, to be shipped on board the transports at Deptford, to be conveyed to the hospital at Scutari for the use of the sick and wounded. Another extensive shipment of Canada stoves for the Crimea took place from the Tower on the same day, as also several thousand feet of iron tubing for chimneys. For the convenience of fixing, this tubing, which is eight inches in diameter, is made in two-foot lengths. 120,000 waterproof articles of dress for the army in the Crimea, consisting of hoods, coats, and leggings, have just been sent into the Government stores by the contractors for the same, and further orders have been entered into by the Government for the supply of 3000 revolving pistols for her Majesty's service.

THE Black Sea fleet gets more and more transformed into a steam fleet. With the exception of the *Vengeance* and *Rodney*, there is no sailing-vessel remaining, and these two will likewise take their departure as soon as the steamers coming out from England shall have rendezvoused there.

WE have reason to believe that the second command of the British army in the Crimea has, after due deliberation, been conferred upon our distinguished countryman, Sir Colin Campbell.

THE old-fashioned cross-belts, which were worn by the household troops in the Crimea, having been found to be extremely cumbersome—contracting the chest and retarding the movements of the Guardsman—the commanding officers of the brigade of Guards have dispensed with the side arm belt, and the men have only a shoulder-belt for the pouch, and are accoutred in every respect as the regiments of the line.

REAR-ADMIRAL SIR HENRY LEEKE is hard at work at Bombay fitting out the *Punjab* (which was built for a steamer), 1850 tons, as a sailing-transport, to convey the 10th Hussars to Suez. The *Punjab* will carry 480 horses and men.

THE medal for the Crimea is to be of the same description as the good-conduct medal. In the instance of any one who may have been specially noticed for gallantry an inscription is to be made on it for "distinguished conduct in the field."

THE Secretary-at-War has approved of one shilling per day being allowed to staff officers for each soldier-servant.

DEPARTURE OF THE BRITISH EXPEDITION FOR THE TIEN-TSIN RIVER.

SIR JOHN BOWRING'S MISSION TO PEKIN.

WE have this week given the Sketches relating to the English mission to Pekin which we promised in our last publication. The following account of the transaction is from the *Friend of China*, NOV. 22, 1854:—

HER MAJESTY'S ship *Rattler* (Captain Mellersh) has returned to Woosung from her expedition to the Gulf of Pecheli, bringing back his Excellency Sir John Bowring and suite. We understand she was anchored nearly a month at the mouth of the Pei-ho (more properly the Tien-tsin-po) in company with the United States steam-frigate *Powhatan* (which conveyed his Excellency Mr. M'Lane, the American Commissioner, and his party) and the United States steamer *John Hancock*.

Communications were regularly kept up between the ships in the bay and the Secretaries of the two Ministers, who were established in the river on board the United States' schooner *Fenimore Cooper* and lorcha *Ohsien*, which had been towed up by the larger ships as auxiliaries to the expedition. A grand display took place on the 3rd November, when, preceded by the band of the *Powhatan*, and passing through lines of about 200 men, consisting of naval officers, marines, and seamen, accompanied by the national flags, the Plenipotentiaries of Great Britain and America landed, and, walking arm in arm, were received by an immense crowd of Mandarins, who escorted them to tents which had been prepared for the occasion; at the entrance of which they were met by the Imperial Commissioners deputed by the Emperor to receive them. When the usual compliments had passed, the inner tent was cleared of the multitude of Chinese Mandarins and foreign officers who had crowded into it, and the high functionaries proceeded with their negotiations. After the interview, which lasted several hours, the Plenipotentiaries remained six days in the bay, which the *Rattler* left on the 10th instant.

Nothing whatever has transpired as to the result of the conferences which have taken place, and the public curiosity will probably remain ungratified until the respective Governments see fit to publish the communications of which the Plenipotentiaries are bearers. We understand Count Kleskowski was introduced by the British and American ministers, as charged with communications from the French Minister, who was unable to proceed in a national ship of war to the Pei-ho, in consequence of the disaster which happened to the frigate *La Jeanne d'Arc* at the entrance of the Yang-tsz-kiang.

While the Ministers were engaged in their conference with the high Mandarins, ample supplies of refreshments, tea, &c., were provided for the whole party who had accompanied their Excellencies to the shore. Tents had been erected for the accommodation of everybody, and many a laÆrcus scene took place in the process of fraternization between the subjects of "Western outer nations" and native officers and attendants, many of whom saw our people for the first time. A black man from the *Rattler* was an especial object of curiosity and wonderment.

NEWSPAPERS SENT ABROAD.—A very large number of newspapers for places abroad, upon which a postage ought to have been prepaid, being continually posted without such prepayment, the Post-office authorities have issued a notice recommending persons who are in the habit of transmitting newspapers to foreign countries, or to any of the colonies, to satisfy themselves, by inquiry at the Post-office, whether or not any postage is payable upon them in this country, before they deposit their newspapers in the letter-box. Newspapers for foreign parts, which have been improperly posted unpaid, are detained and sent to the Dead Letter-office.

A FROSTY NIGHT IN THE CRIMEA.—Words cannot describe the suffering which the army must have undergone last night. During the whole of yesterday it snowed heavily, and about eight p.m. the wind veered round to the north, when it commenced freezing very sharply. To-day snow is on the ground knee-deep, with a clear sky, and a keen wind from the north that would "cut a feather." This morning at daylight the men found their boots frozen like a lump of iron, and most of them had no others to put on. Their bed-clothes, also, notwithstanding the heat of the men's bodies, were frozen. Many of the men are suffering from chilblains. The boots that are served out are of no use; the snow soaks through them as it would through a piece of sponge, and if they step in above the ankles it falls in that way. It is said that the "men will all have high Turkish boots eventually;" but winter is here, and now is the time they want them. Even the moisture which gathers on a blanket from a man's breath freezes now. Huts are a farce; spring will be here before half of the army obtain them. In the meantime a fearful number of men will be lost. I heard an officer say that some men going on duty into the trenches last night were actually observed to be crying, and these were men of stout hearts, who had not quailed under the fire of the enemy at Alma and at Inkerman. A battle is, indeed, a horrible affair; but starvation from cold is worse. In the one, a man dies with the reflection that his death is honourable; in the other, what must his feelings be? I know, from experience, what others suffer, for I myself frequently experience the sensation that my hands are increased to the size of legs of mutton, and this from cold alone. The army has all the comforts sent out that a generous nation can give; they know it. Even the meanest man in the ranks knows it. But Balaclava harbour and Sebastopol heights are two places. An immense gulf separates them, and this is the stumbling-block of all their luxuries. The distance of ten miles here is less surmountable than the whole journey from England. Requisitions are freely given for everything required by the Quartermaster-General's department; but then comes the rub—the articles are at Balaclava. They are wanted on the heights. And whose fault is it? It is, perhaps, hard to say; but all turn to the chief of the commissariat. Our commissariat has no idea of working except by contract. Contract in a foreign land is out of the question, since we only possess a portion of the enemy's country.—*Letter from the Camp, January 5.*

FRACAS BETWEEN PARAGUAY AND THE UNITED STATES.—A Washington letter, written on the 9th, says:—"President Lopez of Paraguay took down the American flag, banished Hopkins, and took possession of the property of an American company established to navigate the Paraguay river. He ordered all Americans connected with it out of the country, forbade American vessels of war to enter the waters of Paraguay, and stopped all further operations of the United States surveying expedition."

ILLUSTRATED LONDON NEWS

SKETCHES IN JAPAN.

MILITARY STATION, HARBOUR OF NAGASAKI.

NAZUMA SIMA ISLAND FOR EXERCISE.

Two weeks ago we gave an account of the late Expedition to Japan, accompanied by a number of Sketches illustrative of the dress and manners of the inhabitants, &c. In our publication of this week we engrave a few additional sketches of Japanese scenery and costume, which will assist our readers in forming some notion of the appearance of the inhabitants of that remarkable island. The following extract of a letter from a young officer on board the *Winchester*, dated Nagasaki, October 5, 1854, gives an interesting account of what he saw in Japan, during the visit of the English:—

The scenery, in making the island, is very beautiful. Mountains in the interior are very lofty, and covered with forests on their southern fronts, but the larger vegetation ceases directly you arrive at the summit; and the whole northern slopes are destitute of trees, but covered with smaller verdure, presenting a strange appearance—the northerly winds having shaded them as regularly as if done by man. The ridges are crowned with a row of treetops—their roots being sheltered on the south side—looking like the bristles on a hyena's back. The closer you approach the land the more it displays its beauties. The country, which is undulating, and in parts very lofty, is covered with verdure, and cultivated to the very tops of the mountains. The atmosphere is delightful, clear, and transparent, quite in opposition to the humid, yellow, windy atmosphere of China. The temperature, too, has fallen to 70 deg., which we feel delightfully cool. Having notified our arrival to the Governor, and intimated our intention of going into harbour, we went in accordingly. The entrance is remarkably pretty, being covered with several picturesque islands, with plenty of guns in battery, but evidently planted by some one totally ignorant of fortification; they are all mounted *en barbette*, hardly any of them covering another. The fort at the entrance is mounted with two-and-twenty remarkably handsome pieces of ordnance. We anchored off the mouth of the inner harbour, across the entrance of which was drawn a cordon of large boats connected by hawsers. Directly we were anchored the Admiral sent despatches to Jeddo. After being here a week they allowed us to land on a little island, about two acres in extent, covered with trees and bamboos, under extraordinary restrictions, guard-boats all round to cut off communication with the shore; no fires to be lighted, trees cut, or rocks to be moved, and every one to be off by sunset. The Japanese are small of stature, and of rather an intellectual expression, very clean in their persons and boats. Not having seen their houses, I cannot speak of them. They are all armed; men of superior rank with two swords; others with one. Their dress is plain, consisting of a dress or grass-cloth or crepe, and silk trousers; they wear shoes, grass soles, with a strap across the instep, going down between the big and second toes; they are better-looking than the Chinese, on whom they look with contempt. Talking about the Russians, they said they did not think much of them—they were dirtier than the Chinese. The latter are allowed to send four junks a year, and the Dutch two ships, which is the only external trade the Japanese have.

JAPANESE COURT OFFICIAL COSTUME.

Last week it was arranged that the Admiral should visit the Governor, who was received at the landing by the principal officers of the city, and conducted by them to the Governor's house. The street, or rather flight of steps, was lined on either side with troops—a very meagre lot, who had their matchlocks covered with red baize, it not being considered orthodox to expose steel to the eyes of a friend; indeed, we had great trouble in persuading one or two to show us the blades of their swords, which appeared beautifully-tempered weapons. The Admiral was graciously received by the Governor, and the officers accompanying were presented in due form. A collation of sweetmeats and pound-cake was served up. When the repast was finished the Admiral held his interview. The diplomacy progressed slowly but satisfactorily; and at length a treaty was drawn out, and another interview held with the Governor, at which it was signed. The exact purport I do not know; but it was to the effect that we should enjoy all the privileges conceded to other nations at any time; that a certain number of ports should be open to us; that the Russians should receive no assistance at the hands of the Japanese. The Governor required a list of the officers of the squadron, stating that it was the Emperor's wish that a present should be made to each according to his rank: when they appeared, however, they were nothing but a number of sets of inferior china. The Admiral's, however, which came direct from the Emperor, were splendid: a most magnificent cabinet of lacquered ware, inlaid in the best taste with mother-o'-pearl; two beautiful embossed china vases, with dishes, trays, &c., to match; some silks, &c.; lacquered boxes; two little dogs, a specimen of spaniel these I believe he intends for the Queen. After the treaty was signed we remained for some days whilst the papers were being translated. The Japanese expressed regret at our leaving, and seemed anxious that commercial relations should be opened between the two countries.

The position of Japan, favoured also as it is by climate and soil, renders the Japanese to a great extent independent of other countries; and, as everything must be measured by comparison, they, knowing no other world but Japan, judge of their degrees of happiness and prosperity by those of their own state around, never having enjoyed European luxuries, excepting the small quantities brought by the Dutch ships.

JAPANESE VILLAGES, IN MAINLAND.

CALENDAR FOR THE WEEK

SUNDAY, Jan. 28.—4th Sunday after Epiphany. Admiral Byng shot
MONDAY, 29.—George III. died, 1820.
TUESDAY, 30.—King Charles I. beheaded, 1648.
WEDNESDAY, 31.—Hilary Term ends. Guido Fawkes executed, 1606
THURSDAY, Feb. 1.—Partridge shooting ends.
FRIDAY, 2.—Candlemas-day.
SATURDAY, 3.—St. Blaise

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 27, 1855.

THE Government, having got itself into difficulties, on account of its inability, or that of the Attorney-General, and the Judges of the land, to define what a newspaper is, has resolved to get out of them by changing the law regulating the Newspaper Stamp-duties. The subject is to be introduced by Mr. Gladstone, by a resolution in Committee of the whole House on Monday next. We do not know what form Mr. Gladstone's proposition will assume, and only allude to the subject at the present time to restate in a few words our own opinion of the matter, as one affecting our interests in as high a degree as those of any of our contemporaries. Some months ago, when the subject was under discussion prior to its postponement until the present Session—we stated our belief that a very simple alteration would meet all the requirements of the case. Our proposal was that the stamping of newspapers should be voluntary—not compulsory—and that such journals as chose to be stamped, in whole or in part, should enjoy the privilege they sought—paying as now the penny stamp, which should entitle each number so stamped to be transmitted by post as at present. We further proposed that unstamped newspapers, if sent by post, should either be chargeable as letters, or rejected by the Post-office altogether; and that it should be incumbent on those sending newspapers through the Post-office to have the stamp folded outside, so as to be easily seen by the Post-office authorities. A reconsideration of the subject has not enabled us to suggest any simpler or more satisfactory contrivance, or one that would more effectually promote the interests of all parties, whether the Post-office or the existing newspaper press. It would give the advocates of a cheap press the boon they seek; and would not be unjust towards established journals of any class. We do not think, however, that our plan, or even the total abolition of the Newspaper Stamp, which we do not propose, would give Mr. Milner Gibson, and the friends of what they call a "free" press, the advantage of cheapness. Of itself, the modification or abolition of the Stamp-duty will, we think, accomplish little or nothing in the direction of cheapness; but, if either were accompanied by the repeal of the Excise-duty on paper, it is possible, if not highly probable, that the price of newspapers might be so greatly reduced as to lead to a complete revolution in that branch of literature. We are not aware, however, that Mr. Gladstone contemplates any such change at the present moment. If he do, the sacrifice of revenue, though considerable, would not be embarrassing. The Excise-duty on paper is a tax on the raw material of many important branches of industry and commerce. It not only affects newspapers, but Literature of every kind; and not only Literature, but a vast variety of trades and manufactures employing many thousands of people—as the inhabitants of Birmingham, Sheffield, Manchester, Glasgow, and other large towns have more than once testified in memorials to the Government. The Paper-duty, as regards the commercial principle involved in its abolition, may be considered doomed. Mr. Gladstone and Mr. Disraeli, in common with all political economists and free-traders, take the same view of it; and as its abolition is simply a question of time, we imagine he could not have a better time than that which he has himself chosen for the readjustment of the Newspaper-stamp.

MR. BRIGHT, though ostensibly a man of peace, is fond of war. War is the bent of his nature; and as the man who is too much addicted to the use of strong liquors binds himself to sobriety by becoming a teetotaller, so the pugnacious member for Manchester, lest he should become too quarrelsome, swathes himself with the bands of the Peace Society, that he may repress, if he cannot altogether subdue, his innate belligerosity. But genius will out, and the genius of Mr. Bright is aggressive. He made war against the Corn-laws, and won the battle. He has now declared war against the public opinion of his countrymen, and against the press, as its exponent. But this new battle he will not win; although we must confess that he fights it with great courage, and displays the sturdy limb, the brawny fist, and the deep chest of the practised gladiator to no small advantage. What a splendid soldier the world might have had in Lieutenant-General Sir John Bright, if Mr. Bright had not unfortunately been a Quaker! In his war against the press, the people are no longer to be called the people. For, presuming to disagree with Mr. Bright and Mr. Cobden on the merits of the Emperor of Russia and the duty of Great Britain, they are proclaimed to be the "populace;" and the press, that was formerly so courted and so praised, is declared to be no longer an instructor, which appeals to the reason and the common sense of the people, but a "venal" thing, and a pander to the basest passions and prejudices of "the populace!" Mr. Cobden—who is the more peaceable man of the two, although he believes war may sometimes be necessary and honourable, which Mr. Bright does not has taken care not to make such violent attacks on his countrymen and their opinions as Mr. Bright has done, and has managed to give his own view of the case, without throwing dirt at all who disagree with him. Mr. Bright, who possesses more vigour, and less compunction, and who disputes as an athlete fights, with no other object than to hit hard, will not give his opponents credit either for sagacity or for honour. Amongst the newspapers which were the objects of his vituperation, at the recent tea-meeting at Manchester, he particularly selected the ILLUSTRATED LONDON NEWS. We quote his attack in full:

> Take the ILLUSTRATED LONDON NEWS, which has its artists at the seat of war, and gives you pictures every week. It was a paper before the war of a gentility so unexceptionable that it never said a harsh word of anybody on behalf of the people. Now it descends to abuse of every kind, of every man who dares to form an opinion for himself, adverse to the prevailing opinion But if it has advanced its circulation since the war broke out, by 20,000 or 30,000 a week; if at this moment an eminent engineer is at his wits' end to form a machine to print the paper fast enough; and if the proprietors are putting in their pockets many thousands a year, as the fruit hanging ready for picking, the growth of this infernal war—I charge them not with dishonesty or insincerity; they may believe everything that they put in their pictures, leading articles, and ballads they publish—but, I ask you, whether, in any case in a court of justice or a matter of your own personal concerns, you would take the evidence of men having so direct an interest in the matter?

We are happy to corroborate Mr. Bright's assertion, as to the growing prosperity of this journal—a prosperity not, however, the result of the war, as Mr. Bright seems to think, but the result, we are glad to know, of the growing confidence and esteem of the public, and which takes its origin in causes far antecedent to the war, or even to the repeal of the Corn-laws. We illustrate the war—because the nation is at war—as we illustrated the Great Exhibition of 1851, or the French Revolution of 1848 because they were facts. We illustrate it for the same reason that Mr. Bright speaks of it, and that the public thinks of it—because it is the event of the day. Our prosperity is not a thing dependent on war. The history of this journal is one of steady progress and increase. From a sale of thirty thousand copies a week—in itself a large circulation—we have grown year by year, to a circulation double, treble, quadruple, and quintuple that number. We have increased in peace as well as in war, and more in peace than in war; and shall, we have every reason to believe, increase still more largely, even if the war should be brought to an end to-morrow—which, if it could be done with honour and safety, we should most unfeignedly rejoice at. We approve of the war, because we think it right, and just, and honourable; because we love peace far above war; because we detest the wicked ambition of the Emperor Nicholas, which has forced this country and France to take up the cause of Right against Wrong, and of Independence and Civilisation against aggressive Conquest and barbarous Cossackism; because we really love peace "at all price," even at the price of the necessary and inevitable war, which will secure it for half a century or a century to come; and because, when strong nations resort to physical force and set reason and justice at defiance, we believe, with the vast majority of our countrymen, and of all reasonable people in every portion of the world, that they must be confronted with and overpowered by physical force—the only *ultima ratio* that exists, or ever can exist, until men are degraded into sheep, or exalted into angels. Mr. Bright can imagine no motive but a sordid one as swaying the actions of the writers and conductors of this or any other journal. We will not assert that he weighs others by his own weight, and measures other people's consciences by the standard of his own; but perhaps if we did so we should not be far wrong in our estimate. If Mr. Bright will not give us credit for honesty or honour, he will possibly give us credit for some degree of sagacity—in foreseeing the war long before it was dreamed of by him and the comfortable citizens, who will neither fight nor relieve the miseries of the widows and orphans of those who do. So early as 1849 we drew attention to the designs of the Czar against Turkey, and advocated the alliance of Great Britain and France to secure the peace of Europe, by restraining his aggressive ambition against that Empire. It will be seen from the following extracts from our leading columns of the 6th of October, 1849, that war was then imminent, and that a union between France and Great Britain was advocated by us, to prevent Russian aggression against Turkey

> The gravity of the position is apparent. A Cabinet Council was summoned by Lord Palmerston on Tuesday, and sat for three hours, when we may suppose that this important question was anxiously debated. The duty and true interest of Great Britain and France are to throw the whole weight of their great influence in favour of the Porte. To forsake that Power in an emergency like this would be suicidal policy for each of them. They would fall at once into the rank of second rate Powers, and leave Russia the virtual mistress of the destinies of Europe. We will depend upon the astuteness they assume whether Russia will attempt to parallel the audacity of her language by the audacity of her deeds, and involve Europe in a war by the possession of Constantinople A war made by Russia on such a pretext would be so wholly without justification, so utterly destitute of that moral force which neither great nations nor small individuals can safely despise, that however much Russia may covet the possession of Turkey, or any part of it, we cannot believe that she will run the risk of a general war, especially at such a period as the present. To the Government of France such a war would be a golden opportunity; and to the people of France it would be the most popular war upon record. Even in England—overburdened as we are with debt, and subjected for war as all our great trading and commercial interests must be considered—an armed intervention with France in favour of the Porte would enlist the sympathy and good wishes of most classes of politicians. If we are to retain India—to say nothing of our influence in Egypt and the Mediterranean—Russia cannot be allowed to conquer Turkey; and France, on this occasion, has interests, if not identical with, most certainly as strong as, our own.

Events have at least proved that we could see further into foreign politics than Mr. Bright or any of his school. Long before war was declared, we advocated a vigour of action on the part of Great Britain and France, which we then believed, and which we still believe, would have prevented the war of 1854, as a similar policy prevented the war of 1849. But both Mr. Bright and Mr. Cobden take a mean view of the war and of their countrymen. They are always harping on the expense of the struggle, and hope to disgust the people, not so much with its bloodshed as with its cost in hard money. They have yet to learn, apparently, that there are things in this world far more precious than money, and, among them, honour and justice. Until they assume a higher and nobler position, they will cease, if they have not already ceased, to be leaders of the people. They will fall from their once high estate, and no longer be of weight in the councils of the nation. If we were all influenced by feelings like those of Mr. Bright and Mr. Cobden, we should indeed be a nation of miserable shopkeepers. Happily, Englishmen are made of nobler stuff, and, with their allies the French, will lead the civilised world in the path of peace and honour for ages yet to come; loving peace, as all Christians ought to do, but not being afraid of war in a righteous cause, whatever its cost, and whatever its inconvenience

We will not enter into the quarrels of Mr. Bright with the contemporary journals, which he insults even more grossly than he has insulted us. Those journals can vindicate themselves if vindication from such an assailant be necessary. We will simply remind both him and Mr. Cobden that it was the press which made them what they are or were. Happily, it does not need the press to unmake them; for they spare it the trouble, by destroying their own reputation more rapidly and effectually than the press could do it for them.

RESIGNATION OF LORD JOHN RUSSELL. On Thursday it was announced that Lord John Russell no longer held office, having tendered his resignation to her Majesty, which resignation is believed to have been reluctantly accepted. For the proceedings consequent upon this event we refer our readers to our Parliamentary Report.

LATEST INTELLIGENCE.

THE WAR IN THE CRIMEA.

The *Telemaque*, with advices from Constantinople of the 15th, arrived at Marseilles on Thursday. Letters from the Crimea of the 12th state that the Flagstaff Battery had been mined by the French, who only waited a favourable opportunity to blow it up. Sickness was on the increase in the camps. The ground was covered with snow. The batteries of mortars greatly annoy the enemy

Several vessels, with provisions and munitions for the Russian army, have been captured by the Allies near Odessa and Kertch

A correspondent of the *Cologne Gazette*, at Odessa, writes that Prince Menschikoff, having received considerable reinforcements, estimated at 75,000 men, including the Eighth Division, Third Corps, has determined to resume the offensive, and make another general attack on the Anglo-French lines, immediately after the return of the two Grand Dukes, for whose special edification this spectacle is reserved.

AUSTRIA AND THE WESTERN POWERS.

It is reported and believed in Paris that the military convention between Austria, France, and England will be signed at Vienna within the next forty-eight hours. It is already understood that by one of the clauses of this convention an auxiliary French army will be allowed to march across Lombardy and the Austrian States, to take part in the war on the Danube.

There are rumours also that an armistice is to be made between the Western Powers and Prussia, which will allow that Power to join the Western alliance in terms exactly analogous to those of the Treaty of December 2.

DESPATCH FROM LORD RAGLAN.

War Department, Jan. 23.

His Grace the Duke of Newcastle has this day received a despatch, of which the following is a copy, addressed to his Grace by Field Marshal the Lord Raglan, G.C.B.:—

Before Sebastopol, Jan. 6

My Lord Duke, The weather has been so bad since I wrote to your Grace on the 2nd inst., that I have not yet been able to disembark the 89th, with a view of encamping the regiment, and it still remains on board the *Golden Fleece* in the harbour

The ground is thickly covered with snow, though not very deep.

All my endeavours are directed to the speedy disembarkation and getting up of the huts, which have now arrived in considerable numbers, and the establishment of the depôt of provisions, which I alluded to in my last despatch, near head-quarters, which I am now enabled to do, with the assistance of the 18th and 49th Regiments—the first encamped near Balaclava, the last still sleeping on board the *Golden Fleece*.

There has been no movement on the part of the enemy.

I enclose a return of the casualties that have arisen up to the 4th inst.

I have, &c.,
RAGLAN.

His Grace the Duke of Newcastle, &c.

NOMINAL RETURN OF NON-COMMISSIONED OFFICERS AND MEN KILLED, WOUNDED, AND MISSING FROM 29TH DEC., 1854, TO 4TH JAN., 1855, INCLUSIVE.

KILLED.

1st Battalion Rifle Brigade—Privates Wm. Borrowdale and James Graham
1st Foot—Private Thomas Walker.
2nd—Private Lovell Reid.
47th—Privates Eugene Griffin and Thomas H. Spiller.
50th—Private Patrick Rourke.
57th—Sergeant John Kyle; Privates Robert Walsh and Martin Byrne.
68th—Private John Wright.

WOUNDED.

1st Battalion Rifle Brigade—Corporal Isaac Bell; Privates Charles Baker, Walter Engle, Thomas Bartley, John Jones, Josiah Wood, severely
1st Foot—Private Isaac Barker, severely. Lance-Sergeant Michael Kenny—Lance-Corporal Benjamin Norman; Privates T. Mullins, John Moran, Henry Dow, slightly.
8th—Private Stephen Monaghan, severely
30th—Corporal Edward Black, severely.
21st—Privates Michael Cavery and James McCallum, slightly.
30th—Lance-Corporal Joseph Bell and private William Frawley, severely.
41st—Private John Farmer, severely.
49th—Private Patrick Holloran, slightly.
47th—Privates Patrick Flanery, Joseph McMahon, Joseph Marshall, Thomas Govan, severely; Private Michael Cornish, slightly.
49th—Private Michael Kenney, severely.
57th—Privates John Rowbert, severely; Thomas Traynor, slightly.
68th—Privates Thomas Fitzgerald, slightly, William Collins, severely
88th—Private James Mabey, slightly.
95th—Private James Burley, slightly.

MISSING.

7th Foot—Private Charles Clarke.

J. B. BOCKNALL ESTCOURT, Adjutant-General

THE COURT.

The event of the week in Court life has been the visit of the Earl of Aberdeen to Windsor Castle on Wednesday, charged with the important duty of announcing to her Majesty the resignation by Lord John Russell of his seals of office as Lord President of the Council. It is thought probable that the political exigencies of the moment will have the effect of hastening the return of the Court to London.

On Tuesday morning the Prince Consort travelled to town by the South-Western Railway, and presided at a meeting of the Governors of the Wellington College. The other Governors present were the Earl of Derby, Sir Howard Douglas, and the Rev. G. R. Gleig. The meeting, which was held at the New Palace, Westminster, broke up a quarter past one o'clock, when his Royal Highness returned to Windsor. Major-General Simpson had the honour of dining with her Majesty in the evening.

His Royal Highness the Duke of Genoa was stated to be seriously indisposed at the date of the latest accounts from Sardinia.

The Earl and Countess of Derby and family have arrived in town from Knowsley.

The Countess of Carlisle, we are happy to announce, is better.

The Earl of Caledon is reported to have been seriously indisposed at his seat in Ireland.

Lord Dunlo, eldest son of the Earl of Clancarty, having just attained his majority, the event has been celebrated with great rejoicing on the family estates in Galway.

The Right Hon. B. Disraeli and Mrs. Disraeli have arrived at Grosvenor-gate from Wynyard, where they have been on a visit to Frances Anne, Marchioness of Londonderry.

The first meeting of the Fox Club will take place at Brooks's this evening (Saturday). A large meeting is expected.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS.—*Rectories*: The Rev. S. C. Mason to St. Clement Danes, Westminster; Rev. J. W. Millard to Shimpling, near Diss; Rev. T. Miles to Stockton, near Heytesbury; Rev. H. W. Long to Whaddon, near Trowbridge; Rev. W. W. Ellis to Magdalen Laver, near Chipping Ongar. *Perpetual Curacy*: The Rev. C. Smith to Tarrington, near Ledbury; Rev. H. I. Blackburne to Rostherne, in the county of Chester; Rev. R. Mackell to Marton in Cleveland; Rev. S. King to Cantley, Yorkshire; Rev. G. Alexander to Wexford, Northamptonshire; Rev. J. Best to Kirk Oswald, Cumberland; Rev. C. Forter to Raunds, Northamptonshire; Rev. P. Smith to Grinton, Yorkshire; Rev. W. Speke to Skenfreth, Monmouthshire; Rev. J. Wallace to Wellow, near Bath. *Incumbencies*: The Rev. J. Harman to St. James's, Enfield; Rev. J. M. Clarke to Christ Church, Forest-hill, Sydenham; Rev. R. F. Ozanne to St. Matthew's, Guernsey; Rev. G. Thompson to Leigh, near Sherborne.

TESTIMONIAL.—A copy of Baxter's comprehensive Bible, with a purse of fifty sovereigns, was presented to the Rev William Duncan Long, M.A., Incumbent of St. Paul's, Bermondsey, by the congregation of St. John's Episcopal Chapel, London road, Southwark.

Note. The sign — denotes below the average.

The reading of the barometer decreased from 30.00 inches at the beginning of the week to 29.77 inches by the 20th; increased to 29.87 inches by the 21st; decreased to 29.77 inches by the 22nd; increased to 30.04 inches by the 24th; and decreased to 29.9 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29.898 inches

The mean daily temperature was below the average on every day of the week. On the 19th the depression was as great as 17½°; on the 20th, 9¾°; on the 21st, 14½°; on the 22nd, 10½°; on the 23rd, 8½°; on the 24th, 4½°; and on the 25th, 3½°.

The temperatures on the 19th of January, 1838, was, however, lower than the above, and was 17·9°; on the 20th of January, 1838, it was as low as 10·6°: this day was rendered remarkable, Murphy, in his almanack, having predicted it as a cold day. We must go back to 1814 for so cold a day as Jan. 21 in this week; in that year it was 22·2°, differing by one-tenth of a degree only from that in the above table; in 1829, on Jan. 23, the mean temperature was 23·9°; in 1838, on Jan. 23, the temperature was 26·2°.

The mean temperature of this week was 27.1°, being 9.7° below the average of the same week in thirty-eight years. The mean temperature of the same seven days in the year 1838 was 34½°; this week was the coldest as far as my registers extend, and the past week was the next in order of lowness.

The wind blew generally from the N.E. The amount of water produced from melted snow was 0·2 inch (two tenths of an inch)

The weather has been excessively cold, but fine. Snow has been falling frequently. On January 23 light feathery snow was falling; each particle crystallised, and falling together in light clusters of from a dozen to twenty. At nine a.m. they were falling abundantly; temperature at the time, 29°. There were more stellæ present, and larger, than those of last year—less glistening, but spicular finer

JAMES GLAISHER.

Lewisham, Jan. 26, 1855.

HEALTH OF LONDON.—Within the week ending January 20 the births of 709 boys, and 677 girls, in all 1386 children, were registered within the metropolitan districts. The number of deaths 1549, exceeding the births by 36, which is very unusual, except in periods of epidemic. 770 of the deaths were males, and 779 were females: of the deaths no less than 720 occurred at ages less than 20 years: 234 at ages between 20 and 40; 224 in the next 20 years; 256 at ages exceeding 60 and less than 80 years; and 73 at ages exceeding 80 years. These numbers show an excess in each period of life, but to the greatest extent at ages exceeding 60 years. Those, however, have suffered the least from the coldness of the weather, which has severely affected the health of those whose ages are between 40 and 60 years.

CORPORATION REFORM. The following amendment was carried on Tuesday at the Court of Common Council by a majority of 59 to 49.—

That the recommendations of the Consolidated Committee—amounting to the surrender of the charters, the restriction of the elective privileges of the wardmoteries, the reducing the number of their representatives, the disturbance of the well-known ancient boundaries of the wards, the withdrawal of the power of the livery to elect their officers, and the degradation of the magisterial office—were inopportune at the present period of the history of the citizens, and in opposition to the administration of justice, and to the wishes of those who were most deeply interested.

AN oversight was committed, in the neglect of the advocates of the amendment to call for the disposal of the original question (in favour of discussing the propositions of the Consolidated Committee), which thus remains as open as ever to discussion

VALUE OF LAND IN THE EASTERN DISTRICT OF LONDON.—Notwithstanding the war, it appears that there is not the slightest indisposition on the part of members of freehold land societies to invest their capital on estates on which building operations are sure to be commenced and prosecuted to the completion of the houses, in the district of the Lower Old Ford estate, Bow, yesterday, at the offices of the Conservative Land Society, and small plots to the value of upwards of £6000 were eagerly selected by members. The allotment of the estate excited much interest. It is close to the Victoria-park; and a new church is about to be erected in its immediate neighbourhood. On the same day the society offered another estate situated at East Retford, Notts, which found equal favour in the eyes not only of local but of distant shareholders.

FOUR LIVES LOST ON THE ICE IN LONDON. The ornamental water in St. James's-park, London, being coated over with ice on Saturday last, many persons ventured thereon. That portion opposite to the Duke of Richmond's "Dangerous" early in the day; but during the afternoon some foolhardy youths crossed the lake to the Wildfowl Island, and, while a number of them were sliding on a beautiful sheet of ice, one of the party broke. The ice broke, and he and three others were in an instant precipitated through the fracture, and, before the officers of the Royal Humane Society arrived, all four sank. The bodies were shortly afterwards taken out of the water, but every effort to restore animation was unsuccessful.

EXECUTION OF BARTHELEMY.—The execution of this man for the murder of Mr. Collard took place on Monday morning. On Sunday he had been engaged in writing letters all day, and declined attending Divine service in the chapel. At ten o'clock at night he went to bed, and slept soundly till four o'clock the next morning. He was closely watched day and night, as he had told out a determination that, as he was tired of life, if the law was not executed on him, he would execute it on himself. He had been visited by the Catholic priest, who he said "had the good taste not to speak of religion to him." At eight o'clock on Monday morning he was visited by the Sheriffs, the Rev. J. Davis, the Chaplain of Newgate, Abbé Roux, a Catholic priest, and others; and in reply to the officers he said he had nothing to communicate. "I have," he said, "written to my father and friends, and I have given the letters to the governor." After leaving his cell he strode up the scaffold with an unfaltering tread. Ten thousand persons had assembled to witness the execution; but the sight of this vast multitude failed, as everything else had failed, to move him. Whilst on the scaffold he asked Calcraft to do his work as quickly as possible. At the given signal the bolt was withdrawn, Barthélémy fell, and died without a struggle. The body was removed to the cells where an hour after an inquest was held on the remains of the wretched man, and subsequently the corpse was buried in the precincts of the gaol. The motives which prompted Barthélémy to the commission of the murder are still involved in mystery. There has been no confession beyond a statement which he volunteered to Mr. Davis, that the young woman who accompanied him to Mr. Moore's house was the Magdalene daughter of a Catholic priest, who was to receive a portion of the money. Of this statement Mr. Moore, in a letter addressed to Mr. Davis, that it was used by Mr Moore for business purposes. Mr. Davis reports of him that he was the hardest criminal with whom he ever had to deal.

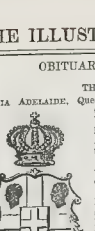
DOCK LABOURERS FOR THE CRIMEA.—On Tuesday fifty of the men selected by the Government agents from the London Dock labourers to go out to Balaclava, to assist in unlading the transports as they arrive out from England, and in warehousing the stores, went before the authorities to be finally approved. The men, having been medically inspected and passed, signed articles for 6s. per diem and rations, and the foreman 7s. and rations, with free passage out and home; each man received a bounty of £11 to provide himself an outfit, and was told to hold himself ready to embark at forty-eight hours' notice. Mr. Goodman, of 4 Warehouse, London Dock, goes out as head foreman over these men, and one of the Customs landing-waiters as superintendent. They are expected to sail in the Government screw-steamer, from Portsmouth, early next week.

THE *Retribution*, 28, paddle-wheel steam-frigate, arrived at Spithead on Tuesday night from the Crimea and Malta. She has brought home 49 invalided and wounded soldiers, who were landed near Gosport, and conveyed to the Military Hospital at Portsmouth. Lieutenant Colter, 68th Light Infantry, who is wounded, came home by this ship. The *Retribution* bears very strong proof of the severity of the treatment she received at Sebastopol, during the attack on the forts by the English and French fleets. Her mainmast is quite gone, having been knocked away by a shell, whilst her rigging is almost entirely destroyed. Her hull also has marks of shot and shell in several places. The *Retribution* made the voyage from Constantinople to Spithead in twenty-one days, including her stoppage at Malta.

JANE POWIS, a pauper belonging to the City of London Union, has been compelled to refund to the parish authorities the enormous sum of nearly £250, invested in the Three per Cent Consols. She had been in the receipt of out-door relief for the last ten years.

OBITUARY OF EMINENT PERSONS.

THE QUEEN OF SARDINIA.



MARIA ADELAIDE, Queen Consort of Sardinia, was the eldest child of the Austrian Archduke, the late Renier Joseph, Viceroy of Lombardy, by his wife (who is still living), the Princess Mary, sister of the late Charles Albert, King of Sardinia. Maria Adelaide was born the 3rd June, 1822, and was married the 12th April, 1842, to her first cousin, Prince Victor-Emmanuel, who succeeded his chivalrous father on the throne of Sardinia, the 3rd April, 1849, and who is, as Victor-Emmanuel II., the now reigning Monarch. By this union Queen Maria Adelaide leaves three sons, viz., the Prince Royal of Sardinia, and the Dukes of Aost and Montferrat; and two daughters, the Princesses Clotilda and Maria.

Queen Maria Adelaide died on the 20th instant, at Turin, of puerperal fever; the immediate cause of her death being the shock she sustained at the news of the demise of her Royal mother-in-law, the Queen Dowager, to whom she was devotedly attached. Her own demise—young and in every way admirable as she was—the darling—for so they called her—of the people of Sardinia—has caused universal public grief throughout the realms of her husband; the sympathy has extended over Europe. The King's grief is said to be terrible; and, in the midst of the present troubled state of Sardinian politics, this double loss of mother and wife has revived all the afflictions of his gallant and right royal house.

MAJOR-GENERAL SIR JAMES DENNIS, K.C.B.

THE death of this gallant officer, at the age of seventy-eight, occurred on the 14th inst., at 69, Pall-mall. Sir James entered the Army so far back as September, 1796, and served with the 49th on board H.M.S. *Monarch* at the battle of Copenhagen, being wounded in both hands and contused. In the last American war he was actively engaged, taking part in the battle of Queenstown, the storming of Fort George, the action at Stoney Creek, and the conflict of the Rapids at Hooples Creek. In 1843 he commanded a division at Maharajpore, and for his gallantry on that occasion received the insignia of a Knight Commander of the Bath. Sir James Dennis was the son of John Dennis, solicitor, and married in 1801 Miss Lawton, daughter of Hugh Lawton, Esq., of Cork

LADY GORE BOOTH

CAROLINE SUSAN, wife of Sir Robert Gore Booth, Bart., M.P., died on the 16th inst., in Merrion-square, Dublin. Great has been the mortality of late in her Ladyship's family. It is but a short time since we recorded the decease of her brother, Mr. Wyndham Goold, M.P. for Limerick—immediately after an uncle, Mr. Michael Goold, died in London; and within the present month another in-law, Lady Anna Maria Monsell, sank under the effects of a comparatively brief illness, at St. Leonards. Lady Gore Booth was second daughter of the late Thomas Goold, Esq., of Dublin, a Master in Chancery. She became, 2nd April, 1810, the second wife of Sir Robert Gore Booth, Bart., of Lissadell, and by him leaves two sons and three daughters. Of the former, the elder, Robert Newcomen, is a Lieutenant in the 4th Light Dragoons.

SIR THOMAS FRANKLAND LEWIS, BART., M.P.

THE Right Hon. Sir Thomas Frankland Lewis, whose death occurred on the 22nd inst., at Harpton Court, Radnorshire, was the only son of John Lewis, Esq., of Harpton Court, by his second wife, a daughter of Admiral Sir Thomas Frankland, Bart. Thomas Frankland Lewis was born in London, in 1780, and was educated at Eton, and at Christ Church, Oxford. He was Lieutenant-Colonel of the Radnorshire Militia from 1806 till the end of the war, and he, for more than a quarter of a century, during his subsequent laborious career, has filled a succession of public appointments. He was Commissioner of Inquiry into the Irish Revenue in 1821, and into that of Great Britain and Ireland from 1822 to 1825: he was then made First Commissioner of Inquiry into Education in Ireland. In 1827 he was Secretary to the Treasury, and he was Vice-President of the Board of Trade in 1828. He was Treasurer of the Navy in 1830. Chairman of the Poor-law Commission from 1834 till 1839, and a Commissioner to inquire into the Turnpike Outrages in Wales in 1843. He has represented in Parliament successively Beaumaris, Ennis, and Radnorshire; and Radnor, for which he was M.P. at his death. He was made a Privy Councillor in 1828, and was created a Baronet the 27th June, 1846. He married first, the 11th March, 1805, Harriet, fourth daughter of sir George Cornewall, Bart.; and secondly, the 15th October, 1839, Mary Anne, daughter of Captain John Ashton, of the Royal Horse Guards. Sir Thomas, by the former lady, who died the 11th August, 1838, leaves issue two sons, George Cornewall Lewis and the Rev. Gilbert Frankland Lewis. The elder, now Sir George Cornewall Lewis, who succeeds as second Baronet, has married Mona Theresa, sister of the present Earl of Clarendon, and relict of Thomas Henry Lister, Esq.

THE REV. S. W. WARNEFORD, LL.D

THIS venerable and munificent divine died at his Rectory, Bourton-on-the-Hill, on the 11th inst. Dr. Warneford was principally known as a Christian philanthropist. His donations in furtherance of public charity have been very great; in fact, such in number and extent as to have embraced colonial as well as domestic gifts—assistance to Scotch and Irish as well as English institutions, and has particularly to the Queen's College Hospital, Birmingham—and to infirmaries, medical schools, and colleges, parochial schools for youth and infancy, and almshouses, while the clerical eleemosynary department of London has largely partaken of his beneficence. To the Society for Promoting Christian Knowledge (in addition to former gifts) he has left £20000, and the same to the Society for the Propagation of the Gospel. His benefactions were all done in his lifetime; they were donations *inter vivos*; he left them not to the executors of his nor to questions of their legal validity. He was his own executor and superintendent, and in some degree the director of his own works, and all this in the full vigour of health and strength of mind and body. Very few have expended with such studious selection of purpose, such energetic and self-denying devotion, a sum which has amounted to at least £200,000. The donor of all this, Samuel Wilson Warneford, was born in 1768, at Sevinghampton, near Highworth, in North Wilts. His father, the Rev. Francis Warneford, was eldest son of Richard Warneford, D.D., Vicar of St. Martin's, Coney-street, York, and sub-chanter of the cathedral of St. Peter's, and known as the author of two volumes of sermons. His mother was Catherine, daughter of Samuel Laverley, an opulent drug-merchant of Southwark, who resided at Lewes, in Surrey. At the usual age Samuel Wilson Warneford went to Oxford University, where he entered Pembroke College. In October, 1796, he married Margaret, daughter of Edward Loveden Loveden, Esq., M.P. (afterwards Edward Pryse Pryse, Esq.), of Buscot, near Faringdon, and a few years after became a widower. He leaves no issue. In 1809 Dr. Warneford (who took his degree of LL.D. about the same time) was made Rector of Lidiard Millicent, in Wilts—a preferment valued at £800 per annum; and in the following year he succeeded to an additional £760 per annum; but he was a munificent patron of ecclesiastical distinction. A considerable provision having been made for younger children, under the marriage settlement of the doctor's father and mother, and likewise fortune having devolved upon him on her decease, it may be easily supposed that the Doctor's income soon accumulated far beyond the requisite expenditure of a person of his delicate health and retired habits. It was this that suggested to Dr. Warneford the good design of devoting as he did, even while living, almost his all to works of charity. The family of Warneford is the most ancient of those in North Wilts which have retained any of their original possessions, and which are traced from the period of the first Crusade.

WILLS and PERSONALTY. The Rev. G. H. Peel, of Great Marlow, has left personalty estimated at £30,000; the Rev. Charles Lucas, of Devizes, £20,000; the Rev. E. Page, late Rector of Bawdrip, Somerset, £12,000; Mrs. E. Slaughter, of Southampton, £20,000; Lady Brunel, £18,000.

BEQUESTS.—Miss Millicent Hall, of Albany-street, Regent's-park, and of Hayes, Kent, has bequeathed £2000 to the Society for the Propagation of the Gospel in Foreign Parts; £1000 reversion and £100 immediate for extending the Colonial Episcopate; £2000 to the Society for Promoting Christian Knowledge; £2000 to the Orphan Asylum, Regent's-park; and £100 to the Clergy Orphan Asylum.

SWEDEN PREPARING FOR WAR.—Orders have been given for placing the entire Swedish army upon a war footing. The measure is to be executed with the greatest promptitude, as it is required to have the troops ready to march

CHRISTIAN EVIDENCE IN TURKISH COURTS OF LAW.—Since the promulgation of the firman for admitting before the tribunals the evidence of persons of all creeds, two cases have occurred in Damascus which show in the clearest possible manner that the principle contained in the new law can easily be carried out. The first case related to Jews, and the second to Christians, and in both the Mussulman accused was condemned. In the second case a custom-house officer had insulted and assaulted the Superior of the Lazarists. The Musselman denied the charge, and the offence could not have been proved but for the evidence of Christians, who alone witnessed the affair. The examination into the matter took place in presence of an interpreter attached to the French consulate; and the tribunal, after hearing the evidence, condemned the defendant to three months' imprisonment.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THIS week has produced a remarkable proof that our Newgate Last Dying Words and Confession Poetry has not improved or altered, indeed, in any way since the times of Dick Turpin and Governor Wall. We have before us, while we write, the penny broadside which Grub-street has given us on the execution of Barthélémy, on Monday last. We have the same artless way of telling a story, with the same rough lines and still rougher rhymes common to the Catnach school of Old Bailey poetry. What is still more remarkable, the very cuts are the identical blocks of bygone times. The view of the dangling murderer, of St. Sepulchre's Church, and Newgate itself, is one that has done like duty on many other hanging occasions. The female costume of the cut is that in vague long before (to use Mr. Thackeray's expression) Planeus was Consul. Stranger still, the cut which represents the murderer shooting Mr. Moore is the actual ballad-block of Bellingham shooting Mr. Perceval in the lobby of the House of Commons! We may yet see it reproduced on an occasion of the same kind. The identical woodcut of Tarlton, the famous clown, who drew tears of delight from the eyes of Queen Elizabeth, was in use in Grub-street between 1580 and 1820, or nearly two centuries and a half.

This mention of our current ballad literature reminds us of the story recently revived in the newspapers concerning Mr. Macaulay and his purchase at Whitechapel of a bunch of ballads. Our contemporaries have post-dated the incident. The whole story was got up by a wag, not when Macaulay's "History" appeared, but on the publication of his "Lays of Ancient Rome," a few years before.

The "Bernal Catalogue" is out with its seventy illustrations, price 8s. The arrival of the news of the fall of Sebastopol before the sale takes place will, it is said, increase its produce by several thousands of pounds. Disastrous news may seriously decrease even the lowest figure at which skilful auctioneers have been heard to place it.

The readers of Carlisle's "Life of John Sterling" will hear with regret that the Venerable Archdeacon Hare died at Herstmonceaux Rectory, on the 23rd instant, aged fifty-nine.

Dr. Routh, the late learned President of Magdalen, has given his library, amounting to some 20,000 volumes, to the University of Durham. Though an Oxford man, and deeply attached to his mother University, his good sense told him that Durham was more in want of books than Oxford.

The Shakspeare and Garrick Goblet, made from the memorable mulberry-tree that grew in Shakspeare's garden at Stratford-on-Avon, was sold last week at Sotheby and Wilkinson's, for thirty-two pounds. Garrick drank out of it at the Stratford Jubilee. The form is indegant: the price was large not, however, too large.

The antiquary who has a liking for New World antiquities should, on visiting the Gallery just opened at No. 57, Pall mall, of rarities from Mexico, seek (without pushing) the acquaintance of Mr. Benjamin Nightingale. Our modest friend is well up in Prescott and other authorities on the subject, and wanders from one antiquity to another with the feeling of a man of taste and the skill of an accomplished antiquary.

Antecedents at auction-rooms and treacherous memories should make a note under the 16th of February of the sale that day at Messrs. Foster's, in Pall-mall, of the small but choice collection of English pictures formed by Charles Birch, Esq., of Edgbaston, near Birmingham.

An admirer of the Central Schooling of Marlborough-house has written to complain of the remarks we made on the breaking up, under the old *regime*, of the Belfast School of Design. The Belfast School, we are assured, never tried the self-supporting system at all, but refused to have any other system but the old one, of a grant of £600 a year, to spend as it pleased. The result of this system, we are told (and have no reason to doubt), was, that the students, being few in number, cost the country at the rate of £9 a year each. It appears to us that the cost price of a fine work of art is not so much a matter of primary consideration as the produce work itself. Did Belfast, under its old £600 a year grant, turn out any one or any thing worthy of the public grant? The Elgin marbles are worth thousands a year to the nation. The production of a single Barry at Belfast would sufficiently compensate for an annual grant from the exchequer of the public of £600 a year for the next twenty years. If Belfast will flourish better under Marlborough-house tuition than under its annual grant, all hail to Marlborough-house! We had no other object in making our remarks than a wish to serve the best interests of Ireland, and of the Department of Science and Art at Marlborough-house.

The "Local Schools of Art" in connection with Marlborough-house, Gore-house, and the Board of Trade, are at present (we are writing in January, 1855) forty-four in number. Of these four are in Scotland (Aberdeen, Dunfermline, Glasgow, and Paisley), six in Ireland (Belfast, Clonmel, Cork, Dublin, Limerick, and Waterford), the remaining thirty-four are in England and Wales. To the leading local schools elementary branches are attached. We first heard of Schools of Design in 1841, and between that year and 1852 nineteen local schools were established. This was thought a large number, but between 1852 and the January of the present year as many as twenty-nine schools have been established. Birmingham and Manchester date from 1842, Sheffield and York from 1843, and Coventry and Newcastle-on-Tyne from 1854. These are the earliest in point of time. The Marlborough-house influence had its origin in the Great Exhibition in Hyde-park.

SPRING CIRCUITS OF THE JUDGES FOR 1855.

OXFORD CIRCUIT.—Lord Campbell (Lord Chief Justice of the Queen's Bench) and Mr Baron Martin. Assizes to be at Abingdon, Oxford, Worcester, Stafford, Shrewsbury, Hereford, Monmouth, and Gloucester.

NORFOLK CIRCUIT. Sir Frederick Pollock (the Lord Chief Baron of the Exchequer) and Mr. Justice Wightman. At Aylesbury, Bedford, Huntingdon, Cambridge, Ipswich, Norwich and City.

NORTHERN CIRCUIT.—Mr. Baron Parke and Mr. Justice Cresswell. At Lancaster, Appleby, Carlisle, Newcastle, Durham, York, and Liverpool.

MIDLAND CIRCUIT.—Mr. Baron Alderson and Mr. Justice Colcridge. At Northampton, Oakham, Lincoln, Nottingham, Derby, Leicester, Coventry, and Warwick.

HOME CIRCUIT.—Mr. Justice Erle and Mr. Justice Crowder. At Winchester, Devizes, Dorchester, Exeter, Bodmin, Bridgwater, and Bristol city.

SOUTH WALES AND CHESTER CIRCUIT.—Mr. Justice Crompton. At Cardiff, Haverfordwest, Cardigan, Carmarthen, Brecon, Presteigne, and Chester.

NORTH WALES AND CHESTER CIRCUIT. Mr. Justice Williams. At Newtown, Dolgelly, Carnarvon, Beaumaris, Ruthin, Mold, and Chester.

The Right Hon. Sir John Jervis, Lord Chief Justice of the Common Pleas, will remain in town.

THE GREAT FRENCH EXHIBITION.—The Secretary of the Imperial Commission of the Universal Exhibition has addressed a circular to the presidents of such departmental committees as have not yet terminated the selection of articles to be exhibited, informing them that the period allowed for such selection has expired, and that they must complete their operations without any further delay.

NEWS OF THE NAVVIES.—Captain W. S. Andrews, managing director of the North of Europe Steam Navigation Company, and under whose supervision the arrangements for the dispatch of the Crimean corps of Messrs. Peto, Betts, and Brassey's Navvies had been matured with so much promptitude and completeness, has had advices by the Peninsular and Oriental mail, on Tuesday, that the following vessels of the expedition had arrived at Gibraltar, at the dates annexed, viz.:—The *Mohawk*, Jan 10; *Wildfire*, Jan. 12; *Prince of Wales*, Jan. 15; *Lady A. Lambton*, Jan. 9, *Great Northern*, Jan. 13; *Hesperus*, Jan. 16. All these had duly proceeded on their voyage to Balaclava, where their arrival was being looked for with daily-increasing eagerness, owing to the growing severity of the weather, and the corresponding necessity for those facilities of transport between the harbour and the heights which it is the mission of the Navvies to afford. The whole of the men were in excellent health and spirits, and their conduct such as to justify all that had been said respecting them before their departure by those who had most experience of them.

FRENCH CACOLETS CARRYING ENGLISH WOUNDED, BEFORE SEBASTOPOL.

THE FRENCH AMBULANCE MULES CARRYING THE ENGLISH WOUNDED.

THE melancholy scene depicted in the above Sketch is one of very frequent occurrence in the Crimea. The want of ambulances for the sick and wounded in the English Camp—indeed, the want of horses and mules to perform any kind of service whatever—has rendered it necessary for our troops to apply to the French for aid; and we are glad to learn that it has always been given promptly and heartily by our noble-minded allies. A letter from the Camp, of January 4, says:—"The French took down our sick again this morning on their ambulance mules, and General Canrobert has ordered that the trade return home with provisions, to the dépôt at head-quarters." Two days previously we see it stated, in another letter, that 1600 hands were employed in bringing up provisions to the English Camp. The huts had arrived about the beginning of the month; no less than 500 of them were "in store at Balaclava," but there were no means of conveying them to the Camp. There had been some talk of the soldiers carrying the planks from the port to the Camp, a distance of fourteen miles; but that was declared to be impossible, and the Horse Artillery were to be devoted to that purpose.

THE GREAT CEMETERY AT SCUTARI.

SCUTARI, the largest of the suburbs of Constantinople, is distinguished by its mosques and picturesque cemeteries, which present a sombre contrast to the busy streets of the city.

The Burying-ground is the most extensive, the most beautiful, and the most celebrated of any in the capital of the Ottoman Empire. The soil of Scutari is regarded with great veneration as the consecrated ground of Asia, whence the founder of the Ottoman dynasty sprung, and, spreading his doctrine with the sword, marched onwards to Europe. On this account these graves of tombs are richer in monuments of illustrious and distinguished men than any of the cemeteries of Constantinople or the adjoining villages. One tomb in the midst of the crowd always attracts the attention of the traveller. A canopy, supported by six columns, marks the resting-place of Sultan Mahmoud's favourite horse. According to Murray's "Handbook for Travellers in the East," if an accurate census of the Turkish population could be obtained, it would probably be found not [illegible] the tombs of this capital city. The annexed view [illegible] picturesque portion of the ground is from the Sketch-book of one of our Artists. It possesses a melancholy interest in association with the sad events of the war in the East.

THE GREAT CEMETERY, AT SCUTARI.

LAUNCH OF HER MAJESTY'S NEW YACHT, "THE VICTORIA AND ALBERT," AT THE ROYAL DOCKYARD, PEMBROKE.

THE launch of a new Steam-Yacht for her Majesty's service, in place of the *Victoria and Albert* (which last year was added to the fleet for general purposes, under the name of the *Windsor Castle*), took place on Tuesday, the 16th inst., from the Royal Dockyard of Pembroke, with the usual ceremonies, in the presence of an immense assemblage of spectators. Her building was commenced in May last year, under the name of the *Windsor Castle*, but, in August last, her Majesty desired it should bear the name of the old yacht, the *Victoria and Albert*, and the vessels accordingly changed names. This ship, which is nearly as long as the great *Himalaya* steamer, is built on the diagonal principle, so as to combine lightness and strength, chiefly of mahogany and East India teak. Her decks are laid with Canada fir planks; there are water-tight bulkheads near the State cabins, felt is laid between the beams and deck to deaden sound. The whole space from the paddle-boxes aft is devoted to the accommodation of Royalty. On the upper deck is a large dining-room, 21 feet by 17 feet, glazed all round, and commanding an uninterrupted view to sea, and over every part of the weather-deck. From the interior of the saloon or luncheon-house a staircase descends to the main-deck, where the Royal apartments are situated.

The state-cabin is 21 feet by 17 feet, and the Royal bed-chamber 19 feet by 14 feet, with a dressing-room at each end. The cabins are thoroughly ventilated, by means of pipes passing up through the ships sides and terminating at the gunwale upon deck. On the orlop-deck beneath is situated the Royal nursery, and other cabins, for the use of her Majesty's suite. The fore-part of the vessel will be devoted to the berths of the officers and crew.

The launch took place about four o'clock in the afternoon, and, in spite of the threatening weather, so much interest was attached to the launch of the beautiful boat that the crowd almost rivalled the one present at the launch of the *Wellington*. It was hoped, when the vessel's keel was laid, that her Majesty would have been present at the launch; and about it would have taken place between this day year, but the events since May resolved the first impression, and it was not required for laying down the new iron-clad battle-ship *Hero*, a design which has been peculiarly lauded by rather unfriendly critics.

The building of Mr. C. W. Lang, the master-shipwright at Pembroke, and the designer and builder of this vessel, are too well known to require any remarks. The *Ruby*, *Garland*, *Fairy*, *Rocket*, *Jewess*, and many other vessels, have proved distinguished for extraordinary speed, but the *Victoria and Albert* is expected to be still more fleet and elegant steam-ship which we have launched, and better to excel all her former efforts in beauty of model; her lines would warrant the opinion that she will be the fastest vessel in the world.

Her dimensions are as follow:—Extreme length over all, 276 feet; length between perpendiculars, 260 feet; length of keel for tonnage, 225 feet; breadth, extreme, 58 feet; breadth for tonnage, 45 feet; depth of hold, 24 feet; height between [illegible] deck, 7 feet 6 inches; ditto, orlop-deck, 6 feet. Her power of engines [illegible] horses.

The weather on the day was not very favourable for the event, but about [illegible] the weather became fine and clear. The setting sun illuminated the scene in a most beautiful manner, and the launch took place amid the most [illegible] enthusiasm.

The vessel was named the *Victoria and Albert* by Lady Milford, who arrived at the yard at half past three o'clock, accompanied by Captain Robert Smart, R.N., the Superintendent of the Dockyard, and there were also present Sir Baldwin Walker, the Controller of the Navy, Hon. Captain Denman, the Commander of the Royal Yacht, Captain Crespin, Lord Cawdor, and many distinguished ladies and gentlemen. The whole of the Dockyard arrangements were perfect.

IMPERIAL PARLIAMENT.

(Continued from page 70.)

HOUSE OF LORDS. THURSDAY.

The Lord Chancellor took his seat on the woolsack at five o'clock.

In consequence of the resignation of Lord John Russell there was a very large attendance of the members of the House of Commons in their Lordships' House. The Duke of Newcastle was the only member of the Government present.

CENSURE OF THE GOVERNMENT.

Lord LYNDHURST gave notice of his intention, on Friday, February 2, to move the following resolution:—

That the expedition to the Crimea was undertaken by her Majesty's Ministers with very inadequate means, and without due caution or sufficient inquiry as to the nature and extent of the resistance to be expected; and that their neglect and mismanagement in the conduct of the war have led to the most disastrous results

LORD RAGLAN'S LETTER.

The LORD CHANCELLOR acquainted their Lordships that he had received a letter from Lord Raglan, acknowledging the vote of thanks their Lordships had passed to the army under his command. The letter was read by his Lordship, and was similar to the one read in the House of Commons yesterday.

The letter was ordered to be entered on the journals of the House.

The Earl of ELLENBOROUGH said that, as a noble Lord had given notice of his intention of bringing the conduct of the war under the attention of their Lordships prior to the day on which it had been his intention to do so, he should, under these circumstances, withdraw the notice he had given for Monday next.

RESIGNATION OF LORD J. RUSSELL.

The Duke of NEWCASTLE: My Lords, it has already been announced in the other House of Parliament that the noble Lord who is the leader of the Government in that House has tendered to her Majesty his resignation of the office which he held as President of the Council, and her Majesty has been graciously pleased to accept that resignation. Under these circumstances, on the motion of the Government, the House of Commons consented to adjourn until to-morrow. My noble friend the First Lord of the Treasury, in consequence of that resignation, has gone down to Windsor; and I think your Lordships will agree with me that it will be in accordance with precedent, as well as for the convenience of the House, if your Lord ships would follow the example of the House of Commons in this instance, although it may not be essentially necessary, and consent to adjourn until to-morrow. I hope, therefore, those noble Lords who have notices on the paper will consent to postpone them accordingly. I move that the House do now adjourn.

The Earl of WINCHILSEA was understood to decline postponing his motion

The Earl of DERBY said it would be to his personal convenience, as well as for the convenience of the Peers generally, if the noble Earl would postpone his motion until another opportunity

The Earl of WINCHILSEA reluctantly gave way to this appeal.

Earl FITZWILLIAM wished to remind their Lordships that they had been informed of the resignation of one of the most important members of the Government—one who held as prominent a position out of doors as in Parliament, and he thought it was at variance with custom, if not with the principles of the constitution, that their Lordships should proceed to act upon the fact without first receiving some explanation of the causes which had led to the resignation.

The Duke of NEWCASTLE: The noble Earl will permit me to interrupt him The noble Lord to whom he is about to refer has not yet made any statement in his place in the House of Commons; but I have every reason to believe he will make a statement to-morrow night of the causes which have led to his resignation. It would not, therefore, be fair to the noble Lord if the noble Earl were to continue his observations now, and I hope he will see the inexpediency of pursuing the subject at present (Hear, hear).

Earl FITZWILLIAM would of course give way, but at the same time he felt that an event of this description ought not to be communicated to either House of Parliament without any explanation as to what were the grounds of the resignation. It did appear to him that the course they were taking was at variance with the constitution, as the explanation ought to be made at the same time the fact was communicated (Hear).

The Marquis of LANSDOWNE (who was scarcely audible in the gallery) appealed to the noble Earl to withhold his comments for the present. The noble Lord who had resigned his office was the best person to give any explanation of causes which had led to his resignation, and he would not have an opportunity of making any statement until to-morrow.

HOUSE OF COMMONS. THURSDAY.

The SPEAKER took the chair shortly before four o'clock

Mr. Lushington took the oaths and his seat for Canterbury.

THE ARMY IN THE CRIMEA.

Mr. ROEBUCK postponed until Friday his motion for a Select Committee to inquire into the condition of the army before Sebastopol, and into the conduct of those departments of the Government whose duty it has been to minister to the wants of the army.

THE WAR AND THE COLONIES.

Sir G. GREY brought up some papers, by command of her Majesty, and took the opportunity of stating what the contents of them were. They consisted of addresses and resolutions passed by several colonial legislatures and public bodies in several of her Majesty's colonies with reference to the subject of the war in which we are engaged. The address from Canada, which was brought over by Lord Elgin, was the joint address of the Council and National Assembly of Canada, and said that the Legislature of that colony had voted £30,000 towards the Patriotic Fund. Within the last few days he had received from Sir F. Head, the new Governor of the colony, two drafts for £10,000 each, being the amount which the Legislature had so voted (Cheers)

The papers were ordered to lie on the table.

SAVINGS-BANK AND FRIENDLY SOCIETIES BILL.

On the motion of the CHANCELLOR of the EXCHEQUER, the order of the day for the second reading of this bill was read for the purpose of being postponed until Friday.

RESIGNATION OF LORD JOHN RUSSELL.

Mr. HAYTER said he had been requested by the noble Lord the President of the Council to say that he had thought it consistent with his public duties to resign the office he had held in connection with her Majesty's Government. He had also to add that her Majesty had been graciously pleased to accept of that resignation. He (Mr. Hayter) had now only to inform the House that the noble Lord would take an early opportunity of stating the reasons for adopting the course which he had now taken (Hear, hear, and cheers)

Lord PALMERSTON: Sir, after the statement which has just been made by my right hon. friend, I trust the House will not think that her Majesty's Government are trespassing too much on their indulgence if I ask the House to adjourn until to-morrow. There are obvious reasons, I think, why I should make that proposal; and I should hope, therefore, those gentlemen who have motions standing for to-night will have the goodness to postpone them until to-morrow, when they will stand in the same position as they do now. I beg to move that this House do now adjourn.

Mr. Drummond and Sir J. Pakington would only consent to the postponement of motions for which they had given notice on condition of facilities for bringing them on being afforded by the Government.

Lord PALMERSTON said, it was the wish and intention of the Government that the motions should stand to-morrow night in the same order that they stood to-night.

Mr. ROEBUCK said, unless the House should otherwise determine, his motion could not take precedence of the order of the day to-morrow, and he trusted her Majesty's Government would consent to his motion being taken first to-morrow night.

Lord PALMERSTON said, the Government could have no possible objection to that, because there were no orders of the day for to-morrow (Hear, hear).

The House then adjourned at twenty-five minutes to five o'clock.

HOUSE OF LORDS. FRIDAY.

Lord ABERDEEN rose to explain the cause of the resignation of the noble Lord the President of the Council, and he thought that his best course would be to read the letter which tendered it. The letter stated that, Mr. Roebuck having given notice of his intention of bringing the general administration of the war under the consideration of the House of Commons, he thought it advisable to tender his resignation, as he did not conceive how that motion could be resisted. Lord Aberdeen proceeded to explain that, so early as September last, Lord J. Russell had expressed his dissatisfaction with the war administration. The noble Earl deeply regretted the step which his noble friend had thought proper to take, and expressed again and again how sensible he was of the great loss her Majesty's Government had sustained by his resignation. However, he and his colleagues felt bound to await the issue of Mr. Roebuck's motion.

Lord BERNERS inquired whether the attention of the Government had been called to the procession of Roman Catholic ecclesiastics in their robes in the town of Turin on 15th of August?

The Earl of ABERDEEN admitted that the procession referred to was illegal, and said that a statement upon the subject had been made to the Lord-Lieutenant of Ireland, with whom it rested to decide whether any proceedings should be taken against the offending parties by the Government

THE WAR IN THE CRIMEA.—THE PRESS.

The Earl of WINCHILSEA called the attention of the House to the course taken by the press with respect to the war in the Crimea, and proceeded to condemn the publication of facts referring to the movements of our army in the Crimea, which publication was calculated to do great injury by affording information to the enemy. The noble Earl asked whether it was true that a free passage had been given by the Government to certain representatives of the press proceeding to the seat of war, and whether any such gentlemen were allowed to share in the rations of our troops in the Crimea?

The Duke of NEWCASTLE said that one gentleman connected with the press had applied for a free passage on board a vessel conveying our troops to Malta; but, as it was found to be contrary to military regulations to grant such permission, the Government sent word down to Southampton that it could not be allowed; and the gentleman in question had found his way out by some other means. It was true that a gentleman of the press had partaken of some of the rations that were distributed to the army in the Crimea; but as that was also found to be contrary to military regulations, the practice was discontinued.—Adjourned.

HOUSE OF COMMONS. FRIDAY.

The Hon. Mr. Cole took the oaths and his seat for Fermanagh.

LORD JOHN RUSSELL'S EXPLANATION

Lord J. RUSSELL (who spoke from one of the back benches) said, he had postponed until that day the statement he wished to make in reference to his resignation of the office which he lately had the honour to hold as President of the Council. On Tuesday last, when he was present in that House, the hon. and learned gentleman the member for Sheffield gave a notice of motion for a Select Committee to inquire into the condition of the army before Sebastopol. The power of inquiry was undoubtedly one of the most valuable privileges of that House; for by means of inquiry the House could correct abuses, promote reforms, check mal-administration, and strengthen those establishments which stood in need of improvement. No one could deny the melancholy condition of our army before Sebastopol (Hear, hear). To this statement he must add, that there was something, with all the official knowledge he possessed, which was inexplicable in the condition of our army in the Crimea (Cheers from the Opposition). If he had been told, as a reason against the expedition to the Crimea, last year that the troops would have been seven miles from the sea—seven miles from a secure port which it was then hoped they would possess—that they would be in want of good clothes and shelter to a degree that they perished to the extent of 90 to 100 in a day, he should have considered such an argument utterly untenable and unsound (Hear). He wished to state that he was not in a position to give a faint "no" to the proposal, not to express in vague and equivocal terms that the motion might not be carried, or to use any evasion with a view to defeat it. There was the strongest inducement possible to put forward an objection to the Committee of Inquiry which the hon. and learned gentleman intended moving for; but he trusted, upon reflection, that it was impossible for him to urge with effect that objection consistently with his own conscience and a desire for truth ("Hear, hear," and cheers). The noble Lord then referred to the appointment of the Duke of Newcastle as Minister of War, to which he was a party, and proceeded to say that in the beginning of November a change in the quarter and conduct of affairs relating to the war was required (Cheers from the Opposition). In order to carry out his views a correspondence took place between him and the noble Lord at the head of the Government. From this correspondence the noble Lord read extracts. The object of the letters was to induce Lord Aberdeen to consent to the appointment of Lord Palmerston to the office of Minister of War—a course, however, to which Lord Aberdeen would not consent. As Lord Aberdeen could not be induced to recommend the proposed change to the Queen, Lord J. Russell felt bound, on Tuesday last, to resign his connection with the Government (Hear, hear). Lord Aberdeen went to Windsor with the resignation, and her Majesty had been pleased to accept it. He was rejoiced to hear that the object he had aimed at was now accomplished, and that the noble Lord was to have the direction of the War Department. He was glad that his retirement should have led to the appointment of his noble friend With respect to the war, the prospects were not in his opinion so gloomy as to justify the feeling of depression that at present existed. It was owing to the efforts made by Austria in conjunction with the Western Powers, that the Emperor of Russia had already abated a great deal of his pretensions; and the prospect of having that Power—a Power capable of contributing 500,000 men—an active ally, was due to the patience of his noble friend the Earl of Clarendon. As regarded the Emperor of the French, he (Lord J. Russell) had no hesitation in saying that he would remain the firm and faithful ally of this country to the end of the war. In fact, if they were to obtain a peace just and honourable to England, just and honourable to France, and safe to Europe, it would depend on the patriotism of the House, the fidelity of the Emperor of the French, and the assistance of Austria. The Whig party had been censured for being exclusive, anxious for office, and jealous of having others participate with them in it; but that was unjust censure, as no party could have behaved with more generosity than the Whig party, which supported Lord Aberdeen's Government, and it should ever be his pride to have belonged to it.

Lord PALMERSTON, having assigned a high eulogium on the character of Lord John Russell, proceeded to say that, with regard to the circumstances to which the noble Lord had referred, it was not for him to say whether his noble friend was right or wrong in agreeing to the appointment of the Duke of Newcastle as Minister of the War Department, or whether he had been right or wrong in proposing in November last that he (Lord Palmerston) should succeed the noble Duke; but he had to say that he had joined in the unanimous request of the Cabinet to the noble Lord to remain as matters at present stood. The other members of the Government would not imitate the conduct of his noble friend, and run away from the motion, but would abide the decision of the House upon it.

WAR ADMINISTRATION.

Mr. ROEBUCK then rose to move for the appointment of a Select Committee to inquire into the condition of our army before Sebastopol, and into the conduct of those departments of the Government whose duty it has been to minister to the wants of that army. After a few observations, the hon. and learned gentleman was compelled, from physical debility, to resume his seat, which he did amid the warmest demonstrations from all parts of the House

Mr. S. HERBERT defended the Government from the charges of neglecting to send out sufficient stores to the army in the Crimea. He stated that there was an abundant supply of everything that was necessary in the harbour of Balaclava; but the cause of the low condition of our army was the difficulty of conveying those stores from Balaclava to the Camp, which, although only a distance of six miles, presented much greater obstacles to means of conveyance than the 3000 miles to be travelled from this country to the shores of the Crimea

A lengthened debate then took place, which resulted in a notice of adjournment to Monday, which was moved by Mr. STAFFORD.—Adjourned.

We have reason to believe that Sir Henry George Ward, G.C.M.G., now Lord High Commissioner of the Ionian Islands, will succeed Sir George Anderson, K.C.B., in the Government of Ceylon.—*Globe.*

The Paris journals mention the death of Mr. William Hope, at his splendid hotel in the Rue St. Dominique.

COUNTRY NEWS.

THE MEMBERS FOR MANCHESTER.—A soirée was given to the members for Manchester on Friday se'nnight. Eleven members of Parliament, and about 800 persons in all, assembled in the Corn-exchange.—Mr. George Wilson presided over the meeting. The speakers were Mr Gibson, Mr. Cobden, Mr. Bright, and General Thompson. Mr. Gibson reviewed the proceedings of last session, which he characterised as abortive—the Reform Bill wisely abandoned; the Bribery Bill emasculated; and the Jew Bill mismanaged. Next session he hoped to see the newspaper stamp settled. In treating of the war, Mr. Gibson admitted that war is sometimes necessary. The Eastern question cannot be settled by the doctrine of the balance of power; not doubting the sincerity of Russia, he would settle it upon the Four Points. Mr. Bright attributed the war to the passions of the people roused by the press, which he vituperated with great bitterness. It had been said that there would have been no war had Lord Palmerston been in power; but he had no confidence in the Minister who attacked Greece, showed no liberality in the affairs of Hungary, and treated the Queen with disrespect. He said a member of Government had spoken of the army of Russia as composed of 800,000 men, and he characterised the Government as stark staring mad who could with that knowledge send such an army as we had to the Crimea. Mr. Cobden expressed an opinion that negotiations for peace were now going on, and said the very great success which attended the terms of peace were irrevocably passed to Russia and that Russia had accepted them; that those terms implied no loss of territory to Russia; and therefore, of course, not the permanent possession of any part of the Crimea—in fact, that the terms were very moderate. He suspected that the Government, having raised the devil of war, had not the courage to announce to the public the terms on which they sought to lay him at rest. These terms were very well known—they must be known, for the diplomatists of Vienna took time enough for the interpretation of their own protocol from the 2nd to the 28th December, but that it must have been fully explained if that were kept back either by this country or France, because orders had been sent out to storm Sebastopol at any cost. If this were done in the name of dynasty or a ministry—if blood was to be shed in torrents for the occupation of a town, every street of which was barricaded, and every house converted into a fortress, to be defended by the most determined troops in the world when behind such breastworks—we should hear some day that twenty thousand of the Allies had been put *hors de combat*, whilst Sebastopol was delivered to the license of the soldiery, and every conceivable outrage committed within it that could make it a hell on earth; and if they found, from a comparison of dates, that the negotiations had been protracted for this, then he hoped no ringing of bells, throwing up caps, or preaching from pulpits would ever for a moment shield a Government that had lent itself for any motives whatever to a deed so dark and indefensible. Major-General Thompson afterwards addressed the meeting

FATAL SNOWSTORM.—During Monday and the two preceding days the southern coast was visited by a violent gale of wind from the north-north-east, and heavy falls of snow. In the height of the storm on Saturday morning a fine barque called the *Jemet Boyd*, of Glasgow, from Hamburg, was totally lost on the Margate Sands, with every soul on board. Between eight and nine o'clock the attention of the boatmen was called to a bark of about 400 tons burden running in from the North Sea. She had a jack hoisted at her fore a signal for a pilot—but help could not be rendered her at the time. The wind was blowing heavily, with a tremendous sea on, and her situation was at once observed to be most critical. Most of the luggers and hovelling-boats at Margate were aground, the water being low, and before the tide could flow to float them considerable delay ensued. The progress of the ill-fated bark was watched with much anxiety by some hundreds who thronged the pier. She had got a little to the westward of the Tongue Light, when she missed stays and struck upon the north-east spit of the sands. In a short time the crew were seen on the after part of the ship, apparently preparing for the worst. It was impossible for a boat to leave her, and their only chance seemed to be to trust to pieces of the wreck. The sea broke with tremendous force over her. At length the mizzen-mast went over the ship's side, and then the foremast and mainmast, and in little more than a quarter of an hour from her taking the sands not a vestige of her or any of her crew could be seen. On the tide flowing sufficiently, several luggers were floated and manned by some fifty or sixty boatmen, who proceeded to the scene of the catastrophe. The gale continued with unabated force, and the boats, in getting away, were placed in considerable peril, some of them striking with such violence as to threaten their instant destruction. The boatmen, however, kept on through the foaming surf, and, on reaching where the ship had gone down, nothing of her or her unhappy hands could be discerned—all had perished and disappeared. On the following day (Sunday) some of the luggers again went out to the scene of the wreck, and picked up the bargo's boats; the starboard quarter was also taken into Margate in the course of the day, which led to the discovery of the name. Some portion of her cargo—cases of vases and glass, hampers, bars, rolls of lead, and sheeting has also been recovered. The crew amounted to about twenty-five

SUNDAY DRINKING IN SCOTLAND.—The existence of "shebeens" in Glasgow is proof of the extent of Sunday drinking A glance at some of the nefarious modes in which the Sabbath "whisky" is carried on, will show what the police have to contend against. In one place, professedly an oyster-shop, a hole has been cut in the roof, through which a bottle of whisky is lowered for customers, and money taken away if the police present themselves. A similar plan is adopted at another house, which happens to be immediately above a publican's premises An arrangement has been made with the publican to supply liquor through a trap-door cut through the floor. Whenever the "shebeen" is drained dry, three importunate knocks are made on the floor, and a fresh supply comes directly by a cord lowered for the purpose. In a house in Rotten-row, Glasgow, there happens to be a front-door below the level of the street, and a back window on the level of a green. The inmates are thus on the alert in business hours, and at whichever side of the house a policeman or suspicious person is first seen, the customers are immediately out at the opposite side. The initiated who come to get their bottles filled usually prefer to make the transaction at the back window, but if they see any signs of danger, go round to the other side, and either get what they want there or wait till a more favourable opportunity. A plan which has been followed with success was that of employing a boy to stand before the door of a house situated at the end of a close in High-street, open at each end. The boy has in his possession a bottle of whisky, sells it at so much per glass; and, if a constable comes in sight, runs out at the other end of the close. He practised this manœuvre with success until a constable was stationed at each end of the close, his neighbour approached at the other end, and the boy ran into the embrace of the former. In a certain house, known to be a "shebeen," the doors were baffled with a pulley, and the full can or kettle, which was placed on the hob, and found it filled with whisky. In a low hovel of Bridgegate, a woman used to sit with a bottle concealed between her dress, and nothing was more common than to see a bottle cut in the hearth, and communicating with a soot cellar. Whenever any alarm was given the bottle was rolled over into the hole, which was also hid by the hearth-stone. Another house was found to justify police interference. Several dairies in High-street and Bridgegate are in reality whisky shops in disguise. In one of them, the shopkeeper, an Irishman, after he serves customers with milk, will ask with a peculiar emphasis, whether they do not want some "crame." If the hint is taken, the whisky is immediately forthcoming, and if not, the purchaser has, at least, got his milk. Another shop in the same locality, in Bridgegate an enterprising barber gives his customers a shave and a glass of whisky for threepence

DISTRESSING OCCURRENCE.—An affair of a most melancholy kind has thrown two families in Leith into grief. A party had assembled in the house of an eminent Leith merchant on Wednesday, and while amusing themselves in the drawing-room, at a late hour in the evening, two young gentlemen, one of them the son of the host, commenced to fence with a couple of swords, when, either by an awkward thrust, or some accidental slip or push, the short sword used by the latter entered his friend's side, and inflicted a mortal wound. The deceased was the son of a most respectable merchant in Leith.

WINE-DUTIES.—The Cadiz papers give an account of Mr. Oliveira's visit to that city in connection with this subject, and intimate the deep interest which all the great houses at Xeres and Port St. Mary's take in the question. The hon. gentleman, it seems, has made a complete survey of the various establishments, and been most favourably received; added to which the leading commercial houses of Cadiz are beginning to view the principles of Free-trade with some favour, even as regards a reduction of the Spanish tariff. Mr. Oliveira is expected home early in February, when he will bring forward in the House of Commons his motion on the Wine-duties.

THREE HUNDRED stout porters are to be sent from Constantinople to Balaclava, and attached to the British army. They, and 600 more who are to follow, are to assist in transporting the stores from the ships to the Camp.

ANOTHER anti-war meeting was held at Manchester on Wednesday evening, the professed object of which was to promote peace and reform. An amendment in favour of the war was carried

AT the naval clubs a rumour is very current that, in consequence of the decision of the Admiralty not to continue Sir Charles Napier in command of the Baltic fleet, Rear-Admiral Martin (now Admiral Superintendent of Portsmouth Dockyard) will be selected for that very onerous post, and that he will have under him as second in command, Rear-Admiral Michael Seymour, who so ably and satisfactorily discharged the duties of Captain of the Fleet during the past season in the Baltic. *Morning Chronicle.*

PRUSSIA AND THE ALLIED POWERS.

The diplomatic correspondence between Prussia and the Allied Powers hich has been published this week throws considerable light upon the present aspect of the great European question of peace or war. On the 5th inst., aron Manteuffel, the Prussian Minister, addressed a letter to Count Arnim, he Prussian Envoy at Vienna, explaining the reasons why Prussia refuses to ulfil the military engagements she entered into with Austria, in virtue of the reaty of the 20th of April. In that despatch the Prussian Minister endeaours to show that Austria is mistaken in supposing that Russia will assume ore offensive, if she is not attacked. According to him, Russia is sincerely esirous to make peace, and has "unreservedly accepted the four points as hey were proposed to her." And now that negotiations are going on, Baron Manteuffel claims, on behalf of Prussia, that it should be allowed to take part n the Vienna Conference. The right to such a privilege "Prussia does not ound on her being a sharer in any stipulation connected with the present astern complication, but on her quality of a great European Power, which, by ts well-won right, has participated in all the treaties that regulate the legal tate of things in Europe."

Count Buol, on the part of Austria, replies to these arguments in a despatch of the 14th inst. He denies that Russia has given any guarantee that she will confine herself to the defence of her own territory, and points to the nvasion of the Dobrudja the other day as a proof that Russia has not ound herself to any such conditions. The situation of affairs has not lost nything of that threatening character which the Bund has recognised, and herefore the Imperial Minister intends to propose to the Committees that a notion be made in the Diet that at least one-half of the several contingents shall e made *mobile*, unless the opinion should prevail that it would be more advisable to place the whole of the Federal army in readiness for operations

The despatch of M. Drouyn de Lhuys, in reply to the Prussian Note, is much sharper in its tone than that of Count Buol, as will be seen from the following analysis, which is almost a verbatim copy of it:—

The Cabinet of Paris establishes that Prussia explains her refusal to mobilise her army —first, because she does not believe in the imminence of an attack upon Austria by Russia. Sadly, because the support which she would have to give ought to be preceded by an *entente* between the contracting parties upon the guarantees of carrying out the eventual conventions. Prussia adds, moreover, feasibility of carrying out the eventual conventions. that there can be the less objection to suspend the execution thereof, because, if it was really necessary to place the Prussian army on a war footing, it could be done within the period fixed upon. The Prussian Government, therefore, is resolved not to change the character of its obligations. The additional article may have extended them, but it has not modified their nature; and Prussia only engaged herself towards Austria to a *défensive* alliance. The two great German Powers, moreover, ought to unite their efforts to obtain the adhesion of Russia to the four points specified in the notes of the 8th of August; and it would be necessary for the consummation of that community of action that Prussia herself should participate in the definition of these first bases of a future peace.

As regards the acts the object of which would be either to consolidate the balance of power in Europe or to modify existing treaties, and which Prussia had signed, her right to participate therein does not depend upon this or that accidental stipulation; it is due to the rank she holds in the world. King Frederick William, to maintain it, will not be deterred by dangers and sacrifices, which the nation would share with as much devotion and energy as patriotism.

Another despatch from M. de Manteuffel (the above is the analysis of that of the 5th of January) brings out in more prominent relief the principal points where Prussia establishes that, the more she intrenches herself behind the strict interpretation of her engagements by the resistance to the pressure made to extend them against her will, the more, on the contrary, will she be disposed to enlarge them by means of negotiation, provided her position and her dignity as a great Power are respected.

The Cabinet of Paris beholds in the exposé given in M. de Manteuffel's despatches two distinct orders of ideas—the one special to the relations of the Prussian Government with the Court of Vienna, the other concerning the *ensemble* of its position in Europe.

On the first point France is resolved not to interfere in questions which exclusively concern the German Confederation; on the second the Cabinet of Paris is willing to explain itself

The Cabinet of Paris does not pretend to contest to Prussia the rank she holds. Nay more, during the last two years it has oft-a reminded her of the obligations of that high rank of which she is so justly proud. But it feels it a duty to observe that the quality of great power is permanent—it cannot be cast off when it implies onerous duties, and be resumed when it only offers advantages. Prerogatives and duties of this importance are absolutely correlative. The one is inseparable from the other. It is not to be supposed that England and Austria take a different view of the case from France. But so much is certain—that France will never allow that a Power which, from its own free will, took no part in the great events which are taking place in the world shall afterwards maintain a claim to regulate the consequences thereof. The advantages arising from the war are only for the belligerent Powers. And the advantages of the [illegible] (essentially moral advantages) consist in the right of participation, in the interests of Europe, in the regulations of peace. Prussia has not done all she could for that object. She has refused to proclaim her neutrality. That resolution does her honour. But, in reality, on what side is she? If hostilities continue, will she be with or against the Allied Powers? This is what no one can tell.

Can Prussia reproach France for her confidence in Austria? The basis of conduct have been so different. By a movement which she declares purely a defensive one, Russia evacuates the Principalities which peremptorily declares herself satisfied; while Austria, on the very morrow of the day upon which that evacuation is communicated to her, exchanges the notes of the 8th of August with Florence and England. On the 20th of November Count Gorschakoff announces the adhesion of his Court to the four points; Prussia congratulates herself on having obtained the object of her efforts; while Austria signs the treaty of alliance of the 2nd of December with the Western Powers. On the 7th of January Russia accepts the interpretation of the four guarantees; Prussia, fancying the success of her policy complete, rejects the appreciation made by Austria of the terms of the 20th of April, and refuses to call out her [illegible]; while Austria spontaneously hastens to recognise that the case provided for by Article of the treaty of the 2nd of December is realised, that the re-establishment of peace is not assured, and offers to combine her plans of military operations with the Allied Powers.

Is there a wish of maintaining that Austria finds in the alliance of the 2nd of December advantages not shared by Prussia? What are they? This observation of Prussia, doubtless, does not imply an assent; but yet a proposition is made to conclude a *Prussian* treaty, beside the *Austrian* treaty, it would be well to explain the exact meaning of the proposition. Was that the object of M. d'Usedom's mission to London? That mission was wrapped up in so much mystery that its real object is not yet known in Paris. But, the more endeavours were made to conceal it, the more were made to discover it. All that has been discovered is, that Prussia exerted all her efforts to prevent the Allies from waging the war upon the vulnerable point of the enemy, and to prevent the passage of their troops through Germany. What did she offer as a compensation? To place a *corps d'armée* on the Polish frontier—that is to say, that Prussia with one hand would turn aside the sword of the Allied Powers, and with the other cover Russia as with a shield. Might one not be authorised to suppose that M. d'Usedom had different treaties in his portfolio, and took out by mistake the wrong one at London—that which was to have been produced at St. Petersburg?

The French Government has not the intention, you may be assured, of hurting the feelings of Prussia. It expresses itself thus in loyal and sincere expressions [illegible] the desire to see Prussia [illegible] but [illegible] it is in the hope to see Prussia at least give up a position in which, if it and been happy enough to see its efforts crowned with success, she would not have been to-day.

THE BLACK SEA TELEGRAPH. The screw-steamer *Black Sea* left the Wear on Thursday week, with the Balaclava and Varna submarine telegraph cable on board, and Messrs. Newall and Co.'s staff of workpeople, who will be employed to submerge it. She had a fair wind, and has every prospect of a quick run out. She will call at Malta to take up Mr. Liddell, C.E., and Captain Du Cane, of the Royal Engineers, and will then proceed to the Crimea or Varna, as will be most convenient, to submerge the cable. Messrs. Newall and Co.'s managers and workpeople have taken due precaution not to be delayed, as they have taken everything out with them—carts, huts, &c.—for their use while laying down the land portion of their work, and have four non-commissioned officers of the Sappers and Miners with them aboard the steamer, who will be able to work the apparatus when completed. The weight of the four hundred miles of cable is 300 tons, and the contract is stated to be £20,000. The system upon which the Black Sea telegraph will be worked is Morse's, but with an important modification by Mr. Carl Frischen, of Hanover, which has been patented by Messrs. Newall and Co. Morse's apparatus prints messages upon long slips of paper as they are received into the office, and thus avoids the slow process of copying by pencil into slips. Mr. Frischen's inventive further exceeds the usefulness of the system, by making it possible for messages to be sent along one wire from both ends at the same instant of time. Thus a clerk telegraphing at Varna can be receiving, by the same wire by which he is sending his communication, and at the same instant, a message from Balaclava. The single wire, by Mr. Frischen's process, conveys several messages from either end at the same moment; and a clerk can be telegraphing at the same time he is receiving a message or more. The circumstances under which the Black Sea telegraph is now on board a first-class steam-vessel in its passage out to be submerged are strikingly illustrative of the energy of the English character, when under wise and able direction. Messrs. Newall and Co. only received final instructions from the Government to make the 400 miles of cable on the 15th December. The vessel that now has it on board was on the stocks at Jarrow not half-finished; but by Saturday week she had her coals and stores on board, her crew shipped and ready for sea, had 400 miles of telegraph cable stowed away in her hold, with an infinite number of packages and bales of clothing thrust into every available corner, for the use of the soldiers in the Crimea, and was in trim to be swung for the purpose of having her compasses adjusted.

NOTES OF THE WEEK.

CHARLES LAMB wrote several charming essays about popular fallacies; more learnedly, and scarcely less agreeably, Sir Thomas Browne battered down a whole Sebastopol of "Vulgar Errors;" but both left untouched that greatest of humbugs, the first article of a political economist's creed, that "the supply of any article is equal to its demand." Read the *Times*, or any other newspaper possessing an "own Correspondent" at the seat of war, and judge whether the demand for beef and blankets, drugs and pickles, is not a good deal greater in the Crimea than the supply of these comfortable articles; inquire about the War-office, and discover if the supply of that article which the *Times* calls "Head"—the meaning whereof is a willingness on the part of Government officials to do anything they are not obliged to do—is at all equal to the want of it; and, above all, ask the lessee of a theatre what chance there is that his demand, however energetically expressed, will get for him in the course of a season two or three good original dramas. There certainly never was a time when men of literary talent were less inclined to write for the stage than at present; indeed there are hardly more than three or four writers going whom an intelligent manager could ask to write for him, having a reasonable conviction that their production would not help him down the broad road that leadeth to Basing-hall-street. Not but that plenty of plays are proposed, and even written and sent into managers. Their tables usually tremble under the weight of manuscript. Five-act, two-act, three-act pieces—pieces in verse and in prose—pieces tragical, comical, historical, pastoral, diabolical—pieces, in short everything except *actable*, are found there in profusion. Some years ago I looked over a bale (about the size of a truss of hay) of manuscript plays which had been sent to a manager of my acquaintance. I did not attempt to read them—far from it—that would have occupied half a lifetime, and the madness or idiotcy at its close; but I cast my eye over some two dozen, and I protest that by no means the worse was a five-act tragedy in blank verse, written by a ballet-girl, called "Devereux the Disowned." The spelling was not good, but worse plays have run a fair number of nights at the Victoria. The most curious part of the business is that you never can argue *à priori*, what manner of man is likely to write a good play. Dramatic writing is altogether a *sui generis* affair—the cleverest men break down upon it. Not very long ago a well-known critic, one who had given much attention to theatrical matters, and certainly a man of taste and talent, had two tragedies damned—utterly, irretrievably damned, within a fortnight: one at the Olympic and the other at the Haymarket. This was really a good position, and quite subversive of the old saying, "Non bis in idem." What I have written is meant as an explanation and an excuse for the fact that the most intelligent managers of theatres are absolutely compelled to place their chief reliance in translations. Even this melancholy resource now fails them; for Parisian authorship is now by no means as fruitful as it used to be in good plays; or, at least, in plays that can be successfully done into English. The productions, for instance of Emile Augier, or De Musset, or George Sand, however successful in Paris, rarely pay for translation. This being the case, Mr. Kean "tries back" some thirty years, falls upon Casimir Delavigne, poet dear to the Restoration, and brings out, most successfully, an adaptation, by Mr. Bourcicault, of his "Louis Onze."

It is less a play than a part written for Talma, who rehearsed it many times, but, for some reason, never performed it. Ligier made the best part of his fame in it at the Français; but Ligier never made so much of it as Mr. Kean has done. His performance is, from first to last, an exceedingly fine and well-studied piece of acting—quiet and sustained—not full of "points," as some actors would have made it, playing, like porcupines, alternately smooth and bristling. It is true that a hypercritic might say that Mr. Kean is sometimes hardly worn and decrepid enough for the character of the sick old miscreant, but this seems inevitable where energetic words are to be spoken. On the whole, *Louis XI.* is far the best part Mr. Kean has played, but the play itself would have been none the worse if it had been written in prose instead of blank verse, which only courtesy can term poetry.

Religious and domestic matters are dangerous things; the world does not stand still, and the habits and manners of one age are so different from those of another that it rarely happens that the applauded play of one century creates the slightest interest in the next. It is all very well to say that wit and passion are eternal; but wit and passion on the stage are not mere mental attributes. Congreve's or Farquhar's *Doriltants* and *Belmours* are as amusing in the library as ever, but the plays in which they are characters would be unendurable on the stage. If, then, the plays of a hundred years ago are unbearable, what chance is there a modern adaptation from the old Greek theatre should be anything better than a solemn humbug? Such a production could only succeed as the means for showing off some wonderful dramatic talent—some Garrick or Kemble; but, however well, as a merely literary work, it may be executed, our present tragic melodrama critics can never succeed in making it more than that most hopeless thing, "a respectable performance." Why, if there are two qualities which are notoriously necessary to a play in these days, they are movement and plot just the two qualities which were never thought of on the Athenian stage. Mr. Spicer thinks otherwise, for he has adapted, or rather founded a play upon, the "Alcestis" of Euripides, the Greek Racine. The fault is in the idea, not in its execution; for it would be impossible to bore an audience in better language. *Hercules*, by Mr. Stuart, is a great piece of stage gutting up—

> The force of *pudding* can no farther go;

and is really worth seeing. However, it is real pleasure to hear Gluck's magnificent music in the choruses. Two more facts about theatres, and then I have done with them for the present. The new two-act comedy produced on Monday, at the Olympic, is by Mr. F. Talfourd, and Mr. Thackeray has promised a play to the manager of the same theatre, which will probably be brought out before Easter. This will be something worth seeing; and it is a compliment to Mr. Wigan that his theatre has been chosen by one of the best of our novelists for the production of his first drama.

It is certain that, considering its agreeable contents, there is no great influence of visitors, just now, to the Crystal Palace—taking the distance and the temperature into consideration, it would be marvellous if there was; still, as it appears that some eight or nine hundred people do go there daily, it may not be uninteresting to say that there is about to be a great change in the management of the Refreshment department. Mr. Horne (who would persist in charging everybody the same price, whether they contented themselves with the simple sandwich, or more ravenously consumed meat, poultry, lobsters, and pastry) has been dethroned; and Mr. Staples, host of the Albion, in Aldersgate-street (dear to City *gourmands*) rules in his stead. The arrangement, too, of the localities for eating and drinking is to be entirely changed. There are to be distinctions—first, second, and third-class Refreshment-rooms which will be separate apartments, so as not to be in view from the Great Aisle of the building. So, henceforth, specimens of British society will not be the first thing presented to the stranger's eyes as he ascends from the railway: lobster-salad shall not be discovered lurking beneath the claw of the lion; nor shall the instep of the noble savage be besmeared with irreverent pale ale.

Behind the present refreshment counter (which, if not entirely done away with, will support nothing but cakes and buns—such light cates as "delight and hurt not") is to be the second class refreshment-room; at the opposite end of the building, beyond Nineveh and the tropical plants, will be that for the first-class. Here, at least (for the plans are not entirely matured), you will eat *à la carte*;—cold things, of course, chiefly, but much choice of them, and with the power of ordering that and that only which you happen to fancy. Far down in that still unfinished tall of the building which projects Kent-wards, opposite the railway station, there is to be a sumptuous divan—a place for newspapers and magazines, as well as cigars and coffee. It is further promised that the coffee shall not be that abominable whitey-brown beverage which, during last year, was concocted in tremendous brass retorts. The situation for the third-class refreshment rooms—the most important in every point of view, even as regards profit to the *entrepeneur*—has not yet been quite fixed upon, but will be in some part of the basement story. All this is much as it should be, and gives hopes that there will be some improvement in the management, hitherto so defective, of this fine edifice.

THE COMING PARLIAMENTARY CAMPAIGN.

(From a Correspondent.)

AN impression seems very generally to prevail that the disturbance which the existence of war invariably produces in all the social systems within its influence, is likely to affect our own political atmosphere, and to impart to it a larger portion of the antagonistic element than has been observable since the great stagnation of party warfare which followed the abolition of the Corn-laws. There is much talk, in political circles, of reconstructed and re-invigorated parties; and it is thought that the present Session will witness some of those Parliamentary conflicts which afford materials to our Macaulays and Martines is for graphic episodes, but whose utility to the nation a philosopher must fail to detect.

We are well aware that calculation and premeditation have far less share in the production of a political crisis than the world, which likes to believe in the wisdom of its notables, is ordinarily disposed to allow. The wonderful sagacity which, when events are over, is shown to have brought them about, and is extolled for its prescient generalship, is a rarer quality than the writers of histories find it convenient to admit. The artistic effect of the description of the crash of a Ministry, or the carrying a great measure, is so greatly heightened by the concentration of the interest around a pair of hostile champions, riding in their respective whirlwinds and directing their respective storms, that neither writer nor reader likes a more commonplace treatment. Yet, could the true history of such incidents be given, it would be seen that to sudden thought and accidental relations are due very many of the great moves in our political history. With this conviction strong upon us, we are disposed to attach less value to the rumours which assign to the leaders of party a deliberate intention to fight a series of battles with a view to a projected result. But, at the same time, and while making all allowance for the inevitable restlessness caused by the fact that war is raging almost within telegraphic distance from our coast, we do not think it at all improbable that our Houses of Parliament, and chiefly the House of Commons, will present more scenes of excitement and conflict during the approaching months than have marked recent Sessions.

The Opposition makes no secret of its belief that, though it is not strong enough to rush upon office and hold it against all comers, the present condition of the war, and the general dissatisfaction which prevails in regard to its conduct, would tell in the favour of almost any candidates for office who might promise a change of system. Its leaders consider that, were they now to take office, and instantly address themselves with vigour to the prosecution of the war, the country would not be inclined to eject them on the ground of their unpopular political theories; and that then any fortunate turn in the war as may reasonably be expected in the coming spring, would be excellent capital in bidding for the future confidence of the nation. Add to this a fact of which the wiser men of the party are not so anxious to make proclamation—namely, that there are a great number of the second-rate members of the Opposition who are almost rabidly eager for office, and who occasionally embarrass their chiefs by ill-timed clamour to be led to battle; and it will be seen that there are reasons for surmising that the ranks on the Speaker's left may make a demonstration at no distant period.

The conduct of the war and the management of supplies has always been considered a legitimate subject for discussion; and it would, indeed, be most absurd that any tangling conventionalities should prevent the representatives of the nation from demanding the fullest inquiry into the most vitally important questions which can possibly be raised. If the Opposition can succeed in convincing the country that her Majesty's present Ministers are unfit to conduct so vast an affair as a war, and can next persuade it that the Earl of Malmesbury and Sir John Pakington would be fitter guardians of the honour of the nation, they have a constitutional right to do so. But the decision of Parliament ought to be taken on the merits of the question, and not upon any craftily-devised motion for catching votes which do not express opinions. For example, the Belgian proposition, by himself hostile to all war. Any war motion which enlisted his vote (and in his reckless self-will he would probably give it where it might do most mischief), would simply be a vote-trap, and unworthy of a party which aspires to rule a great nation. We are the more disposed to insist upon this, because the Opposition leader has already shown skill in framing this kind of device, and because we hold that a Ministry could not do its duty manfully or honourably, that succumbed to any sham majority. If one-half of the Opposition charges against Government be just, Opposition itself will act most unjustifiably and unconstitutionally, if it do not bring the question to one of "confidence" at the earliest opportunity. There is ample field for the antagonistism said to be so rampant, and here is a means for the legitimate exercise of party strength.

We have written as bystanders, for our own convictions have already been recorded, and it will, we trust, be remembered how unwilling we have ever been to permit the great interests of a nation to be used as mere counters in the game of parties. So tremendous a fact as a war, in which the blood of thousands is being poured out as water, is too solemn for us to assent to its being discussed except with the gravity it should exact. The Coodles and the Foodles may wrangle for their places, and carry motions of censure and resolutions for papers, and play the rest of the Parliamentary game, when nothing of more consequence than a Coodle or a Foodle is in question. But England is now in mourning for her lost children; and, it may be, in terror for those whom she still calls her own. This is no time for factious squabbles. If the war be mismanaged, prove the fact, and let those who are incapable of duty be thrust from office; but, in the name of a nation's destiny, let us have no mockery of patriotism. Faction is ever contemptible, but faction clamouring and stumbling amid the Crimean graves, would be too outrageous an insult to humanity.

WAR TESTIMONIAL.—It will be remembered by those who read the recent attack on Odessa that Capt. J. B. Dickson, R.N., highly distinguished himself on that occasion, when in command of the gun-boats, for which service he received his promotion to post rank. In addition to this honourable notice, Capt. Dickson has been presented by the crew of his ship, the *Fortunate*, with a splendid silver Centre-piece, designed and manufactured by Messrs. E. and E. Emanuel, goldsmiths and jewellers to the Queen, of the Hard, Portsea, and Portsmouth. The group of figures at the base of the centre-piece personifies Neptune, seated in a car; Hope, leaning on her anchor; and Britannia, with the shield and spear. An ornamental column, designed after the model of the palm-tree, supports a glass dish for fruits or flowers. The three nautical standards of England, France, and Turkey, modelled in full relief, are attached to the pillar. On the angles of the plinth are groups of naval and military "trophies," between which are representations of H.M.S. *Britannia*, in bas-relief, a view of the *Britannia's* rocket-boats firing on Odessa, and an inscription appropriate to the gift. The design is admirably characteristic, and the execution a fine specimen of working in metal.

ASTLEY'S ROYAL AMPHITHEATRE.—TESTIMONIAL.—On Monday, at the conclusion of the morning performance, the members and *employés* of the above establishment presented Mr. and Mrs. W. Cooke with an elegant claret-jug and salver, manufactured by Vaughan and Co., of the Strand; and bearing the following inscription:—"This trifling memento was presented by the ladies and gentlemen of Astley's Royal Amphitheatre to Mr. and Mrs. William Cooke, as a token of the high respect and esteem they entertained for them. Jan. 22, 1855."

A PERILOUS SITUATION.—A French aëronaut, named Buislay, made an ascent at Barcelona, last week, which very nearly closed his ballooning career. When the balloon went up, it took a direction inland, but in a short time got into a current of wind completely opposite, and not long after, when at some distance out at sea, it was seen to descend with great rapidity. The captain of a steamer at anchor in the roadstead at once got under way and stood towards the spot. He then sent a boat to the assistance of Mr. Buislay, who, but for this timely aid, would in a few minutes have been drowned. The balloon has been lost.

INDIAN CIVIL SERVICE.—The maximum age of candidates for admission into the civil service of the East India Company has been fixed at twenty-three years instead of twenty-two, as previously announced.

THE TINLINE TESTIMONIAL.

WATERPROOF CLOTHING FOR THE ARMY IN THE CRIMEA.

THE exposed condition of our gallant army in the Crimea has very naturally prompted a variety of measures to make up for the deficiencies in their original outfit for that inclement climate. Their sufferings, according to the latest accounts, from exposure to the violent rains and storms which have been rarely paralleled for the period, immediately suggested their supply with waterproof clothing, thoroughly impervious to moisture, so as henceforth to render their position one of comparative comfort. These articles, it is stated, had not hitherto been supplied to troops; although the waterproofing of cloth by means of caoutchouc was one of the earliest of its new applications.

Her Majesty's Government, with this view, ordered of Mr. George Spill, of the Old Farm house, Stepney-green, a vast quantity of this clothing, requiring 340,000 yards of cloth, prepared with indiarubber; and the great demand caused an extraordinary exertion on the part of the manufacturer. The order, which extended to nearly 50,000 waterproof suits, besides several thousand pairs of waterproof sheets, having to be completed within forty days, all hands set to work with energy almost amounting to enthusiasm; the factory at Stepney green was open night and day; and the work was completed within the specified time, without accident to men or machinery.

The clothing thus supplied for the troops consists of (for each man) a large cape, with sleeves attached; a pair of leggings, to be worn over the boot-fronts; a hood to protect the head, and made to draw closely round the face, so that the soldier will be entirely incased in waterproof material, and altogether protected from damp. The material is a warm cotton fabric, used as an inner lining, the exterior being waterproofed with a dressing of caoutchouc, of which goods Mr. Spill is an extensive manufacturer. From examples sent by him to the Board of Ordnance for inspection, the contract was obtained for 45,000 suits, each consisting of a cape, boots, leggings, and cap.

At the works at Stepney-green, cloth was waterproofed each day to extend seven miles, until the whole quantity was prepared. It was then cut up into garments, the making of which gave employment to several thousand hands to make up and complete for wear; and quantities of these garments were forwarded, from day to day, to the Government, to be dispatched to the seat of war.

Several smaller contracts were also promptly disposed of during the same period: one for supplying the "navvies" sent out for the Crimean Railway Expedition, by Messrs Peto, Betts, and Co. They are provided with 300 warm woollen-lined oil-proofed coats, leggings, "sou'-westers," and canvas bags.

The "Old Farm-house," the seat of the works, is a place of some antiquity, popularly said to have been "King John's Palace." The inwalled premises extend to six acres, covered with buildings for the various branches of the manufacture. The steam-engine furnace had not been altered to consume its own smoke, according to the requirements of the new Act of Parliament; but, Viscount Palmerston had considerately ordered the police not to take cognizance of this non compliance with the Act, lest the requisite alterations should impede the completion of the important Government contract.

THE TINLINE TESTIMONIAL.

THE presentation of this splendid Testimonial to Mr. George Tinline, Acting Manager of the South Australian Banking Company, originated with the merchants, traders, and professional men of Adelaide, and other fellow colonists of Mr Tinline, who dined together in the Adelaide Exchange, on the 5th of April, 1853. The fund for the purchase of the valuable gift had been previously subscribed, and was presented by the Chairman, Mr. George Elder. It consisted of a cheque for £2000, and a further cheque for £210, which he placed in the hands of Capt Hart, as the head of the committee, for the purpose of purchasing in England, a Service of Plate. This design has been executed with artistic spirit by Messrs. Hunt and Roskell, and the Service has recently been presented to Mr Tinline.

We have engraved one of the principal pieces of the service, a massive Silver Salver. The border is richly chased, and represents the flowers and fruit of Australia; and, in alternate compartments, in embossed characters, are the Arms of Australia, and the Tinline cipher reversed. In the centre is a gold plate, bearing the following inscription:—

The Service of Plate, with the sum of £2000 sterling, was presented to George Tinline, Esq., Acting Manager of the South Australian Banking Company, by his fellow colonists, on Tuesday, the 5th day of April, 1853, as a useful memorial of the important services rendered by him during the financial crisis immediately preceding and subsequent to the passing of the Bullion Act; and in testimony of their appreciation of his most considerate, judicious, and successful efforts to maintain unimpaired throughout that period public and private credit.

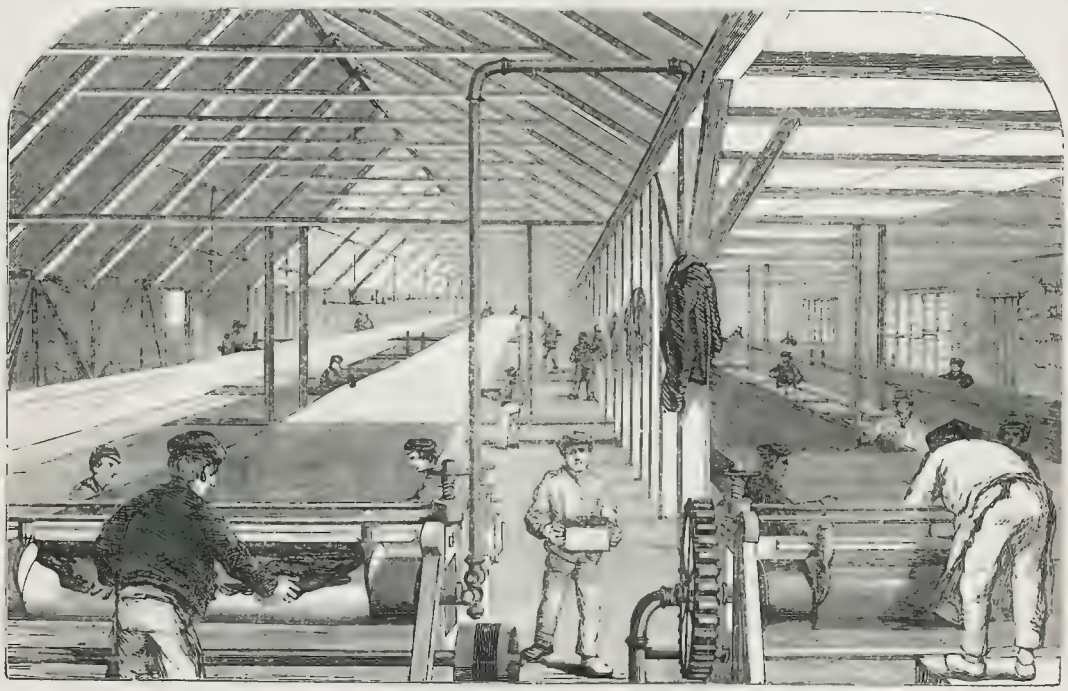
Around this centre are richly engraved groups, separated by the grass palm, illustrating, first, the passing of the Bullion Act, the Governor giving his assent to the enactment of the measure, surrounded by the various members of the Legislature. Next are the colonists in distress; and, thirdly, the colonists in prosperity, the result of the new law.

LOVE'S "LONDON SEASON."

A PORTRAIT of Mr. Love, the Polyphonist, in one of the leading characters of his last new entertainment, called "The London Season," now performed every evening at the Regent Gallery, will interest many readers. Continued acquaintance only confirms the opinion we have already expressed of his merit and originality. In Mr. Love's delineations of certain foibles and eccentricities (which are perhaps rather more apparent during "the London Season" than at any other period), notwithstanding even a superficial observer may detect a little embellishing exaggeration, it is tolerably evident that the artist has depended more upon a close observation of those peculiarities, than upon what the author of the piece has set down; and that his "portraits" are painted from the actual life, not merely from imagination. His *dramatis personæ* are sufficiently natural to show that he has been a frequent and not an unprofitable witness of the oddities, or of something very like them, which he personates with such precision, pleasantry, and effect—take the *Cabman* or *Miss Hoddytoit* as an example; and in the mechanical department of the entertainment there is an unusual neatness and almost incredible celerity, which greatly heighten the astonishment and gratification of the audience. But, if his visible delineations of character are worthy of eulogistic remark, his brilliant ventriloquy and exquisite vocal imitations are quite as much so: he gives to his numerous invisible and imaginary characters so great an apparent reality that they appear to be unequivocally present. We remember well the celebrated ventriloquist Alexandre; and, while admitting the unquestioned vocal powers and general versatility of the latter, it is now generally considered that Love is superior in both

MR. LOVE AS "MR. TRANQUILIUS CALM," IN "THE LONDON SEASON."—FROM A DAGUERREOTYPE BY MAYALL.

particulars. Brilliantly quick as were Alexandre's changes of personal appearance to suit the exigencies of the subject, Love is quicker. As a ventriloquist Alexandre was singularly excellent; but Love's artistical management of tone is as wonderfully real as it is rapid and complete in transition. Those whose reminiscences may be on a par with our own, but whose early impressions are not easily obliterated, and who may wish to witness the exquisite perfection to which this art has been brought, should take an opportunity to visit our modern Proteus in his "London Season." It is a wonderfully-managed series of mimicry, acting, transformation, and ventriloquy, and creates the greatest astonishment in the minds of all who are present at its representation.



THE INDIARUBBER WATERPROOF WORKS, OLD FARM-HOUSE, STEPNEY.

SCENE FROM THE NEW PLAY "LOUIS XI." AT THE PRINCESS' THEATRE.

M. CASIMIR DELAVIGNE'S "LOUIS XI," AT THE PRINCESS'.

THERE can be no doubt that, notwithstanding the paucity of its incidents, the authors of "Louis XI." have crowded within its limits a large number of first-rate stage effects. These grow naturally enough out of the individuality of the hero. They are types of the man—startling revelations of character. A part constructed on this principle throws on the actor the responsibility and honour of producing such effects: they must proceed from his intelligence, his manner; they owe nothing to surrounding circumstances. The scene selected by our Artist for illustration is an example in point. It forms portion of a still larger example; and concludes a situation that, in the hands of an ordinary actor, must have perilled the success of the tragedy. A criminal Monarch confessing to his ghostly shriver the catalogue of his sins, and seeking absolution, is an intrusion into the sanctuary which nothing but the highest merit both in the poet and the artist can justify To win applause in such a crisis is to "snatch a grace beyond the reach of art"—that is, of *recognised* art; for, otherwise, the triumph is achieved by the most consummate art, both in author and actor. Lord Byron, in his "Giaour," made an effective scene out of similar materials; but then he had to do with impulse and passion, and his sinner could plead the force of love and the pressure of social wrong, not as an excuse for his guilt, but its irresistible motives. Louis has nothing but his will and ambition for apologies, and no fervour of soul to make the latter attractive. The poet has managed, however, to create an entirely *moral* interest; and the audience are made to recognise the instructive intention, and submit to the lesson. The conscience is laid bare; fallacies are exposed; righteous indignation is expressed; and judgment is passed. Even such a situation has preceded that which is now presented. While the convicted despot is writhing under the denunciations of a confessor whom he had deemed possessed of supernatural power, the man he had most wronged rushes in upon him, threatening his life; *Nemours*, whose father the King had condemned to the block, while his blood fell upon his children, the enforced witnesses of his execution. Constitutionally a coward, with that love of life which men suffering under long maladies frequently exhibit, *Louis XI.*, with his mind already subdued by superstitious terror, has not a rag of fortitude to oppose to the furious onset of the avenger. Mr. C. Kean at once exhibits an utter prostration of soul and body, he fears the very point of the dagger, and excites compassion by his helplessness. To pierce a wretch so abject is what no truly brave man could do. *Nemours* feels this; but he resolves to wring his heart; and therefore, in answer to his various appeals for mercy, reads from his father's petition to the King the corresponding appeals, which the latter in his pride of power and place had unfeelingly rejected He has also overheard his confession, and concluded from it that life was a heavier burthen than death to one so guilty and consumed with such remorse. Indignant, therefore, he grants the offender life, to the peril of his own, and quits the prostrate tyrant, who remains apparently insensible from the excess of fear. Such a situation, justified by adequate acting, is necessarily effective Mr C Kean traced it from point to point; not a touch, not a shade was missing The delineation was composed of minute particulars, which by degrees culminated to a high tragic impression -indeed, all but the highest.

Great exertions are being made that Turkey shall figure well at the Paris Exhibition. Kesmil Bey is working the commission with great energy

Among the list of articles exported from Switzerland appears the item "snails," of which 325 quintals were sold for foreign consumption during the months of October and November last.

PARIS FASHIONS FOR FEBRUARY.—(SEE PAGE 88.)

NATIONAL SPORTS.

The weather, as far as field sports are concerned, is in such a dubious state that it almost seems a mockery to mention the coursing and steeplechase fixtures which stand on the list for next week. The latter comprehend Wolverhampton, which furnishes two steeplechases on Monday, for one of which there are eleven acceptances; none of them of a high character, as Star of England with 11st. (and that a "raised weight") is at the head of them. Croydon stands for Wednesday, and has a hurdle-race handicap with fourteen entries to back up its steeplechase. All the jumping cracks are hiding their light under Liverpool, Doncaster, &c.; and it is not improbable that the "800 sovs added" by the French Jockey club will tempt some of them and their admirers across the Channel on the great Metropolitan day (March 22nd) to run at Croix de Berney, near Paris.

The coursing fixtures have been completely harranged by the frost; and the only ones that we know of as pressed for next week are the great "renewed trial between North-Western and South-Western coursers," at Lytham, on Monday, &c.; and a day at Bryn-y-pys, on Tuesday; and two at Hilton, near Yarm, on Thursday and Friday. However, with three months of open weather up to this point, neither coursers nor hunters have much to complain of. The Wilts and Berks kennels have been suffering so heavily from distemper, that it is thought that some of the South-Western nominations at Lytham will hardly be taken up. Bedlamite has not run this season; and we doubt not that the address of Newcastle Nell and Cerito will be as lucky as that of Egypt and Mocking-Bird.

The racing men have at last been roused from their comparative winter slumber by the publication of the weights for five great handicaps; in which Messrs Topham and Johnson weigh Ratapian at 2 lbs. and 4 lbs respectively more than Virago. Mr. Topham has also shown Calmuse 8 st., and Wild Huntsman 8 st. 7 lbs., no mercy, and let in Scythian (a very much better horse than the public fancy) at 7st. 4lbs., and that child of mystery, the Reiver, who is still, we believe, the property of Mr. Stanley, at 7st. 6lbs. Muscovite is in favourably, considering his great size and muscular power, both at York and Chester; and the same may be said of a good second-rate three-year-old, Kingstown. The countless *vrais* which are flung off before the handicapper face render the composition of such lists an almost herculean task, but we hear very few complaints on the whole, and anticipate very fair sevi.l.ues. The Epsom and the Northampton Handicaps bear strong internal evidence not being framed by Johnny Johnson; and in the two former Admiral Rous's principle, that a handicap should commence at 10st., is fully carried out

The lots at the different trainers are beginning to muster strong. In addition to those we mentioned last week, Fobert has 31, Stevens 34, and William Day 33. Mr. Parr seems to have not succeeded as yet in effecting any sales, as he still numbers 14; while neither Tros, Grapeshot, nor Tyrtus appears as yet in G. Abdale's string, which only counts 5. The spring meetings are so near at hand that a good deal of work has been done in the snow, at the imminent peril of feet-balling, and consequent spavins. Bonnie Morn, who is still said only to look like a colt, leads the great, long-striding Greenulus in his gallops. Miss Mowbray, the steeplechase mare, is believed to be under Scott's charge, as her old trainer, Dockeray, is now engaged solely to Messrs Payne and Greville. Phryne has just produced a sister to Rambling Tom, who is a great dangerous-looking animal to claim a 5 lb. mare's allowance in the Derby; and we may expect to see a Teddington foal at the foot of Inheritress next year. Chanticleer's subscription is full; while Cinabum, the once favourite horse of Lord George Bentinck, and the sire of Sittingbourn e and of Strood (who was sold for 1200 guineas, untried, last October), is said to have changed hands at a London auction last week for 25 15s. 6d.! If we remember rightly, Amurath, who was once Lord Derby's, was sold for something like £5 at Birmingham a melancholy illustration of the "High-mettled Racer" ballad

St. Hubert still holds his own in the betting, with a firmness which is most unaccountable in a "dark" horse. His friends laugh at the notion of Oulston being the better of the two, and declare that they will support their horse till the 2000 Guineas day, and that he will be able to support himself after that.

WINTER IN STAMBOUL. The dreary winter has at length set in, and the streets are a mass of snow and mud. From the crowds of strangers who have lately been collected from all parts of the world within the limits of the European quarter, there is an air of animation in the narrow and dirty streets, but an animation without gaiety, and more resembling the bustle of some dingy and populous neighbourhood of London. The great street of Pera is a dirty lane, formed by high irregular houses, and destitute of all pavement for foot passengers, who must clamber and slip over the pointed blocks of stone, among horses and asses, porters carrying heavy weights by means of long poles, and crowds of the rabble of the East, all struggling for the middle muddiest track. Without large boots or goloshes no one ventures to quit his home, and as rain may be expected at intervals of about two hours, each traveller is armed with an umbrella. The streets are not wide enough to admit of the approach of a shower, the collisions are incessant, and the path may almost be choked. The most conspicuous figures are the French officers, who are met at every turn. The British are almost entirely confined to the Asiatic shore of the Bosphorus. Their two quarters of Scutari and Koulali are most conveniently situated for the comfort and health of the troops, and remote from the hospital. Both are decidedly far removed from the close and tobacco-laden atmosphere of Pera. But the inconvenience which results from their being placed on the opposite shore of an arm of the sea liable to violent squalls at all times, and in winter almost impassable, is more than equivalent to these advantages. The officers who have the management of our hospitals are obliged to have recourse to a miserable caique whenever they wish to consult with the authorities on this side of the water, for though a steamer has been established to ply across, it is not suited to the necessities of men who may be detained for an untimed time, or summoned at a moment's notice to make a journey. The consequence is that the British authorities are accustomed to do as much business as possible in a single visit, and, with the exception of the naval officers and a few belonging to regiments just arrived, very few of our countrymen are to be met with within the limits of the capital. The French, however, are to be found everywhere, and their tasteful uniforms add much to the liveliness of the streets on a fine day, which, in this changeable climate, may be expected occasionally even in the depth of winter—*Letter from Constantinople, Jan. 8.*

THE CHAOS AT BALACLAVA. A vessel arrived at Balaclava loaded with boots and shoes. Having no bill of lading, and the cargo being merely stated as shoes for the army, the vessel was ordered out of the harbour to wait her turn. At the first favourable opportunity she came from Lord Raglan to obtain a vessel to proceed to Constantinople instantly on a most pressing service. This vessel was consequently ordered to proceed to Constantinople with Lord Raglan's agents, without unloading. When she had nearly reached that place one of the agents imparted in confidence to the Captain that he was going to Constantinople to purchase boots and shoes, the army being in great state of distress for want of a supply. The Captain replies, "Why, my vessel is filled with boots and shoes." Upon which the ship was put immediately about and returned to Balaclava.—*Letter from the Camp, Jan.*

Accounts from various parts of Spain continue to indicate the approach of a Carlist insurrection.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The [illegible] business doing in the Consol-market this week has been comparatively small, the prices have given way. The causes which have been prejudicial to the [illegible] of heaviness are the unfavourable news from the East as respects the probable termination of the war, the late heavy shipments of bullion, and the numerous rumours afloat respecting the contents of the forthcoming Budget of the Chancellor of the Exchequer; added to which, news reached the City late on Thursday to the effect that Lord John Russell had resigned office. On the subject of the easier modes of making money to carry on the war a difference of opinion is said to have prevailed in certain quarters. It has, we understand, been proposed to raise a large additional amount by means of taxation, but the project is not likely to meet with much encouragement from the Government. At present, however, great uncertainty prevails on the subject, as further Ministerial resignations are expected.

Sales of stock have been pushed to a large extent during the past week, and the purchases, the supply in the hands of the jobbers is large. This feature has of course, tended to keep prices in check; but favourable news from the Crimea, and only a moderate loan—if it should be applied for—will, no doubt, have the effect of enhancing the quotations.

Very few purchases were effected in any security on Monday. Altogether, the market was in a most inactive state.—Bank Stock was [illegible]. The Three per Cents Reduced marked 91¾ up to 92; the Three per Cent Consols, 91¾ down to 91½, the New Three per Cents, 91¾ to 92½; and Consols for Account, 91¾ ⅜; India Stock, 223; Exchequer Bills, 7s. to 4s. prem.; Exchequer Bonds, 99¾. On Tuesday the market was again heavy. The Three per Cents Reduced varied from 91⅝ to ⅜; the Three per Cent Consols, 91⅝ to ½; Consols for Account, 91¾ ⅜; New Three per Cents, 91¾ to 92; New Five per Cents, 117; Long Annuities, 1860, 4 5-16 ⅜; Ditto, 18-9, 4 3-16. India Bonds were 14s. Exchequer Bills, 4s. to 7s. prem.; Exchequer Bonds, 1859, 99½ ¾. The following are Wednesday's quotations—leaving the highest and lowest ranges:—Bank Stock, 212 to 210; Ditto, for the Account, 210½; Three per Cents Reduced, 91¾ ⅜; Consols for Account, 91¾ ⅜; New Three per Cents, 91⅝ 92; Long Annuities, 1860, 4 5-16; India Stock, 223. India Bonds, 11s.; Exchequer Bills, 4s. to 7s. prem.; Exchequer Bonds, 1858, 99¾; Ditto, 1859, 99¾. On Thursday Consols were very flat. The Three per Cents marked 91 to 91½ 90¾ 91 for Transfer; and 91¾ ½ to 91½ for Account. The new Three per Cents were 91¾ ⅜; and the Three per Cents Reduced, 91¾ ½. Exchequer Bills were 4s. to 7s.; and India Bonds, 11s. to 14s. prem.

All Foreign Bonds have been dull, yet we have very little change to notice in the quotations. Brazilian Five per Cents have been done at 100; Ditto, New Five per Cents, 99¾; Mexican Three per Cents, 21¾; Peruvian Four per Cents, 51; Russian Four-and-a-Half per Cents, 90; Spanish Three per Cents, 37; Ditto, New Deferred, 17¾; Turkish Bonds, 76¾; Dutch Two-and-a-Half per Cents, 62; Dutch Four per Cents, 88; Portuguese Four per Cents, 42¾; Sardinian Five per Cents, 86; Belgian Four-and-a-Half per Cents, 94; French Three per Cents, 68f. 75c.; Austrian Six per Cents, 70.

The interest on French Treasury Bonds has been reduced one per cent.

The imports of bullion have been liberal, viz., £97,000 from India, £1000 from New York, £139,000 from the West Indies, and £305,000 (including 85,000 sovereigns) from Australia. The exchange upon Paris closed favourable, and a no portion of the new loan has been taken in this country, scarcely any shipments of gold have been made this week.

There has been a moderate inquiry for Joint-Stock Bank Shares, the prices of which have continued firm:—Australasian have realised 83¾; English, Scottish, and Australian Chartered, 18; London Chartered of Australia, 21¾; London and Westminster, 23; National Provincial of England, 6⅝ ex div.; Ditto, New, 17 ex div.; North of Wales, 7; Oriental, 37¾; Union of Australia, 66; Ditto, New, 26; Union of London, 27 ex div. In Miscellaneous Securities very little has been done. Canada Companies have realised:—Ditto, 8s per cent, 107¾; Grand Canal, 24¾; Ditto, New, West India Docks, 119 ex div.; Commercial, 93 ex div.; London, 103; Peninsular and Oriental Steam, 84¾. Canal shares have marked the following quotations:—Brecon and Ogmore, 30¾ ex div.; Ditto, New, 10¾ ex div.; Surrey Canal, 84; Grand Junction, 55; Grand Surrey, 48; Leicester, 70; Loughborough, 575; Neath, 180; Oxford, 110; Regents, 16¾ ex div.; Redditch, 6; Stort, 230 ex div.; Worcester, 625; Southwark, 265; Warwick and Birmingham, 20. Water-works Shares have been very dull:—Berlin, 24; Grand Junction, 70; Kent, 79; Southwark and Vauxhall, 78¾; New River Company, 85¾; West Middlesex, 95 ex div. There has been scarcely any inquiry for Gas-light and Coke Companies' shares:—British Provincial Leave marked 21; Continental, 64; Equitable, 28; Phœnix, 28½; Ratcliff, 70; Imperial, 86 ex div.; Ditto, New, 10¾ ex div.; Surrey Consumers', 11; United General, 19½; Westminster Chartered, 40½. Insurance Companies' Shares have been:—Alliance, 182; Argus Life, 22; City of London, 24; Ditto, New, 6; Globe, 233 ex div.; Imperial Fire, 90; Ditto, New, 3; Law Fire, 4; Ditto, Life, 56; London, 28; Pelican, 45; Provident Life, 9; Sun Life, 57½; Victoria, 5⅝. Hungerford-bridge 5s. shares marked 12. Vauxhall, 23; Waterloo, 4½; Ditto, Old Annuities of £3. 4., Ditto, New Annuities of £7. 2s.

Although the dividends upon some of the leading lines are good, railway shares have been dull and droop[illegible]. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 29; Caledonian, 61¾; Ditto, for money, 62¾; Chester and Holyhead, 13; East Anglian, 1¼; Eastern Counties, 11¾; East Lancashire, 73¾; Edinburgh and Glasgow, 56; Great Northern, 99¾ ex div.; A Stock, 73; Ditto, B Stock, 126; Great Southern and Western (Ireland), 104; Great Western, 68¾; Lancashire and Yorkshire, 74¾; London and Brighton, 106; London and North Western, 101; Ditto, Eighths, 1; London and South-Western, 84; Ditto, £50, 84¾; Ditto, £40, 37; Manchester, Sheffield, and Lincolnshire, 26¾; Midland, 69¾; Norfolk, 50; North British, 31; North-Eastern, Berwick, 76; Ditto Leeds, 15; Ditto, York, 94; North Staffordshire, 13¾; South-Eastern, 58¾; Thames Haven Dock and Railway, 6.

LINES LEASED AT FIXED RENTALS. Buckinghamshire, 98; London, Tilbury, and Southend, 10¾; Midland Bradford, 82; Preston and Wyre, 43¾; Wilts and Somerset, 76.

PREFERENCE SHARES.—Eastern Counties Extension, No. 1, ¾ prem; Ditto, Six per Cent Stock, 13; Great Northern Five per Cent, 114; Ditto, Redeemable at 10 per cent prem., 105½; Ditto, Four-and-a-Half per Cent, 100¾; Ditto, New, 4¾; South-Eastern, 10.

FOREIGN.—Dutch Rhenish, 7¾; Grand Trunk of Canada, A issue, 4¾; Great Central of France, 11¾; Great Luxembourg, 2¾; Great Western of Canada, 16¾; Western of France, 2.

In Mining Shares very little has been doing. Pentgibland Silver Lead have been 1¼; United Mexican, 2¾; St. John del Rey, 30; Cobre Copper, 21; Linares, 7.

Friday P.

The business doing in the Consol Market to-day has been to a limited extent, have ruled somewhat lower. The Three per Cents have marked 91¾ to 91½ 91⅜; the Three per Cents Reduced, 91¾; and the New Three per Cents, 91¾ ⅜; Exchequer bills, 4s. to 7s. prem. All Foreign Bonds and Railway Shares have ruled very dull

THE MARKETS

CORN EXCHANGE (Friday).—Since Monday very moderate supplies of English wheat have come to hand, and the trade has ruled very dull. The show of samples to-day was small, nevertheless the demand was far from active at Monday's advance in the quotations. Upwards of 12,000 quarters of foreign grain arrived last week, and the trade to-day appears to have no notice to make. In floating cargoes very few sales were reported [illegible]. The supply of which was to-day—several of Monday at late rates. We were well supplied with oats, which sold slowly on former terms. Beans, peas, and flour were in short supply, at rather improved prices.

ARRIVALS. English—wheat, 1930; barley, 1950; malt, 1620; oats, 3180; flour, 1490 Foreign—wheat, 11,660; barley, 30,0[illegible]; oats, 18,320.

English.—Wheat, Essex and Kent red, 68s. to 78s; ditto, white, 74s to 84s; Suffolk red, 68s. to 72s; ditto, white [illegible]s. to —s; rye, 44s. to 46s; grinding barley, 32s to 36s; malting, 36s to 38s; malt, 70s to 76s; Yorkshire potato oats, 20s to 22s; Kingston and Ware, 23s to 25s; Cornwall, 19s to 21s; Scotch and Lincolnshire, 20s to 22s; potato, 20s to 22s; feed, 18s to 20s; Dublin and Cork, 20s to 22s; ditto, white, 20s to 22s; tick beans, 44s to 47s; grey peas, 44s to 45s; maple, 46s to 48s; white, 48s to 50s; boilers, 48s to 50s; Essex and Suffolk, 46s to 48s; flour, 60s to [illegible] demand generally but been very inactive; yet we have had [illegible] notice in the quotations.

Liverpool Exports.—Wheat, 72s to 75s; Baltic, crushing 68s to 68s; Mediterranean and Odessa, 65s to 70s; Rangoon, 54s to 56s per quarter. Cork, Indian, 40s to 42s per barrel. Red seed, 42s to 46s; white ditto, 50s to 52s. Tares, 9s. to 12s. per bushel. Flour, 45s to 47s per sack; 23s to 25s per bag of ten stones. Linseed Cakes, £5 5s to £5 10s per ton; rape cakes, £6 5s. to £6 15s per ton. Canary, 1s. to 60s per quarter.

Bristol.—The prices of wheaten bread in the metropolis are from 10d. to 11d., of household ditto, 8d. to 9d. per 4lb. loaf.

Imperial Weekly Averages.—Wheat, 72s. 2d.; barley, 33s. 7d.; oats, 26s. 11d.; rye, 45s. 2d.; beans, 45s. 7d.; peas, 45s. 8d.

Liverpool.—Wheat, 73s. 3d.; barley, 34s. 1d.; oats, 27s. 7d.; rye, 45s. 7d.; beans, 47s. 3d.; peas, 45s. 6d.

English Grain Sold Last Week.—Wheat, 77,711; barley, 99,917; oats, 18,967; rye, 180 beans, 6180; peas, 1120 quarters.

Tea.—The amount of business doing in our market this week is but moderate. Prices, however, are well supported Common sound congou, 10d. per lb. The stock of most kinds of tea is large.

Sugar.—There has been a good demand for all raw sugars, and in most transactions the quotations have advanced 6s. to 12s. per cwt. Low to mid. yellow Barbadoes has realised 36s 6d. to 38s 6d.; mid yellow, 39s 6d to 40s 6d; grainy mid yellow 41s 6d to 42s 6d; good white, 43s 6d to 44s 6d; fine ditto, 45s 6d to 46s 6d. Refined goods have changed hands to a fair extent, at the following prices:—Crushed sugar 50s per cwt; lump 52s; Mauritius ditto, 48s; Bengal ditto, 47s 6d.

Coffee.—On the whole, the demand has been steady. In prices very little change has taken place. Ordinary sales, 56s 6d to 60s. per cwt.

Rice.—[illegible] quotations are freely supported

Provisions.—The amount of business doing in Irish butter is but moderate; yet, in some [illegible] Leghed, is held at extreme rates. In bacon and other articles very little is doing.

Hops.—Here we have very little or no change to notice in the value of the [illegible] spot, has changed hands at 36s. 6d. to 58s.; and for farn and delivery, 60s. 6d. per cwt. The imports are to-day [illegible]

Oils.—Linseed oil is quoted at 33s per cwt. Fine Sperm is worth £123. Other oils are almost [illegible] in demand at late rates.

Spirits.—The sale for rum is heavy, and the quotations are not supported. Proof Leewards, 2s 11d to 3s 2d; East India, 3s 3d to 3s 10d per gallon. Brandy, Genevas, and corn spirits remained very little attention.

Foreign Imports.—The week's imports of foreign hops amount to 183 bales from Hamburg, 558 from New York, and 93 from Antwerp. Our market is fairly supplied, and the demand is inactive at about stationary prices. New Mid and East kent pockets, £14 to £24; New Weald of Kent, £14 10s. to £24; Sussex, £14 to £24 10s.

Cattle.—Friday.—Fresh Monday.—Northumberland, [illegible]. Beswell, 28s.; Hilton 2[illegible]; Swaledale, 28s 6d.; Whitworth, 28s per ton

Smithfield (Friday).—To-day's market was fairly supplied with beasts. All kinds met a dull sale, at scarcely the prices obtained on Monday of last week per 8 lbs. Among the sheep were 120 cows from Spain. The numbers of sheep were somewhat good, and the quarry for beef rules rather heavy. Calves—the supply of which was very limited—were steady, and the primest veal was worth 6s per 8lb. In pigs very little was doing, at late rates. Milch cows sold slowly, at from £14 to £18 each, including three [illegible]

To-day to sink the offals:—Inferior beef, 3s. 6d. to 4s. 2d.; second quality ditto, 3s. 8s. to 4s. 10d.; [illegible] to 4s. 6d.; second quality ditto, 5s. 2d. to 5s. 4d. Inferior mutton, 3s. 2d. to 3s. 6d.; middling ditto 3s. 8s. to 3s. 10d.; prime ditto, 4s. to 4s. 2d.; second quality ditto, 4s. 4d. to 4s. 6d. Inferior lamb, 4s. 8d. to 5s. 2d.; small pork, 3s. 10d. to 4s. 4d.

THE LONDON GAZETTE.

TUESDAY, JANUARY 23

WAR-OFFICE, JAN. 23.

GENERAL ORDER. Horse Guards, Jan. 11.

The Queen, having signified her intention to confer the Order of the Bath for service in the Crimea upon the surviving officers and men, with Clasps for those who were present in the battles of the Alma and of Inkerman, in further pursuance to command that a Medal and Clasps shall in like manner, be conferred upon the nearest relative or representative of such as may have been fallen, the General Commanding-in-Chief desires that her Majesty's gracious intentions shall be made known to the Army by General Order

Field-Marshal Lord Raglan has been requested to forward lists of the individuals who may have been killed in action, or who may have died within on service in the Crimea, or in consequence of wounds.

By command of the Right Honorable General Viscount Hardinge, Commanding-in-Chief

G. A. WETHERALL, Adjutant-General

BREVET.—Major-Gen. Sir Colin Campbell, K.C.B., and Major-Gen. J. L. Pennefather, C.B., to have the local rank of Lieutenant-General in Turkey.—Col. H. H. Rose, C.B., holding the rank of Brigadier-General in Turkey, having conducted himself to her Majesty's satisfaction, and rendered distinguished services in the great and brilliant victories in the Crimea, to be promoted to be a Major-General, in pursuance of the Royal warrant of the 6th October, 1854, and placed on the permanent list of general officers, his commission to bear date the 12th December, 1854. Captain and Brevet-Major the Hon. St. G. G. Foley, Deutschutz, to be Lieutenant-Colonel in the Army, for distinguished service in the field, his Commission to bear date 12th December, 1854.

OFFICE OF ORDNANCE, JAN. 26

Royal Artillery—Brev. Colonels B. Coppage, D. Thwaites, J. H. Griffin, R. Burn, to be Colonels; Brevet-Majors and Lieuts.-Colonels A. Pym, F. D. Lean, and Captains J. H. F. Marriott, H. L. Layard, to be Lieutenant-Colonels; Lieutenants and Captains A. C. Ogilvy, H. T. Newton, H. Hungerford, to be Captains; First Lieuts. H. W. J. Dashwood, J. J. Hope, W. F. Richards, and Second Lieuts. W. Cameron, Second Lieuts. F. A. Astley, R. A. Mitchell, G. Cotgrave, and L. L. Franklyn, to be First Lieutenants.

Royal Engineers—Brevet-Colonel C. Pasley, to be Colonel; Brevet-Major T. R. Mould, to be Lieutenant-Colonel, Second Capt. the Hon. H. F. Keane to be Captain; First Lieut. W. Farrer to be Second Captain; Second Lieut. J. H. Wilson to be First Lieutenant.

JAN. 28.—Royal Artillery—Lieutenant-Colonels F. H. Thomson and C. O. Stranaffel and Lieut.-Col. J. Worthan, to be Colonels; Brevet-Majors G. Wynne, W. C. Shaw, R. D. Harrison, J. T. Ford, and W. Ireland, to be Lieutenant-Colonels; Capts. C. E. Ford and R. C. Mowle and Second Capts. W. Cowper, C. J. Gibb, C. G. Gray, W. D. Goodlad, and T. Fosbery, to be Captains; First Lieuts. J. J. Wilson, G. R. J. Crofton, J. H. Smith and A. F. V. Crease, to be Second Captains; Second Lieuts. C. A. L. de Montmorency, the Hon. W. Le P. Trench, F. A. Machalin, M. J. Wemyss, and E. C. Sim, to be First Lieutenants

BANKRUPTS.

J. STEVENS, Fetter-lane, City, cheesemonger. E. MURDOCH, Star Hotel, High-street, Maidstone, Kent, licensed victualler. W. PEARCE, Clerkenwell-green, Middlesex, gas-fitter. H. B. HARRIS, Shrewsbury, draper.—IT SPENCER, late Second Lieut., Surrey, bankrupt, dealer, and horse and cattle salesman. J. [illegible], Strood, Gloucester, cheese factor.—J. WARD, Penistone, York, surgeon and apothecary.—J. COXON, Macclesfield, butcher, licensed victualler and coach proprietor. T. E. PEARSON, Seaton Carew and West Hartlepool, Durham, merchant.

SCOTCH SEQUESTRATIONS.

J. KNIGHT and COMPANY, Glasgow, distillers. J. FAULDS and COMPANY, Beith, merchants.—J. M'CALLUM, stranraer, boot and shoe maker and leather merchant

FRIDAY, JANUARY 26.

WAR-OFFICE, JAN. 26

1st Foot—G. Deane and J. H. Maxwell to be Ensigns

4th Ft. A. Blake to be Lieutenant

7th Ft. Kerr to be Ens.

9th Ft. G. H. Vesey to be Ensign

11th.—Capt. P. Philpot to be Captain.

14th.—Capt. M. Petrie to be Captain, A. Molony to be Lieut.

17th.—Serjeant-Major J. Lee, T. Harvey, and R. D. Wright to be Ensigns

18th.—Lieut. G. A. Elliott to be Captain; R. I. Adamson to be Ensign

19th.—C. Martin to be Ensign

21st.—Lieut. A. Paterson to be Lieutenant

23rd.—Ensign H. Hamilton to be Lieutenant; J. M. H. Dare to be Ensign

25th.—Lieut. W. G. Shute to be Captain, J. W. Klagsbrunn to be Ensign

29th.—Lieut. H. Bowen to be Captain; Ensign C. N. Stevenson to be Captains; Ensigns H. L'Estrange Herring and H. D. Erskine to be Lieutenants; S. H. Smith and T. Elwyn to be Ensigns

33rd.—R. T. Twining and L. R. Forbes to be Ensigns

36th.—Lieut. A. Gowan to be Captain; H. M. Lampen to be Ensign

40th.—Ensign A. J. Reward to be Lieutenant

44th.—Lieut. J. C. Vaughan to be Captain; H. J. Shadwell to be Ensign.

47th.—Lieut. J. Spottiswood to be Captain; E. H. Sandys, jun., to be Ensigns

48th.—Lieut. R. Every, brevet-Major J. Cassells, Lieut. G. H. Page, to be Captains, Ensign R. A. Maude to be Lieutenant

49th.—Capt. L. H. G. Meacon and Brevet-Major W. Armstrong to be Majors; Lieuts. F. W. Goodlake, R. Marsh, and Ensign and Pay-Master P. J. Brewer to be Captains; Ensigns T. F. Bastard, and H. D. T. Savory to be Lieutenants; R. F. Barrowes and R. R. Pennell to be Ensigns

50th.—Capt. R. J. Thackwell to be Captain

54th.—W. Long to be Ensign

57th.—Lieut. T. W. J. Lloyd to be Captain

THE GIPSY SISTERS OF SEVILLE, BY J. PHILLIP, IN THE WINTER EXHIBITION.

THIS is no imaginary sketch, no mere effort of *genre* painting; it claims to rank in the historic art as a study of character, of race, of nationality; and by one who has made the study of Spanish nationalities all his own. The deep meaning in the eye, and the strongly-marked features of the two Gipsy Sisters, speak of a hard destiny of bitter memories: of a persecuted race, but of an intelligent, and deeply reflective one withal; of a race in which there is yet much to admire, if not to love and to esteem. One has a transient smile, with a smack of coquetry in her regard, as if she were recognising the flattering salutation of some passer-by; but the other is all sternness, and repels with hollow scorn the idle compliment. The ample fall of the rich dark tresses; the warm and swarthy complexion; the truly national costume, and the glowing atmosphere, are perfect in their several truth and in their general harmony. The execution in every part is highly artistic.

"THE SPANISH GIPSY SISTERS."—PAINTED BY JOHN PHILLIP.—FROM THE ROYAL COLLECTION.

PARIS FASHIONS FOR FEBRUARY.

THE New-Year's-day receptions at the Tuileries have not introduced any change in the fashions. The Court mantles, indispensable on that occasion, were, for the most part, made of velvet, with worked borders; many, however, were made of the same material as the robe, which is generally, white; lozenges or squares of lace being placed around the mantle. A house, well known for its laces, has made a Court mantle of black or white lace, mounted upon satin, transparent, to match the colour of the toilette.

We present our fair readers with a description of the Empress's costume at the reception of the 2nd January. Upon the raised bands of her hair shone three rows of diamonds, surmounted by the Imperial crown. The robe and mantelet were of sky-blue velvet. The skirt of the robe was worked in front, with gems, as also was the corsage; the mantle was embroidered with gold and clear pearls. The Princess Mathilde wore a purple robe, with a mantle of the same colour, adorned with pearls and rubies.

Robes are worn fuller than ever. Flounces are somewhat out of favour; but, as if to set this dictum at defiance, we saw the other day flounces on a robe of *moiré antique*, and on another of velvet! Scarcely could either of these eccentricities get through the corridor of the Théâtre des Italiens; still the costumes were elegantly worn, and noticed by every one. We hope they will have but few imitators; but our duty is to note all that is made in the way of novelties.

The *moiré antique* is going somewhat out of fashion, and for a very simple reason: this material owed its fame to its high price, but it has just experienced a great reduction, and may be bought for seven or eight francs a yard. Hence it will only be worn for visiting and walking dresses. It is difficult to say what material is to be substituted for it. The Exhibiton will, assuredly, bring us some beautiful and rich novelty, but it must be very dear which will be its first element of success.

Bonnets are as scanty as ever, and particular materials are manufactured for making the upper parts; they are either *velours épingles*, or *gros-de-tours*, sprinkled with black velvet peas upon a ground of rose, blue, green, dark violet, or chestnut. A new material called *velours mousse* is remarkably becoming in this cold weather; it is trouble lost, however, to search for a warm material for bonnets, which leave nearly all the head uncovered, and only shelter that part of it which is naturally protected by the hair. Velvet mantles are in season this severe weather; they are uniformly black. *Mantelets vitale* are also worn of velvet, worked colour upon colour with deep lace, which falls low behind, and raises itself towards the arms.

THE ILLUSTRATIONS.

No. 1 Bonnet of rose-coloured *velours mousse*, ornamented with white blonde upon the front, and *d'comboles roses* in the cap. Black velvet mantle, ornamented with marten-fur. Robe of *velour Ottoman pensée*, with two flounces trimmed with squares of black velvet placed upon the borders, and forming a sort of square.

No. 2 Bonnet of *velours épingle marron*, with black lace; and cap of rose-coloured velvet flowers. Mantle of grey *drap jeutre*, trimmed with large black velvet braid, placed near the edge. Robe *en brocatelle bleue Louise*, with running velvet patterns upon every flounce, and borders in black.

No. 1 *Coiffure* of flowers *mauve rose*, arranged in a half-crown, and placed beneath the hair; a rose-coloured ribbon of *velours épingle* is under the bands, and passing over the summit of the head.

No. 2 *Coiffure* of *cordon de chine*, beginning at the back hair, and letting fall over the shoulders its white flowers, mingled with leaves.

No. 3 *Coiffure* of velvet plaited with the hair, and letting fall two *barbes* of lace, *en point d'Alençon*, upon the velvet ribbon. The stars of diamonds are disposed to form a diadem on the bands of hair. The shade of the velvet should match the dress; and *Tuileries* green only is worn.

No. 4 *Coiffure demies*: a wide ribbon begins at the upper part of the head, goes round the comb, and forms two large bows on each side, while the long ends fall upon the shoulders.

No. 5 *Coiffure en perle* one row passes over the head, and loses itself in the rolls of hair; two large Italian pins serve to sustain the hair, and are mounted with large beads of pearl.

MUSIC.

THE performance of "Judas Maccabeus" by the SACRED HARMONIC SOCIETY on Friday (last week) demands notice, not only on account of its general excellence, but specially on account of the first appearance of Madame Rudersdorff as an oratorio singer. This lady, who enjoys a high reputation throughout Germany as a *prima donna* of the first class, on the Italian and German Opera stage, has fully maintained that reputation since her arrival in England at the beginning of last season. She has shown great powers, and has been justly appreciated as a fine actress and an accomplished dramatic singer; but the public were not prepared for her appearance in a totally different character—a singer of the sacred music of Handel. In this branch of their art few foreign performers have succeeded. In the first place, the effect of their singing has generally been more or less marred by their want of command of the English language, and their exotic pronunciation and accent; and, secondly, Handel's music having been composed in and for England, and having been almost exclusively performed in England from his own time to the present—demands a style of performance which has been handed down by tradition through successive generations of English singers, and which is unknown even in Handel's native country, where (to its shame be it spoken) his music, after the lapse of a century, is only now beginning to receive some degree of attention. Mdme. Rudersdorff, however, is a complete mistress of our language, which she speaks and sings with the facility and purity of a native. Her extensive musical attainments, moreover, have long since made her well acquainted with the works of Handel; and we have reason to know that, ever since her arrival in England, she has assiduously laboured to acquire the true Handelian style, having wisely had recourse to the aid of the very best English authorities. The result was shown by her admirable performance in "Judas Maccabeus," when it was apparent to every one that, as a soprano singer of the sacred music of Handel, she is rivalled only by Clara Novello, whose great gifts of nature have likewise received the highest cultivation in every branch of her art. A great beauty of Mdme. Rudersdorff's singing was its facility and smoothness: she never strained her voice beyond its natural powers, and never indulged in forced emphasis or exaggerated expression. She spoke the words with perfect intelligence and propriety, conveying with the utmost clearness the full meaning of the composer. Nor did she disfigure the text (as so many singers do) by redundancy of so-called embellishment. She sang with the utmost plainness and simplicity, admitting only an occasional slight but graceful variation of a closing phrase, and introducing, sparingly but beautifully, that truly Handelian ornament, a fine shake. Her most remarkable songs were, "Pious orgies, pious airs," to which she gave a profound devotional expression; and "From mighty kings he took the spoil," which she sang with a brilliancy of execution and a buoyant joyousness we have scarcely ever heard equalled. Her success was complete; and she will now, unquestionably, take her place, though a foreigner, in the foremost rank of our English Handelian singers.

M. JULLIEN, pursuing the classical course which he has so happily begun, has followed up his Beethoven and Mendelssohn Festivals by a Mozart Festival, which was given on Tuesday evening, and was the most attractive and successful performance of the season. The vast theatre was crowded to overflowing in every part. The multitude listened with charmed ears to the strains of the most captivating of all composers—strains universal in their influence, and equally enchanting to the learned and the unlearned. M Jullien's selection was made with excellent judgment and taste. It included the unrivalled overture to the "Zauberflöte," which has been called "the despair of composers;" the famous symphony in C, to which a great musician (we think it was John Cramer), by way of expressing its pre-eminent grandeur, gave the name of "Jupiter"—a name by which it is now generally designated; the symphony in E flat, so full of sweet and graceful melody; the beautiful and expressive air, "L'Addio," which Miss Dolby sang exquisitely; and the sonata in E flat, for the piano and violin, which Madame Pleyel and Ernst executed in a style of absolute perfection. Nothing could be more striking than the profound silence and earnest attention with which these long, elaborate, and refined instrumental pieces were listened to by a vast promiscuous assemblage, who, a very few years ago, would not have had the patience to give them a hearing.

THE directors of the PHILHARMONIC SOCIETY have engaged Herr Richard Wagner as conductor of the concerts of the ensuing season. Herr Wagner long held the office of *maestro di cappella* at Dresden, but was obliged to leave Saxony in consequence of having involved himself in the political troubles of that kingdom, and has latterly resided in retirement at Zurich. He is one of the most celebrated musicians of the day; but his character as a composer, like that of Berlioz, is the subject of much controversy. In England his numerous works are almost unknown; and our acquaintance with them is too slight to enable us to form an opinion on their merits. There can be little doubt, however, from the sensation he has created in Germany, that he is a man of a bold and original genius, and it seems by no means improbable that his music, however strange and fantastic it may at first appear, may assume, when better known, a very different aspect. As a musical director and *chef d'orchestre* his abilities are said to be of the highest order. The first concert of the season takes place on the 12th of March.

PRUSSIAN SHIPWRIGHTS IN FRENCH DOCKYARDS.—The immense naval preparations going on in the French dockyards have absorbed the labour of all the available ship-carpenters in the country, but it under it desirable to obtain further assistance from abroad. Under these circumstances the French Government have turned their attention to the principal ship-building ports in the Baltic, with the view of engaging carpenters and other mechanics serviceable in ship-building. Upwards of sixty men of this description have been engaged at Stettin alone, and a still greater number at Dantzig, Konigsberg, and Memel. The conditions are very liberal: the men get a free passage to Havre, with two francs a day for expenses, and their wages are five francs a day. They are also to be sent back to their respective homes at the expense of the French Government, when their services are no longer required.

The pay of the third-class constables of the metropolitan police is ordered to be raised 2s a-week, and Lord Palmerston has given directions for a new arrangement of night duty, by which the labours of the force will not be so severe as now.

THE THEATRES.

OLYMPIC.—A new piece, entitled "Tit for Tat," was produced on Monday. It is a version of "Les Maris ne font toujours Rire," by MM. Delacour and Jaimes *fils*, which we understand has been made by Mr. Tallfourd. The transformation has been cleverly executed; for the piece owes all its success to the dialogue. The story is facile to excess, and the structure entirely exceptional. It is in two acts, and each act is a separate play. In the first Mr. Robson is thrown, as usual, into a fit of jealousy; and in the second revenges himself on his tormentor, Mr. Wigan, by repaying the compliment. Such an arrangement is at least new. But we have so frequently had occasion to describe Mr Robson under the influence of "the green-eyed monster," that we have really nothing to add. Something we might have said to Mr Wigan's portraiture of the same passion, but he has not a fair opportunity afforded in the second act of competing with the hero of the first. He necessarily comes off second best. The story, however, culminates, if the acting does not; and the retorts of the dialogue and the surprises of the situations are rare specimens of stage arrangement. The only drawback to the enjoyment of the action is the eternal intrigue that forms the no-interest of pieces derived from the French. The want of originality in this particular is an alarming symptom of the decay of invention. But the vivacity of the treatment atoned for the defects of the subject, and secured the success of the drama.

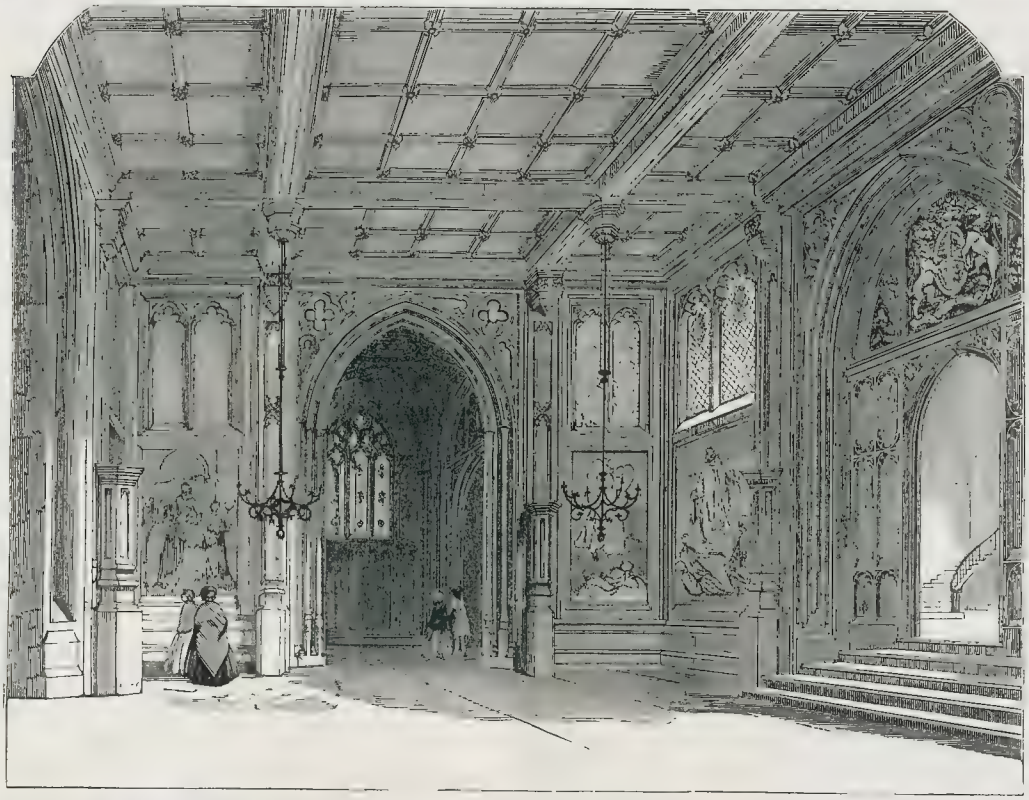
A RUSSIAN STRATAGEM.—A flag of truce came in last night from the enemy, with a request that all similar flags might in future be received at the parallel now constructing in front of the Second Division. This request Lord Raglan instantly refused. His Lordship added that all flags must be received at the broken bridge on the Tchernaya road, and at no other place. To receive flags of truce in front of the Second Division would be entirely to open our Camp to the enemy's view; which, without doubt, was the object of the request.—*Letter from the English Camp, Jan.* .

RELIGIOUS EXPENDITURE AT BOSTON, UNITED STATES.—It is estimated that the current expenses of the churches in Boston will amount to 240,000 dollars a year. The value of the church estates is about 4,000,000 dollars. The expenses of the different societies vary from 1500 dollars to 5000 dollars a year. The cost for public worship in the churches occupied by the wealthier portion of the citizens will average about 100 dollars a Sunday; the clergyman has a salary of 3000 dollars, the music costs about 1000 dollars, and the miscellaneous expenses will be from 1000 dollars to 1500 dollars a year. The taxes on the pews vary from 8 dollars to 70 dollars a year, according to their value. The Methodist preachers have the smallest average salaries, and Unitarians the largest.

The municipality of Bordeaux, in consequence of the dearness of wine, has entered into an arrangement with a company for establishing places for the sale of beer at 30c. the quart, and it has reduced the octroi duties on beer to one-third of the former charge.

The Prefect of the Seine has courteously presented to the London Sewers Commission the copy of two records relating to the distribution of the waters of Paris, and also the report of M. Mille on the mode of cleansing the towns of Great Britain

THE NEW HOUSE OF COMMONS.



THE DIVISION LOBBY.

THE SMOKING-ROOM.—(SEE NEXT PAGE.)

THE NEW HOUSE OF COMMONS.

THE UPPER WAITING-HALL.

This is a handsome portion of the new Palace, and has a pleasing effect, terminating the fine staircase leading to it. Its proportions are nearly square; its ceiling is of oak, divided into compartments, and by four massive beams, at whose intersections are rectangular pendants, from which are suspended neat brass branches for gas, of four burners each. The pedestals on each side of the doors and fireplace are to bear a statue in the course of time. When this is done the effect will be complete. Already the walls under the windows are filled up with eight beautiful frescoes—the subjects taken from our celebrated poets. It may not be amiss to mention these, as they strike the eye on entering the hall.

The first on the left of the door way, opposite to the stranger, is "King Lear apportioning his kingdom between his daughters," from Shakespeare's play of "King Lear." This is by Herbert. The next on the right is "Satan touched by Ithuriel's spear," from "Paradise Lost," and is painted by Horsley. The next [illegible] "Scott," by Ford, and, on the other side of the door [illegible] from the House," by Armitage. "The Death of Nelson," by [illegible], is the next, and, corresponding with it, is "The Death of Lara," by [illegible]. In the place we have the subjects of "Griselda's First Trial of Patience," by Cope; and "The Red Cross Knight Slaying the Dragon," by Watts. These subjects are all well handled by the respective artists, and fully prove how much may be done in wall decoration in this style of art. The windows of the Hall are filled in with small diaper-pattern panes. Over the top of the window, under the tracery, is some stained glass, containing the monogram "V. R." in a small bundle of neat design. Over the fireplace and the opposite doorway, leading to various committee-rooms, is sculptured the Royal Arms.

THE SMOKING-ROOM.

This is a truly handsome room, [illegible] carefully the architect has studied the comfort of the members. It is [illegible] divided into two divisions by piers, upon which [illegible] at the angles, small columns, between which are sunken panels. The ceiling is of oak, panelled; the centre panels being painted, bearing the rose, fleur-de-lis, and portcullis alternately. The walls are painted of a neat light tint, reaching to within about five feet of the ground. They are then lined with encaustic tiles, of pale green and white, in elegant patterns. There are three arched recesses, in which are placed long seats covered with dark green leather, well stuffed in front of these there is a range of [illegible] tables. In this centre of the first division, which might be termed an ambulatory, is a square stove, having three openings or grates for fires. It is of iron, nicely ornamented on the cheeks, and topped by a richly-veined marble slab.

The other division, as seen in our Drawing, is occupied by seats and tables, similar to those in the recesses; the floor is laid with encaustic tiles and Caithness stone. The feet of the visitors are protected from the chill of the tiles by handsome rugs. A more complete room for its purpose is, perhaps, not to be found—there is no little in it that will retain the scent of smoke. Yet there is an air of real comfort about it. The view from the windows is across the Thames, looking over the broad esplanade; to which there is ready access from this room, and of which the members, on a summer's evening, avail themselves, during the intervals of a long debate. There is a bell in the room which communicates from above, and announces to members the approach of a division, and as its shrill notes ring on the ear, hon. gentlemen may be seen hurrying up the stairs to the division lobby to give their vote, long settled in their minds. The approaches to the room are from a door near the corridor of the Commons' Library and from the Refreshment-room, both by the same staircase. Its management is in the hands of Mr. Steers, of the refreshment department.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS, TUESDAY.

Parliament met for the first time since the recess

THE VOTE OF THANKS TO THE NAVY.

The LORD CHANCELLOR read the following letter to their Lordships:

My Lord,—I have had the honour in a day to receive your letter dated the 18th ult., transmitting the resolutions of the House of Lords expressive of the high sense it entertains of the valuable services rendered by myself and by the officers, seamen, and marines of the fleet lately under my command.

Having, on the 31st ult., transferred my command to Rear-Admiral Sir Edmund Lyons, I have transmitted a copy of your letter to him, and the resolutions of the House of Lords have been made known to the several officers who were serving under me.

I have also, in obedience to the order of the House, forwarded to Admiral Hamelin the resolutions bearing that officer and the French navy for their cordial co-operation in the various services in which the combined fleet have been engaged; and, as Admiral Hamelin has also transferred his command, I have sent copies to Vice-Admiral Penaud and Rear-Admiral Bouet Willaumez.

To high honour and distinction the House of Lords has thus been pleased to confer on myself, the officers, seamen, and marines of the fleet lately under my command, will be received by all with every gratitude and respect; and I have to beg your Lordship will be pleased to accept my sincere thanks for the generous terms in which you have conveyed to me the resolutions of the House.

I have the honour to be, my Lord,

Your Lordship's most obedient, humble servant,

J. W. D. DUNDAS, Vice-Admiral.

On the motion of the Noble and Learned Lord, the above letter was ordered to be entered on the minutes of the House.

THE CONDUCT OF THE WAR.

The Earl of ELLENBOROUGH gave notice that on Monday, in moving for certain returns, he should make some observations on the general conduct of the war

Earl GREY gave notice of his intention to move on Tuesday, the 6th of February, that an humble address should be presented to her Majesty on the subject of the office of the Minister of War.

THE BLACK SEA.

The Marquis of SALISBURY gave notice that he would call the attention of the Government to the statements which had appeared in the public prints relative to the Black Sea.

THE CRIMEAN MEDAL.

In reply to the Duke of Richmond, the Duke of NEWCASTLE stated that her Majesty had been graciously pleased to grant the decoration of a clasp to the officers and men engaged at the battle of Balaclava. Some conversation took place respecting the incidents of that encounter, and the gallantry of the troops who took part in it.

THE WAR IN THE CRIMEA.

The Earl of WINCHILSEA gave notice that on Thursday he should call the attention of the House to the course Government had pursued with respect to the war in the Crimea, and that he would afford the Duke of Newcastle an opportunity to make explanations of a statement that a reporter in one of the leading journals had gone out under the authority and sanction of her Majesty's Government, and that the whole or a portion of his expenses had been defrayed out of the public purse.

HOUSE OF COMMONS TUESDAY.

NEWSPAPER STAMPS.

The CHANCELLOR of the EXCHEQUER: I wish to state, on the part of the Government, that it is my intention, on Monday next, to propose a resolution in Committee of the whole House with the view to the introduction of a measure relating to the law on Newspaper Stamps (Hear, hear). I also intend, upon a very early day, to move for leave to bring in a bill to improve the Act of 1854 in several particulars, commonly called the Superannuation Act, relating to pensions for civil service

THE LIGHT CAVALRY CHARGE AT BALACLAVA.

Mr. C. BERKELEY gave notice of his intention to ask the Secretary-at-War whether the order which had been published in all the newspapers as emanating from Lord Raglan to Lord Lucan for the Light Cavalry to make the disastrous charge at Balaclava was the correct one or not (Hear). If not, then why? Lord Raglan wishes the cavalry to advance rapidly to the front, follow the enemy, and try to prevent their carrying away the guns The French cavalry is on the left." He hoped the right hon. gentleman would name a day for giving an answer whether that was the correct order or not

Mr. S. HERBERT: If the hon. gentleman will name any day on which he wishes to put the question, I will be prepared to answer them.

Mr. BERKELEY: Thursday.

EDUCATION IN ENGLAND.

Lord J. RUSSELL: I beg to give notice that on Friday I will move for leave to bring in a bill for the Promotion of Education in England (Hear, hear).

NAVY ESTIMATES.

Lord J. RUSSELL: I may take this opportunity of stating that the Navy Estimates will be on the table of the House in the course of a day or two, and that my right hon. friend the First Lord of the Admiralty will propose to go into Committee on those estimates on Friday se'nnight

LAW OF PARTNERSHIP.

Mr. CARDWELL: On Monday next I shall move for leave to bring in a bill to amend the Law of Partnership (Hear, hear).

THE NEGOTIATIONS AT VIENNA.

Mr. LAYARD asked whether there would be any objection on the part of the Government to lay before the House copies of the correspondence which had taken place with Foreign Powers with regard to the treaty of the 2nd of December, 1854, and especially any document communicated to the Russian Government containing the interpretation placed by the British and French Governments upon the Four Points—not for negotiation, but acceptance?

Lord J. RUSSELL: I cannot at present say whether it will be possible to lay upon the table any of the correspondence to which the hon. gentleman has adverted. With respect to the correspondence generally, I should say that it would be inconvenient to the public service to lay it on the table. But there may be one or two papers, in the shape of reports, which it may be possible to lay before this House; and I will consider this point before I give a final answer. I may state generally what has occurred in respect to the Four Points, and in what state the question stands at present (Hear, hear). At the end of November the Russian Government instructed their Minister at Vienna to declare their acceptance of what are called the Four Points. On the 2nd of December a treaty was signed between France, England, and Austria. On the 28th of December a meeting was held of the Ministers of France, England, and Austria, at Vienna, with Prince Gortschakoff, the Minister of Russia. At that meeting the French Minister read (on the part of France, England, and Austria) the interpretation which the three Powers put upon the Four Points, to be considered as bases of negotiation. I will mention only, with respect to the third point, that it was proposed by that interpretation to put an end to the preponderance of Russia in the Black Sea. Prince Gortschakoff stated that he could not adhere to those interpretations; but that he would request further instructions from his Government. He afterwards informed Count Buol that he had received those instructions; and on the 5th or 6th of January another meeting was held, at the office of the Minister of Foreign Affairs, at Vienna. At that meeting Prince Gortschakoff read a memorandum which he said he had received, and which contained the views of his Government. It was replied by Count Buol, Lord Westmoreland, and Baron Bourqueney, that they had no authority to receive any such memorandum, and that they must require, as bases of negotiation, the consent of the Russian Plenipotentiary to the interpretation, of which we had also received a note. The Russian Plenipotentiary, Lord Westmoreland states in his despatch, then withdrew the memorandum which he had read, and declared his acceptance, on the part of his Government, of the interpretation as the bases of negotiation. My honourable friend will understand by that that the Russian Minister accepted these interpretations as the bases of negotiation, of course reserving to himself the power, when those bases were laid down into articles, to make any observations on the part of his Government which he might think proper. The Government of her Majesty have declared that they are ready to enter into negotiation on those bases; but hitherto no full power has been given to our Minister at Vienna to negotiate upon them.

Sir H. WILLOUGHBY asked if the Government would have any objection to lay before the House a copy of the Protocol signed on the 28th of December by the Three great Powers, explaining the Four Points as contained in the note of the 8th of August, 1854?

Mr. LAYARD: Before the noble Lord answers that question, perhaps he will allow me to ask whether the House is to understand from his statement that the negotiations are actually going on, or are suspended for a time (Hear, hear)?

Lord J. RUSSELL: With respect to the question of the hon. Baronet, I beg to say that it is the point I reserved for consideration. I doubt whether that document can now be properly laid on the table of the House. As to the last question, I beg to say that negotiations are not yet begun upon the bases I have stated.

Mr. BRIGHT: I understood the noble Lord to say that certain terms had been offered to Russia, about which there had been understood to be some difficulty, but that Russia had accepted them. The noble Lord expressed it in this manner, "That Russia had consented to put an end to her preponderance in the Black Sea." That, I suppose, will not withdraw from the House the hope that instructions are about to be sent out for the purpose of opening negotiations (Hear, hear). I think the House and the country will be very glad if the noble Lord can state that a despatch containing such instructions, as distinctly as it was made, instructions for negotiation will be sent off (Hear, hear).

Lord J. RUSSELL: I have already stated that the Government have expressed their readiness to negotiate on those Four Points

STATE OF THE ARMY, &c.

Mr. H. DRUMMOND gave notice that on Thursday he should move for some returns by means of which he should endeavour to separate some of many complicated subjects which now engaged the present Board itself, and he was sorry he was not able to do this without certain papers. He should move that there be laid before the House an account of the munitions and stores provided for the army before the troops left this country; also copies of reports received before that period, relative to the nature and strength of the fortifications at Sebastopol, the numbers and force of the garrison there, and the number and distribution of the Russian forces in the surrounding provinces. Also the amount of accommodation for the sick and wounded at Scutari, and the means for transporting them from the Crimea (Hear, hear). Also a copy of the instructions sent from this country to the persons in charge of the medical and other stores; together with returns as to the commissariat service, &c. (Hear, hear)

Mr ROEBUCK gave notice that on Thursday he should move for the appointment of a Select Committee to inquire into the conduct of our army before Sebastopol, and into the conduct of those departments of the Government whose duty it was to minister to the wants of that army (Hear),

Mr. ADAIR, on the 6th of February, to move to address her Majesty on the progress and maintenance of the present war;

Mr. RICH, on the 6th of February, to move for a Select Committee to inquire into the efficiency of our military academies and other provisions for preparing officers for regimental and staff appointments;

Mr. COLLIER, on Thursday, to call the attention of the House to the state of our trade with Russia.

BURIAL ACTS.

Mr. A PELLATT gave notice to move (Feb. 6) for a Committee to inquire into the operation of the several Burial Acts and Proprietary Cemetery Acts, also into the regulations of the Home-office for conducting interments under the Burial Acts.

PUBLIC HEALTH ACT.

Sir B HALL, in asking leave to bring in a bill to alter and amend the Public Health Act, premised that, if he obtained permission to bring in his bill, he should not refer the measure, together with the auxiliary bill for amending the Nuisances Removal Act, to a Select Committee, for examination and remission. After describing the various bills and propositions which had been successively laid before Parliament, with the view of improving the sanitary condition of the country, the right hon. Baronet proceeded to explain the provisions of his present bill, by which he proposed to repeal all former Acts, to remodel the constitution of the Board of Health, and simplify the working machinery of surveyors, inspectors, and engineers, through whose agency the decisions of the Board were carried into effect. Entering into somewhat minute details respecting the changes which he purposed to effect in existing arrangements, Sir B. Hall stated that the chief alteration referred to the mode whereby the bill was to be put in operation in any given locality. This was to be done not, as heretofore, upon the invitation of one-tenth of the rate paying inhabitants, but by that of a clear majority of votes recorded at some public meeting, and subsequently ratified, if required, by a general poll throughout the district. Compulsory powers were, however, to be given to the Board to interfere for the sanitary improvement of places where the registered mortality exceeded the proportion of 23 per annum to every 1000 of population. Under provisions, he observed, were introduced into the bill for the purpose of obviating the necessity of applying for a special Act on behalf of every town or district whose inhabitants might wish to bring themselves within the jurisdiction of the Board of Health; for regulating the construction of new streets and houses, so as to secure the fulfilment of certain sanitary conditions; and for defining the powers and duties of local boards. He suggested that the bill should continue in force for a period of two years, by which time its character and operation would be sufficiently tested.

After a few words from Mr WILLIAMS, leave was given to bring in the bill.

NUISANCES REMOVAL ACT.

Sir B HALL then moved for leave to introduce a bill for amending the Nuisances Removal Act, passed in 1848. Recapitulating a multitude of facts, showing the necessity of preventing the accumulation of unwholesome materials, the stoppage of drains, and obstruction of ventilation, on one hand, and the benefit which resulted from care bestowed upon those particulars on the other, the right hon. Baronet explained the method by which he proposed to make public provision for those purposes, intimating generally that the system of inspection at present existing in the city of London would form the model of his arrangements for the whole of the metropolis.

After a few words from Mr Wilkinson, Mr Thornely, Sir H. Willoughby, and other members, leave was given to bring in the bill

HOUSE OF COMMONS WEDNESDAY.

The Speaker took the chair at twelve o'clock.

The SPEAKER read the following letter from Lord Raglan, acknowledging the vote of thanks passed to the Army by the House of Commons:—

Sir,—I have had the honour to receive your letter of the 16th of December, transmitting the resolutions of the House of Commons, and requesting me to communicate them to the officers and men of the British army, and General Canrobert, and I beg to acquaint you that I have fulfilled your instructions, and am proud of having been charged with so agreeable a commission. The officers and men of the British army derive the highest gratification from the knowledge that their gallant exertions in the cause in which they are engaged have been honoured by the approval of the Representatives of the British nation, and they accept with feelings of the deepest gratitude the unanimous thanks of the House of Commons. I shall lose no time in making known to the House the sentiments entertained by General Canrobert of the public recognition of the brilliant achievements of the French army in the joint co-operation with the army of her Majesty; but I may engage to you a copy of his Excellency's letter in reply to my communication, and the general order in which he announced to the army under his command the resolutions of the House, and expressed his deep sense of the honour done to the French troops. I trust you will be so good as to acquaint the House that I am deeply sensible of the great distinction it has conferred upon me in noticing my services, and that you will yourself accept my warmest acknowledgments for the manner in which you have performed the duty of communicating to me its resolutions. I have the honour to be, with the highest respect, your most obedient servant, RAGLAN.

The letter of General Canrobert alluded to by the Speaker was not read.

Colonel NORTH moved for a return of the quantity of coffee, roasted and ground, sent to the army in the Crimea, previous to the 22nd day of December last, specifying the ships in which it was sent, and the date of departure of those ships from this country.—Agreed to.

Mr. J. GREENE moved for a Select Committee to consider the cheapest, most expeditious, and most efficient mode of providing for the printing required for the Houses of Parliament and the public service; to consist of Mr. Muntz, Mr. Hadfield, Mr. L. Vernon, Mr. Hamilton, Mr. Hankey, Mr. Crauford, Mr. J. Greene, Lord Seymour, Mr. V. Smith, Lord Goderich, Mr. Wilkinson, Mr. Crossley, Mr. Wilson, Mr. Thornely, and Mr. Walter—with power to send for persons, papers, and records; five to be the quorum.—Agreed to.

The House adjourned at half past twelve.

(*Continued on page 82*)

THE POLES AND THE CONSCRIPTION.—The persecution of the Polish fugitives who have crossed into Prussia with the view of escaping the Russian conscription is being carried on unrelentingly by the authorities of the former State. Count Von Westarp, a provincial judge in the southern part of Upper Silesia, gave directions on the 11th ult to the subordinate officials of his district to arrest thirty-nine individuals, advertised as conscript deserters by Russia, and on ascertaining their identity to deliver them up forthwith to the Russian authorities in Poland. That even the poorest classes in Poland continue to dread and loathe the Russian military service is shown by the circumstance that all the thirty-nine individuals in question except two of them, who are Jews, are merely day labourers, poor workmen, and household servants

THE SENIOR SERGEANT A CENTURY OLD.—There is at present living in Exeter a sergeant, named Thomas Scobright, who, in October of the present year, will be 100 years old. He served in the 20th Foot, 26th Foot, and 2nd Garrison Battalion for a period of forty years and two months, and has actually been since the 13th of December, 1802, more than 52 years. He served in the army under Lord Cornwallis in the American War of Independence in the year 1783, when the troops were withdrawn from the United States and America, under General Washington. At that time he had been upwards of twenty years in the service, so that he may be said to have almost passed his life in the Army, and it is believed that he is the oldest man at present connected with it. A short time since he was presented by Lieutenant-Colonel Rogers with a medal for the victories in Egypt, a remembrance of his services which he highly prizes.

THE FRENCH IN THE RUSSIAN TRENCHES.—The other night, in a deluge of rain, and in complete darkness, some twenty of those intrepid volunteers known in the army as *enfans perdus*—because they risk their lives for glory—went on their usual nightly visit to the Russian trenches. Two led the way, one behind the other at the distance of five paces. The rest of the band followed, commanded by an officer called Benoit, formed in single file. The sergeant of the party then crept along on their bellies in dead silence. Their chief, an old Zouave, had taught them how. As each man lies down he glides along his rifle to the full length of his arm; he then glides himself; and thus goes on without noise or embarrassment, always ready to bound to his feet should an enemy surprise him. The first in advance acted as a guide; he felt the way; the second communicated with the officer commanded by his band. Every man had his eyes and ears on the alert. The path they took made a circuit. They had to leave on the right an earthwork occupied by Russians. To fall upon it, carry it, or kill its occupants, would not have been a difficult task, but it would have given the alarm. It was necessary to double it and glide between it and the ditch, inspect the enemy's works, and return without letting them be aware of the danger they had incurred. Before entering the narrow strip which separates the fosse from the Russian post, the officer left more than half his men on station. Should his party be discovered, they were to fall upon the post. He himself, with five or six determined men, enters the dangerous path, and proceeds alongside the fosse, with his hand to the breast of the defences; they are bound firmly together, and are fixed fast in the ground. The fossé is six feet deep and full of rain water. It was impossible to scale the fosse; to tear up the defences would require time; it would be better to burn them, the chevaux de frise are connected together by chains. If the one burns the other will remain; it is more advisable to carry them off some twenty yards—once there, they are ours. The night is pitch dark. A few steps a head a man appears. Astonished, he glides towards him. It is one of his own men. If they all get up they fear to be seen; the sound is there; it commences here, and leads there. But the rain continues to pour down. It is bitter cold, and the flash of a gun may lead to their discovery. The officer gives the signal to return. They recognise by the same means. Their track on the moist earth guides them. They pass close to the Russian outwork. The Russians little suspect a mortal foe is so near to them. The men rise together; they surround them all prisoners, but it would be imprudent. There are other parts of the defences to be examined. The success of the enterprise is more valuable than the death of ten Russian soldiers. Finally, all having been explored, they rejoin the remainder of the band who are waiting for them lying down in the mud. "Anything new, boys?" says the officer. "Nothing." "Then let us return." And these twenty brave fellows crept on the slimy ground, as they were becoming anxious about them, in the same silence as before. It is said that in the night between the 28th and 29th of December the same men destroyed the entire works which annoyed our troops, took a prisoner, despite of themselves, and carried off some sacks of powder. One of them received a ball in the foot.—*Letter from the French Camp*

THREATENED DUEL BETWEEN MESSRS. W. CONINGHAM, D. URQUHART, AND E. ROLLAND.—On Saturday morning Mr. Somers Clarke, solicitor, appeared before the Brighton Borough Magistrates, to make an application on behalf of Mr W. Coningham, of Kemp Town, late a candidate for the representation of Brighton and of Westminster, and Mr. Urquhart. The application was that they should enter into sureties by an affidavit on the part of Mr. David Urquhart, late M. P. for Stafford, to cause a breach of the peace. From Mr Clark's statements it appeared that on February 2 March of last year Mr Urquhart and Mr Coningham, Mr. Rolland, and other gentlemen met in the room of the committee of an association which was denominated an Association for the Protection of Polish Refugees and other Countries from Partition. The society was formed, and Mr Rolland was appointed chairman, Mr. Coningham treasurer, and Mr. Walpole hon. secretary. Mr Coningham, at the same time in April, lent Mr. Urquhart a sum of £50; and in October he applied for repayment of the loan, which he considered to have been made for Mr. Urquhart's personal use. Mr. Urquhart, however, appears to have considered that the sum (which he has returned to Mr. Coningham) was advanced by that gentleman for the public purposes of the association. The consequence was that an angry correspondence took place between Mr Urquhart, Mr. Rolland, and Mr Coningham, in which the two former gentlemen called on Mr. Coningham to retract the statement that the loan was made for Mr. Urquhart's private use, or to give satisfaction. The magistrates declared their opinion that Mr. Urquhart's and Mr. Rolland's letters, which were read, were intended to cause a breach of the peace; and they granted a warrant for the apprehension of Mr. Urquhart and Mr. Rolland.

PRESENTATION OF A SWORD TO GENERAL SIR DE LACY EVANS, K.C.B

The public recognition of this gallant officer's services on his return to England from the Crimea, took place on Monday at Folkestone, when the congratulatory Address, accompanied by a Sword valued at 150 guineas, was presented to him by a deputation from the inhabitants of the united Parishes of Hythe, Folkestone, and Sandgate. The presentation took place at one o'clock in one of the large saloons of the Pavilion Hotel. The deputation was headed by Mr Brockman, M.P. for the district, and included about sixty gentlemen, among whom were the Mayor of Hythe (Mr Money-penny), the Mayor of Folkestone (Mr. Macke), Colonel Sandilands, Mr. Lacon (Comptroller of Customs at Folkestone), the churchwardens of the several parishes, and the aldermen and councillors of Hythe and Folkestone, &c. The deputation, having been introduced, were received with marked courtesy by the gallant General

Mr. Brockman (addressing Sir De Lacy Evans) said:—I have been requested, in the name of the inhabitants of the united district of Hythe, Folkestone, and Sandgate, to present a congratulatory address to you upon your return to your native country, after a career in a foreign land, which, although brief, has been brilliant and patriotic. We have been anxious not to lose a moment in doing honour to a gallant and distinguished officer; and we carefess ourselves gratified to find that the "Men of Kent" are first in the field, as they certainly yield to none in their admiration of your bravery and patriotism. I have for years been your intimate friend; and it is a subject of high gratification to me that in every company of Englishmen your name is received with expressions of honour and exultation. We venture to ask you to honour us by accepting this sword, in testimony of our admiration of the manner in which you have used its kindred weapons for more than half a century After apologising for his want of eloquence in performing the task he had undertaken, Mr. Brockman read the Address as follows:

TO GENERAL SIR DE LACY EVANS, K.C.B., M.P., ETC

Sir, We, the inhabitants of Hythe, Folkestone, Sandgate, and adjacent parishes, forming the Parliamentary borough, take the opportunity now open among us affords to express our satisfaction that your health is sufficiently restored to allow of your receiving our congratulations on this occasion

We welcome you back with heartfelt pleasure from the seat of war—a war made memorable by deeds of justice and the independence of nations, accomplished, and has been by disease and privations, but borne with constancy and patience. It is with pride (mingled with deep grief for the noble hearts that have throbbed their last in the gallant actions of Alma, the heights of Inkerman) that we have traced the passages of danger and death through which you have shone conspicuously your energetic mind, self-abandonment to sickness to attend the call of duty, and generous self-denial in the hour of victory.

We gladly thank the Almighty dispenser of all good for your safe return to England, Lady Evans, your family and friends, and trust that many years of posterity) may still be in store for you, and may enable that country still further to be indebted to you for the councils which experience so hardly obtained must enable you to furnish in the continued prosecution of her battles

Honour us, sir, by accepting this outward token of our esteem. It represents not the measure of your deserts, nor our appreciation of your worth.

Folkestone, Jan. 22, 1855

The Address having been handed to Sir De Lacy Evans,

The gallant General said, he could assure the gentlemen forming the deputation, and the inhabitants of the district generally, that he felt most highly gratified at the compliment which had been paid to him. He believed that all men felt pleasure in visiting their home after an absence in foreign countries, particularly in critical times; and it certainly could not fail to afford him additional satisfaction to receive such a cordial welcome on the very spot where he had landed. He was well assured that the compliment was not intended for himself alone, but that it was also an exemplification of feeling for the gallant army with which he had the honour of serving. He had observed that great complaints were daily made of the management of the war, and it was asserted that the war had made but slow progress. Now he begged to differ with many on that point. He did not consider, under the circumstances, that the progress of the war had been slow, and he was sure that the result would show the correctness of his opinion. No such war as that in which they were now engaged could possibly be finished in so short a time as some were unreasonable enough to expect, particularly where such a country as England, with its small military strength, was not the aggressor. England was not a military power; and the aggressor in the present war was a very important military power, possessed of vast resources (hear)—one who always maintained a very large army, and was always prepared for war, if not, indeed, for aggression. Hence, at the sudden outbreak of the present hostilities, England had not been prepared with a large standing army. It was impossible she could always have a perfect war establishment on a military scale. We had happily enjoyed forty years of peace, and opinions would not admit of the continued maintenance of a large standing army. He would recall to their minds the many military wars which this country had been engaged, and it would be found that the British forces seldom attained decisive success until at least a third campaign had set in. He might instance the war which immediately followed the breaking out of the French Revolution. England was great and powerful as a commercial nation, and he had no doubt that the present contest would also be brought to a termination as decisive in its results as it would be glorious to British arms. The army sent to the Crimea, though young, had vindicated the honour of its country. There was no other army to send. It was young, but it had done its duty. Many mistakes in details had certainly occurred, but they had been the result of inexperience. No want of judgment, in his mind, had been evinced by any officer in that staff in which he had had the honour of holding an humble post. Some battles had been fought which each our army had gathered glory in alliance with the arms of France—an alliance he would pronounce the most devoted and loyal, and which the spirit of this country fully appreciated. He again begged to return them his best thanks; and at the present moment he almost wished he was not a soldier, as he might then have been a better orator. Having returned home, however, he was glad to find that his humble exertions had been considered deserving of acknowledgement, and he thanked them from the bottom of his heart.

Mr. R. Hart, one of the deputation, asked permission to call the attention of the gallant General to the present condition of our army in the East. He was not desirous of drawing forth any expression of opinion which Sir De Lacy Evans, as an officer, might feel desirous of withholding; but the fact could not be disguised, that notwithstanding the great generosity of the people of this kingdoms, the army at present in the Crimea was in a most wretched condition.

Sir De Lacy Evans observed that he had of late read many statements on the condition of the troops It was not his province, or that of any officer, to enter into this question, but he had no objection to say one thing, and that was, that when he left head-quarters the army was not in the condition described in some reports. More he could not say. He would again remind them that at the commencement of a war many mistakes generally took place, and after forty years' peace such mistakes ought not to occasion much surprise. He would take this opportunity of saying that he fully appreciated the kind sympathy now so generously evinced by all classes for the army, and he had no doubt the course of conduct pursued by the people would be the forerunner of great results

The deputation then retired

Sir De Lacy Evans, though much improved since his arrival at the Pavilion, a still in very imperfect health

CHRISTMAS IN THE CRIMEA. Well, and what do you think I was doing when I received your letter on Christmas-eve? Why, mixing batter for pancakes, and Walter was frying them. Of course, when letters were announced, down went spoon, fin, and everything else, until I had heard from the dear ones I have left behind We are three in mess together, and, having had so much salt pork and junk lately, we determined to have something extra for Christmas, so we sent our cook and commissariat man off to Balaclava, where he purchased 5lbs. of flour for 6s. and 3lbs. of plums for 4s., which is rather dear. So having had our fill of pancakes, the next consideration was how to make the Christmas pudding—and this was a teaser. However, we picked the plums, and got them mixed with the flour. In place of suet, we cut up pieces of salt fat pork very fine, which being also amalgamated with the other ingredients, our pudding was complete as to making. Now, as to cooking it, we found an old camp kettle, which, having pierced with our bayonets, and filled with charcoal (now almost used up), formed our oven. On this we placed another camp kettle with our pudding in, and left it to boil for three hours, when it was pronounced done; so off with it, and on went the frying pan, with some slices of fat pork and fresh meat (the first we have had for six weeks) and some onions, which made a very savoury mess, I assure you. Our dinner being now ready, we were in want of something to wash it down, but having neither sherry, wine, porter, nor tea, on went the frying-pan again to roast some green coffee (by-the-by, I have just finished roasting and grinding a bottle full of that same article), which being roasted, one of us gets a large stone which is worked hollow in the centre. Into it the coffee is put, and a 42-pound shot rolled over it until the coffee is sufficiently crushed, when it is put into the mess-tin, with due quantum of sugar, to boil; and so our Christmas dinner is ready, and I can assure you that we were ready also, and enjoyed our dinner as well as the circumstances would allow. While eating my plum dough it made me think of dear old England and the happy Christmas I spent there last year, and where I hope to spend the next.—*Letter from the English Camp, Dec. 25.*

HOW THEY GET ON IN THE FAR WEST.

The proposed interference of the people, rather than the Government, of the United States, with the affairs of Europe, has increased the interest which the inhabitants of the Old World take in the progress of the New. Little more than seventy years ago they were the British North American Colonies emphatically, "our plantations," containing about 3,500,000 people. In 1790, when the first Census was taken, there were under the Federal Government 3,929,872; in 1850, at the last Census, there were 23,191,074; and now there are probably nearly 26,000,000. The population, therefore, has increased sixfold in less than sixty-four years. It doubles itself in about twenty-four years. In the period between 1790 and 1851 the population of Great Britain increased from about 9,800,000 to 21,000,000, or it increased two and one-seventh fold. The population of the United States, therefore, has increased almost three times as fast as the population of Great Britain, and is now increasing in the same or a still greater ratio. But in no other country of Europe has the population increased half as fast as in Great Britain. In many of the countries of Europe population is almost, and in some some completely, stationary. Thus the population of the United States has increased at least six times as fast as any State in Europe except Great Britain. This increase is not, as in Russia, the consequence of conquest. In 1803 the acquisition of Louisiana, by purchase, added some fifteen or twenty thousand to the population; but the other acquisitions of territory such as Texas, California, part of New Mexico—brought with them very few people, except as persons were tempted to settle in these places after they were acquired by the States. The extension of their dominion has been in general over unpeopled lands, and they have not at the same time conquered and incorporated large populations. The increase of people is mainly due to natural fecundity and—but in a much less degree—to immigration. There is no other example in modern times of such a rapid and continuous increase of people, and there is good ground for believing that nothing like it ever before took place in any part of the world. Never before had such skill and knowledge as the Americans carried with them from Europe an opportunity for displaying the power of production on an abundance of fertile unoccupied land, and we may therefore rest assured that never in any age did population increase for the long period of seventy years so rapidly as in the United States. The example of the neighbouring country of Mexico, the example of the Indians who still rove in the fertile valley of the Amazon, and over various parts of America in much the same condition as when that continent was first discovered, demonstrate that plenty of room or of unappropriated land and all the material elements of wealth are not of themselves sufficient to cause or encourage the growth of population. Man is fed and life nourished by labour; and the steady, skilful application of labour, to provide subsistence, and all other things necessary to keep the body in health and vigour, makes all the difference between the Anglo American inhabitants of the States, the Spanish American inhabitants of Mexico, and the Indians scattered over the whole of the new continent. To skilful industry the people of the United States owe all their greatness. In what degree their exertions may have been protected and encouraged by their form of government, is not at present a question: we put aside all political considerations to pay attention to the undoubted fact that the wonderful increase of the people in the States, their prosperity and power, are due to skilful and steady industry.

The total slave population of the Federal Union is now about 3,300,000—scattered over sixteen of the thirty-one States, and over two of the five Territories which constitute it. But in New Jersey there are only a few slave apprentices, on the way to abolition; in Delaware, Utah, Maryland, and Missouri the number is comparatively small, and the bulk of them are in Virginia, the Carolinas, Georgia, Alabama, Mississippi Louisiana, Tennessee, and Kentucky. The plague is mainly confined to nine States, and they are not the most flourishing. The chief source of the national prosperity is not the labour of slaves, but of free men. Even in the States where slavery exists there is a great deal of free labour, and to it especially is due the general progress. For many years no slaves have been imported, and all the immigration has been of free men Nevertheless, the slaves have increased nearly as fast as the free population—a pretty certain sign that at least their material comforts are cared for. In 1790 there were 697,897, and in 1850, 3,204,067 an increase of nearly fivefold; in 1790 the free population was 3,231,975, and in 1850, 19,987,107—an increase of more than sixfold. The free population, however, exists in all the States, and as it increases comparatively slowly in the nine chief slave States, in them the slaves increase the fastest. With the exception of the States of Mississippi, Louisiana, Texas, and one or two other slave States, the increase of population is not proportionately so great as the increase of population in New York, Pennsylvania, Ohio, Michigan, and in other States, where there are no slaves In the slave States the slaves increase most; in other States the increase is all of free men, which makes the contrast stronger. Even if it were otherwise, as the slaves make little or no progress in improvement—the worst feature of slavery—the whole progress in the States may be attributed to the free population. These latter have not only ample room; they not only possess a knowledge of all the useful arts of Europe; they are free to exert themselves in every direction; and individually and collectively, they are undoubtedly the most energetic and steadily industrious people—not even excepting ourselves now on the earth. Hence their shipping—to which we are indebted for many improvements in our shipping—almost equals ours in tonnage; and next to it is by far the largest mercantile marine in the world. Hence their railroads, though generally laid down with only one pair of rails, and destitute of all the architectural works which have found a place on European rails, much exceed in length those of our country; and hence the telegraph, there communicating with almost every town, is almost as much and as commonly used by the whole people as the post is here. Descending from these general statements, we will set before our readers, as a specimen of the whole, the growth of one town.

On the southern shore of Lake Michigan, which has a water communication to the south with the Mississippi, the West Indies, and the whole southern hemisphere, and to the north-east with the St. Lawrence, all the British North American colonies, and all parts of Europe, there was founded, somewhere about 1830, the town of Chicago. It is not the only town in the neighbourhood, for there are others on the same lake, and one of them, Milwaukie, not more than ninety miles from it, is growing perhaps as fast as Chicago; but of this latter only we shall now speak. In 1840 it had only 4479 inhabitants; in 1850 they numbered 29,963, though no gold mines had been found in the neighbourhood There run from it, connecting it with great trunk lines of rails, twelve railroads, 2416 miles in length; and it has, moreover, sixteen branches of railways and extensions, running 1130 miles. By railroads it is united to Mobile, in the Gulf of Mexico, and with Philadelphia, New York, and all the eastern States. The construction of these rails has added, since 1850, so much to the population, that the number is now supposed to amount to nearly 50,000. In 1851 the value of its imports was 24,416,000 dollars, and of its exports 10,000,000 dollars. In 1853 it received from the country around it, and sent forward to New York and other places, to be distributed in part over Europe, nearly 14,000,000 bushels of grain of all kinds, and flour; besides unknown numbers of barrels of beef, and pork, and lard, and hams—the grain alone being greater in quantity than proceeds, on an average, from any of the great shipping ports of the Old World, including Odessa. From Chicago the quantity exported is increasing year by year. It is only one, though the chief, of several depôts for the spare agricultural produce of upwards of 1,000,000 people, who within twenty years have planted themselves or have grown up on the fertile lands that lie to the west of Lake Michigan, and now, in the several States of Illinois, Iowa, Wisconsin, Arkansas, Missouri, &c., are increasing at the rate of several hundred thousand a year. Being a kind of common metropolis for them, as they multiply and fill the broad lands that stretch to the Pacific, Chicago promises to become one of the largest inland cities of the world, nowhere rivalled, except by such huge ones as London and Paris, and the fabulously large towns of China. It is already a great place, formed by the hand of labour in twenty years, having in it all the conveniences of a European town of the first class, abounding in newspapers, speaking by telegraph, and running by rail to every part of the Federal Union.

Now let us go a step lower, and look at the industry in an individual which, when exercised by the multitude, is the means of accomplishing all these wonders. It has been remarked, with some acuteness, in order to console mankind for a present-asserted inferiority to the ancients, that the "Pyramids were built by men like ourselves." In like manner, we may find not merely consolation, but encouragement, and even delight, in noticing that the prairies of the Far West are cultivated; that railroads are made over the whole of North America; that the desert is crowded with towns filled with all the elegances of life—the flourishing abodes of trade, art, and literature, by patient and energetic industry, such as is possessed in common by the multitude in Europe and in America. Nay, the very men who, in the former, rust, waste, and are destroyed, in the latter are roused to exertion; and their labour—cramped, impeded, and fruitless in Europe—in America converts the wilderness into a blooming garden, and the desert into a crowded city. About the year 1806 there was born in Somerset county, State of Pennsylvania, of comparatively poor parents, Jacob Strawn, or Strahan. Like all American children, he received a school education, and felt the desire to get on common to all boys whenever they are free. He married before leaving home, and then took to clearing a piece of ground for a farm. Late in the night did he keep chopping up the timber by fires which his wife made; and early in the morning, allowing himself not above two hours' sleep, was he again at work. He was successful; but soon gave up his first clearing, and removed to another in Ohio. Here he stuck and prospered for eleven years, when he removed further west and fixed himself in Illinois. He bought there three hundred acres of land. From the beginning of life he had a passion for cattle, and he made it his business to buy, sell, feed, and drive them. On his three hundred acres he built a log house: forward he went buying, feeding, and selling cattle; adding acre to acre, herd to herd, till his three hundred acres increased, in two compact farms, to sixteen thousand three hundred acres, all situated in Morgan and Sangamon counties, State of Illinois. He feeds sixteen hundred head of cattle, seven or eight hundred hogs, fifty horses, and from fifty to a hundred mules. His first log hut has given place to a handsome brick house, that should be far more worthy of respect hereafter than the robber castles of the middle ages which we admire. He cultivates nearly three thousand acres with maize, and leaves the bulk of his land in grass. He sells stock yearly to the value of 100,000 dollars. His land is in admirable order, and is generally cultivated by contract, he letting it in portions to other men to till under his direction. In the half-peopled country in which he first settled he had some difficulty in procuring cattle. Then he scoured the whole district, riding by day and by night, on roads or without roads, through storms and through sunshine. In hunting up cattle, and driving them, he passed days and nights on horseback, getting no other sleep than in the saddle. He soon formed connections over a wide extent of country, and had, in different places, pilots, who were necessary, and assistants ready at his summons. No beast was, in his younger days, too wild for him to subdue; and it has been said—but this smells of Kentucky that he could seize a beast by the horn and nose and throw him on the ground. He acquired such accurate knowledge of cattle that he could ride through a drove, count them, calculate the weight of each beast to a few pounds, and their value, and offer a price or buy them on the spot, before another man could well tell their number. He was a great trader before he kept a book, yet he made no mistakes. He knew cattle by sight better than men, and never forgot the beast with which he had formed an acquaintance. By energies like his, the great provision market of the west became supplied with beef and pork; dairies were formed, and the States came to export annually about 100,000 barrels of beef, 200,000 barrels of pork, 60,000,000 lbs. of ham, 60,000,000 lbs. of lard, 4,000,000 lbs. of cheese, and 14,000,000 lbs. of butter. Mr. Strawn is still a hearty man, with three sons to assist him in his business: but he complains that he has become lazy, and must now sleep four hours, when formerly two were sufficient. He rises, however, with the dawn, and is active through many hours. He abjures alcohol, and delights in milk and apple-pie His great exertions and services have obtained for him the name, as we learn from the *Prairie Farmer*, of the "Napoleon of cattle;" and in the Far West his merits are recognised as a perfect exemplification of how the people there go ahead

It is pleasant to add that at all the new towns of the West there is an abundance of newspapers. In Chicago alone there are five daily papers, six weekly papers, one semi-monthly, and three monthly periodicals. The *Prairie Farmer* is one of the latter; and to it and the *Chicago Democratic Press* we are indebted for much of the curious information we have laid before our readers.

THE SANDPIPER.

To the Editor of the ILLUSTRATED LONDON NEWS.

I have just read in the ILLUSTRATED LONDON NEWS of the 20th instant the description given of a Sandpiper which was shot by a gentleman near Cambridge, on the 12th of December last, with an Engraving of the bird. A bird answering to that description in every respect, both as to size, form, and colour of plumage, and of which the Engraving is an exact representation, was shot by me at Bigswear, on the banks of the Wye, in Gloucestershire, on Friday last, the 19th inst. The bird, not being known, was particularly examined, and shown to some gentlemen, who agreed, after reading the account, and seeing the Engraving of the sandpiper, that it was the same bird It is to be regretted that it was too late to preserve the bird as a specimen, since it appears to be a rare bird in this country

I am your obedient servant,

W. S. B

Bigsweir, Jan. 23, 1855.

CHAPTER OF THE BATH. Her Majesty, it is said, will, shortly after her arrival in London for the season, hold a chapter of the above distinguished order, of which Prince Albert is Grand Master, for the purpose of investing Lieutenant-General Sir De Lacy Evans (now a Knight Commander) and Major-General the Earl of Cardigan, who distinguished himself by his heroism at Balaclava, with the insignia of the grand cordon of the order.

INTERNATIONAL CIVILITIE. The other day a Russian officer presented himself at the point where the trenches end with a flag of truce. The works and firing immediately ceased on that point. The Russian approached, and the officer on duty went out to meet him. He was the bearer of a letter for the Commander-in-Chief. Having made his official communications, the Russian officer, who spoke very good French, chatted how we got on, and the cold weather was. "We don't mind it," was the reply. "Well," said the Russian, "for our part, we are tired of it." A good deal of courtesy prevails During the luncheon of the officers of a Russian ambassade, at about 60 metres from our trenches, showed themselves to our soldiers and politely saluted them, which politeness was returned by our men. As soon as the Russian had left, and the flag of truce was hauled down, the crack of the rifle was again as lively as ever. No one could have supposed that a few minutes previously there was a suspension of hostilities by the bullets the *sowchys*, as the men call them) came whistling just the same as the men at their work In war, at a given signal, soldiers are ordered to aim at their destined enemy to kill each other. This is military custom The ground in the vicinity of the Camp is strewn with cannon balls and fragments of shells. In some places the balls lie as thick as stones just dug up in a field. Near the trenches are not so many cannon balls, but those fragments of shells and grenades. The clay soil is often marked with dark streaks of blood or gunpowder; yet we have very few wounded.—*Letter from the French Camp, Dec. 31.*

MARRIAGE OF SIR H. DE TRAFFORD WITH LADY A. TALBOT

LAST week the quiet monotony which usually pervades the town and neighbourhood of Rugby, was agreeably dissipated by an "auspicious event," celebrated in a manner that divested it of the commonplaces usually attending marriages even in high life. The event we refer to was the celebration, on Wednesday, the 17th inst., of the marriage of Sir Humphrey de Trafford, Bart., with the Lady Annette Talbot. Both names, as our readers may be aware, are inseparably connected with some of the most stirring epochs of English history. The de Traffords are a family of high antiquity and great wealth in Lancashire, of which county the present representative of the family, the subject of our notice, is Lord-Lieutenant. The lady is the eldest daughter of the late Colonel Charles Talbot, by Julia, daughter of the late Sir Henry Tichborne, Bart. (subsequently married to Capt. Washington Hibbert). Sheand her brother, the present Earl of Shrewsbury, are the lineal descendants of many "renowned Talbots" of the mighty Earl, among the rest, who upheld so long the English power in France. Both families have ever been numbered among the leading supporters of the Roman Catholic faith; and the knowledge that the marriage ceremony would be invested with many accessories characteristic of a bygone age, in addition to the usual picturesque ceremonial of the Romish Church, created much interest in the Midland and Northern Counties. A great number of the neighbouring gentry had also received invitations to the grand ball which was to be given in the evening, in celebration of the event; and in the hotels of Rugby every bed had been engaged for a considerable period.

At Bilton Grange, the residence of Captain and Mrs Hibbert, a distinguished circle of guests had been for some days assembled, including the Earl of Howth and the Ladies Mary and Emily St. Lawrence, Lord and Lady Dormer and the Hon. Miss Dormer, Viscount St. Lawrence, Mr. and Lady Catherine Wheble, Hon. G. S. Smythe, &c., &c. After breakfasting, the company assembled in the gallery at Bilton Grange, and here the *coup d'œil* was the most charming that can be imagined. The room itself was of great length, paneled with dark oak, and hung with sombre portraits and gorgeous tapestry. Peopled with figures, harmonising so well with the spirit of the place, it was difficult to avoid being carried back in imagination five or six centuries at least. The bridesmaids, twelve in number, were attired in white silk, with a cope or mantle of coloured corded silk, fastened with a brooch of pearl, and falling in long straight mediæval-looking folds from the shoulders. Six of the mantles were red, and six blue, thus equally dividing between them the colours of the Madonna. The head-dresses consisted of blue and red wreaths to match the mantles, with the indispensable white tulle veils falling from the back of the head over the whole person. The ladies who officiated on this occasion were the Lady Gwendeline Talbot, younger sister of the bride; Miss Belinda de Trafford, sister of the bridegroom; the ladies Emily and Mary St Lawrence, cousins of the bride; Miss Tempest, niece of the bridegroom, the Hon. Mary Dormer, cousin of the bride; Miss Hibbert, the Misses Lydia, Margaret, Cecilia, and Emily Herbert, her half-sisters, and Miss Teresa Townley. The bride's costume—not very dissimilar in character—was of white glacé silk, richly trimmed with Brussels lace. Her Ladyship wore a cope of white watered silk, embroidered with gold and silver flowers, fastened with tassels of the same. A brilliant diamond cross hung round the neck, costly bracelets on the arms, and the prescriptive orange wreath and point veil dependent from the head completed the costume.

Mrs Washington Hibbert, the mother of the bride, was most picturesquely attired. Her dress, also of white silk, was trimmed with ruches of dark-blue ribbon vandyked; and the cope was of dark blue velvet suspended from each shoulder by a *coque de perle*. A head dress of the same material, ornamented with pearls, heightened and completed the effect of the magnificent robe. The marriage was solemnised at the chapel attached to St Mary's College, Rugby. This edifice was built about eight years since, by Captain Hibbert. In it novitiates are educated in the doctrines of the Church of Rome. From the spot where the bridal party were set down to the entrance of the chapel, the path had been covered with crimson cloth, and covered by a canvas roof, gaily ornamented with banners. They were received by the officiating priest, and on the arrival of Dr. Ullathorne (titular Bishop of Birmingham) the ceremony was performed by him. After an admirable and impressive address to the contracting couple by Dr Ullathorne, a grand pontifical high mass was celebrated. This was just before noon briefly interrupted by the retirement of the bride and bridegroom into a side aisle, in order that the registrar of the district should complete the legal form, to comply with the law which requires all marriages not effected by special license to be completed before that hour. Outside the chapel the happy pair were loudly cheered by an immense concourse of persons assembled, whose enthusiastic cheers testified to the popularity which the excellent owner of Bilton Grange has won from all classes and creeds during a long residence in the locality.

The company having returned to the Grange, a superb déjeûner was served in the banqueting-hall—an exquisite apartment with an open arched roof of great beauty. A gallery occupies one end, and the walls are decorated with old portraits in oak frames, in capital keeping with the rest of the apartment. On this occasion a famous bride-cake, decorated with appropriate Scriptural mottoes, was placed on a stand in the centre of the hall, under a magnificent silver corona, designed by Captain Hibbert.

After doing ample justice to the good things provided, the health of the bride and bridegroom was proposed in an appropriate speech by Dr. Ullathorne. Sir Humphrey de Trafford, in a feeling manner, returned thanks. The host and hostess, and finally the bridesmaids, having been similarly honoured, the party rose and retired.

The ball in the evening was attended by a large party of the

THE MARRIAGE CEREMONY, IN ST. MARY'S CHAPEL.

RECEPTION OF THE BRIDAL CORTEGE AT ST. MARY'S CHAPEL.

neighbouring gentry; and the poor in the neighbourhood were also regaled by the liberality of Captain Hibbert.

Bilton Grange, situate within three miles of Rugby, the seat of Captain Washington Hibbert, the present husband of the bride's mother, is, *par excellence*, one of the most unique and perfect Gothic residences in England. What it lacks in antiquity Captain Hibbert has made up by the most lavish expenditure of ornament, controlled only by the exquisite taste which pervades every part of the mansion. The general design of the house was Captain Hibbert's own, and the details were carried out under the personal superintendence of the late lamented Mr. Pugin, who justly considered the interior one of his chefs-d'œuvre. Where unlimited means are placed at the disposal of artists of the highest rank in their profession, the result may easily be anticipated; and Bilton Grange is one of those houses that will stand for ages a monument of the liberality and good taste of its gallant owner. The leading features of the mansion are the great gallery, the banqueting-hall, and the drawing-room. It is impossible to speak too highly of the general effect of all these apartments. The gallery, which is about 160 feet in length, might have been built in the thirteenth century, so completely has the spirit of the old architects been caught in its design and arrangement. The walls were hung with ancient family portraits, interspersed here and there with panels filled with tapestry of the richest hues and most antique manufacture. From the ceiling hung a number of Gothic coronas, by which the gallery is lighted; and the floor is composed of polished oak. The banqueting-hall is a stately apartment, having an open arched roof of great beauty. A minstrel's gallery occupies one end of the apartment, and the walls are hung with old portraits, in perfect keeping with the sombre tone of the general decorations. But the drawing-room bears away the palm. This is an exquisitely-finished saloon of great beauty, with bay-windows looking upon the garden. Over the fireplace, which is of elaborately-carved stone work, is emblazoned the figure of St Hubert, the patron saint of the Hibberts, with labels bearing the family mottoes, "Sit prudentia" and "Pugna pro patria," on either side. The walls are hung with a material of great brilliancy of colour, harmonising charmingly with the fittings of the room—the pattern chiefly consisting of squares, within which the family monogram is shown in every variety of device. Around the cornices are inscribed in Gothic characters a series of mottoes enjoining the practice of the moral virtues. The ceiling is carved and ornamented in gold and colours, and the furniture admirably preserves the true Gothic style of the apartment.

On entering the Chapel, which is situate just on the confines of the borough, and nearly opposite the famous old school from which the place has attained all the celebrity it ever had, the spectator soon finds that it is to the liberality of Captain Hibbert the members of the Roman Catholic religion in this district are indebted for the erection of a very beautiful chapel standing in its own grounds, and annexed to a college of considerable extent, in which novitiates are educated in the doctrines of the Church of Rome. Upon a tablet, immediately upon entering the chapel, there is inscribed as follows:

A FAITHFUL TRANSLATION OF THE GRANT OF POPE PIUS IX., CONCEDED TO THE PRAYER OF THE PETITION AS MADE TO HIS HOLINESS BY THE CONGREGATION OF ST MARY'S CHURCH, RUGBY.

"At Holy Father,—A church having been erected by the piety of Captain Hibbert, a convert to our holy religion, in the neighbourhood of Rugby, in Warwickshire, dedicated to the great Mother of God, the consecration and solemn opening of the same having taken place on the 8th of September, 1847, the faithful of that place supplicate your Holiness to grant a plenary indulgence on solemn festivals, and on those of Our Ladye, to all of the faithful, who, after confession and holy communion, will visit the aforesaid church, praying according to the intention of your Holiness.

Rome, Nov. 16, 1851.—Granted as requested. POPE PIUS IX.

Seen by us William Bernard, Bishop of Birmingham."

After perusing this document, it can be no matter of surprise that the occasion of an event with which the happiness of a member of Captain Hibbert's family was so intimately associated should have been gladly selected by the members of the Romish Church in this district as a favourable opportunity for testifying their gratitude and respect towards him. This was done in an effective manner on the 17th inst.; and it may be doubted whether on any former occasion within the last two centuries a ceremony appertaining to the Romish Church has been celebrated in this country in a more imposing manner than was the marriage of Sir Humphrey and Lady Annette De Trafford.

The interior of the Chapel had been very elaborately decorated for the occasion. Mr. Hardman, of Birmingham, with his staff of officials, has been employed for some time past in carrying out plans, the completeness of which were beyond all question. The Chapel itself consists of a nave, which is separated by a handsome carved oak screen from the altar. The Ladye Chapel, on the north side of the altar is approached by an aisle running parallel with the nave, from which it is divided by a series of arches. The interior walls of the chapel were decorated with large emblazonments, displaying the arms of the two families of Talbot and De Trafford; and, on either side of the altar were banners bearing heraldic shields. Upon a label over the chancel arch was emblazoned, in black letters of the sixteenth century, the following text from the Gospel of St. John:—

"There was a marriage in Cana of Galilee, and the mother of Jesus was there; and Jesus also was invited, and his disciples, to the marriage."

And upon labels under the wall-plates, extending entirely round the edifice, the Douay version of the 128th Psalm was inscribed in corresponding characters. The pillars throughout the sacred edifice were wreathed with bands of shamrock, showing the Irish descent of the family; and natural ivy wreaths, ornamented with bows of white ribbon, lined the soffit of the arches and capitals of all the pillars. The seats in the centre of the nave had been entirely removed, and in front of the altar screen was placed a "prie Dieu," covered with crimson velvet, upon which were embroidered in gold lace the monograms of the betrothed pair. The altar was hung with red and gold tapestry of [Gothic pattern, a gift of the bride to the chape

THE DEJEUNER, IN THE BANQUETING-HALL, AT BILTON GRANGE.

BILTON GRANGE, NEAR RUGBY.

THE LIFE AND WORKS OF W. ETTY. R.A.*

Etty was an instance—one out of many in the history of modern art, and particularly that of our own country—of a man endowed with a certain amount of natural gifts, achieving a certain and respectable amount of success, but failing of attaining a first rank for want of proper education and direction of his talent. Adopting art, in spite of many difficulties, at an age almost too advanced to submit to the drudgery of instruction, and soon discovering a facility in a special province of art, that of colour, obliged to paint, for a livelihood, ere he had learned to draw; he followed up his *specialité* to the end, to the almost total neglect of every other requirement of excellence.

The son of a superficially and gingerbread-baker at York, William Etty was, at the usual age of putting out to life, apprenticed to a printer at Hull, with whom he served the appointed seven years, doing his duty as a compositor, though much against the grain; his fixed predilection being for painting. At the termination of his apprenticeship, then nearly nineteen years of age, his friends yielded to his importunities, and sent him up to London on a visit to an uncle, who was well to do in the gold-lace trade; a kind hearted man, who resolved upon giving the youth a fair trial in the field of his ambition. Introduced to Opie and Fuseli, and afterwards to Lawrence, he was received as a pupil of the last named for a twelvemonth, on payment of a fee of a hundred guineas; but being left very much to his own resources, saving the occasional copying of a portrait, or parts of one, it is not to be supposed that he learned much in a school so refin d, yet so artificial and conventional as that of the fashionable portrait painter. Meantime, admitted as a pupil in the Royal Academy, he studied and worked unrestrictedly in his own way—unresolved at first what line to adopt. At an earlier period, before entering the Life School, he thought of painting landscape; but "afterwards," to use his own words, "when I found that all great painters of antiquity had become thus great through painting great actions and the human form, I resolved to paint nothing else;" and, pursuing at a later time the same idea, he go on to say, "Finding God's most glorious work" of creation, it is not the fact—being the weaker vessel, and second to man; and insufficient for the realisation of the grandest subjects in the eye of art. The sneer against "drapers' and milliners' work," is an impertinence, exposing ignorance of the grandest works of the greatest painters, both ancient and modern, and a want of appreciation of the divinier attributes of human beauty. In the days of great art, both painting and sculpture, ancient and modern, the rule to which of course there have been exceptions) has been to drape the figure, particularly the female; and the triumph of the artist has been to show beauty of form and grace of attitude, improved by appropriate and tasteful costume, and giving life and character to the cold marble or the flat canvas, by the development displayed in the head, and the expression of the face, upon which his greatest study and care were bestowed, and which were the test and proof of his inspiration. Etty found himself gifted with the knack of imitating the colour and texture of the human flesh; but he was not so successful in drawing the human figure, whether in action or repose; and had no conception of the diviner part of our nature—the soul, the mind; of which the body is but the vehicle.

We have said Etty was not strong at drawing; and the reason was simply, that, having no natural gifts for what the Germans call *motive*, of which drawing is the chief exponent, he did little to supply the technical power by study. According to his biographer, "blind motions towards colour stirred within him; ineffectually as yet. The attempts of even later date are remembered as 'black and colourless.' But the impulse, the instinct were there;" and then we have the test in his own telling—"One night in the *Life* Fuseli was visitor. I threw aside the chalk, took up my palette set with oil colours, and began to paint the figure. 'Ah! there,' says Fuseli, 'you mean at home; and truly so I felt;" and from that time he continued to paint the colour of the model before him, the outline of which he could not trace; only occasionally attempting a copy from the antique. Is it surprising that his first efforts were failures, and that in 1840 (when twenty-three years of age) his six pictures tendered to the Royal Academy for exhibition were rejected? "Deep was the night in the *Life*," he says, "my vanity and self-conceit had received;" and noble, because generous and candid, was the remark made to him on the occasion by Sir Thomas Lawrence.—"My (former) master told me the truth in no flattering terms. He said, 'I had a very good eye for colour, but was lamentably deficient in all other respects almost;'" and Etty, to do him justice, taking the admonition in good part, set himself to work "studying the skeleton, the origin and insertion of the muscles," sketching from Albinus, and from "prints of the antique figures." But it was only as "to get up" the alphabet and spelling-book of Art; and so Etty continued his devotion to the Muses and Graces after his own fashion, one in which millinery and dressmaking, any more than the osseous and muscular development, were to have a place. Still, however, he did not perfect his really taking, and in many respects effective, colouring all at once. He changed his plan frequently before he was satisfied of being in the right way; and then he records the fact in a manner which opens a new and not very agreeable insight into the artist's mind. We know not whether there is any necessary connection between painting and unwholesome religious sentimentality, but it is remarkable that neither Haydon nor Etty could finish a good day's work, nor manage a good commission, without perceiving in it the interposition of a special providence, which they acknowledged in prayers of thanksgiving, which shock us as we read them. For instance, in the case of poor Etty now spoken of, after detailing certain principles of good colouring which he has at length lighted on, he bursts forth in the following strain: "O Father of every good and perfect thing! do Thou be pleased to assist my blindness; and to grant that in this and all other advances to knowledge I may be ever conscious of Thy goodness, and use them to the advantage of society. For Christ's sake. Amen." This was early in life; but even still less excusable, and still more disagreeable to our mind, is what we read of him (in 1839, at the ripe age of fifty-two) when seeing the number of ambitious pictures by Hilton left unsold at the Royal Academy:—"How thankful to God I ought to be," emphatically exclaimed Etty, "that I have not a single picture on my hands!"

The secret of Etty's success was that he painted a few class of subjects, in which very little of mind entered; that he painted everlastingly, always copying in the *Life* in the Academy, and female models in his own studio; but, above all, that he was "contented with very small returns," and was constantly commissioned by the picture-dealers. The truth was Etty, thrifty, not to say penurious in habit, was one of those who could never refuse an offer, if enforced with the clink of gold, or the rustle of notes; and the profits which have been made by those who wrested money from his hands must have been enormous. Amongst other passages of a like kind we read

> Of the numerous (modern picture) dealers who in subsequent years relied so much for their supply on Etty, the first to build was Mr. Colls, who, in his appreciation of Etty, was, as late as 1835, in advance of the rest of the world. His connection with the painter, one fruitful in minor works of fancy, commenced in the spring of that year with the purchase of a beautiful picture—'Wood Nymphs Sleeping; Satyr Bringing Flowers: Morning'—at a price in keeping with those Etty then commanded—£55. After many a subsequent change from hand to hand, in 1851, realised £950. Mr. Colls remembers buying of Etty, during the immediately subsequent period, five other pictures, at about 50 guineas each one, an important work, "containing twenty-one figures," "Christ Blessing Little Children." All which, as many others of succeeding years, secured originally for an old song, as it would now be thought (£10, £20, £30, and sold at a moderate advance), have been bought by the same dealer again, and sold, bought, and sold over and over, until by successive stages reaching £300 and £400.

The following story is too rich to be omitted

> October sees him in Manchester, for a day or two, hoping to sell a picture. To his exhibition he had sent the "Delilah;" for which one offer of a £100 had been refused, to his present remorse. Fated this year to ill-success, he finds it still unsold; begins to fear it will "stick by him." A call was made and an evening spent with Daniel Grant, "one of the most benevolent men in Manchester," the possessor of "Venus and her Doves" commissioned on the painter's first visit. But "trade is bad" this year, the firm a loser by an odd "£100,000" or so; and manufacturers "afraid of pictures." The following day, after attending some neighbouring races, Etty dined with Mr. Grant. Over their wine, the pictures being mentioned, his wealthy host takes it into his head to bid for them: asks "what he will take" for the "Delilah" and the "Sirens" "in the lamp," not having seen the latter. On his side, the painter was alarmed for the sale of his pictures, and would fain "turn them into cash." "Thinking," he tells his brother, "by going to the lowest sum, I might tempt him, I said £300 for the two"—the original price, and that a moderate one, of the "Sirens" alone. £300 the manufacturer had that morning put in his pocket to risk in the betting-ring, and had lost only £38 of it. Willing to save the remainder, and lay it up in a more tangible luxury, he threw it for £290, "in notes," before the nervous painter, to whom money in hand was always a temptation. But £200 for two such works, the produce of the best hours of one year in the maturity of the painter's life, in the maturity of his skill and fame, was irresistible bait even to so bad a man of business as Etty. "Another £50" failing to seduce him, the tempter pocketed his ineffectual notes; and the artist already regrets his own ordinacy—"any man will have such another offer." He remorsefully calls to mind his uncle's aphorism—"Never refuse money, William!"—counsel which he had hitherto scrupulously held to in mind; and continued to do so, during years when it was hardly to appreciate. "A lost occasion gone for ever by," he fears, this opportunity of securing £350 will prove. On parting from his host late at night, to the latter's abrupt query, "Will you take the money?" Etty, prudent in his accidental surrender by previous chaffering, responded with "Only if you have no bargain was struck. The cash was sent to his inn with the £290, and the manufacturer to his bed, owner, at that early date, of pictures whose intrinsic claim he was little qualified to apprehend; and of which the mere money value, in 1854, considerably exceeds £2000. The "Sirens" itself is valued at that sum

Again:—"For 'Venus and her Satellites' (1835), *Etty*, having refused one offer, was, as usual, afraid of oversetting his market. It was secured by the Rev. E. P. Owen for less than the 300 guineas asked. Sixteen hundred guineas have since (in private) been proffered for it.

At the time of the attempted revival of fresco-painting in this country, under the auspices of Prince Albert, Etty received his Royal Highness's commands to paint one of the compartments in the rustic Summer Temple in Buckingham Palace gardens, a work which he reluctantly commenced, "not expecting to succeed," as he assured the Prince on receiving the commission, "being unacquainted with the practice of fresco." And a sad failure he made of it, amidst much reluctant spirit, often having to cut away portions of the plaster, and sometimes painting over portions when dry, and when, of course, the colour could not be absorbed. One drawback was the having to plan perched up on a scaffold; and he offered to give up his first attempt ("Circe and the Sirens Three"), and make a new one (subject, "Hesperus"), in his own studio. The sketch for the latter was left "on approbation" at the Palace, but was not approved of. "Notwithstanding the verbal compliment of Prince Albert at the Academy dinner. Etty's second fresco was never put up. The sketch, when shown to Royalty, had been accorded a glance, and the request to take it away. "For mercy's sake, he does not know what he want," are the words reported to have been used on the occasion; and, much as we may sympathise with the artist in his disappointment, we can scarcely wonder that he should have failed in this instance of producing exactly what was required in the way of elegant, classic decoration [illegible] from Prince Albert for his labours on the two frescoes, which he sold to Mr Colls (a steady dealer-patron) for double the amount, who afterwards sold them to Mr. Wethered for a still larger sum, as sang the poet of old.

All this while Etty was planning and preparing his "Joan of Arc," one of nine works (three-times-three he considered a lucky number) upon which he wished to base his future fame; and the Royal Commission somewhat interfered with his labours upon it—indeed, dismantled him, according to the calculation of his biographer, to the money value of some £300 or £400. At last (1847) the work (in three compartments) was finished "on Easter Sunday;" and after it was done he writes—"By one o'clock on Easter Sunday I felt that I ought to go to the Abbey, and return thanks to Almighty God for having so mercifully directed me as to enable me to complete, so far, this colossal effort." And "not in the Abbey alone did he render his fervent acknowledgments:"—when once asked if he had fulfilled his promise of praise and sacrifice on this score, "Yes," he replied with much unction, "in York Minster I returned thanks from my heart and soul; and *afterwards took the sacrament!*" The three pictures of "Joan of Arc," are purchased by Messrs. Colls, Wethered, and Wass, jointly, for £500 *paid down*. But have put the *golden crown upon my head*," Etty joyfully exclaimed to Mr. Colls; and indeed was almost out of his senses with delight, little thinking of the sundry golden opportunities he had lost in his greed after quick and small returns, and the fortunes he had bestowed upon others by picture-manufacturing

Etty, in spite of asthma, and all the symptoms of premature old age, continued hobbling to the *Life*-room every evening of his life, continued "copying what he saw," that is, continued producing Academy studies with scant progress in dramatic colours to the last (so unlike the practice of Michael Angelo, and other great artists, who knew when to copy and when to produce—when, in short, to leave school); and amassed sufficient to enable him to retire to his dear native city, York, where he bought a house, and where he died, in 1849 (at the age of 62), leaving behind him property (including yet unpublished memoirs) to the amount of about £23,000

Mr Gilchrist, in the production of this memoir, has availed himself with discretion and ability of the various materials placed in his hands for the purpose, and, independently of what necessarily relates to the personal history of his subject, has produced a very agreeable two volumes of art gossip. We could have wished, however, that in reference to one person referred to in his pages, Sir Thomas Lawrence, he had avoided the tone of vulgar sneer, the result of ignorant prejudice which some previous biographers and critics have adopted in. Lawrence was an artist whose talent—not certainly applied in the highest walks—will be more and more admired as time goes on, and shows the difficulty of adequately supplying his place in a style of portraiture eminently combining the real of every-day life with the ideal dignity of art.

* The "Life of William Etty, R.A.," by Alexander Gilchrist, of the Middle Temple, Barrister-at-Law. Two vols. Bogue

---

NEW GOVERNMENT OFFICES. Arrangements are in progress for making new offices for the dispatch of the public business, in place of the inconvenient premises in which the affairs of the Government are at present conducted. For this purpose, it is intended to remove the whole of the houses in the area bounded on the south by Cannon Row street and Upper Crown street, Westminster; on the west, in part by Bridge street and the entrance from Duke-street into St. James's park, and on certain parts of the north and west by Upper Crown street, St. James's park; on other parts of the north and west by her Majesty's Colonial-office; on other parts of the north by the north side of Downing street; and on the east by Whitehall and the west side of Bridge street. In the new building which will be erected on this site all the business of the various departments of the Government will be transacted.

EDUCATION IN THE MIDLAND DISTRICTS.—Mr. Bowyer, Inspector of Schools for the Eastern and Midland Districts, reports generally well of the schools in connection with unions in the country, but of the school at Rillesdon, he says, under the head of instruction:—"A wretched school. Children extremely ignorant, and destitute of intelligence. To the question, 'What is a great image?' the head boy of the boys replied, 'Lightning, sir, and everything that is in the air above.' On questioning him, I found that his answer was not a random one, but expressed the sense of the boy. Under the observations we find the following: "At my first visit the school was vacant. At my second I found a new mistress, whose ignorance surpassed anything within my experience. To the question, 'What remarkable event occurred when our Saviour was twelve years old?' she replied, 'I believe he was put in the bulrushes.'" A nearly similar instance is recorded at Grantham. Mr. Bowyer writes, "None of the boys could point out Egypt on the map, or explain what was a graven image. One boy said it 'was going to school.'"

COMPULSORY PREPAYMENT OF LETTERS FOR THE EAST.—In order to facilitate, as far as possible, the transmission of letters and newspapers addressed to the officers, seamen, and other persons employed on board transport ships engaged in her Majesty's service in Turkey and the Black Sea, special mails will in future be made up at the General Post-office for such correspondence on every Monday and Friday evening, and forwarded via France, and by the French Mediterranean packets, to the Postmaster of the Ionian Islands, Malta, or Constantinople, according to the combined British and French rates of postage which will be chargeable on letters so addressed:—Not exceeding ½ oz., 1s.; exceeding ½ oz., and not exceeding 1 oz., 2s.; exceeding 1 oz., and not exceeding 1½ oz., 3s.; exceeding 1½ oz., and not exceeding 1 oz., 4s.; exceeding 2 oz., and not exceeding 2½ oz., 5s.; exceeding 2½ oz., and not exceeding 3 oz., 6s.; and so on, being chargeable for every additional quarter of an ounce. The above rates of postage must be paid in advance, or the letters will be open and returned to the writers. Newspapers will be liable to a postage of 2d each, which must also be paid in advance

SURGEONS FOR THE RUSSIAN ARMY. The enlistment of surgeons for the Russian army has been put a stop to in Prussia, mainly by the representations of the British Ambassador in Berlin, supported by his Austrian colleague. The interposition has been put upon the 16th article of the Act of Confederation, and, as it draws no distinction between combatants and non-combatants, it is admitted that the engagement of military surgeons for any foreign Power is considered illegal, and prohibited for the future

ARRIVAL OF THE "GREAT BRITAIN."—The *Great Britain* screw steam-ship, Captain Gray, made her appearance at Queenstown on Sunday night for coals, after a passage of eighty-four days from Melbourne, having left that port on the 29th of October. She brought 289 passengers, all of whom were in good health, and 180,000 ounces of gold, valued at £720,000. Her passage was much protracted by easterly gales, especially during the latter portion, when she had to trust to her steaming powers alone. The *Great Britain* was to leave Queenstown on Monday evening for Liverpool. It is thought she will be taken up for the conveyance of troops for the Crimea, by either the English or French Government.

OPINIONS OF THE SILENT MEMBER. (No. I.)

I WENT into the House some years ago with the same intention as many others namely, to talk and have my say on the various subjects brought before Parliament; but I found that when I began to talk others began to cough, or to laugh, or to sleep; or, in fact, to do anything but to listen. As I felt it necessary to assert myself somehow, or somewhere, I used to go home talking to myself, and I have thus acquired a habit, which has grown upon me to such an extent that I generally have something to say—to myself—on every topic of interest.

Though I have had in one sense the talk all to myself, it has not been all on one side; for I have contracted the habit of answering myself, and looking at both sides of a question. Being rather of an argumentative turn, I frequently find myself discussing matters with a good deal or earnestness; but as a man does not easily get out of temper with what he says to himself, however much he might fire up at the same thing if addressed to him by any one else, I have been able to obtain some of the advantages of an argument without any of the inconveniences of a warm and angry discussion.

I fancy that I have profited in some degree by these conversations, such they may be called; and I have often found myself arriving at conclusions which appear to me to be sound, though they are not unfrequently at variance with those which are generally entertained, so that public opinion and my private opinion are sometimes quite opposed to each other. It is a common saying that "public opinion is always right in the long run;" and I believe such to be the fact. But this maxim implies that truth is occasionally a good deal in advance of the public mind, which has to take a very long "run" to reach the point that is ultimately arrived at. The public will no doubt get right at last on every subject; but there is nearly always a good deal of error in the beginning, and it can do no harm to raise a voice on what may be for the moment the unpopular side; for if the voice should be in the wrong it will not prevail, while if in the right the firmness of truth must ultimately triumph over the obstinacy of error. I do not mean to say that I am in the habit of taking the unpopular side of every question; on the contrary, there are many subjects on which the popular mind has come up to the truth, but if I am permitted to go on talking from time to time through these columns, I shall often have something to say which may clash with the popular opinion of the moment. Nevertheless, I have so much confidence in my own convictions, that I am almost bold enough to follow the example of Mr. Cobden, who asks for two years at the outside to test the truth of his very unpopular views, and the soundness of his judgment.

Having said thus much by way of introduction of myself to those who will, I hope, become my listeners, I announce my intention to leave off the practice of talking to myself, and to begin talking to the public at large, by means of the very effective mouthpiece through which I am now speaking. I propose to talk on no particular class of subjects, and in no other style than the "colloquial;" for I have an objection to what is called "talking big," and I shall try to prevent my talk from being so frivolous as to deserve the appellation of "idle talk;" or so tedious as to degenerate into mere garrulity

It may be expected that I should begin to talk about that which is in the mouth of everybody—the war; but it seems to me, unhappily, a subject that will not bear talking of. There was a great deal too much talk and too little work before the war began, and I—as one professing to have more respect for public opinion as it will be than for public opinion as it is—feel that, however loudly people are talking just now on the subject of the war, silence will ultimately be considered the wisest course we can adopt as to the present moment of our history. If it is possible to talk down the system by which the army of England has been sacrificed, there are tongues enough already going to accomplish such a desirable object; and a powerful reinforcement of talkers will be of course brought into play (how different from being brought into work!) by the reassembling of the House of Commons. If we are to lick the Russians it must be with something more effective than our tongues, which have long since done their utmost against the enemy

Murder is not an agreeable subject of conversation, but it has been lately forced upon us as a topic for talk by the commission of more than one crime of great apparent atrocity. I cannot help thinking that there is too great a tendency not only to talk but to jump to conclusions on the subject of great alleged crimes, before the supposed criminals are tried, and the possibility is that, instead of being brought to justice, they may be brought to injustice by the prejudice that has been created against them. We boast a great deal about our "trial by jury," and the right of every man to be presumed innocent until a jury shall have found him guilty; but no sooner does a case of homicide arise than we have the newspapers teeming with accounts of "The Murder," or the "Double Murder," and all the alleged "Antecedents of the Murderer." I confess that I felt a little ashamed of the English press and of the English public, to whose taste these things are, no doubt, palatable, when I read in a respectable Sunday newspaper, and subsequently saw copied into the *Morning Chronicle*, an article with reference to the Italian who now lies under an accusation of murder. The writer evidently felt that he was doing wrong, for his remarks begin with an admission that "to comment on a crime *pendente lite* is not generally considered within the province of a public journalist." Notwithstanding this assertion, he goes on to speak of the act of the accused as a premeditated murder, and concludes by calling on the jury to convict; observing that "if, upon any plea of overpowering passion or even of temporary insanity, one or both of which may possibly be set up in his defence, he shall be permitted to escape, then there will be no longer safety for any man who may however involuntarily, offend a bloodthirsty ruffian, or thwart however innocently, the course of an assassin's passions. This practice of condemnation before trial is quite at variance with that spirit of fair play about which we English talk so much, but on which, unless we discourage the sort of hangue that the press is in the habit of holding, we shall have no reason to pride ourselves. When public opinion goes wrong, the whole nation is likely to go wrong, for public opinion is the best check we can have on the abuse of all authority. I am not sure that the prejudice against Barthélémy has not worked a serious injustice in the case of that unfortunate man, who, from the first moment of his apprehension, was denounced in the newspapers as a "double murderer." I am not his apologist, but I confess I take the same view as that of the "Lawyer" who wrote to the *Times* to point out that Barthélémy had been declared guilty of a felony in killing Mr. Moore, without having been tried for it, and that he was to be hanged in consequence of that act being a felony, though the point had never been submitted to the opinion of a jury. I have seen no satisfactory answer to this objection, and fancy that none could be given; but as everybody said, "Oh! Barthélémy is a monster, who deserves hanging," nobody seemed to think it worth while to consider any legal point in his favour. I have once or twice said to myself, "Suppose Moore had been the assailant of Barthélémy; suppose the former had made a murderous attack on the latter, who had killed his assailant in self-defence, where would have been the felony, and how would the killing of Collard have been murder?" The suggestion is an improbability, but not an impossibility, and, at all events, a jury should have been called on to decide as to the guilt or innocence of Barthélémy in an affair which was the very essence of the crime he was accused of in the case of Collard. However, the man is hanged, and I may be told "It's useless now to talk about it;" but perhaps by talking now we may help to make people know better another time, should such another event happen.

Talking of criminals naturally sets one thinking about the police—a body with reference to which some strange stories are told,

and some strange facts have obtained publicity. I shall not fall into the error I have imputed to others by prejudging the "detective" King, who is entitled to a fair trial on the charge of incitive juvenile thieves to rob and share their plunder. I am, however, glad to see that the Government has taken one of the means necessary for improving the quality and character of the police force, by raising the pay of the third class men and diminishing the amount of duty. Nine hours at this season of the year, or at any season, was too long to expect the unwearied attention of a policeman on his beat, and we cannot be surprised that he sometimes accepted the shelter of our kitchens and the hospitality of our larders, upon the invitation of a soft hearted cook or a sentimental housemaid. It would be well if these were the worst errors of the force, against more than one of whom charges have been recently brought and substantiated; though, as a whole, the police may be well deserving of public confidence. At all events, it has become obvious to the authorities that a fit body of men cannot be kept up without a more liberal scale of pay, which has accordingly been ordered by Lord Palmerston.

FINE ARTS.

EXHIBITION OF THE PHOTOGRAPHIC SOCIETY.

THE second exhibition of the Photographic Society has just been opened at the Gallery of the Water-Colour Society, Pall-mall East. The collection is a numerous one, consisting of nearly 700 pieces, which cover all the walls and all the screens. Many of the works are very interesting and beautiful and afford ample evidence of the improvements which are daily making in, this new process, and the important aid it may lend to Art itself. For the truth must also be declared: Photography will never supersede Art;—it will be a slave in the hands of Art to produce in abundance, and with wonderful rapidity, examples and materials for after use; but Art must still exercise its functions to decide their applications—to fashion them to the purpose, to invest them with life, with tone, with feeling: in fact, to render them picturesque

Photography, though a rapid process, is still a process of time; and the slightest change in the position of the object whilst the work is going on will mar the effect; and for a simple outline give a blotch, more or less extensive, more or less intense. Hence perfectly inanimate objects, as architectural subjects, for instance, are best adapted to it; but even in these we find a hardness of outline, a glare of the lights, and a heaviness in the shadows, descending to impermeable darkness in the deeper shades, which, strange as it may sound to say so, is not true to nature, nature as seen by the eyes of man. Let it be recollected that the plane upon which the sun-picture is cast is inanimate steel or paper; whereas the eye of man is endued with life, gifted with a medium, expanding and contracting according to circumstances, and by the power of which the more prominent asperities of an object are subdued to the mind's apprehension, and the more distant and darker portions, after some curious prying, explored; and we shall understand the virtue of that crowning charm of the painter's art—*clair obscure*—a charm which Photography is incapable of rendering.

The further the object photographed is removed from a condition of stillness the less successful the result The foliage of trees and the ripple of water will not consent to "sit" to the practitioner; and wild and reckless confusion respond to all the attempts to portray these features of "Dame Nature" when seen under the influence of even a breath of air. Man, civilised man, is more tractable. He places himself on a seat, and fixes his every limb and feature as in the stillness of death, until such time as the work of portraiture is accomplished. But, in doing this, is he aware that he flies in the teeth of nature, which abhors actual repose, as it abhors a vacuum? The "effect" produced is that of torpidity, without its "repose"—of death, without its truth; and when the portraiture is done in duplicate, and presented in "the round" by means of the stereoscope, the aspect is not so true, not so near nature as a wax figure—more ghastly and incongruous than painted stone;—which we are sorry to find Mr. Gibson considers perfection. Again, look at any of the productions in this room where we have a human figure thrown in amongst inanimate objects; as that sleeping man in a "View in the Highlands;"—how obtrusive is the figure of the descendant of Adam; yet how much less life and truth in his appearance than in that of the shrubs and foliage in which he is embedded. Of course in subjects of action, in which an event is supposed to be going forward, the epic of painting, Photography is out of the question. Suspended action is a thing most difficult to depict; one of the most achievements of art—for it is a thing impossible in nature. We throw out these suggestions merely as arguments in support of our opinion that, whilst Art has much to gain from the resources, she has nothing to fear from the rivalry, of Sun-painting.

The collection now presented by the Photographic Society is rich in variety. Professionals and amateurs have been actively at work during the summer in all parts of the world, producing remembrances of objects of beauty and interest Portugal, Turkey, France, Russia, Wales, and all parts of our "tight little island," have been explored in search of the picturesque; and most charming *morceaux* have been brought away in many instances. Portraiture also, we have in abundance; and not a few specimens of insect economy, and in other departments of natural history

Amongst the most successful exhibitors we may mention Mr. Robertson (various scenes in and near Constantinople), Mr. Hugh Owen (scenes in Portugal and near Bristol), Mr. J. C. Bourne (Suspension bridge at Kieff, in Russia), Mr. Norman, Mr. H. Cooke, Mr. T. C. Ponting, Mr. H. Tyler (copies from prints), Mr J. G. Tunay (scenes near Edinburgh), Mr. Le La Motte (Views of the interior of the Crystal Palace), Messrs. Bisson Frères (Hôtel de Ville, Paris), and Mr. Mayall, Mr. De Laroche, Mr. J. H. Hennah, &c., in portraiture. Decidedly the most interesting and satisfactory part of the Exhibition, however, are the fine copies from drawings by Raphael in the Royal collection at Windsor Castle, executed by Mr. Thurston Thompson for Prince Albert. Here, indeed, the exact and obedient process of photography is well and worthily applied, and with a result gratifying in the highest degree; for here Art, be it remembered, has created the subject, and sun painting has had no scientific or constrained attitudinising of clumsy humanity to copy, but a picture the work of man, which, though every line of it is flat and motionless, speaks of the fulness, and action, and expression of life. Such reproductions are invaluable to the art-student; and we are glad to hear that it is proposed to be the intention of the Society to distribute copies of these remarkable works to the different museums in the country, and also to obtain for a similar purpose copies of other works of like character which are to be found in other collections throughout the country. The copies after Raphael's drawings, now exhibited, comprise sketches for "The Murder of the Innocents;" for "Is Disputa" (or the "Theology") and the "Poetry," both in the Vatican; two of the "Virgin and Child;" the "Three Graces," and a "Leda."

THE THEORY AND PRACTICE OF LANDSCAPE PAINTING IN WATER-COLOURS. By GEORGE BARNARD. W. S. Orr and Co.

This work, the first part of which we noticed with approval some months ago, is now completed, and forms a handsome volume. Mr. Barnard has treated his subject with great ability and fulness, both as regards the theory and practice of the art. The amateur, with this book in his hands, may confidently try his powers in every branch of landscape-painting with a tolerable certainty of acquitting himself respectably, and with daily increasing success. The author, who blinks none of the difficulties of the subject, under the head "Composition," duly impresses upon the learner the necessity of attending to fundamental principles of drawing, including perspective, before attempting anything in the more attractive art of colouring. "Any attempt," he says, "to please by a picture possessing the most harmonious arrangement of charming tints, yet being defective in regard to the choice of objects, in lines misplaced, or faulty in perspective, will be utterly vain and fruitless. Errors like these would undoubtedly offend both the eye and the taste of an intelligent observer; and that, too, in such a degree that any praise he might bestow upon the beauty of the colouring would be accompanied by regret that such powers capable of so much in one branch of art should yet be so deficient in those on which all truthful representation depends. Colour is subordinate to form, and light and shade; for, although more attractive, it is in the representation of nature the least important of the three." The chapter on Light and Shade (chiaroscuro) is ably written, and illustrated by a great number of charming landscape examples.

There are chapters especially devoted to "The Sky, Atmosphere, Clouds, &c.," "Aerial Perspective," "Foreground," "Buildings, Ruins, &c.," "Distance," "Water," "Rustic Figures," "Pictorial Phenomena of Nature (denominated by artists 'Effects');" "On Method," "Style," "Sketching from Nature," &c.; besides ample explanation, both as incidental to the above subjects, and as a department by itself of the theory of colours, and their contrasts. By the aid of Leighton Brothers' chromatic process, all that relates to colour and its treatment is profusely and effectively illustrated. There are, one and all, upwards of a hundred engravings, executed in various styles but adapted to the particular purpose, neither pains nor expense, apparently, having been spared to render the work both ornamental and practically useful.

CHESS.

R. B.—Blandford. The move of 6. Q to K B 3rd, in the defence of the Muzio Gambit, has been generally, though erroneously, attributed to either Harrwitz or Lewis. It occurs in an author who wrote between forty and fifty years before those gentlemen. The other defence you refer to is found in a useful little book, the joint production of Messrs. Kling and Horwitz called "Chess Studies."

C. D. G.—Mate cannot be given in the way you propose. See our Solution.

STUDENT.—You are right. The Knight can be captured, but quite altered in the Diagram.

G. R. W., Louvain.—Philidor was born at Dreux, September, 1726, and died in London, August, 1795. You will find an extremely interesting account of this great master in the Rev. Jacob Chess magazine, *Le Palamède*, vol. *I*

F. M. H., of Hull.—Your solution shall be given next week.

C. L., Gabarrus, North Carolina.—Received and under consideration

DERBYON.—You are perfectly right: it shall be re-examined.

TWICKENHAM.—It is from a clever little Problem by D'Orville. The original is as follows

White: K at its R sq, Rs at Q B 3rd and Q 6th, Kt at Q B 2nd, Ps at Q Kt 4th and Q R 2nd

Black: K at Q R 6th, P at Q R 2nd White to play and mate in *three* moves

A. Z. B. Y.—Wanting in point and power

C. M. J.—It can be solved easily in *two* moves

NOVICE.—Treat the game as an elegant and intellectual recreation, and as nothing more. The man who pursues its whole time and attention to be absorbed in the pursuit of any game, even Chess—whose talk is only of the move, or that match, or the other player—is sure to be looked upon, by rational people as a pitiable object

F. D., PRIZES FOR THE BEST CHESS PROBLEMS.—The committee of the great Chess meeting to be held in May or June at Leamington contemplate giving, we understand, among a variety of other prizes, a very handsome one to the inventor of *the twelve best original Chess Problems* of three, four, and five moves.

SOLUTIONS OF PROBLEM No. 569, by Albert, E. S., Vernon, Omega, T. W. P., R. G., Alpha, Deseance, are correct.

SOLUTIONS OF PROBLEM No. 570 by W. C., Streatham, Dawson, Ernest, D. D., F. R. of Norwich, J. P. W., J. Sharp, Jun., J. M. of Sherburn, E. B., Peter, Santab, Pentbollin, Omicron, Led., J. W. C., H. H., Tub, Cato, G. L., Delmeo, R. F. O., P. Q., T. L., Mentor, Cambria, Swanzea, Lex. Civis, Delta, Phiz, F. D., Cadie, Miles, H. E. S., J. T. W., are correct. All others are wrong.

*** Many notices are deferred from want of space.

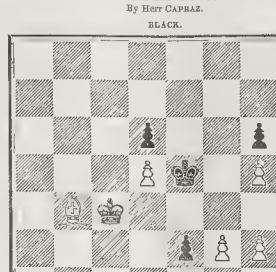
SOLUTION OF PROBLEM No. 570.

WHITE.	BLACK.	WHITE.	BLACK.
1. B to Q B 4th	P to K R 5th (best)	3. Kt to K Kt 5th	Anything
2. B to K 6th	P moves	4. B or Kt mates.	

PROBLEM No. 571

By HENRY CAPRAZ.

BLACK.



WHITE.

White to play, and mate in five moves.

CHESS IN THE METROPOLIS

Mr. STAUNTON gives Mr. BRIEN the odds of the Pawn and Two Moves.

(*Remove White's K B P from the board*)

BLACK (Mr. B.)	WHITE (Mr. S.)	BLACK (Mr. B.)	WHITE (Mr. S.)
1. P to K 4th		17. K R to K sq	K to K B 2nd
2. P to Q 4th	P to K 3rd	18. K R to K 3rd	P to Q R 3rd (c)
3. K B to Q 3rd	Q to K R 3rd	19. P takes Q Kt P	Q B P takes P
4. Q B to K 3rd	P to Q 3rd	20. P to Q R 5th	Kt to Q R 3rd
5. Q Kt to Q 2nd	B to K 2nd	21. Q to her B 3rd (d)	B to K 2nd
6. P to K 5th	Q to K R 2nd	22. Kt to Q B 5th	B takes Kt
7. K Kt to K B 3rd	P to Q 4th	23. P takes B	Q to K B sq
8. Castles	P to K Kt 3rd	24. Kt to K Kt 5th (e)	R to K B 6th (f)
9. P to Q B 4th	P to Q B 3rd	25. Kt takes K R P	K takes Kt
10. P to Q B 5th	Q to K Kt 2nd	26. R to K R 3rd (ch)	K to Kt 2nd
11. P to Q Kt 4th	Kt to K R 3rd	27. B takes K Kt P	R to K Kt 5th (g)
12. B takes Kt	Q takes B	28. R to K R 7th (ch)	K takes R
13. P to Q Kt 5th	Castles (a)	29. Q to K R 3rd	R to K Kt 4th
14. P to Q B 4th	P to Q Kt 3rd	30. R takes B	Q to K Kt sq
15. Q Kt to his 3rd	B to Q 2nd	31. R to K R 7th (h)	Q takes R
16. Q to her B 2nd	B to Q sq (b)	32. Q takes P (ch)	
		And the game was drawn	

(a) We cannot understand why White did not take the Q Kt P, and then bring out his Q Kt.

(b) This seems tame, but White has suffered himself to be so hampered with the adversary's Pawns on the queen's side that he is compelled to adopt a very sorry-looking course of action. It is as well to remark, here, that leaving the Kt with his Rook, though very promising in appearance, would have proved an unprofitable venture, for, suppose—

16	R takes Kt	18. K R to Q sq	B to K B 5th
17. P takes R	B to K Kt 4th	19. K to B sq	

And Black escapes with the better game.

(c) Very hazardous; but it was certainly necessary for him to release his Queen's Pieces, if possible.

(d) Last time. He should at once have played Kt to Q B 5th.

(e) The prelude to a series of very ingenious moves.

(f) Foreseeing the object Black has in view when he marched forward with his Kt. It is surprising White did not guard against the meanest attack, by playing his Rook to K Kt 2nd

(g) Taking the Q B Pawn with the Queen would probably have been better It would certainly have led to an interesting struggle for victory, if there be not easy to discover

(h) The situation is an instructive one, and affords abundant scope for speculation. With Black's game we should certainly have been disinclined to put up with a drawn battle, though it must be admitted that the road to victory, if there be any, is not easy to discover

CHESS ENIGMAS.

No. 908.—By R. B. WORMALD, Esq., of Oxford.

White: K at K Kt 6th, Rs at K B 6th and Q E 4th, Bs at K Kt 7th and Q Kt 7th; Ps at K Kt 3rd, K B 2nd, and Q 2nd.

Black: K at K 4th, Q at Q Kt 8th, R at K Kt sq, Kt at Q 4th, Ps at K Kt 5th and K 5th.

White to play, and mate in four moves.

White to play, and mate in three moves

THE BURNETT TREATISES.—The decision of the great literary prizes—one of £1800 and another of £800—to the authors of the two best treatises on "The Being and Attributes of God," was announced on Saturday. The successful competitors were found to be—for the first prize, the Rev. Robert Anchor Thompson, A.M., Louth, Lincolnshire; and for the second, the Rev. John Tulloch, manse of Kettins, Cupar Angus, Principal of St. Mary's College, St. Andrew's, Scotland. There were 208 treatises lodged. The judges were Professors Baden Powell, Henry Rodgers, and Mr Isaac Taylor They were unanimous in their judgment. The sealed envelopes were opened in the Town-hall, Aberdeen, by Mr John Webster, Advocate, in the presence of the other trustees and a large assemblage of the principal citizens.

THE FRENCH LOAN.—A curious instance of the universal popularity of the loan is given in a French paper. At Tarbes, in the south of France, out of 100,000 francs received as deposits, two-thirds of the payments were made in old French and Spanish coins, which had long disappeared from circulation, and must have been hoarded for many years. A more striking proof of confidence in the Government on the part of the lower classes could not be afforded.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Lord Bloomfield was received by the King of Prussia on Wednesday week, in private audience, for the purpose of delivering to his Majesty a letter in reply to that conveyed by M. d'Usedom to Queen Victoria.

The Austrian Minister at the Court of Hanover, Baron von Koller, was recalled from thence on the 13th inst.; whether permanently and on what ground is not known. The Baron has at any rate given up his apartments there

The French Emperor, accompanied by the Empress, drove on Saturday afternoon in the Champs Elysées. They were attended only by one equerry, but had no outriders, nor escort of any kind. The reception their Majesties met with from all classes was enthusiastic

The English and French Consuls at St. Domingo have summoned vessels of war to the port, to resist any aggression on the part of persons from the United States, and five French vessels have already arrived

The health of Lord Cardigan is steadily, though but slowly, improving.

Mr. Mason, the American Minister in Paris, who has been lately indisposed, is now in a fair way of recovery.

Princess Paskiewitsch is expected in Berlin shortly on her return to Warsaw from the south of Germany. Prince Paskiewitsch reached St. Petersburg on the 4th inst.

The application for a new trial in the Mountgarret Peerage case, after several days' argument, was decided on Monday in the Dublin Court of Exchequer. The motion was granted, on the grounds of misdirection of the Judge, and the reception of improper evidence. The costs were given

The French Government has just purchased the last picture of M. Ingres, "Joan of Arc before the High Altar at Rheims." After having formed one of the attractions of the Universal Exposition, this fine work will be placed in the gallery of the Luxembourg

Count de Montmirail, an *habitué* of the Bourse, has been sentenced by the Court of Correctional Police to six months' imprisonment and 1000 francs fine for circulating false news and calumnious against the Emperor

A testimonial to Wilson, the Scotch vocalist, is mentioned by the Scottish papers. It is proposed to erect a portrait statue to his honour in one of the conspicuous niches of the Scott monument.

The German Art-papers speak highly of a grand historical picture by Herr Feuerbach, of Carlsruhe. The subject is the Death of Arcuno, the satirist, a famous poet of the sixteenth century, who died at a drunken feast He is represented crowned with ivy, and the cup is dropping from his freezing hand.

A Mr. Philips, an American citizen, was arrested at Bâle the other day, in consequence of his unfortunate resemblance to M. Mazzini

The Rev. Dr. Beamnont, well known throughout the kingdom as an eminent preacher among the Wesleyans, died, on Sunday morning, whilst giving out a hymn in a Wesleyan chapel at Hull.

Lord Redcliffe has formed a plan for uniting Wallachia and Moldavia, and placing the province under a Prince whose dignity shall be hereditary.

Recent accounts from St. Petersburg state that MM. de Brunnow, Kisseleff, and Oscroff—previously employed in England, France, and Turkey—are to be attached for the time being to the Imperial Department for Foreign Affairs

M. d'Usedom, after returning to Berlin, to receive anew confidential instructions from the King, will probably return to London as permanent Envoy, in place of Count Bernstorff.

Admiral Dundas arrived at Berlin on the 19th, and intended to remain there some days before returning to England

The official fêtes have commenced in Paris. After a dinner, on Wednesday week, M. de Morny gave an guests a concert, at which Madame Bosio, Madame Borghi, MM. Graziani and Neri Baraldi, assisted.

On Sunday last, the anniversary of the execution of Louis XVI., all the official receptions in Paris were suspended.

The Duke of Cambridge, finding that his health does not improve at Malta, is about to return to England.

Count Buol has received the Grand Cross of the Legion of Honour, and M. Drouyn de Lhuys that of the Order of St. Stephen in Austria.

The French Emperor has conferred a silver medal of honour of the first class on Captain Rew, of the English merchantman *Britannia*, who, on October last, saved the crew of the French sloop *Ulysses*, of 20 guns.

The funeral of the Queen Dowager of Sardinia was celebrated on the 16th, at Turin, with great pomp. The streets were crowded, and the windows hung with mourning drapery. The Court has gone into mourning for 180 days.

The Milan and Turin mail was robbed on the night of the 14th by a band of brigands. The robbers were, however, disappointed in their expectation of a large sum of money, there being scarcely anything either in the possession of the passengers or in the letters.

A Dutch steamer, *De Hollander*, sailing under the Dutch flag, and with a Dutch crew, has been hired by the English Government to take out troops, or provisions for the troops, to the Crimea.

A party of miners has arrived at Panama from New York, to make a scientific exploration of the Isthmus, in search for gold. They were to commence their search along the Gulf of San Miguel.

A piece of ground belonging to the city of Paris, at the corner of the Rue des Lavandières and the Rue de Rivoli, and containing 352 metres, was lately sold for the sum of 176,000f., or more than 501. the square metre

A new dock is about to be constructed at Havre de Grace. and every ship entering that port since New-Year's-day (the 1st current) is required to contribute 6d. per registered ton towards the expense of making the dock.

Workmen are at present employed in cleaning and restoring the fine dome of the church of the Sorbonne, which was built by the order of Cardinal de Richelieu, and under which is his mausoleum, one of the finest works of the French sculptor Girardon

The French Customs returns for the last year give general satisfaction, as showing that, notwithstanding the war, manufactories have been going on with great activity. The amount of the Customs revenue has increased from 119,000,000 in 1852, and 141,000,000 in 1853, to 149,000,000 in 1854.

America is represented in Spain by a Frenchman, in Portugal by an Irishman, in Italy by an Italian, at the Hague by a German Jew, and at Naples by a Scot.

Every satirical work in Paris directed against the Emperor of Russia meets with a sale in magnitude proportioned to the severity of the satire.

Cardinal Wiseman and the other prelates of Great Britain now at Rome have supplicated the Pope, and the request has been backed by the Bishops of other nations, that the devotion paid to the Venerable Bede may be extended to the whole Church.

Kiss intends to send the model of his new group, "St. George and the Dragon," a pendant to his "Amazon," to the Paris Exhibition It will be conveyed upon a waggon constructed for the purpose, and entire, if the tunnels are all of sufficient height.

The Historical Institute of France has just renewed its *bureau* for 1855 by electing the Marquis de Brignole, formerly Sardinian Ambassador in Paris, its president; Prince de la Moskowa, honorary president; Count Reinhard and M. Jules Barbier, deputy vice-presidents; and M. Achille Jubinal, secretary

A proposition is afoot for erecting a cathedral in the Isle of Man as a memorial in honour of Bishop Wilson.

On the 16th the Prussian First Chamber passed the bill for admitting English vessels to the Prussian coasting trade

General Archet is chief of the French police at Constantinople, and since his gendarmes have patrolled the streets fewer excesses have been committed.

According to an official return just made, fifty-two brigands were either killed or arrested in Greece last December.

The inhabitants of Edgbaston, near Birmingham, have petitioned the magistrates to increase the police force, and establish a horse patrol.

In consequence of a coalition amongst the millers of the Valley of the Suippe, the price for grinding corn has been raised from 1f. 90c. to nearly 4f. the sack Two of the most active getters-up of the coalition have been arrested.

A considerable sensation was created in Liverpool on Tuesday by the removal of failure of an extensive shipping house engaged in the Australian and other South Seas trades. The liabilities are stated at about £300,000.

In many of the macadamised streets in Paris, which when paved were almost uninhabitable from the noise, the houses are now worth, in rents, at least ten per cent more than they were, and the economy in the wear and tear of carriages is at least fifty per cent.

The curés of the forty-five churches of Paris have posted up notices recommending to their flocks to send old linen and lint to the mairies for the use of the army in the East.

Three Finlanders who were taken prisoners of war in the Baltic, and were allowed to enter the English merchant service, deserted from their ship in South Australia.

Card-plate elegantly engraved and 50 superfine cards printed for 4s. 6d Observe, at HENRY RODRIGUE'S, 21, Piccadilly, London

CAUTION.—For above thirty years S. MORDAN and CO. have been compelled to caution the Public with reference to the various imitations of their EYE-POINTED PENCIL-CASES
The celebrity which this article obtained when the letters patent were first granted to them, and the universality and unrivalled excellence of the exertions of the Patentees have been directly to justify this confidence. The numerous spurious barrels of a good article imitated in the past has been that numerous imitations have been produced, and the vendors assisted by the sale of inferior goods, to reduce a larger immediate profit.
Under these circumstances, S. Mordan and Co. are induced to issue this notification and to request the public, when desirous of purchasing their Pencil-cases, to observe that they only guarantee those on which the words "S Mordan and Co" are engraved.
As in every town in Great Britain respectable houses are found who have at all times dealt with Mordan and Co.'s goods no difficulty need be experienced in carrying this recommendation into effect.
Perhaps the above caution is the more strictly necessary when Cumberland Lead Pencils are purchased for refilling the pencil-cases. Unless these have been accurately gauged to the exact size of the pencil point, they will be found utterly useless.
The Black Cumberland lead pencils are stamped "Warranted S Mordan and Co"
CEDAR PENCILS made from the Cumberland Lead, patented by Mr. Brockedon's Patent Process. S Mordan and Co. have the honour to assuring that such excellent pencils in every respect are only to be obtained from the Black Lead from the Borrodale Mine, and in consequence of the Cumberland Company having disposed of the whole of their stock of this lead to the proprietors of the Patent, they are enabled to offer their Cedar Pencils, made from the only pure lead extant, with confidence that their superiority will be readily appreciated by the public The highest encomiums have been pronounced on these Pencils by painters, engravers, civil engineers, and draughtsmen of the greatest eminence in their several professions, and whose testimonials have been published in detail The following names are selected —

Charles Barry, Esq., R.A.	Copley Fielding, Esq., P.W.S
C. L. Eastlake, Esq., P.R.A.	W. Westall, Esq., R.A.
E. H. Bronod, Esq., P.R.S.	David Roberts, Esq., R.A
Clarkson Stanfield, Esq., R.A.	J. T. Willmore, Esq., A.R.A.
R. Westmacott, jun., Esq., F.R.S.	M. T. Wilson, Esq., Director, Government School of Design.
S. Prout, Esq., A.R.A.	
Philip Hardwick, Esq., R.A.	

Each Pencil is stamped "Warranted Pure Cumberland Lead. S. Mordan and Co., London"

Thus they are enabled to offer, at a great saving of cost to the purchaser, thoroughly waterproof travelling cloaks, of every length and variety of make, waterproof driving capes and leggings, storm suits, a great protection in travelling by sea and land, Mackintosh blankets, for soldiers or settlers, to resist ground damp in open-air exposure; and all are impenetrable to rain in any climate. Purchasers of twelve or more articles are allowed a discount. Manufactory, North Woolwich (opposite her Majesty's Dockyard). Warehouse at 66 and 67, Cornhill, and 4, Bishopsgate-street, the principal Depôt, London and Liverpool. S. W. Silver and Co., outfitters and contractors.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLER, 198, Strand, aforesaid.—SATURDAY, JANUARY 27, 1855.

THE ILLUSTRATED LONDON NEWS

No. 726.—VOL. XXVI.] SATURDAY, FEBRUARY 3, 1855. [WITH A SUPPLEMENT, SIXPENCE.

FALL OF THE ABERDEEN ADMINISTRATION.

THE portentous calm amid which the Legislature reassembled on the 23rd of January was dispelled more suddenly than any one anticipated. Acting without advisers or confidants—in secrecy, and on his sole responsibility—Lord John Russell astonished his colleagues, the Parliament, and the country, by resigning office on the 25th. As a necessary consequence, the Administration has fallen to pieces. It could not survive the defection of its leader in the House of Commons,—of a leader so trusted, so honoured, so able, and so influential. Lord John Russell's motives for the act, which is one not utterly unprecedented, are not to be impugned, though it may be questioned whether his late colleagues have not a right to complain of something that looks very like treachery. On the Tuesday he announced, as a member of the Government, that he would introduce within a few days a bill for the promotion of Education in England and Wales, and on the Thursday he ceased, by his own act, to be a Minister of the Crown. And what occurred in this short interval to compel him to adopt a course which must have been highly painful, if not repugnant, to his feelings? Nothing beyond the announcement of a motion by Mr. Roebuck to inquire into the state of the troops before Sebastopol, and, as necessary corollaries, into the conduct of the war, and the general management—or mismanagement—of the Army. But how was it that Lord John Russell had not prescience enough to foretel such a motion, and to calculate upon it as a certainty, or weeks before the Legislature reassembled? Was there no dissatisfaction in the press, and in the public mind—which was sure to find a vent in Parliament, even if Mr. Roebuck had not thought it expedient to raise the question? Or would Lord John Russell have braved all other opposition but that which found its mouthpiece in the member for Sheffield? Could he withstand Disraeli—but not Roebuck? Was a Parliamentary censure of the mismanagement at Balaclava so unlikely to happen that it was not to be taken into account until the ears heard it, and the eyes could read it in the papers of the House? Lord John Russell—and we say it with the most unfeigned respect—should either have resigned at a much earlier period, or he should have held on with his colleagues, and shared their fate, as he had already shared their councils. But on this topic it is needless to dwell. What Lord John Russell might have done has ceased to be of national importance. What he has done is the great fact of the day; and will influence the fortunes of the country and the fate of Europe for generations. His secession, but more especially the reasons he gave for it, left Parliament no choice but to agree to Mr. Roebuck's motion. That the majority on that occasion was so large we take to be a fortunate circumstance. Had the conduct of the war been condemned by a majority of twenty—or a dozen—or even of one member—we do not see how the Ministry could have ventured to retain office. But, with the fact of so startling a majority, the allies as well as the enemies of England will learn another fact, which will give confidence to the one and inflict sore discouragement upon the other. They will learn that, however heterogeneous may be the elements of party in this country—however confused and chaotic the opinions of our statesmen on many important points both of internal and external policy—there is one point on which there is no disagreement. They will learn that the heart of the people is in the war; that the national "blood is up;" that the Parliament, like the people, has but one desire, which is, to carry on hostilities with the utmost vigour, even to the overthrow of the strongest Administration the country has enjoyed for many years.

Immediately after the battle of Inkerman the glory of Great Britain was at its highest. The world held its breath in admiration at the unparalleled bravery of the noble eight thousand who withstood for hours and finally defeated an army five, if not six, times their number. To the silence of that admiration succeeded one unanimous burst of applause from every part of the civilised world—applause which in their secret souls even the Emperor Nicholas and his Generals must have acknowledged to have been nobly earned. But since that day, while the bravery of the army has suffered no diminution, while the enthusiasm of the people at home has experienced no abatement, and while the determination of all classes to stint neither men nor money—to relax in no exertion—to withhold no sacrifice necessary to command success, has been strengthened by cool reason as well as by passion—discredit has been thrown upon our arms and upon our institutions. We have fallen in the opinion of the French who fought by our side. We have lost reputation—our glory has been tarnished—the prestige of our name has been imperilled; and the Czar has been emboldened into obstinacy by the spectacle of our helplessness.

The complaint of Lord John Russell against his late colleagues, and of the whole country against Lord John Russell, as well as against his colleagues, is, that by some defect of management—some blundering in details—some incapacity existing somewhere, or some obstruction, that must be discovered and removed—the noblest army that ever left our shores—an army that has been victorious in every encounter with the foe—that has not only equalled but surpassed all the heroism recorded in British history—has been left to perish of disease and famine, and been shamed in its own eyes, and in those of the world, by no fault of its

SCENE IN THE MILITARY HOSPITAL, AT HASLAR.—(SEE NEXT PAGE.)

own, and by no causes which it had any right or reason to anticipate. Compared with such facts as these, of what value was any Administration, however well-intentioned and honest as a whole, and however illustrious as regards the personal and public character and position of its component members? Clearly of none. The public welfare and the national honour were at stake, and Parliament rose superior to party. The Coalition Government was defeated by a Coalition greater than itself. Men of all parties forgot their antecedents and connections in the paramount and patriotic determination to make war on such a scale, and with such a purpose, as to conquer a safe, an honourable, and a durable peace.

The change of a Ministry in the midst of a great war is doubtless an evil; but, the evil having come, the British nation, true to its practical character, will turn it to speedy and to profitable account. The Czar will not be allowed to draw any encouragement from the knowledge that Lord Aberdeen has fallen. He will learn our dissensions, but will learn at the same time that we are still the foremost people of the world; and that, if our rulers make blunders, the people have both sagacity and energy to supply their deficiencies. It is not only a change of Ministry but a change of system that will result. Forty years of peace have not demoralised us, as Alma and Inkerman can testify, and as other victories, yet to be won, will prove as abundantly and as gloriously. But these forty years of peace have allowed a bad system to develop and extend itself in the administration of an army, which in peace was not over popular, and which offered few charms to the hard hands of the labouring, and none to the clear heads and aspiring genius of the middle, classes. But with the fall of the Aberdeen Ministry, falls the system which that Ministry was unable, though, perhaps, not unwilling, to reform. The system was so deeply rooted, that it required the shadow of impending calamity and disgrace to arouse all classes—the governing as well as the governed to the stern necessity of abolishing it. The country could not obtain Reform in Parliament until revolution was close at hand. It could not obtain a Repeal of the Corn-laws except under a similar penalty. The Reformation of its military system has to be purchased in the same unpropitious manner. Fortunately the change will come before it be too late. There was little time, but we hope there will be sufficient.

SCENE IN THE MILITARY HOSPITAL AT HASLAR.

AMONG the melancholy scenes which chequer the incidents of the war, the Military Hospital at Haslar presents some afflicting episodes of suffering. That engraved upon the preceding page (sketched a few days since) portrays a private of the 23rd Regiment. This poor fellow was hit, at the battle of the Alma, by a chain-shot, which, he says, he did not feel. The sufferer lay upon the field until the following afternoon, when his leg was amputated. He was brought to Portsmouth not many days since, and now presents a sad illustration of

the b.g wars
That make ambition virtue

DESPATCHES FROM LORD RAGLAN

(From a Supplement to the *London Gazette* of Friday, January 26.)

War Department, January 27, 1855

His Grace the Duke of Newcastle has received a despatch, of which the following is a copy, addressed to his Grace by Field-Marshal the Lord Raglan, G.C.B.:—

Before Sebastopol, Jan. 13, 1855.

My Lord Duke,—The weather continues very severe, and to-day it blows a gale of wind, with drifting snow

Although I have not received the official report from the officer commanding the Fourth Division, the officer of his Quartermaster-General's department, whose duty it is to visit the advanced posts at daylight, has brought in an account of a sortie made by the Russians in the course of last night upon our right and left attack, the enemy advancing, under protection of a heavy cannonade, along the Woronzow-road and the ravine on our extreme left.

The enemy succeeded in driving in the troops in the advanced trench, which was not re-occupied until the reserves were brought forward from the second parallel.

A party in pits on the right of the advanced trench, consisting of 1 sergeant and 13 rank and file, are missing; and 1 officer and 36 privates are stated to be wounded

The time for the despatch of the mail being at hand, I am very sorry that I shall not be able to send your Grace to-day a more accurate statement of this affair.

I enclose a return of casualties between the 8th and the 11th

Great progress is making in disembarking and issuing to the troops vast quantities of warm clothing of all descriptions; and I believe I may assert that every man in this army has received a second blanket, a jersey frock, flannel drawers, and socks, and some kind of winter coat, in addition to the ordinary great-coat.

The provision of fuel is still a great difficulty.

Every effort is making, and with tolerable success, in landing and putting up the huts; their great weight (2½ tons each) is a serious obstacle to their conveyance to the Camp, with our limited transport. Each hut requires three stripped artillery waggons, with from eight to ten horses each, or 180 men.

Much sickness continues to prevail. I have, &c., RAGLAN.

His Grace the Duke of Newcastle, &c., &c., &c.

War-office, Jan. 27, 1855

The Right Hon. the Secretary at War has received from his Grace the Duke of Newcastle the following list of casualties amongst the non-commissioned officers and private in the forces under the command of Field-Marshal the Lord Raglan, G.C.B.; from the 8th to the 11th January, 1855, both days inclusive:

RETURN OF CASUALTIES FROM 8TH TO 11TH JANUARY, 1855

8th Foot: 1 rank and file killed; 2 rank and file wounded.	45th: 1 rank and file killed; 1 rank and file wounded
19th: 1 rank and file wounded	49th: 1 sergeant killed
21st: 1 sergeant, 1 rank and file killed; 1 rank and file wounded.	55th: 1 rank and file wounded
23rd: 1 rank and file killed.	57th: 1 rank and file wounded
30th: 2 rank and file killed	88th: 1 rank and file killed; 1 rank and file wounded
33rd: 2 rank and file killed	93rd: 1 rank and file wounded
34th: 1 rank and file wounded.	97th: 1 rank and file wounded
44th: 1 rank and file wounded	

Total: 2 sergeants, 7 rank and file, killed; 13 rank and file wounded

J. B. BUCKNALL ESTCOURT, Adjutant-General

44th Private John Burns, slightly	93th: Private Michael Nevin, slightly
	97th Private James Duffy, severely

J. B. BUCKNALL ESTCOURT, Adjutant-General

THE LAST LONDON ALCHEMIST. The last true believer in alchemy was, according to Mr. Brande, Peter Woulfe, F.R.S., the eminent chemist, who occupied chambers in Barnard's-inn, Holborn, and usually spent the summer in Paris. Woulfe was a tall, thin man; his chambers were on the second floor of No. 2, Barnard's-inn, here he died in 1805, and his last moments were remarkable. By his desire, his laundress shut up his chambers and left him, but returned at midnight, when Woulfe was still alive. Next morning, however, she found him dead; his countenance was calm and serene, and, apparently, he had not moved from the position in which she had last seen him. Among Woulfe's contributions to the "Philosophical Transactions" are "Experiments to show the Nature of Aurum Mosaicum." - *Curiosities of London* (just published).

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our Special Correspondent.)

PARIS, Friday.

There are still reports that a series of grand balls are to be given at the Tuileries in the course of the season, but as yet no particular announcement of the fact has been given out, and it is said by some that the rumour will not be realised, and, unless matters in the East assume a totally different aspect, the Court will confine itself principally to dress receptions and fêtes of a less public character. As, however, the Emperor gives every possible encouragement for these fêtes not only at all the Ministries, but at the Prefectures and Sous-Prefectures in the provinces, it is to be supposed that, for consistency 'sake, the Tuileries will follow the course it prescribes to the public functionaries.

It appears that six new *dames d'honneur* are about to be appointed. These are Madame de Lourmel, widow of General de Lourmel, killed before the walls of Sebastopol (her service will not, as may be supposed, commence until the expiration of her mourning); Mesdames de Sauley, de Sancy, de Labédoyère, and her sister (whose name escapes us), and Mdlle. de Renneval.

Apropos of the Court, we may relate a little adventure of the Empress, which puts the *badauds* on the *qui vive* for the recurrence of such an event. Her Majesty, attended by the Comte Tascher de la Pagerie, Grand Master of her Household, and her ladies, went to the *atelier* of M. Winterhalter to give a sitting for a large picture, on which the artist is now engaged, representing the Empress surrounded by her *dames d'honneur*. Having sent away the carriages, with orders to return at a certain hour, the fineness of the weather, notwithstanding the intense cold, tempted her Majesty to walk; and, leaning on the arm of M. Tascher de la Pagerie, and followed at a certain distance by her ladies, so as not to attract attention, she proceeded down the Boulevards from the Rue Basse du Remparts to the Tuileries, without being recognised, extremely amused by the success of her little *escapade*.

A report now asserts that the opening of the Great Industrial Exhibition will be deferred for a few weeks, and that it will then be signalised by the attendance of several of the crowned heads of Europe. Our Queen and the Emperor of Austria are especially cited among those whose presence is hoped for. On his return to Paris, the Prince Napoleon will resume his presidence of the Commission of the Exhibition. With regard to the catalogue of this Institution, the variety of plans proposed, seem to resolve themselves into the following:—a separate volume for each section, comprising in all six or eight; one for the national commercial produce, one for that of foreign countries, for French painting, French sculpture, foreign works of art, agricultural produce, &c.

Few events of a private character have produced so strong and painful a sensation on the public mind, as the death of M. Gérard de Nerval - whose name as a poet, *feuilletoniste*, and dramatic writer, stood high in the list of French authors, and whose peculiar charms of style and conversation, whose warmth of heart, whose unworldliness, whose fine and gentle nature, rendered him an object of sincere regard and interest, even to those who were comparatively but slightly acquainted with him—of earnest affection to his more intimate friends. Gérard de Nerval possessed not only genius, but opportunities of turning it to an account that would have rendered him more than independent,—his total indifference to money, his inaptitude for anything in the shape of affairs, the impossibility that attended him of following any regular mode of life, any course of occupation, kept him always more or less poor. But his poverty weighed upon him less than riches would have done: his brilliant and sensitive imagination, allowed full scope and never curbed by realities, passed beyond healthy limits, and on more than one occasion produced effects that filled the many friends, who loved him with no common devotion, with alarm and uneasiness. To the result of one of these fits of mental excitement must be attributed the loss literature and society have sustained. At eighteen Gérard de Nerval produced a translation of "Faust," which called forth a letter from Goethe, containing the following phrase:—"I never understood my own work so well as in reading your version of it." Germany and the East were the principal sources of inspiration to this charming writer. After his voyage in the latter, he composed "Les Nuits du Rhamadan," "Voyage en Orient," and a variety of short articles, anecdotes of travel, *feuilletons*, &c. "Sylvie," "Lorely," "Les Filles du Feu," "Aurélie"; ou, la Vie et la Rêve," "Les Illuminés," &c.—almost all partaking more or less of the mystic character of his mind—successively appeared, to establish his reputation. The first chapters of the last-named work—one of the most singular combinations of reason and wild imagings in modern literature—appeared in the *Revue de Paris*; the continuation was found in his pocket at his death.

The death of M. Jaques Arago is another serious loss, though of a less painful character and under less distressing circumstances to French literature, to which, notwithstanding his infirmity -blindness—he had for many years large contributed; he leaves inedited a considerable number of MSS of various natures. M. Arago's peculiar ingenuity for plays upon words has often been cited: the following instance was given us by M. Louis Blanc, with whom, accompanied by other friends, M. Arago was crossing one of the bridges of the Seine, from which the view of the river represents it winding in the form of an S. Extending his arm in this direction he turned to his companions, saying "Mephistophiles!" The friends, after much wondering, having "given it up," Arago, finding they were not Sphinxes, condescended to translate Mephistophiles into *Mes-fils c'ite (cette) eau fait l'S!*

Last week saw the appearance of two new journals, *La Revue Historique*, a collection of autographs, and *Paris Bon Vivant*, the name of which sufficiently indicates character.

A new "Histoire de l'Empire" is about to be published from the pen of M. B. Sarrans, jun. This work, the proofs of which the author is correcting, was commenced some years since, in collaboration with Armand Carrel. It is composed from a variety of curious and interesting documents, and is expected to contain many valuable revelations.

Versailles seems to be the place chiefly chosen by our compatriots for their sojourn in the approaching Exhibition season. Daily lodgings are being engaged there, and it is anticipated that before the arrival of May it will be as full, in proportion, as the capital itself.

The Grand Opera has engaged Mdme Miolan, of the Opéra Comique. Mdme. Miolan's voice and method are almost irreproachable, as far as they go; but how those clear, sweet, bird-like trills, that form the delight of her present audience, are to make themselves heard in the *salle* of the great Opera, puzzles us. We wish her all success, but we fear to anticipate it. Mdme. Deligne-Lauters has a magnificent success at the Lyrique with the new Opera, "Robin des Bois."

POLITICAL COINCIDENCE. It is a remarkable coincidence that 305 was the number of each of the majorities in the divisions which drove Lord Derby and Lord Palmerston from office.

VISITORS TO PUBLIC PLACES. From a return moved for by Mr. Hume, and recently issued, the following details are taken:—The number of visitors to the Tower of London for the year ending February 1, 1854, was 32,075; and the money paid, £1,901 17s. 6d. The expenditure for 1853 was £1483 7s. At Hampton Court the number of visitors in 1853 was 180,783. At Kew Gardens, on week days, 210,741; on Sundays, 190,469: total, 401,210. At Westminster Abbey, £570 9s. was collected in 1853. The visitors in the same year to the British Museum were 681,111; the readers, 67,794. To the National Gallery there were 627,745 visitors; to the Vernon Gallery, 249,992; to the Museum of Practical Geology, 27,713.

THE WAR IN THE CRIMEA.

By the *Egyptus*, which left Constantinople on the 22nd, we have advices from the Crimea to the 20th ult., at which date the condition of the troops was improving. The Russian sorties had become more frequent, but the severe frost had rendered a general engagement impracticable. The French troops have taken most of the English right attack, which will relieve our army. A council of Generals was held at Lord Raglan's quarters on the 15th, and the general impression was, that something important has been resolved upon, as soon as the weather permits. The French have for some time been quite ready to open on the town with fifty 10 and 13 inch mortars, and have only been waiting until all the English mortars were in position, and sufficiently supplied with ammunition to support their fire. Pending this happy consummation, and to divert the enemy in the meanwhile, our allies are said to have commenced firing from a distant battery with ten 13-inch mortars upon the town and strongest of the Russian works. Each of these mortars fires fifty rounds a day, and any one who has ever seen the effect produced by the bursting of a "Whistling Dick," of thirteen inches, will know at once that 500 per diem cannot fail into the enemy's lines without doing fearful mischief to all around. All their missiles are certain at four thousand yards, and for destructive purposes can be used at five thousand; consequently, even the defences on the north side of the harbour come under fire. Where they have been thrown in the town, the stately and strong built houses on which they fall are mere ruins; 240 lb weight of iron falling upon the roof of a house, from the height of a mile, penetrates to the very foundation, when the explosion of a well-confined bursting charge of 20 lb. of powder settles everything about the structure, from foundation to roof, for ever. Not many shells have yet been thrown among the heavy buildings near the town—*yet*, when they have fallen, buildings which throughout the siege have never shown a mark are now mere piles of rubbish. The French, for the present, are principally directing their efforts to injuring the Garden Battery and redan, and 400 out of the 500 shells fired each day fall in the centre of these ill starred defences. Already no less than eleven guns have been silenced in these works, and, though generally the cannon is replaced during the night, it still shows that the bombs are telling severely. On the average fifty wounded will be taken to the hospitals after each day's bombardment. When the English commence they will do so with thirty-five mortars and sixty heavy guns, all of which, with the exception of two or three of the latter, are in position, and only waiting for stores of ammunition to open fire. When the bombardment is commenced fifty rounds every twelve hours are to be fired from each piece of ordnance, until all the ammunition is expended. According to this arrangement about 20,000 rounds of shot and shell will be thrown into Sebastopol every twenty-four hours, and the Russians must surely be made of sterner stuff than bronze or granite if they stand fifty or sixty hours of such a cannonade. When the bombardment has done its worst it is said the Allied forces are to storm.

The *Militarische Zeitung* says that two French divisions, under General Pelissier, are to join Omer Pacha; and that Perekop is to be attacked, and, if possible, taken by the combined forces. General Marmora's force will land in the bay of Kaffa, under the protection of the guns of a squadron of the Allied fleet, and will threaten the communications by way of the isthmus of Arabad. This Piedmont detachment will embark for its destination on the 28th of February, and will be reinforced by some Anglo-French troops

THE RUSSIANS CELEBRATING THE NEW YEAR.

The Russians, who had been very active inside the town during the 12th, the last day of the year according to their calendar, and who had lighted great watch-fires on the south side of the place, illuminated the heights over the Tchernaya with rows of lights, which shone brilliantly through the darkness of the cold winter's night, and were evidently with all possible pomp and ostentation celebrating the opening of their peculiar new year. Lights shone from the public buildings, and our lonely sentries in the valleys and ravines, and the *enfans perdus* the French sharpshooters lying in their lairs with watchful eye on every embrasure before them might almost fancy that the inhabitants and garrison of the besieged city were tantalizing them with the aspect of their gaiety. At midnight all the chapel bells of the city began ringing, and it was evident that a religious ceremony of extraordinary solemnity was about to take place. On the English side the sentries and pickets were doubled as usual, and the sand bag and the advanced posts were strengthened wherever it was practicable. About a quarter past one o'clock in the morning the Russians inside the line of works gave a loud cheer. The French replied by opening fire, and the Russians in return instantly began one of the most tremendous cannonades from the front of their position which has as yet been heard. The earthworks flashed forth uninterrupted floods of flame, which broke through the smokeas lightning through the thunder-cloud, and revealed distinctly the outlines of the buildings in the town, and the lines of dense crowding artillery. The roaring of shot, the screaming and hissing of heavy shell, and the whistling of carcases filled up the intervals between the deafening roll of cannon, which was as rapid and unbroken as quick file-firing. The iron and stones passed over our lines unintercepted for more than half-an-hour; and the French, whose works to our left are less protected by the ground than ours are, had to shelter themselves closely in the trenches, and could barely reply to the massive volleys which ploughed up the parapets of their works; but their *enfans perdus* never lost an opportunity of sending their balls into the embrasures. In the meantime, while the firing was going on, a strong body of men had been pushed out of the town up the face of the hill towards our works in front and on the flank of the left attack. As it was expected that some attempt of the kind would be made, one of the steadiest sergeants in the service was posted here with twelve men. Every reliance was placed on his vigilance and on his strict attention to his duties, but somehow or the other the enemy crept up on the little party, surprised and took them prisoners, and then advanced on the covering parties with such rapidity and suddenness that the parties of the Sixty—th and of the Twenty—st Regiments, which were on duty in the trenches, were obliged to retire almost without firing a shot. They rallied, however, and fired, and, being supported by the regiments in rear, drove the enemy back to the town. In this little affair one officer and nine men were severely wounded, six men were killed, and fourteen men are now missing. The French had to resist a strong sortie nearly at the same time, and for a short time the Russians were within the parapet of one of their mortar batteries, and spiked, it is said, two or three mortars with wooden plugs, but the French soon drove them back with loss, and in the pursuit got inside the lines of the Russians' advanced batteries. The soldiers, indeed, say they could have taken Sebastopol with ease if they were permitted to do so. At two o'clock in the morning all was silent once more, and the Allied armies had opened their new Russian year on Crimean soil.

RUSSIAN PREPARATIONS FOR THE SPRING CAMPAIGN.

The German papers are full of reports from Russia regarding the preparations which the Czar is making for the spring campaign. According to letters from Revel of the 16th ult. it appears that the future army depôt at Ballo, the assembling of which was decreed on the 10th December by the Emperor, is to be much more considerable than was supposed when the ukase was issued. General Siewers, commander of the corps of infantry, having also under his orders that of the Baltic, and whose headquarters are established at Mitau, will also have under his command an army of at least 100,000 men, destined to operate, in case of need, in the provinces of Lithuania, Courland, and along the coast of Finland, between Libau and Revel. The correspondent of the *Berlin National* writes as follows from St. Petersburg, under date of the 19th:—

The military administration has ordered enormous quantities of warlike stores in manufactories, workshops, and depôts have received fresh orders, and the Commissariat has been directed to proceed with rigour against all contractors and purveyors who are not punctual. The severity with which some authorities have proceeded against such persons has rather alarmed their spirit of enterprise, and thus raised prices for want of competition. The dockyard administration has made a demand for 50,000 pud of hemp for rigging, and 1000 tons of suet. The arsenal of Brausk had furnished 22,000 pud of artillery stores, and 6,000 pud of ammunition from Dubowy to Rosloff, on the Don, as the first facilities the transport. Tula has furnished about 300,000 pud of arms, which have been conveyed to different depôts. Enormous quantities of hospital stores have been sent to Bejeac-Liteiski, on the B.g, to Kiyeff, Wilna, Minsk, Grodno, &c. In short, the most restless military activity prevails throughout the whole empire. In proportion as reports are received of military preparations and movements of troops in Asiatica, the more energetic are counter-preparations on this side. Russian journals rva. each other in registering details of the movements and dislocation of Austrian troops. Attempts are made to treat the question with indifference; nevertheless the Court journal made the remarkable observation the other day, that "Germany would not be able to avoid war with Russa."

The *Kreuz Zeitung* contains long details of the forces on paper at the disposal of the Czar. The Russian organ is, from peculiar circumstances, in a position to obtain correct information—at all events as to the paper amount of the Russian forces, and we may therefore give the summary of its calculations. These, exclusive of the Caucasian corps, and two divisions of the 5th and 6th corps, detached to Asia, amount to 607 battalions, 562 squadrons, and 1719 field-pieces, which on paper represent 637,000 infantry, 95,000 cavalry, and 42,000 artillery. The journal says that not more than ten per cent is to be deducted for non-effectives Now, this is most notoriously incorrect. It is possible that the regiments of the Guards and *élite* corps, when in garrison, and in peace time, may not have more than ten per cent ineffective; but it is not less notorious that not a single battalion of the 3rd, 4th, 5th, and 6th corps averages, one with the other, more than a maximum of 600 present under arms, and that squadrons and batteries offer the same proportion. Thirty and not ten per cent difference between effective and paper strength is the fair allowance to be made. Altogether it is calculated that the total amount of the Russian army may consist of 350,000 men.

The reckless consumption of human life in order to gratify the ambition of the Emperor is beginning to tell upon the supply of serfs, as will be seen by the following extract from a recent Russian letter:—

ST. PETERSBURG, Jan. 24.—In consequence of the difficulty of filling up the ranks of the army, the Emperor has ordered that men shall be liable to the service of the army, even instead of that of to thirty, as heretofore. Those sons of aged or widowed parents hitherto exempted are also now ordered to serve, forming separate corps

AUSTRIA AND THE CONFEDERATION.

The publication of the following despatch from Count de Buol to the States of the German Confederation, which has taken place sorely to the annoyance of the Prussian Government, has caused an immense sensation in Germany. This excitement will become perfectly intelligible on referring to the very pointed demand made in the despatch itself, in which each Prince of Germany is called to say whether, supposing Prussia, supposing a majority of the Confederation to declare for inaction, he will be ready to unite his armies with those of Austria, and join his armies to those of its empire. The following is the despatch, as given in the *Dusseldorf Gazette*:—

Confidential. VIENNA, Jan. 14, 1855.

We may still consider the adhesion of Prussia to the alliance concluded by the treaty of the 2nd of December as a probable eventuality, and for its part the Imperial Government will always consider it a duty to do everything in its power to put an end (one way or another) to the differences which, to its regret, unhappily now exist between the two great German Powers.

If the hope of seeing Prussia adhere to the alliance should be realized, the complete and sincere concurrence of the two Powers in their quality of German Federal Powers would thereby be assured

Experience, however, bids us extend our provisions to the case that Prussia should attempt longer to persist in her policy of indecision, and should even attempt to act at Frankfort in a manner to thwart our propositions upon the necessity of the Confederation being prepared for war.

In such case, the Imperial Government would only the more resolutely desire to pursue, with the support of the other German Governments, the path traced by the Federal Constitution as regards the manner in which this great question ought to be considered, and it would regard itself as neglecting one of the most sacred duties of its mission in Germany, if it did not endeavour above all things to attain that the Confederation should take constitutional resolutions, and if, for its own part, it was not perfectly ready to take upon itself the consequences of these resolutions.

Therefore at a moment when our confederates will have to decide upon their participation in events perhaps decisive for the destines of Germany, we cannot hesitate in putting the question to them, confidentially, as to how they will act in the case of being resolved to go in accordance with us, should a conformable resolution not be obtained in the Federal Assembly

We do not hesitate openly to ask our confederates if, in that case, they will grant sufficient confidence to Austria to join her destinies; and if, in case alarming complications should arise, they would fall, with all their forces ready, in the most extreme eventuality, equally count upon their active co-operation.

The Imperial Court would, in such case, give the most solemn assurances to guarantee their territorial possessions and position against every eventuality, and, moreover, to grant them their share of advantage resulting from the war in proportion to the number of troops employed. In exchange, Austria must put the condition that a body of troops, to be determined upon, should be at once made ready for service, and claim that ——— [Here comes the same as of the Government of the State addressed] shall express to his Majesty the Emperor the confidence of placing, in case of appeal, the direction of their contingent under the superior command of his Imperial Majesty

We count upon a frank and candid reply, and it will give us great satisfaction if we find that it responds to our wish, as that will have the effect of throwing light upon our relations with the German Governments, and of consolidating them especially with ——— [name of State], providing them with all the guarantees of the necessities of the present moment.

You will please to make a confidential communication of this despatch to ——— DE BUOL.

Some of the German journals, commenting on this despatch, trace a parallel between the present state of Germany and that which existed in 1806, the epoch of the dissolution of the German Empire, and, looking at the remarkable words which occur in Count Buol's despatch, some of these journalists express the apprehension that the map of Central Europe is about to be exposed to the risk of a new modification. It is worth remarking that this is the first time since the establishment of the Confederation that a question of war has been brought before its Diet. The articles of the "Final Act of Vienna," under which Austria proposes to make separate war conventions with the several States, are thus framed:—

Art. 41 Resolutions adopted in restricted council, relative to the reality of the danger of a hostile attack, bind all Federal States to a participation in the defensive measures requested as necessary by the Diet. In the same manner a declaration of war pronounced in plenary Assembly binds all Federa. States to a direct participation in the common war.

Art. 42. Should the preparatory question of whether danger be at hand be decidedly negatived by a majority—nevertheless, it remains open for such States as are persuaded of the danger to deliberate among themselves upon measures for common defence.

On the 22nd ult. Baron Prokesch made a motion in the Diet that half the contingents of the several Federal States be made mobile, and that a Commander-in-Chief be elected; but, as some of the members declared that they were not furnished with the necessary instructions, the questions could not be put to the vote

A telegraphic despatch from Berlin states that, at the sitting of the Committee of Diet on the 30th, the motion of Austria for the mobilisation of the federal contingents was rejected and withdrawn, and that the motion of Prussia on the preparation for war (*Kriegsbereitschaft*) was accepted

THE ATTITUDE OF PRUSSIA.

The latest diplomatic production which has issued from Berlin is a despatch from M. Manteuffel, dated January 23rd, and addressed to the Representatives of Prussia at Paris and London, explaining the reasons why, after admitting that Prussia cannot join the treaty of December 2nd, the Powers negotiating have not been able to reconcile their common purpose with their particular interests. "Frankly," Prussia avows, that "important changes of *fact* have supervened;" the term for adhesion fixed by the treaty has expired; and "the offensive tendency of the treaty, eclipsed in some sort before the expiration of the term," now displays in true bearing the engagements which Prussia is invited to contract. Moreover, the Western Powers have had confidential communications with the Representative of Russia, from which Prussia was excluded. In Prince Gortschakoff's memorandum M. Manteuffel's Government "see conciliatory and pacific dispositions;" but not knowing the work by the three Representatives, of which it is the complement, nor "the *ensemble* of the motives which have decided over the birth of these documents," that Government cannot form a precise judgment on the eventualities of the engagements involved. These are the reasons why further negotiations would be fruitless until a representative shall be permitted to take his seat at the deliberations in Vienna. King Frederick William "makes this conviction the point of departure for his future attitude" He will not do so, however, without declaring that "he does not permit himself to be guided only by practical exigencies, but by considerations of a higher order." What these considerations are, except that Prussia has "rights as well as duties," we cannot learn from M. Manteuffel's very enigmatical language; although he finishes the passage by saying:—

Here, Monsieur le Comte, are principles so simple and natural, that they seem not to require an advocate. It is the kindness to lay them before M. le Minister for Foreign Affairs (the Principal Secretary of State), who, we have the utmost confidence, will not withhold his approval of them; and will, with us, consider the frankness with which we have stated them as likely to facilitate rather than hinder an eventual good understanding between the two Cabinets

It is impossible for anybody to say what these simple principles are Prussia evidently wants to be off her bargain with Austria. The April treaty, and the additional article thereto of the 26th of November of last year, it is now pleaded at Berlin, are only of a defensive character, and contain no engagements of an offensive nature against Russia Seeing, however, that all these "defensive" measures no longer avail in restraining Austria from assuming an openly hostile position against the Muscovite patron of Germany and the brother-in-law of the King of Prussia, the latter has resolved to give Austria a checkmate in the Diet. It is difficult to say what the issue of the contest will be, but all accounts represent the people of Germany as thoroughly disgusted by the conduct of Frederick William. A gentleman who has recently passed through a greater part of Northern and Southern Germany, on his way to and from England, viâ Berlin, Hamburg, Leipsic, Frankfort, Mannheim, Carlsruhe, and Strasbourg, states that, whereas in former times, since 1848, public feeling at these places was generally unfavourable in its estimation of Austria, now the bold, straightforward, and honest policy of that country forms the most popular theme of every-day conversation.

A telegraphic despatch from Berlin, dated Wednesday, says:—The Government has decreed immediate mobilisation. The Fourth and Sixth Army Corps are ordered to occupy the provinces of Saxony and Silesia. The demand of France, that a portion of the French army be allowed to pass through Prussia, is categorically rejected."

THE VIENNA INTERPRETATION OF THE FOUR POINTS.

The following is said to be the interpretation of the Four Points agreed on by the representatives of the Allied Powers at Vienna:—

For the purpose of fixing the sense which their Governments attach to each of the principles contained in the four articles, but reserving to themselves, as they have always hitherto done, the power subsequently to make such special stipulations as appear to them demanded by the general interests of Europe over and above the four guarantees for the prevention of the return of the late complications, the Plenipotentiaries of Austria, France, and Great Britain declare that—

1. Their Governments are jointly of opinion, that it is necessary to abolish the exclusive protectorate which Russia has exercised over Moldavia, Wallachia, and Servia, and from henceforth to place the privileges accorded by the Sultans to these principalities, which form part of their territories, under the joint guarantee of the Five Powers; and that they (the Governments) have, therefore, considered, and do consider, that none of the stipulations of the old treaties of Russia with the Porte, having reference to the said provinces, can, at the conclusion of a peace, be put again into force; and that the arrangements which have to be made in reference to them must in future be concluded in such a way as to afford perfect and entire consideration for the rights of the Sovereign Power, those of the three Principalities, and the general interests of Europe.

2. In order to give to the freedom of the navigation of the Danube al. the development of which it is susceptible, it would be expedient that the lower portion of the Danube, from that point where it becomes common to the two littoral States, should be withdrawn from the territorial dominion that exists in virtue of Art. 3 of the peace of Adrianople

At any rate the free navigation of the Danube would not be secured if it be not placed under the surveillance of a Syndical Board, that should be invested with the necessary powers for the purpose of getting rid of the obstructions which at present exist at the mouths of this stream, or which may at a future time be formed there

3. The revision of the Treaty of July 13, 1841, shall have for its object to connect the existence of the Ottoman Empire more closely with the balance of power in Europe, and to put an end to that preponderance of Russia in the Black Sea. The measures to be taken in reference to this end depend too directly on the contingencies of war for their basis to be laid down as yet.

It is sufficient to indicate the principle that is to guide them

4. Russia, renouncing the claim to exercise an official protectorate over the Sultan's Christian subjects who belong to the Oriental *rites*, naturally renounces the revival of any article of her former treaties, and more particularly of the Treaty of Kustchuk Kainardji, the erroneous interpretation of which has been the main cause of the present war. Whilst they (the Governments) extend each other their mutual co-operation for the purpose of obtaining from the initiative of the Ottoman Government the recognition and observance of the religious privileges of the various Christian communities without distinction of rights, and whilst they jointly avail themselves, in the interest of the said communities, of the generous intentions proclaimed by his Majesty the Sultan with reference to them, they will take the greatest care to protect the dignity of his Highness and the independence of his crown from every encroachment

To the first, second, and fourth points Prince Gortschakoff gave in his adhesion. The only point on which no joint agreement was arrived at was the 3rd, the revision of the Treaty of 1841. Cognisance was taken of Prince Gortschakoff's declaration that the Emperor's sovereignty did not admit of the Powers reply, and it will give us great satisfaction to find that it responds to our wish, as that will have the effect of throwing light upon our relations with the German Governments, and of consolidating them especially with ——— [name of State], providing them with all the guarantees of the necessities of the present moment.

It is impossible for anybody to say what these simple principles are Prussia evidently wants to be off her bargain with Austria. The April treaty, and the additional article thereto of the 26th of November of last year, it is now pleaded at Berlin, are only of a defensive character, and contain no engagements of an offensive nature against Russia Seeing, however, that all these "defensive" measures no longer avail in restraining Austria from assuming an openly hostile position against the Muscovite patron of Germany and the brother-in-law of the King of Prussia, the latter has resolved to give Austria a checkmate in the Diet. It is difficult to say what the issue of the contest will be, but all accounts represent the people of Germany as thoroughly disgusted by the conduct of Frederick William. A gentleman who has recently passed through a greater part of Northern and Southern Germany, on his way to and from England, viâ Berlin, Hamburg, Leipsic, Frankfort, Mannheim, Carlsruhe, and Strasbourg, states that, whereas in former times, since 1848, public feeling at these places was generally unfavourable in its estimation of Austria, now the bold, straightforward, and honest policy of that country forms the most popular theme of every-day conversation.

A telegraphic despatch from Berlin, dated Wednesday, says:—The Government has decreed immediate mobilisation. The Fourth and Sixth Army Corps are ordered to occupy the provinces of Saxony and Silesia. The demand of France, that a portion of the French army be allowed to pass through Prussia, is categorically rejected."

THE VIENNA INTERPRETATION OF THE FOUR POINTS.

The following is said to be the interpretation of the Four Points agreed on by the representatives of the Allied Powers at Vienna:—

For the purpose of fixing the sense which their Governments attach to each of the principles contained in the four articles, but reserving to themselves, as they have always hitherto done, the power subsequently to make such special stipulations as appear to them demanded by the general interests of Europe over and above the four guarantees for the prevention of the return of the late complications, the Plenipotentiaries of Austria, France, and Great Britain declare that—

1. Their Governments are jointly of opinion, that it is necessary to abolish the exclusive protectorate which Russia has exercised over Moldavia, Wallachia, and Servia, and from henceforth to place the privileges accorded by the Sultans to these principalities, which form part of their territories, under the joint guarantee of the Five Powers; and that they (the Governments) have, therefore, considered, and do consider, that none of the stipulations of the old treaties of Russia with the Porte, having reference to the said provinces, can, at the conclusion of a peace, be put again into force; and that the arrangements which have to be made in reference to them must in future be concluded in such a way as to afford perfect and entire consideration for the rights of the Sovereign Power, those of the three Principalities, and the general interests of Europe.

2. In order to give to the freedom of the navigation of the Danube al. the development of which it is susceptible, it would be expedient that the lower portion of the Danube, from that point where it becomes common to the two littoral States, should be withdrawn from the territorial dominion that exists in virtue of Art. 3 of the peace of Adrianople

At any rate the free navigation of the Danube would not be secured if it be not placed under the surveillance of a Syndical Board, that should be invested with the necessary powers for the purpose of getting rid of the obstructions which at present exist at the mouths of this stream, or which may at a future time be formed there

3. The revision of the Treaty of July 13, 1841, shall have for its object to connect the existence of the Ottoman Empire more closely with the balance of power in Europe, and to put an end to that preponderance of Russia in the Black Sea. The measures to be taken in reference to this end depend too directly on the contingencies of war for their basis to be laid down as yet.

It is sufficient to indicate the principle that is to guide them

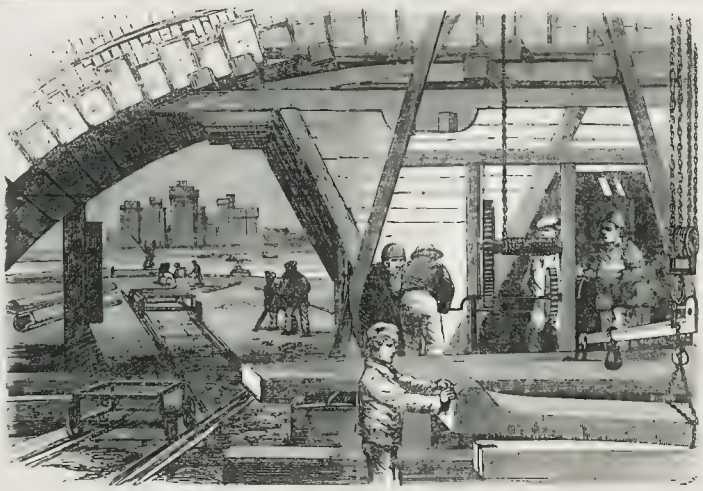
4. Russia, renouncing the claim to exercise an official protectorate over the Sultan's Christian subjects who belong to the Oriental *rites*, naturally renounces the revival of any article of her former treaties, and more particularly of the Treaty of Kustchuk Kainardji, the erroneous interpretation of which has been the main cause of the present war. Whilst they (the Governments) extend each other their mutual co-operation for the purpose of obtaining from the initiative of the Ottoman Government the recognition and observance of the religious privileges of the various Christian communities without distinction of rights, and whilst they jointly avail themselves, in the interest of the said communities, of the generous intentions proclaimed by his Majesty the Sultan with reference to them, they will take the greatest care to protect the dignity of his Highness and the independence of his crown from every encroachment

To the first, second, and fourth points Prince Gortschakoff gave in his adhesion. The only point on which no joint agreement was arrived at was the 3rd, the revision of the Treaty of 1841. Cognisance was taken of Prince Gortschakoff's declaration that the Emperor's sovereignty did not admit of the Powers reply, and it will give us great satisfaction if we

WORKS AT WESTMINSTER-BRIDGE.

LITTLE more than a century has elapsed since the present Westminster-bridge was opened for public use. It was designed by Mr. Labelye, a Swiss architect, and was commenced on the 29th of January, 1739; it occupied eleven years and nine months in its execution, and was opened at midnight on the 17th November, 1750. It consists of thirteen arches, varying in span, from 76 feet to 52 feet, with two small arches at the abutments of 26 feet span. The total water-way of the thirteen arches is 820 feet at the springing line. The money raised for the construction of the Bridge was £389,500—of which the sum of £197,500 was raised by lottery, and £192,000 by Parliamentary grants.

In the popular accounts given of the Bridge at the time of its erection it is described as one of the finest in the world; "that there is not, perhaps, another Bridge in the whole world that can be compared with it; that all the piers were laid at a considerable depth under the bed of the river, in a hard bed of gravel, which never requires piling, whereas the usual method of building stone and brick bridges over large rivers is to build them upon stilts, that is, driving piles in the bed of the river, sawing their heads off at low-water mark, and after, above them, laying some planks to rest the piers upon." The security for passengers walking through the streets of London at night at the time of the opening of this Bridge may be gathered from the following extract from a work written at the period:—



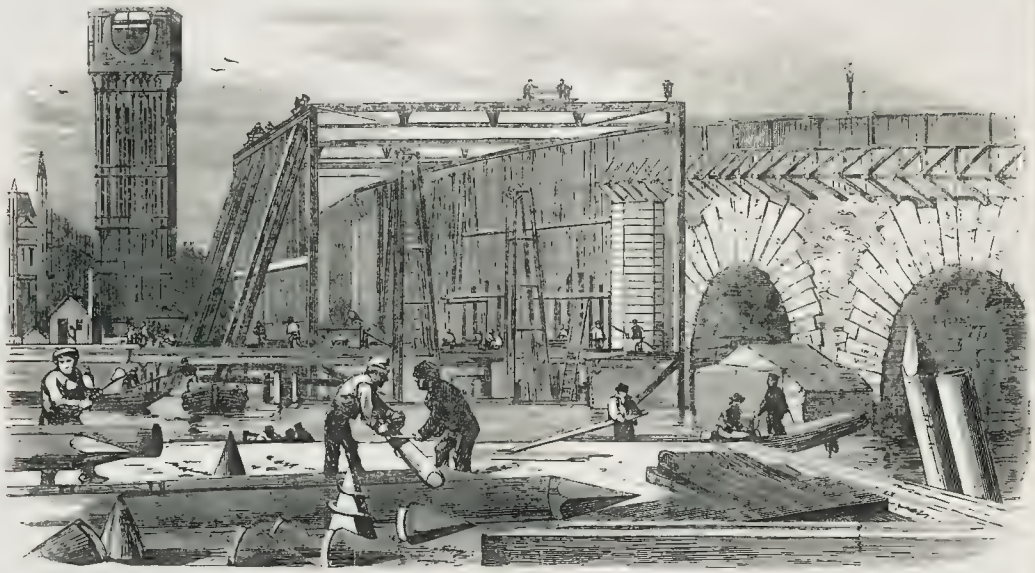
PART OF THE TIMBER PLATFORM FOR DEPOSITING MATERIALS FOR THE NEW BRIDGE.

A guard, consisting of twelve watchmen, is appointed for the security of the passage over this bridge. They are to be upon duty from the close of day every night till the opening of the next morning. We walk the public streets with so much danger in these hours that this provision was extremely necessary upon a bridge of so great length, which is not to be transformed into a street. The recesses over each pier, which are built in the form of alcoves, and designed as places of shelter in bad weather, of retirement in case of an accidental danger or difficulty in the passage, might have otherwise served for places of ambush for robbers and cut-throats; though, indeed, even these occupations, which thrive so much in our time, could not have been followed here without hazard, as there is no way of escaping but at the two ends of the bridge.

The foundations above referred to, with the omission of the said stilts, proved so defective, that, in 1747, one of the piers sunk 16 inches, which rendered necessary the reconstruction of two of the arches, and considerably delayed the completion of the structure.

The condition of the river when the Bridge was built was governed by the dam formed by the piers and starlings of old London-bridge which impeded the passage of the flood tide, and also prevented the free flow of the ebb, so that, at the low water of spring tides, the difference of level of the Thames above and below London-bridge amounted to more than 5 feet, causing a fall through London-bridge so dangerous to passengers in boats, that, on an average, about fifty people were drowned, annually, in passing under the arches, or, as it was called "shooting the bridge."

Even before London-bridge was removed the foundations of West-



STAGING AND TRAVELLER ON THE UPPER SIDE OF THE OLD BRIDGE.

minster-bridge were found to be insecure; but, on the removal of old London-bridge, and the consequent change in the bed of the river by the scour of the ebb tide, the bed of the river at Westminster-bridge was so much lowered that expensive repairs became necessary for maintaining the structure. These repairs, the maintenance of the Bridge, and the works which were undertaken for the widening of the Bridge twelve feet, on an extension of the old piers, caused a total expenditure from 1810 to 1853 of upwards of £200,000.

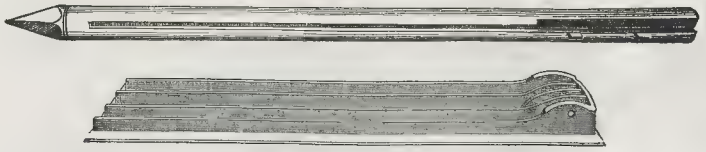
The main features in Mr. Page's design of the new Bridge have been governed by the character and low level of the Houses of Parliament, and the consideration of accommodating the important land traffic which is carried on over Westminster-bridge; and, that the architectural appearance of the Bridge should not be discordant with the Houses of Parliament, the mouldings and ornamental parts are from sketches given by Sir Charles Barry. To fulfil the requirements of a Bridge in this position, the arches are of moderate span, the centre arch being not more than 120 feet. The summit of the roadway of the new Bridge will thus be obtained at a level ten feet below the level of the present roadway.

The width of the new Bridge will be 85 feet, out of which there will be two footpaths, each 15 feet in width. The carriage-way will be divided by a kerb in the centre, to confine the traffic to its proper lines, and thus avoid the confusion and delay caused in the thoroughfares by the irregular tracks which each carman, uncontrolled, chooses for himself.

DREDGING TRENCH FOR THE CAST-IRON CASING.

The width of the new Bridge being 85 feet, it will be 40 feet wider than the present Bridge; the line of the northern (or down-stream) parapet will coincide with the north face of the present Bridge, and the additional 40 feet in width will be set off on the south (or up-stream) side, towards the Houses of Parliament; the width of 85 feet will then be continued along Bridge-street, Westminster, and along Bridge-street, Lambeth, as far as Stangate, forming the approaches to the new Bridge. The inclination of the roadway of the Bridge will also be considerably reduced; the steepest gradient of the new Bridge being 1 in 54, instead of 1 in 24, as at present. The new Bridge will consist of seven arches, having a waterway of 748 feet, the span and rise of each arch being these—the centre arch is 120 feet span, and 18 feet rise; the two next are 116 feet span, and 17 feet 3 inches rise; the next two are 105 feet span, and 15 feet 7½ inches rise; and the two arches adjoining the abutments are 94 feet 6 inches span, and 14 feet rise. The thickness of the piers of the centre arch at the springing is 10 feet 6 inches, and the other piers are respectively 10 feet 3 inches, and 10 feet thick. The position of the abutments of the Bridge is regulated by the proposed line of embankment of the Thames, but the length of the roadway from the present shore is 1160 feet. Assertions have been made at various times that the bed of the river at the present Bridge was not fitted for the foundations of a new Bridge; in short, that it was a rotten foundation. So far from this being the case the borings made under Mr. Page's direction for the Commissioners of her

THE NEW WESTMINSTER BRIDGE.—GENERAL VIEW.—THOMAS PAGE, ENGINEER.



CAST-IRON PILE AND PLATE.

Majesty's Works (before the drawings for the Bridge were completed) proved that a good bed of clay lies at depths of from 13 to 14 feet below the low-water line—some of the borings were carried to a depth of 60 feet below the surface of the clay, which was all found to be of a uniform character.

Having described the general features of the Bridge, some account of the mode of forming the foundation may be interesting. Instead of the stilts or bearing-piles being avoided, they are introduced in close proximity to each other, and driven down with a ram weighing a ton, until ten blows with a fall of nine feet move the pile only half an inch. They are of English elm timber, 14 inches square, and on an average 34 feet long. The number in the whole structure 922, besides an additional number of 100 for sheet piling. The total quantity of timber in the piling will be nearly 30,000 cubic feet.

The piers and abutments are cased with strong cast-iron piles and plates: the piles are driven 18 feet, and the plates 16 feet, into the bed of the river. There are around the foundations of each pier forty-four cast-iron piles, and forty-four plates, and they enclose a space 16 feet wide and 109 feet long from point to point of cutwaters. The piles are 26 feet long and 15 inches diameter, and weigh two tons: the plates are 4 feet 3 inches wide, and 15 feet long, and weigh 37 cwts.: they slide in grooves in the piles, and when in place the top flanges of the plates are 6 feet below low water, and they are to be continued above that level to the top of the piles, viz., 2 feet above low water by granite slabs, 18 inches thick, resting on the plates and supported by the piles. The total number of cast-iron piles is 318, and the number of plates is 316; and the total weight of the casing is 1320 tons. The piles are tied together by iron bars four inches deep and one inch thick. The space enclosed by the casing is to be, after the timber-bearing piles have been driven, of which there are eighty-five for each pier, cleared of all loose ground, and filled up solid with concrete to the height of the top of the iron piles. On the floor thus obtained, granite blocks of seven tons weight will be laid, and will form the base for the piers. The piers are to be of brick, faced with stone. The quantity of brickwork in the whole structure will be 7250 cubic yards; and the total quantity of stone, of which there will be three kinds—viz., granite, Bramley-fall, and Portland —will be 180,000 cubic feet; and the total quantity of concrete will be 10,000 cubic yards. The ribs forming the arches are fifteen in number for each arch. The centre portion of them, extending to a length of nearly one-half the span, will be of wrought iron, and the remainder is to be of cast iron. The weight of cast iron in the whole of the ribs will be 1250 tons, and the weight of wrought iron will be 460 tons. The total weight of the iron work above high-water line will be 3600 tons, of which 700 tons will be of wrought iron. The bearers which support the roadway in connection with the wrought iron of the ribs will be likewise of wrought iron, and the remainder are to be of cast iron. These bearers serve to brace and stiffen the ribs as well as to support the roadway. The ribs are further braced with diagonal and cross frames. The bearers are placed at distances of 3 feet, and upon them will be laid a floor of oak planking 4 inches thick, which will be covered with a layer of asphalte $\frac{3}{4}$ inch thick, and upon which the granite pitching forming the roadway will be laid. The structure will therefore rest on a foundation of bearing piles, as in the case of London, Southwark, and Waterloo Bridges; but the introduction of the iron piles and plates allows the foundation to be made without the expense of cofferdams. A similar mode of forming the foundations was used by the engineer in the Bridges of Windsor and Chelsea. It may also be observed that any arrangement of foundation which would have rendered cofferdams necessary would have precluded the practicability of constructing the new Bridge without resorting to a temporary bridge

The works at present are being proceeded with by the contractor, Mr. Mare, the celebrated shipbuilder of Blackwall, on the up-stream side of the present Bridge, with the object of completing so much of the new Bridge on the south side of the present as will allow the traffic to be diverted from the old Bridge, which can then be removed for the completion of the new structure.

We have reason to believe that in reconciling the conflicting interests of land traffic and water traffic in the engineering arrangements of the new Bridge, and in providing that the structure should accord to a certain extent with the Houses of Parliament, the public are much indebted to the attention and judgment of Sir William Molesworth, Chief Commissioner of her Majesty's Works and Public Buildings.

CALENDAR FOR THE WEEK.

SUNDAY, Feb. 4.—Septuagesima Sunday.
MONDAY, 5.—St. Agatha. Sir Robert Peel born, 1788.
TUESDAY, 6.—Dr. Priestley died, 1804.
WEDNESDAY, 7.—Mary Queen of Scots beheaded at Fotheringay Castle, 1587.
THURSDAY, 8.—Hail-Quarter-day.
FRIDAY, 9.—
SATURDAY, 10,—Queen Victoria married, 1840.

HIGH WATER AT LONDON-BRIDGE,
FOR THIS WEEK ENDING FEBRUARY 10.

Sunday	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.
M. h. m. 3 42	A. h. m. 3 56	M. h. m. 4 11	A. h. m. 4 27	M. h. m. 4 43	A. h. m. 4 57	M. h. m. 5 13	A. h. m. 5 27	M. h. m. 5 41	A. h. m. 5 56	M. h. m. 6 21	A. h. m. 6 40	M. h. m. 7 1	A. h. m. 7 22

Now ready, elegantly bound in cloth, gilt edges, price 21s.,

THE ILLUSTRATED LONDON NEWS,
VOL. XXV.,
With upwards of 600 Engravings; including a very numerous Series of Illustrations of the Progress of the War during the past Six Months.
The COVERS for VOLUME XXV., with the New Design, price 2s. 6d. each, may also be obtained, by order, of all Booksellers, &c., in the Kingdom.

*** The Photographs of the Annual Canadian Provincial Show, held in the town of London, Canada West, reached us too late to be available for engraving.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY FEBRUARY 3, 1855.

AFTER the sudden, and we cannot but say the disastrous, collapse of the Aberdeen Administration, her Majesty sent for the Earl of Derby; and his Lordship undertook to form a Ministry, and had lengthened interviews with Lord Palmerston. Lord Derby had a difficult sack before him; but he would have met with no factious opposition. On the contrary, he would have received all possible aid and support. It was not by his act, or by that of his followers in either House, that the late Ministry was hurled from power, with an ignominy which, as a body, they little merited. The crisis was not of his making; and if he had been enabled to form a Government which might fairly have claimed the confidence of the nation, that confidence, so far from being withheld, would have been lavished upon him.

The choice of the Queen, so suddenly deprived of councillors, was extremely limited. Her Majesty could not primarily have sent for Lord Palmerston, though ultimately, and contingent upon the failure of Lord Derby, that was the only course left open; for Lord Palmerston shared the condemnation of a Parliamentary majority as much as Lord Aberdeen or the Duke of Newcastle, or any other Minister offered up as a victim to appease a clamorous and offended people. It is true that Lord John Russell might have been sent for; and it is likely that his Lordship, and the ancient Whigs who acknowledge his leadership, might have considered themselves for awhile the masters of the situation. But this delusion, if it ever existed, must have been speedily dispelled by the unmistakable utterances of public opinion—in the Houses of Parliament—in the press—in the Clubs—and at the very street corners. Lord John Russell was Premier for nearly six years, during which period Aniility, Nepotism, and slumberous Inefficiency "reigned, rioted, and revelled" in Downing-street and Whitehall. His Administration collapsed amid all bu universal contempt—leaving nothing behind it but a bad reputation. The manner, too, in which this doughty and too daring David had slain the Goliath whose servant and friend he had so long been was not such as to inspire confidence in any men beyond the confines of the families of Russell, Elliot, and Grey. His Lordship might have undertaken the task of forming a Ministry; but who, after the resignation of Thursday in last week, and the Parliamentary statements of the following Monday, would have consented to serve under him? A few of the old circle of familiar friends, close relations, and near connections, might have enlisted under his banner, and, looking upon office as their natural inheritance, might have taken possession as a matter of course; but the men of business, of genius, of high standing, and of a truly honourable ambition, would have held aloof, lest their business habits should have been mullified, their genius degraded, their political position endangered, and their high ambition turned to dishonourable uses. Such an Administration could not, it is to be presumed, have included Lord Palmerston—*the* man, above all other men, whom the country desires to see in the position either of Premier, of War Minister, or of Secretary for Foreign Affairs. Such a Ministry, if it had been formed, could not, without Lord Palmerston and some others, have remained in existence for a month; and, at this perilous emergency, a month, or even a week, or a day, is too precious to be wasted in wretched experiments certain to lead to political failure, if not to national calamity and disgrace.

The present crisis of political affairs may well induce the country to ask what becomes of the outcry against COALITION? If there is to be no coalition, no Ministry can stand for an hour. By means of a coalition—and by no other means whatever—can a strong and durable Government be formed. Toryism is as dead as Whiggism; and "Protection" is almost as obsolete as the claim of the Stuarts. The country has but one interest, one business, one thought—which is, to carry on the war to a triumphant issue—to remedy past evils in the management of the army, and to place our public departments, civil and military, in effective working order. This is the task, and a new and powerful Coalition is the means to accomplish it. As the stupid clamour against coalition came from the immediate adherents and friends of Lord Derby, we may suppose that we shall hear no more of it now that Lord Derby has tried to effect a coalition, and failed in the attempt.

What the country demands at this instant—and demands in a voice which is not to be mistaken—is a Ministry of vigorous men, who, rising with the grandest occasion ever presented to a Government, will ruthlessly sacrifice convention, routine, pedantry, family claims, and jobbery in one great holocaust to the Nemesis of the hour; and, nerved with that strength which comes to the aid of those alone who are actuated by intense and united conviction, will concentrate the might of the nation upon the Russian war. This is a great demand, but it is peremptory. Worse evils than the fall of a Ministry will menace a class whose representatives shall dispute one jot or one tittle of that demand.

The original and capital sin of our present (or we may say, late) system of administration, lies in its being split up into a score of complicated and antagonistic responsibilities. The principle of the new administrative system must be to have as few responsibilities as possible; to consign the general direction of the war to what most nearly approaches to a Dictatorship—that authority being enabled to carry out its designs by the aid of an intelligent, indefatigable, but subservient executive. Fewer councils and more orders should be the rule of the incoming men: and such councils should (*pace* Mr. Disraeli) be Venetian in the small number of their constituents; while the orders should emanate from a single power, to which colleagues have subordinated their own for an especial and patriotic purpose. This condition may be startling; but is it so startling as the sight of a glorious army ruined in strict adherence to the constitution? This abnormal arrangement is the demand of every Englishman at this moment, and is, moreover, the only rational course in a frightful emergency. Precedent must be trampled down in the foul mire of Balaclava. Would that nothing more precious had perished there!

With these convictions we can await with hopeful composure the announcement of a new Coalition and a new Ministry. In the words of Achilles before the Grecian Lords, after his coalition with the Agamemnonites, "All we ask is War."

M. VON MANTEUFFEL, on behalf of the King of Prussia, has endeavoured to reply to the trenchant and able circular of M. Drouyn Lhuys. The Prussian Minister has a bad cause; but, as in duty bound, he has endeavoured to make the best of it. The same undignified see-saw which has characterised all the proceedings of the Prussian Government prior and subsequent to the war pervades the document. The King cannot yet discover the policy he ought to pursue. He balances between his love for the Czar and his fear of the Allies. Were it not that he is jealous of the young Emperor of Austria, and the position he has assumed at the head of the great German people, it is possible that the King would even yet see the line of duty which glitters straight and clear before him; but jealousy, if not imbecility, blinds his eyes, and he can see nothing but Russia, and the supposed necessity of standing between the Czar and the rest of Europe. M. Von Manteuffel's attempt to parry the home-thrust of M. Drouyn de Lhuys—that Prussia ceases to be a great Power when she ceases to act as becomes a State which would maintain that high position—is ineffactual. Prussia is *de facto* a small Power so long as King Frederick William enacts his present part; and, in the estimation of the world, little Sardinia and her gallant Monarch are far greater than Prussia. The King's demand to participate in the Conference at Vienna cannot be allowed, although M. Von Manteuffel pertinaciously insists upon it. As an avowed ally of Russia, or an equally avowed ally of Great Britain and France, the claim would not be refused; but, as a go-between, the King has no footing, and must stand aside until he learn decision and common honesty.

The latest telegraphic news from Berlin would lead to the inference that he is about to declare himself in favour of the Czar, The Diet at Frankfort, acting under Prussian influence, has refused the mobilisation of the German contingent demanded by Austria; but the Prussian Government has ordered the mobilisation of the Prussian army, and decreed the occupation of the provinces of Saxony and Silesia by the armies forming the Fourth and Sixth Military Divisions. The King has also rejected the demand of France that a portion of the French army be allowed to pass through Prussia. Should these despatches prove to be true, the war will be extended; and the King of Prussia will have more than enough on his hands to defend himself against the French on the Rhine, and against his own subjects in Berlin.

LATEST INTELLIGENCE.

THE MINISTERIAL CRISIS.

We are informed on good authority that her Majesty commanded the attendance of the Earl of Clarendon at the Buckingham Palace this afternoon. And it was very generally rumoured in the House that that noble Earl had been entrusted with the task of forming an Administration.—*Globe*, Friday (2nd Edition).

THE WAR IN THE CRIMEA.

The *Moniteur* contains the following despatches, received by the Minister of Marine from Vice-Admiral Bruat:—

Moutchello, Port of Kamiesch, Jan 22

The weather continues exceedingly fine. The *Caravane* and the *Hydre* departed for the Bosphorus on the 20th; the *Lucerne* on the 21st. The *Fulton* arrived yesterday, bringing 200 troops, and towing a vessel of three masts with sixty horses on board. Nothing new at the Camp. The *Jean Bart* will sail this evening for the Bosphorus.

Jan. 23.

The weather to-day is magnificent. The *Constitution* will sail to-morrow. The *Mogador* has notified the blockade at Odessa, and the *Berthollet* at Kaffa, Kertch, Anapa, and Soujouk Kalé. At all these places they are massing forti-ications. The Russians have resumed the construction of earthworks at Sebastopol. They are endeavouring to unite the Malakoff bastion with the town. They made another sortie last night, which was vigorously repulsed. For the last two days they have kept up a smart fire on the English batteries.

MORE RUSSIAN TROOPS.

Kiew, Jan 26.

The Russians are sending considerable reinforcements to the Crimea.

Two Grenadier divisions, 1500 Riflemen, and 15 reserved Battalions, occupy Perekop.

Another corps, under General Read, occupies the second line of Bessarabia.

THE GERMAN DIET AND THE WAR.

BRUSSELS, Thursday.—Advices from Berlin and Vienna report that great anxiety is felt to ascertain the manner in which the Austrian Government will receive its recent check in the Diet. It is feared that, after the position taken up by Prussia, Austria cannot act up to its rights as a European Power without breaking up the Confederation. It is believed that no determination will be come to before the new English Ministry has been constituted

FRANKFORT, Thursday.—The United Committees of the Germanic Diet jointly proposed that, instead of a general mobilisation of the Federal army, the principal contingents should be made ready for war. This was the Bavarian proposition; it was supported by Prussia, acceded to by Austria, and carried.

BERLIN, Feb. 1.—It is confidently stated that Austria agrees to the proposal of Bavaria, as to the placing of the Federal army on a war footing, to which Prussia has already adhered

According to the *Augsburg Gazette*, orders were a few days since issued that two corps of the Fourth army, which is in Gallicia, should be prepared to take the field at the very shortest notice. Not long ago another corps—the 12th—received the same order. The reserves of the Gallician army, which were stationed in Northern Hungary, were, about ten days since, sent by way of Kaschau towards the mountain pass at Dukla.

DESPATCH FROM LORD RAGLAN

(From Friday Evening's *Gazette*)

War Department, Feb. 2.

His Grace the Duke of Newcastle has received a Despatch, of which the following is a copy, addressed to his Grace by Field-Marshal the Lord Raglan, G.C.B.

Before Sebastopol, Jan. 15.

My Lord Duke,—The fall of snow has been very great for the last three days, and it is now fully a foot deep; which, I am assured, is a very unusual occurrence in this part of the Crimea.

This circumstance adds materially to our difficulties in obtaining fuel; but detachments of Turks are posted near the coast to bring up wood, which has been cut by parties of our own in the neighbourhood of the Monastery of St. George, to the nearest divisions

I am happy to say that the number of wounded in the sortie of the 8 seems, on the night of the 12th inst., was only six—instead of thirty-six, as I erroneously stated to your Grace in my despatch of the 13th—and that it was altogether a less serious affair than was at first reported.

I enclose the return of casualties between the 12th and 14th, inclusive

Last night the enemy attacked the French advanced trench in considerable force, but were repulsed, after a sharp contest and some loss on both sides.

I have, &c.,
RAGLAN.

His Grace the Duke of Newcastle, &c., &c.

RETURN OF OFFICERS WOUNDED, FROM 12TH TO 14TH JAN. 1855.
WOUNDED
68th Foot.—Lieutenant H Battiscombe, slightly.
J. B. BUCKNALL ESTCOURT, Adjutant-General.

RETURN OF NON COMMISSIONED OFFICERS AND PRIVATES WOUNDED AND MISSING FROM 12TH TO 14TH JAN., INCLUSIVE
WOUNDED.
21st Foot: Privates James Kain, Uriah Curtis, James Carroll, Francis Gough, slightly.
44th: Privates Foster Kelly, Richard Prayers, severely
57th: Private Patrick Mahoney, severely (since dead)
68th: Privates John Byrne, Robert Graham, Joseph Hampshire, Paul Hick, slightly; James Mack, Richard Woolfe, severely.
MISSING
68th Foot: Sergeant William Cooper; Lance Corporals John Harwood, Benjamin Binder; Privates John Eve, William Tolley, Edward Mason, William Adams, Thomas Farrell, James Byrne, James Menagh, John Baker George Field, John Clarke.
J. B. BUCKNALL ESTCOURT, Adjutant-General.

THE MINISTERIAL CRISIS.

A Cabinet Council was held on Tuesday, at the Foreign-office, Downing-street. It was attended by all the Ministers with the exception of Sir James Graham (who was indisposed). The Council sat one hour.

The Earl of Aberdeen left town after the Cabinet Council, for Windsor Castle, to have an audience of the Queen. The noble Earl returned to town soon after six o'clock in the evening

The Chancellor of the Exchequer, Sir William Molesworth, and Mr. Sidney Herbert, had interviews in the morning with the Earl of Aberdeen, at Argyll-house.

Mr. Sidney Herbert had an interview, also, in the morning with the Duke of Newcastle, at the War-office; prior to which the right hon gentleman had a lengthened consultation with Lord Palmerston, at his residence in Carlton-gardens

The Marquis of Lansdowne received Sir George Grey at his residence in Berkeley-square in the morning, and had a lengthened consultation with the right hon. gentleman. Just before Sir George Grey left, Earl Granville was admitted to an interview, and remained with the noble Marquis some time after Sir George Grey's departure. It was very generally anticipated through town that the Marquis of Lansdowne would be sent for by her Majesty

Lord Palmerston received no political visitors on Tuesday morning, with the exception of Mr. Sidney Herbert. His Lordship, having read the papers transmitted to him, proceeded about twelve o'clock to the Home-office for the transaction of business.

Lord J. Russell had no political visitors on Tuesday, and did not leave his house.

Sir James Graham was confined to his bed through indisposition, and consequently unable to take any active part in the settlement of the Ministerial difficulties.

Lord Derby on Tuesday evening received the Queen's commands to attend her Majesty at Buckingham Palace at half-past eleven next morning.

Her Majesty arrived at Buckingham Palace shortly after eleven o'clock. The Queen was accompanied by his Royal Highness Prince Albert, but by no other members of the Royal family.

Within half an hour of her Majesty's arrival in London the Earl of Derby drove up, and was immediately afterwards admitted to an audience of her Majesty, with whom he remained in consultation an hour and a half.

The noble Earl, after leaving the Palace, drove to Lord Palmerston's residence in Piccadilly, and had a lengthened interview with his Lordship.

Lord Derby, after an interview with Lord Palmerston, which lasted until two o'clock, returned to St. James's-square.

Several "rumours" were current in the Clubs in the course of the forenoon. One rumour was that Lord Derby had consented to undertake the formation of a Government, provided Lord Palmerston would accept the office of Secretary of War. Another was, that the noble Earl had consented to form an alliance with the Peelite portion of the late Cabinet, having to Mr. Gladstone the Chancellorship of the Exchequer, to Mr Sidney Herbert the Secretaryship of War, with an office to the Duke of Newcastle. In order that this arrangement may be carried into effect, Mr. Marsell is said to have consented to take the Secretaryship of State for Foreign Affairs.

Her Majesty and his Royal Highness Prince Albert, and the Ladies and Gentlemen in Waiting, left Buckingham Palace in two of the Queen's carriages, at eight minutes before three o'clock in the afternoon, for the Paddington terminus of the Great Western Railway, and returned by a special train to Windsor Castle. The Royal suite consisted of the Marchioness of Ely, Colonel the Hon. C. B. Phipps, Major-General the Hon. Charles Grey, Colonel Seymour, and the Master of the Household. The Queen and Prince Albert were conducted to their carriage by the Earl Spencer, Lord Steward.

Immediately after her arrival at Windsor her Majesty dispatched a special messenger to Lord Derby. The messenger arrived at the noble Lord's residence in St. James's-square at nine o'clock, and took back a despatch in return.

The Countess of Derby and Lady Emma Stanley arrived in St. James's-square, from Knowsley, on Thursday.

At ten o'clock on Thursday morning the Earl of Derby left his residence, and called upon Mr. Disraeli at Grosvenor-gate.

The right hon. gentleman, a few minutes, his Lordship proceeded to the Great Western Railway, and thence by special train to Windsor

The noble Lord, having had an audience with her Majesty, returned to London, arriving at Paddington station at half-past two o'clock.

There were no interviews between the noble Lord and any members of the Whig or Peelite party on Thursday morning.

On Lord Derby's return to town, at twenty minutes past two, he proceeded to the residence of Mr. Disraeli at Grosvenor-gate.

Before a Queen's messenger arrived at Lansdowne-house, bearing a despatch commanding the attendance of the Marquis of Lansdowne at Windsor Castle

The noble Marquis immediately left London for Windsor, and remained in the guest of her Majesty during Thursday night.

Immediately after the return of the Earl of Derby from Windsor yesterday (Thursday) afternoon—on which occasion he declined to undertake the duty of forming a Government—her Majesty commanded the attendance of the Marquis of Lansdowne, who proceeded forthwith to Windsor, where he arrived at seven o'clock last night. His Lordship remained in consultation with her Majesty until ten o'clock, and this morning the conference was renewed. A few minutes after the arrival of the noble Marquis in town this (Friday) morning, his Lordship sent for the Chancellor of the Exchequer, who came to Berkeley-square a few minutes before eleven o'clock. The right hon gentleman remained in consultation with the noble Marquis until half-past eleven, at which time he proceeded to the residence of Mr. Sidney Herbert in Belgrave-square. The Marquis of Lansdowne, the Chancellor of the Exchequer, and Mr Herbert remained in consultation until nearly one o'clock, when the noble Marquis proceeded to the residence of Lord John Russell in Chesham-place, with whom he remained until half-past one. On leaving Lord John Russell's house the Marquis of Lansdowne called upon Lord Palmerston, with whom he remained in consultation until two o'clock. On leaving Lord Palmerston, the noble Marquis proceeded to Buckingham Palace, where he had an audience of the Queen, who came up from Windsor this morning, for the special purpose of assisting in the formation of a new Administration.—*Globe, Friday.*

The country is still without a Ministry, as the Earl of Derby announced to the House of Lords last night his inability to form a Cabinet. The cause of this inability is assumed to be the failure of his Lordship's attempt to obtain the co-operation of Lord Palmerston's service [except] on condition of including in the Cabinet to be formed with Lord Palmerston, Mr. Sidney Herbert, and Mr. Gladstone! Such a condition the Earl of Derby, it is added, summarily and most properly rejected, and thus the negotiation fell to the ground.—*Standard, Friday.*

General Sir De Lacy Evans, K.C.B.—On Thursday, at one o'clock, a deputation of electors of the City of Westminster waited upon General Sir De Lacy Evans, by appointment, at his residence in Bryanston-square, for the purpose of presenting that gallant officer with an address, expressive of their admiration of the heroic services he recently rendered to his country in the Crimea, and of their gratification at his safe return to his native land. The deputation, which included a very large number of the most influential members of the city, assembled at the residence of John Villiers Shelley, M.P., in Park-lane, and thence they proceeded in a body to Sir De Lacy Evan's residence in Bryanston-square

Conduct on the War.—Public meetings have been held during last week in Finsbury, Newcastle, and Glasgow, at which resolutions condemnatory of Ministers, and urging the vigorous prosecution of the war, have been passed

Irish Gallantry Three days ago our regiment was in the trenches: we had one man knocked topieces and two more wounded by grape. The same day a very feeling circumstance took place. Two Russian soldiers were coming down a street: says one of our men, "By Jasus, but they have a woman to protect them." "Bad luck to me," says another, "if she goes at one side I'll have at them." They would not chance a shot for fear of hitting the woman. But she was not four paces from the Russians when they dropped the Minié rifles and down tumbled one of them; the other started off at a good run. "Faith," said one of my comrades, "if we shot the woman the Roochians would let Old Nick know it, and he would stick it in the papers that we were shooting the women; and other countries would say, Sinope again." Now, my dear wife, although we are at bloody work, this little incident will let you see that, while we have no reluctance in shooting or bayoneting a Russian, we have some respect for their women.—*Letter from an Irish Soldier.*

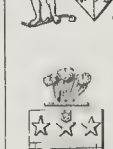
The Blenheim Free Dispensary.—The nineteenth anniversary ball of this excellent institution was held at Willis's Rooms, on Monday evening, under the presidency of the Right Hon. Sir Benjamin Hall, Bart., an office filled for many years by the lamented Lord Dudley Stuart, M.P. The ball was very numerously attended by the friends of this very efficient charity.

OBITUARY OF EMINENT PERSONS.

HARRIET, DUCHESS DOWAGER OF ROXBURGHE.

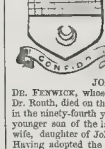
Her Grace (who died on the 19th ult., at Brighton, aged seventy-seven) was daughter of Benjamin Charlewood, Esq., of Windlesham. She became the second wife of the late Duke of Roxburghe 28th July, 1807, and had by him an only child, James Henry, present Duke. Her Grace married, secondly, 14th November, 1826, Lieut.-Colonel Walter Frederick O'Reilly, C.B., younger brother of the late William O'Reilly, Esq., of Knock Abbey Castle, county Louth, and was again left a widow in March, 1844

SIR JOHN BOYD, BART.



The death of this baronet occurred on the 19th ult., at Boulogne. Sir John was born June 8, 1786, the elder son of the second baronet, Sir John Boyd, of Danson-hill, by Margaret, his wife, fifth daughter of the Right Hon. Thomas Harley, son of Edward, third Earl of Oxford. He succeeded to the title May 30th, 1815, and married, September, 22nd, 1818, Harriet, daughter of Hugh Boyd, Esq., of Ballycastle, county Antrim; by whom he leaves a daughter, Henrietta, wife of Lieut.-Colonel Brooke Taylor, and two sons—the elder the present Sir John Augustus Boyd, Bart., born July 26th, 1819, married, in 1850, Honora Mary, third daughter of the late Charles B. Calmady, Esq. of Langdon Hall, Devon, and has issue.

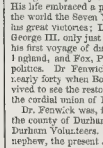
JOHN RALPH FENWICK, ESQ., M.D.



Dr. Fenwick, whose age approximated closely to that of the late venerable Dr. Routh, died on the 11th ult., at his residence in the North Bailly, Durham, in the ninety-fourth year of his age. He was born November 14, 1761, the younger son of the late John Fenwick, Esq., M.D., of Morpeth, by Mary, his wife, daughter of John Thornton, Esq., of Netherwitton, Northumberland Having adopted the medical profession, and obtained the degree of Doctor of Physic, he settled at Durham about the year 1790, and, distinguished by his skill, courtesy, and information, soon became one of the leading physicians of that city. In 1812, shortly after his marriage with Sarah, eldest daughter and coheir of Robert Spearman, Esq., of Old Acres, he retired from practice, and devoted much of his time and attention to politics. He was a Liberal in the most honourable signification of the term, a bold and eloquent advocate of constitutional freedom, a staunch supporter of Reform, and an unyielding enemy of tyranny and oppression wherever he found them to exist. His life embraced a period of momentous events. At the time that he entered the world the Seven Years' War was *raging*, and Frederick the Great gaining his great victories; Louis XV. was revelling in his "Parc aux Cerfs," and George III. only just ascending the throne. Captain Cook had not set out on his first voyage of discovery, the United States were still a loyal colony of England, and Fox, Pitt, and Burke had not yet appeared in the arena of politics. Dr Fenwick was twenty years old when Elliott defended Gibraltar a nearly forty when Bonaparte commenced his brilliant career; and yet he survived to see the restoration of Napoleon's dynasty to the French throne, and the cordial union of England and France.

Dr. Fenwick was, for many years, a magistrate and Deputy-Lieutenant of the county of Durham, and formerly commanded, as Lieutenant-Colonel, the Durham Volunteers. As he leaves no issue, his property devolves on his nephew, the present James Thomas Fenwicke, Esq., M.D.

MR. SERJEANT D'OYLY.



Thomas D'Oyly, Serjeant-at law, died at Rottingdean, on the 14th ult. The family of which the learned Serjeant was the head is one of the oldest in the kingdom, the D'Oullys, or D'Oylys, of Ouilly le Vicomte, near Lisieux, in Normandy, being historically mentioned as having held high rank among the nobles of their country two hundred years before 1066; in which year, accompanying the Conqueror, they transferred their name and fortunes to the soil of England. Their descendant and representative, Serjeant Thomas D'Oyly, the subject of this notice, was the eldest son of the Venerable Matthew D'Oyly, Rector of Reed, and Archdeacon of Lewes, Sussex, by Mary, his wife, one of the two daughters (coheiresses) of George Poughler, Esq., of Leicester. Thomas D'Oyly was born in London the 16th December, 1772: he was educated at Westminster and Christchurch, and was ultimately Fellow of All Souls', Oxford. He was called to the bar the 9th May, 1798, and became a Serjeant in 1819, and obtained a patent of precedency. The Serjeant married, in 1820, Elizabeth, daughter of the Rev. Dr. Simons, Rector of Ickham, by whom he had one son and two daughters, who are all living. The Serjeant was remarkable for combining the most profound legal attainments with a strong love and ability for those rural pursuits among which he had been brought up. In Sussex he will long be remembered, not only as one of the most eminent Chairmen of Quarter Sessions (a post which he held there for many years), but as a true and kind friend and neighbour, and a worthy and thorough English country gentleman The only literary work with which Mr. Serjeant D'Oyly's name is connected is, we believe, a valuable edition of "Burns' Justice," which he published in 1836, in conjunction with his friend Mr. Justice Vaughan Williams. With but two or three exceptions, Mr. Serjeant D'Oyly was the last of the English barristers called to the bar before the present century.

DR. PHILLIMORE

Joseph Phillimore, Esq., D.C.L. and F.R.S., Regius Professor of Civil Law in the University of Oxford, Chancellor of the diocese, and a Deputy-Lieutenant of the county of Oxford, and one of the Bushy trustees, died at his residence, Shiplake-house, Reading, on the 24th ult. Dr. Phillimore was Chancellor of the dioceses of Worcester and Bristol, Commissary of the Peculiars of St. Paul's and Westminster, Judge of the Cinque Ports, and Advocate of her Majesty in her office of Admiralty. He was educated at Westminster, became a student of Christ Church, and early acquired great literary and professional distinction. His Latin and English compositions were famed for their ease and elegance. He held the chair of his duty as Regius Professor, his speeches on the presentation of Warren Hastings, on the presentation after the peace of the Allied Sovereigns, and on the presentations on the occasion of the Duke of Wellington's installation, caused general admiration. His reputation stood high as a writer on civilians and his pamphlet on the nature and extent of the licence trade, written at an early period of his life, was much admired for the felicity of the language and the knowledge which it displayed of history and jurisprudence. In politics Dr. Phillimore belonged to the Grenville party, and sat for many years in Parliament, where he frequently spoke. During the Administration of Lord Liverpool and Mr. Canning he was a Commissioner for the affairs of India, when he refused a Privy-Councillorship, which would have obliged him to abandon the profession. He was afterwards Chief Commissioner of French Claims and Chairman of the Committee for the Registration of Dissenters' Marriages. To his abilities as a Judge Lord Lyndhurst paid the highest tribute in his place in the House of Lords, saying that he had carefully examined the proceedings of the Court at Bristol, and that it was impossible for justice to be better administered than it was in the court where Dr. Phillimore presided. Dr. Phillimore was the son of the Rev. Joseph Phillimore, and brother of Captain Sir John Phillimore, C.B.; of William Phillimore, Esq.; and of the Rev. Robert Phillimore, late Vicar of Shipton-under-Wychwood. He married Elizabeth, niece of first Lord Bagot, and daughter of the Rev. Walter Bagot, of Blithfield, Staffordshire. By this lady, who survives him, he leaves one daughter and six sons.

Wills, Personalty, and Bequests. Sir Roger Martin, Bart., left personalty estimated at £14,000; Henry Shepphard, Esq., of Clifton, £200,000; T. A. Raynsford, Esq., late Registrar in Chancery, £70,000; Rev. J. L. Jackson, M.A., Dorset, £35,000; J. B. Whitworth (wholesale grocer, London), £25,000; James Weston, Esq., Finham-park, £35,000; Mr. J. Dore, of Chandos-street, £10,000; Miss Jemima Freeman, of Colchester, £25,000, who has bequeathed £2000 to the Essex and Colchester Hospital: £1000 to the Society for Poor Clergymen and their Widows of Essex; and £500 to the Society for the Relief of Poor Lying-in Women of Colchester.

Society of Antiquaries.—At the ordinary meeting on Jan. 25th, Viscount Mahon, M.P., the president, in the chair, J. Joseph, Esq., banker, of Brecon, South Wales, was admitted a Fellow. The following gentlemen were elected Fellows:—George Roots, Esq., barrister-at-law; R. H. Major, Esq., Secretary of the Hakluyt Society; and Francis Bennoch, Esq.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS

TAKEN DURING THE WEEK ENDING THURSDAY, FEB. 1

Month and Day.	Corrected Reading of Barom. at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of Day	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average. The numbers in the 7th column are calculated on the supposition that the saturation of the air is represented by 100.

The *reading of the barometer* decreased from 29.98 inches at the beginning of the week, to 29.91 inches by the afternoon of the 28th; increased to 29.97 inches by the 27th; decreased to 29.64 inches by the 29th; increased to 29.73 inches by the 30th; decreased to 29.40 inches by the 31st; and increased to 29.91 inches by the end of the week. The mean for the week at the height of 82 feet above the level of the sea, was 29.771 inches.

The mean temperature of the week was 29·7°, which is 7·3° below the average. The mean daily temperature was below its average on every day of the week. The highest temperature of the week occurred on Friday, and was 34°, and the lowest was 20° on Sunday. The general direction of the wind was N.E. The mean temperature of Jan. 26, 27, and 28, in the year 1848, were 29·1°, 29·8°, and 21·0° respectively; of Jan. 29 in 1831 was 29·0°; of Jan. 30 in 1839 was 26·1°; and in 1845 was 30·2°; and of Jan. 31, 1850, was 20·0°; on Feb. 1 in 1830 was 22·0°; and in 1841 was 27·2°. The mean of the seven days ending Feb. 1 in 1816 was 29·2°, and in 1839 was 30·1°. And these are the latest instances of such low temperature as those experienced in the past week.

Snow fell on the 29th, 30th, and 31st. Crystals of snow were abundant on Jan. 30th and 31st.

For the month of January the mean reading of the barometer at the level of the sea was 30.188 inches. The highest temperature during the month was 51·8° on the 1st, and the lowest was 13° on the 19th, the range of the temperature during the month was therefore 38°. The mean of all the highest temperatures by day was 39°, and of all the lowest by night was 25·2°; the mean daily range of temperature during the month was therefore 13·8. The mean temperature of the air during the month was 31·6°, being 1·8° *below* the average of thirty-eight years. The mean temperature of the dew point for the month was 24·7°. The mean temperature of the dew point was 6·8° below the mean of the air. The mean degree of humidity was 86 complete saturation being represented by 100), and the fall of rain during the month was nine-tenths of an inch.

James Glaisher

Health of London Within the week ending January 27 the births of 839 boys and 822 girls were registered within the metropolitan districts: in all 1661 children. The average number for the fourth week in the year from the preceding 10 years is 1466. The number of deaths registered within the same time was 1030—a number exceeding the calculated number by no less than 418, showing the effects of the rigorous weather of the last two weeks. Seven hundred and eleven of the deaths occurred at ages less than 20 years; 205 at that age and under 40; 288 aged 40 years and under 60; 347 who were 60 years old and under 80; and 77 at ages exceeding 80 years.

St. Marylebone Bank for Savings.—The twenty-fifth annual general meeting of this institution was held on Thursday, when the several reports stated that the progress of the bank during the past year had been of a satisfactory description, no less than 2284 new deposits having been made in the last year.

The Committee of the London Fever Hospital are about to place one of the wards of that institution, apart from the fever wards, at the use of the authorities, for invalids returning from the Crimea.

Exhibition of Inventions.—As a substitute for, and in the absence of, a permanent museum of inventions, it has been the custom of the Society of Arts, for some years past, to make annually a collection of specimens, models, drawings, and descriptions of articles invented during the previous year, whether patented, registered, or not. Steps are now being taken to get together the seventh annual collection, which it is proposed to open at the end of April

Dust in the Streets.—The ill effects of the working of the street-cleansing contracts in the City have been again seen in the late snow-storms. The contractors do not consider snow as street dirt they are bound to remove, and the footpaths have nothing to do with it. It is quite useless to rely upon the antiquated regulation of housekeepers sweeping the footpaths around their houses. The Mansion-house had only one footpath swept, and that by the Lord Mayor's orders; before now, the Lord Mayor has been fined for not having his footpaths swept

Royal Free Hospital, Gray's-inn-road.—The annual general court of the governors of this valuable charity was held in the boardroom of the institution, Gray's-inn-road, on Tuesday, for the purpose of receiving the report and upon other business—the Right Hon. the Lord Mayor presided. Mr Fenn, the secretary, read the report, which stated that for the year 1853 36,214 patients were relieved, a larger number by one ever relieved in any preceding year; but in 1854 the number amounted to 41,835, being still an increase over 1853 by 5621. The in-patients also much exceeded those of 1853, but it was limited. This, owing to the want of funds, the number was limited. The total number of patients relieved since the foundation of the charity, in 1828, is 446,602. During the prevalence of cholera 6152 were relieved, the hospital being open night and day. The money and clothes given to destitute patients on leaving the hospital—especially unfortunate females—have been the means of restoring many to their homes and friends. In consequence of so large an amount of relief afforded, the expenditure has exceeded the receipts, which is further accounted for by the urgent demands of the Patriotic Fund and other military charitable collections, as well as the high price of provisions. The report, after stating that the medical staff had been greatly increased, concluded by making a strong appeal to the governors, collectively and individually, as well as to the public generally, by their aid to place the hospital free from debt, and in a position of increased efficiency. The Lord Mayor moved the adoption of the report, which was carried by acclamation. Mr. Wakley moved, and Mr. Halewell seconded, a vote of thanks to Mr. Marsden, the founder of the hospital. Mr. Marsden, in returning thanks, said that notwithstanding the great difficulties the institution had to contend with at its outset, it being the first free hospital in the kingdom, it had now established itself, and now claimed its place with the first hospitals in surmounted them all, and now claimed its place with the first hospitals in the land. During the past year the medical staff had been largely increased, and he could fairly state that either for skill or number it could not be surpassed by any other establishment of the kind. He trusted that those present would exert themselves to relieve the hospital from the debts incurred in former years, amounting to nearly £5000, which was there great drawback upon the committee. Owing to the want of funds they had been compelled to close three of their wards, and to take in but a limited number of in-patients; and it was most painful, more especially in this cold and desolate weather, to have to refuse, upon an average, fifty applicants per day of that class which could not help themselves.

Drury-lane Theatre.—A Dividend.—The annual general meeting of the proprietors of the Theatre Royal, Drury-lane, was held in the saloon of the theatre, on Tuesday, for the purpose of receiving the report of the committee, and electing officers for the ensuing year. Benj. Bond Cabbell, Esq. (in the absence of the Earl of Glengall), took the chair, supported by a large body of proprietors. The committee, in their report, stated that Mr. Smith, the present lessee, had entered into a lease for seven years, commencing the 1st of January, 1852, at a rent of £4000 per annum; and they considered it due to that gentleman to acknowledge the punctuality with which he had paid his rent since he had held the theatre. It was upon the full conviction that he would continue to fulfil his obligations thus honourably that the committee rested their expectations of having the means to discharge the claims consequent on presenting the public with a nearly new theatre, both internally and externally, at an expense of about £2000. The committee had kept up the quarterly payments to the Duke of Bedford, and the sum of £250 had also been paid to renters' trustees. The income since the last general meeting had been £7076 18s. 10d.; and the expenditure, £7119 14s. 3d. Mr. Arden, in moving the adoption of the report, congratulated the proprietors that it was more favourable than any they had received for the last twenty years. The report was unanimously received.

The Murder in Foley-place.—On Tuesday morning the inquiry was resumed before Mr. Wakley, at the Middlesex Hospital, touching the death of Mr. Joseph Latham, otherwise Lambert, who was assassinated by an Italian named Luigi Buranelli, on Sunday, the 7th ult. The court was crowded on the occasion. Buranelli was present. His face was bandaged, from the pistol-shot wound, but he did not appear to suffer much pain. He walked with a slow but firm step, and took a seat at the end of the table, opposite the Coroner After evidence had been heard as to facts with which the public are well acquainted, the Jury proceeded to Foley-place, to take the evidence of Mrs. Lambert. On the Coroner and Jury arriving in Foley-place, Mrs. Lambert was in the front parlour, and, after being seen by the Coroner and her medical attendant, the Jury were admitted. Her evidence did not differ in substance from what had been previously given by other witnesses. The Jury returned a verdict of "Wilful Murder" against Luigi Buranelli.

H.M.S. "MAGICIENNE" PASSING EARTHOLM ISLAND, IN THE BALTIC.

H.M. STEAM-FRIGATE "MAGICIENNE."

As the *Magicienne* was the last ship of the British fleet to leave the Baltic, the accompanying Illustration will be interesting to show the kind of weather to be met with in that sea about three weeks since. The Sketch was taken by an obliging Correspondent on the 14th ult., and shows H.M.S. *Magicienne* passing the little isle of Eartholm, when returning from her last solitary cruise in the Balti

This picturesque island lies within sight of the island of Bornholm, and is also under the Danish flag. It is of very small extent, and is valuable chiefly from having a convenient anchorage, and being available as a naval arsenal. The Russians are said to have an eye upon it, for which reason it is strongly fortified.

Several merchant-vessels were lying there, seeking shelter from the severity of the weather, at which time the *Magicienne* was literally covered with ice, caused by the freezing of the spray of the sea during the cruise On her arrival at Copenhagen on the 15th she had forty of her crew placed *hors de combat* by the cold; the thermometer being seldom above 18 deg or 14 deg. below freezing. Our men suffered severely from not having the sheepskin clothing necessary for such a low temperature.

The *Magicienne*, 16, Captain Thomas Fisher, arrived in Plymouth Sound on Saturday, from the Baltic—where she had been employed for upwards of nine months. The *Magicienne* had on board three Russian deserters, who left some line-of-battle ships at Sveaborg One of these is a silversmith, and has given evidence of his skill since joining; one is a blacksmith, and the third is a soldier and sailor: he handles a musket with celerity and expertness, and is no way deficient when on duty as a seaman. Since leaving England on the 31st of March she has gone 11,795 miles, burnt 2286 tons of coal, and been at sea 184 days. During her absence, the *Magicienne*, besides assisting disabled ships belonging to the Allied fleet, has been instrumental in saving two vessels.

The wounded soldiers who recently arrived in the *Cambria* at Liverpool, and met with such a kind reception in that town, received equal attention from the ribbon-weavers of Nuneaton, when they arrived there on their way to Coventry and Chatham. As soon as it became known in the town of Nuneaton that a number of wounded soldiers were at the station, gentle and simple hastened to give them a greeting, and as it was a cold, raw day, a subscription was started on the spot to procure some port-wine and biscuits for them. This was done at once; and on the next day, when another train arrived with about 100 more of the wounded, a larger supply of wine awaited them. The soldiers seemed much affected by the kindness they met with; and said that, although every attention was paid them by the authorities of Liverpool, yet that the hearty reception and substantial fare that they met with at Nuneaton made them feel the grateful hearts that beat in the English people. About £10 worth of wine was supplied on the two days to the wounded soldiers.

Notice has been given at the Underwriters'-room, Lloyd's, that several vessels, each of 500 tons burden, are required to convey a number of wooden huts to Heligoland, where her Majesty's Government are about to establish a military camp and depôt to enrol men for the Foreign Legion.

PORTION OF THE BRITISH ARTILLERY CAMP BEFORE SEBASTOPOL.

The Illustration below represents a portion of the English Camp during one of these snow-storms which have prevailed so frequently during the last three or four weeks. The view is very dreary, but frost and snow are much easier to deal with than the rain and mud with which our unfortunate army has had to contend. In the French Camp the snow was hailed as an improvement in the outward condition of things. The *Presse d'Orient* speaking of the French army, says "Our soldiers support the cold gaily. Some of them build huts in snow, and others, possessed of more elevated tastes, turn sculptors, and make colossal statues near our camp."

The two mules in the foreground would at once serve to indicate the locality of the annexed Sketch. No one who knows anything of the two camps would ever suppose that such starved-looking animals were under the charge of our allies. Hardly an English letter comes from the Crimea without some expression of regret at the treatment the cattle have received

I noticed one horse in particular (says a visitor to the Camp between Kadikoi and Karani) It was the most pitiful sight I ever beheld Once upon a day he had been a handsome charger, but now he was the veriest caricature of a horse that Edwin Landseer—foiled on the most atrocious nightmare that ever weighed upon Cruikshank—could conceive or delineate That horse was grand in its decay, for it beggared description. A skeleton covered with an old hide; no mane, no tail; a pair of deep-set, glaring, ghastly, and almost ferocious eyes, and lips shrunk away from the long,

SHIPMENT OF WOODEN BARRACKS, ON BOARD "THE WHITE FALCON," AT SOUTHAMPTON, FOR THE FRENCH ARMY IN THE CRIMEA.

bare, and hungry teeth. You could not tell the colour of the animal; his coat of hair was covered with a thick coat of mud, which was baked on him, and fitted him tight, like a slush-coloured leather jerkin, and there he stood, shivering in the sun, and up to his knees in mire, tied to what had once been a shrub, but was now a bundle of dry, withered, leafless, branchless sticks, rooted to the ground; and these sticks the animal eyed with a hungry glare, and every now and then took a bite of them. Sterne wept fictitious tears over the carcase of an ass that lay by the roadside. He would have wept real tears—as many stronger or better men have done—if his "Sentimental Journey" had brought him to anything like our Cavalry Camp.

SHIPPING WOODEN BARRACKS FOR THE FRENCH ARMY IN THE CRIMEA.

In the Illustrated London News for January 6 we detailed the construction of the Wooden Barracks, to the order of the Imperial Government, for the French army in the Crimea. We now illustrate the scene of the shipment of the Barracks in Southampton Docks on board the American ship *White Falcon*, chartered by the French Government. The Houses, or Barracks, which we have already described at some length, were packed in great lengths, clamped with iron hoop. The *White Falcon* has six shrouds to each mast, and she is altogether considered a very smart craft: there are raised cabins on deck and on the poop. The packages of the huts were ranged along the jetty, and taken in through one of the side ports, as shown in our second Illustration—"between-decks" of the *White Falcon*. Here is seated a Dockyard clerk, taking an account of the packages—a French official superintends; while the men are carrying the packages and stowing them away. In the distance are some lanterns. The vessel, we understand, had stowed in her hold 2000 barrels of pork. The day of the above shipment was Saturday, January 20.

BETWEEN-DECKS OF THE AMERICAN VESSEL "WHITE FALCON," RECEIVING ON BOARD THE WOODEN BARRACKS FOR THE FRENCH ARMY IN THE CRIMEA.

IMPERIAL PARLIAMENT.

(Continued from page 115.)

HOUSE OF LORDS.—THURSDAY.

RESIGNATION OF MINISTERS.

The Earl of ABERDEEN said that, after the vote of the House of Commons on Monday, her Majesty Ministers at once resolved to place their resignations in the hands of the Queen, and her Majesty had been graciously pleased to accept of the same. They therefore only held office until their successors were appointed. Although her Majesty's Ministers had opposed the motion of Mr. Roebuck as being unconstitutional in itself, it was not their desire to oppose any inquiry into their conduct He believed that an impartial inquiry would establish those facts; that no indifference to the wants of our army in the Crimea had ever existed in the minds of her Majesty's Government; and that no exertions had been spared to supply the wants and to maintain the efficiency of our troops in the Crimea. He thought that the Duke of Newcastle had met with great injustice. It was impossible for any Minister to exceed the noble Duke in assiduity and attention to the duties and the interests of his office. He (the noble Earl) did not complain of the feeling that generally prevailed in respect to the management of the war. The public saw that the misfortunes which had occurred were beyond the ordinary calamities of war, and they very naturally turned to the Government as an object of censure, as it was to them they looked for the efficiency and protection of our army. The members of the Government submitted to the natural consequences, and resigned their offices. Although the individual suffering of our army in the Crimea was very great and painful, he saw no cause for discouragement or dismay in looking at the position of our army in reference to the war. On the contrary, he saw every reason to indulge the most sanguine hopes of our ultimate success The noble Earl, in conclusion, expressed a hope that a strong Administration would be formed, that would carry on the war with vigour and effect, and with a view to the only legitimate end of all war namely, to the arrival of a speedy and honourable peace (Hear, hear)

The Duke of NEWCASTLE entered at considerable length into a defence of his proceedings, and strongly complained of the course pursued towards him by Lord John Russell He had over and over again offered to resign his position to any of his colleagues, and to give his services in any other capacity than that of Minister of War. It could not, therefore, be his desire to retain his office that led to the withdrawal of the noble Lord, whose expressions of kindness, while endeavouring to remove him from his position, he could only consider as so much of the Articles designate *soft sawder*. He also said that it was his intention to have given up the office of Minister of War whether the motion of Mr. Roebuck had been successful or otherwise.

The Earl of DERBY, after commenting upon some of the observations of the Duke of Newcastle, stated that he had been sent for by her Majesty, and if he could have seen any hope of success he would have attempted to form an Administration. He thought that in such a crisis every one should sink his personal feelings in order that her Majesty should not be left without a Government; he yet felt that in the state of public parties he could not offer to her Majesty the assurance of being able, satisfactorily, to conduct the affairs of the Government, and consequently he had at that moment no instructions from her Majesty to form a Government.

HOUSE OF COMMONS. THURSDAY.

In reply to a question from Mr. Stafford, Mr. COWPER said that parcels for Balaclava would be received at the dockyards for any officer at the Crimea, and would be forwarded also to parties either at Balaclava or Scutari

Mr HAYTER moved for a new writ for the borough of New Radnor, in the room of Sir T. Frankland Lewis, Bart., deceased.—Agreed to.

RESIGNATION OF MINISTERS.

Lord PALMERSTON said,—I rise, Sir, in a formal manner to make a communication to this House which will probably be anticipated, and which communication would have been made on Tuesday if it had not been for the accidental circumstance of their Lordships in another place having adjourned, namely, to state that, in consequence of what passed in this House on Monday night, her Majesty's Government thought it their duty to tender to her Majesty the resignation of their offices, that that resignation was graciously accepted, and that they now only held office until their successors are appointed. Under these circumstances the House will naturally feel that it would be highly inconvenient to proceed with the dispatch of any public business, and I therefore propose that this House at its rising do adjourn until to-morrow (Friday). My reason for not moving the adjournment for a longer period, which might have been very naturally expected, is that I have learned from you, Sir, that the noble and gallant member for Westmeath (General Sir de Lacy Evans, Bart.) has intimated to you that he will take his seat in this House to-morrow evening (Loud cheers). I am quite sure that I should be doing violence to the feeling of this House if I proposed by any longer adjournment to deprive honourable members of the earliest opportunity of testifying to that honourable and gallant member their sense of his brilliant and distinguished services (Hear, hear, and cheers). There is also a bill which my right honourable friend the Secretary of State for the Colonies introduced last night, for the purpose of carrying into effect a treaty with the United States, which it is proposed to submit, and if there should be no disposition, on the second reading of that bill, to enter upon a discussion, it will be very advisable to allow that bill to pass through its second reading to-morrow (Hear).

The Speaker put the question, and it was agreed to.

The Fisheries (North America) Bill, and the Passengers Act Amendment Bill were severally read a second time.

On the question that the House do now adjourn, Lord EBRINGTON said he could not allow the House to adjourn without expressing his regret that nothing had been said in reference to the Government which was to replace that which had just resigned.

HOUSE OF COMMONS. FRIDAY.

VOTE OF THANKS TO SIR DE LACY EVANS.

In consequence of the announcement made by Lord Palmerston on the previous evening that Sir De Lacy Evans had signified his intention of taking his seat this day in order to receive in person the thanks of the House, there was a very large attendance of members, and even the galleries on the right and left of the Speaker were occupied by such as could not find accommodation below. The benches at the end of the House appropriated to Peers were also well filled by members of the Upper Chamber.

At about twenty minutes past four o'clock, General Sir De Lacy Evans entered the House in full uniform. The House was full, and the members immediately rose and received him with enthusiastic cheering. He took his usual seat on the floor, below the gangway

The SPEAKER immediately addressed him, and in glowing language communicated the thanks of the House for his conduct at Alma and the other actions in the Crimea, and particularly in that of Inkerman, where, in addition to his valour as a soldier, he had displayed the most generous behaviour in declining to resume the command of his division when he arrived in the middle of the engagement

Sir De Lacy Evans said, he felt most deeply impressed with the conviction that if any honour could be conferred on a British subject, it was the thanks thus given by the representatives of his fellow-subjects, and he hoped he should be pardoned if he very imperfectly expressed his sense of that honour. He more particularly wished to express his gratitude to those hon. gentlemen who were opposed to him in political opinions. He felt that this honour was shared with the division he commanded, for he had not the remotest claim to the thanks of the country were it not for the devoted gallantry of that division and of the officers under his command. The gallant General then proceeded to complain that Lord John Russell, in moving the thanks of the House to the army in the Crimea, had not done justice to the Second Division in the statement he had then made, and concluded by again thanking the House for the honour it had conferred upon him.

Lord PALMERSTON then moved that the Speaker's address, and so much of Sir De Lacy Evans's speech as referred to the vote of thanks, be inserted on the journals

Mr. WALPOLE seconded the motion, which was carried unanimously.

The Fisheries (North American) Bill passed through the Committee, and the House adjourned.

THE COURT.

The non-political incidents of Court life have presented no features of interest beyond the first meeting of her Majesty with the Duke of Cambridge, which took place on Wednesday, at Buckingham Palace, on the occasion of the Opening of Parliament in London.

His Highness the Maharajah Duleep Singh, the Duke and Duchess of Argyll, Lord Ernest Bruce, and the Rev. Arthur Penrhyn Stanley have been among the visitors at Windsor Castle during the week

The Marchioness of Ely has succeeded the Duchess of Wellington as the Lady in Waiting. Lord Waterpark and Major-General Berkeley Drummond have succeeded Lord Rivers and Mr. J. R. Grnsby Gore as the Lord and Groom in Waiting

As at present arranged, her Majesty the Queen and his Royal Highness Prince Albert, accompanied by the younger branches of the Royal Family, will take their departure from Windsor Castle on or about the 14th instant, for Buckingham Palace.

Their Royal Highnesses the Duchesses of Cambridge and the Princess Mary and the Duke of Cambridge visited her Royal Highness the Duchess of Gloucester on Wednesday, at her residence, Gloucester-house, Piccadilly.

His Excellency the Ambassador of France and the Countess Walewska entertained a small circle at dinner at Albert-gate House on Saturday, among whom were his Excellency the Austrian Minister and the Countess Colloredo, Viscount and Viscountess Palmerston, &c.

His Excellency Baron Von Usedom and the Baroness Von Usedom have left England on their return to Berlin. His Excellency sailed from Dover on Saturday.

LONDON WATER SUPPLY. At the meeting of the Society of Arts on Wednesday last, Mr. Homersham, M. Inst. C.E., read a paper "On the Chalk Strata, considered as a Source for the Supply of Water to the Metropolis." He commenced by stating that in many districts of Great Britain, where the soil rests upon clay, millstone, or other matter impervious to water, it is usual to collect the water flowing off the ground after heavy rains in very large reservoirs, to supply canals and towns. Such a reservoir exists in the valley of the Brent, situated about 5½ miles in north-westerly direction from Cumberland gate, Hyde-park, and is used to stow the superabundant rain-water flowing off an extensive district of the London clay geological formation; the surface of which is principally covered with grass. On the other hand, where the soil rests upon chalk as on the Chiltern ridge and on the north downs the heaviest rain, instead of flowing off, sinks into the ground as soon as it falls, giving back little to support vegetation, as is evident when the luxuriant vegetation on the London clay is compared with the scanty vegetation on the chalk downs. The notoriously moist character of the air over a clay district, and the drying character of the air over a chalk district, were instanced as familiar proofs but little of the rain fall was evaporated from the surface of a chalk country compared with a clay country. The author showed that, while on a clay district, 2000 yards in length of stream and river courses existed per square mile, to say nothing of great lengths of drains and ditches, on the chalk there was *only* 780 yards of stream and river courses, and no drains or ditches. The bridges crossing clay streams were shown from various examples to have from five to ten times as much waterway as bridges crossing chalk streams, notwithstanding the clay bridges were frequently dry when the chalk water, which the chalk bridges were built to pass, was running. The author stated that the amount of water flowing down clay streams, fed by a large area of drainage ground, was larger in dry weather than from a chalk stream with a similar area of drainage. As much as 200 square miles of chalk country lying altogether was pointed out to the north of London without a spring, stream, or river upon it. From these well-authenticated facts it followed that the rain sank into the chalk and flowed out through the interstices between the planes of stratification that lead direct to the sea. The water was traced between high and low tide flowing into the sea up through the beach where the chalk was exposed, as at Dover, Deal, Brighton, &c. The proposal of the author was that, before the water reached the sea, it should be intercepted for the supply of the metropolis, for which it was well adapted, from its even and agreeable temperature, its clearness, its aërature, and freedom from organic matter. The only drawback to its quality in this respect consisted in the water holding in invisible solution about 17½ grains of chalk per gallon, as bicarbonate of lime; this chalk, however, could be easily withdrawn from the water by a process invented by Dr. Clark, of Aberdeen, without injuring the other good qualities of the water. The author had lately constructed works that were now supplying the important parishes of Plumstead, Woolwich, and Charlton with water derived from the chalk strata after having the chalk taken out of it by Dr. Clark's process. The water is much liked by the consumers for all purposes—washing, boiling, and drinking. Practically an inexhaustible supply of pure soft water is thus within the reach of the metropolis.

PRESERVATION OF LIFE FROM SHIPWRECK.—On Thursday a meeting of the general committee of the Royal National Life-boat (late Shipwreck) Institution was held at its offices, John-street, Adelphi; Thomas Chapman, Esq., F.R.S., in the chair. The silver medal of the Institution were voted to John and Wm. Lewis, of Harwich, and £20 between themselves; and the crews of their smacks, *Aurora* and *Royal*, in testimony of their gallant and persevering exertions in the rescue of four men from the brig *Staunton*, of Shields, which was wrecked on the Gunfleet Sand during a heavy gale on the 16th ultimo. The poor men had been forty hours on the breaker, and it was only after repeated attempts they were at last providentially saved from a watery grave by the gallant Lewises and their crews; also £3 more granted to the crew of a steam-tug for their assistance in carrying a line from the life-boat to the barque belonging to one of her Majesty's steamers which was unluckily lost while attempting to approach the wreck. Various grants were then made in aid of local life-boats. We were glad to observe that, after the meeting decided to sell again a portion of the funded capital of the institution, to meet the heavy and increasing demands made upon its limited funds, the East India Company, Lloyd's, Trinity House, Lloyd's Register of British and Foreign Shipping, Royal Mail Steam packet Company, and the Peninsular and Oriental Steam Navigation Company, had again liberally contributed to the Institution. These donations were truly appreciated by the committee as coming from public bodies so peculiarly competent to judge of the merits of the society.

THE LAW PROFESSORSHIP IN THE GLASGOW UNIVERSITY. Professor Allen A. A. Mcconechie, of the Glasgow University, has intimated his intention to resign the Chair of Civil Law in the University of Glasgow. Only one applicant, Mr. Skene, Sheriff-Substitute for the county of Lanark, has been mentioned. The appointment rests with the Town-council of Glasgow and the Incorporation of the University, and the probability is that their choice will fall on Mr. Skene.

A HANDSOME TESTIMONIAL.—A silver dessert centre-piece was presented to Mr. F. Ball, by the clerks and managers of the different works of Messrs. Naylor, Vickers, and Co., of Sheffield, at a dinner at Bishop's Royal Hotel, on the 24th ult.

LORD CARDIGAN AND THE UNITED SERVICE CLUB.—The members of this, the oldest military and naval club, intend to invite the noble Lord to become an honorary member, in consequence of his distinguished gallantry at Balaclava on the 25th of October last.

THE TELEGRAPH AT ROME. The line of electric telegraph connecting Rome with the rest of Europe, by the way of Bologna, is now completed, and will be opened for public use in Feb. None can enter into confidential conversation with either of the Emperors of France, Austria, or Russia, except the erection of the intermediate stations, which are actively proceeding so as to enable the Government and the public to make use of the line at the beginning of next month.

THE QUARTERMASTER-GENERAL AND THE NAVVIES.—It is to be lamented that more regularity and system do not exist in the actions and movements of each department. I do not wish to enter on that ground of censure which has proved the subject of so much correspondence lately; moreover, the very attempt to do so would involve me in a labyrinth of critical examination. I might mention, *en passant*, one single case which occurred with in the last week, and one which amply exemplifies my remark. It is well known that the navvies are coming to the Crimea for the purpose of laying a tramway from Balaclava to Sebastopol. With this knowledge, it was proposed by certain persons of one of the departments that huts might be erected for the accommodation of the navvies on their arrival; and certainly this proposition betokened the desire to assist the movements of the forces. Well, a requisition was made to General Airey, the Quartermaster-General of the English army, for the necessary permission and assistance; but, strange to say, a refusal was received from the above-mentioned quarter, with the remark that "it was none of his business, and the navvies might take care of themselves." Now, certainly, this is not pulling together with that zeal and energy necessary to the proper furtherance of the plans of the campaign. It is easily seen that if only half a dozen huts had been erected, thus causing a disposition to assist in a most necessary work—if this had been done, it would confirm the belief of the navvies that every aid will be rendered them on the Crimea. But in this they will be most grievously disappointed, for I much fear that they will be obliged to do everything for themselves, even the simplest things for those unexperienced in a Crimean campaign.—*Letter from Balaclava, Jan 12.*

THE MINIE RIFLE.—The Minié rifle is being adopted into the American service upon an improved plan. Instead of a short iron tube inserted in the ball, it is to be made with a cavity, into which a portion of the charge of powder will be forced, and its explosion does the whole work of spreading the ball so as to completely slug or fill the rifled bore of the gun, and driving it on its mission of death. The manufacture of muskets in the United States armouries is to be abandoned, and the troops are to be armed with the improved Minié rifles, with bayonets.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE living links that unite us to the poets of the first half of the present century are fast disappearing from among us. This week has added another to the many that have gone. Dorothy Wordsworth, the only sister of William Wordsworth, died at Rydal Mount, in Westmorland, on the 25th of January, in her eighty-fourth year. She was born on Christmas-day, 1771, and from girlhood (though not from childhood) was the constant and chosen associate of her illustrious brother. Wordsworth was as fond of his sister as Charles Lamb was of his sister, and we know how touchingly Elia has exhibited his fondness for Mary Lamb. Mary Lamb lived single, so did Dorothy Wordsworth. Both had poetic tastes and sensibilities, both were fond of poetry, and both suggested subjects to their respective brothers which have had a beneficial effect upon our literature. The contrast between the temper of Wordsworth and his sister is represented by the poet himself:—

> My sister Emmeline and I
> Together chased the butterfly
> A very hunter did I rush
> Upon the prey * *
> But she, God love her! feared to brush
> The dust from off its wings.

He loved her in earnest truth, and has rejoiced in verse that

> The blessing of his later years
> Was with him when a boy,

while he has characterised the nature of her influence upon him in four remarkable lines:—

> She gave me eyes, she gave me ears,
> And humble cares, and delicate fears,
> A heart, the fountain of sweet tears,
> And love, and thought, and joy

She delighted in Chaucer and in Spenser; caught, on many occasions, the raptured ear and eye of Coleridge with the point and spirit of her poetic criticisms, and was found by Southey to be the cheerful, well-informed companion of many a country walk and winter fireside. In 1836 she became, as Wordsworth himself has told us, "a confirmed invalid;" yet such was the natural strength of her constitution that she survived for eighteen years. Her fine memory she retained, we believe, to the last.

Though Dorothy Wordsworth was not gifted like her brother with what her brother calls "the accomplishment of verse," yet she had all the genius and faculty divine of a true poet, looking on nature with a poet's eye. How exquisitely earnest and truthful is her description of daffodils, as seen in spring. "We saw a few daffodils close to the water-side. As we went along there were more and yet more; and at last, under the boughs of the trees, we saw there was a long belt of them along the shore. I never saw daffodils so beautiful. They grew among the mossy stones about them. Some rested their heads on these stones as on a pillow; the rest tossed, and reeled, and danced, and seemed as if they verily laughed with the wind, they looked so gay and glancing." What the sister saw and told in prose, Wordsworth saw through his sister's eyes and has told in verse:—

> I wandered lonely as a cloud
> That floats on high o'er vales and hills,
> When all at once I saw a crowd,
> A host of golden daffodils;
> Beside the lake, beneath the trees,
> Fluttering and dancing in the breeze.
>
> Continuous as the stars that shine
> And twinkle on the milky-way,
> They stretched in never-ending line
> Along the margin of a bay;
> Ten thousand saw I at a glance,
> Tossing their heads in sprightly dance
>
> The waves beside them danced; but they
> Outdid the sparkling waves in glee:
> A poet could not but be gay
> In such a jocund company.
> I gazed—and gazed—but little thought
> What wealth the show to me had brought
>
> For oft, when on my couch I lie
> In vacant or in pensive mood,
> *They flash upon that inward eye*
> *Which is the bliss of solitude*;
> And then my heart with pleasure fills,
> And dances with the daffodils

Of this poem Wordsworth himself has told us that the two best lines in it are by his sister. These lines we have printed in italics. Surely there is now a chance of our seeing Miss Wordsworth's Diary entire. If she reported conversations as she described the face of nature, her Diary must be a treat. One of her sayings is well known, "When a child I could not have pulled a strawberry blossom." There is the sense of womanhood in this.

Since this was written we observe that the *only* sister of another poet has just been removed from among us, at an age only one year younger than Miss Wordsworth. On the 25th of last month died, at Brighton, Miss Sarah Rogers, the only sister of the poet of "The Pleasures of Memory," who happily still survives among us. Miss Rogers had all her brother's taste for art and literature. Her house in Hanover-terrace was elegantly filled with choice examples of art from Giotto to Stothard, bought as much by her own good sense as by her brother's example and assistance. Some of her best pictures she is understood to have left to the National Gallery.

Mrs. Milner Gibson is honourably known to all literary men in London of any distinction. She loves their company, and is, by her conversational powers, fit to associate with the most intellectual and refined. What author is there, then, who does not wish her well, who will not rejoice in any accession of fortune to one who uses what she has with equal sense and liberality? One of the choicest properties in Suffolk—Hardwicke House, near Bury St. Edmunds—has just descended somewhat unexpectedly to her. It was her father's, and she was an only child, and yet there was a chance—nay, more than a chance—of the property passing away from her to the second wife of her father. Few believed otherwise. But old Sir Thomas Cullum, whatever he may have hinted he would do, has done what he ought to have done, and that choice Elizabethan mansion, so sweetly situated on a rising knoll among woods, is now the property of Mrs. Milner Gibson, with the attendant advantages—so it is said—of twelve thousand a year. We remember Hardwicke: it is the only house in England—and we have travelled critically the length and breadth of nearly every county, from Land's End to Berwick-upon-Tweed—into which we failed in obtaining admission. We had neglected carrying with us a letter of introduction to Sir Thomas; and one fine day in summer drove from Bury to Hardwicke, to take our chance of seeing an early Italian picture of which we had heard high praises. We rang, and a tall butler replied, Sir Thomas was not at home, and the house was shut up. We told our object in a way which on every other occasion has never failed in procuring admittance when the family were not at home. We offered money, gold and silver together, but no—not the single picture we sought to see would the French butler or valet allow us to see. We spoke of our journey on purpose; mentioned several friends of Sir Thomas to whom we were known; but no! We were obliged to drive away, muttering our wayward fancies on the road about some imaginary relationship between the obdurate French butler and the murderer Courvoisier.

It is our intention whenever any great dearth of literary or artistic news occurs—as is the case at present—to print such *unpublished* materials of moment connected with English authors or English artists as our own collections, aided by the assistance of many friends, will enable us to supply. With this view we print a curious memorandum from Sir James

Thornhill, the painter, which will be found to embody some new materials for his "Life":—

COPY OF MEMORANDUM OF SIR JAMES THORNHILL TO W. CLAYTON, ESQ., &C.

Some Reasons why ye Petitioner Sr James Thornhill should not stand on the same footing with all the rest of his late Majesties Creditors.

Impr: Because his Ancestors, both of Father and Mother's side, have been sufferers in the cause of that Liberty; the fruits of which ere now so happily enjoyd by many the subjects of England.

His Grandfather Coll: Thornhill suffer'd in the Parliaments servi.e in ye West, during the late Civil War's.

His Grandfather on the Mother's side, Coll: Wm. Sydenham, One of the Lds Commissioners for the Publick Treasury of England, one of his Highnesses Council of State, and Gover of the Isles of Wight, &c.: had purchas'd Carisbrooke Castle and several woods &c belonging for £700, which on the Restauration were taken from him, but his Person pardond; as never intending to hurt ye Person of the King but to oppose the Tyranny in his Administration.

His Grandfathers Brother Coll: Sydenham, Gover of Weymouth was there slain in ye services of the Parliament and country.

Another Brother Majr Sydenham also killd before Sterling Castle in the same cause.

2dly, Your Petitioner has serv'd faithfully for the Town of Weymouth where he was born, for several years, without any the least expence to ye Crown, and has spent a great deal of Time and Money also, during all that while, in serving the Interest of ye Crown, by many hundreds of good Votes both in the City of London and Westminster.

He may very truly insist on it, that the small debt of £1100 which he now prays, will no ways ballance his last taxs and expences aforesaid

3dly, As he succeeded Sir Verno in Hisfory Painter to his Late Majesty by Warrant under his Grace ye Duke of Newcastle, and a fresh Warrant to serve his present Majesty by the Queen's particular Order; entitled to the same advantages as his Predecessor had, with was £200 p an: being ye same as ye Kings Fun Painter enjoys &c.

Yet instead of ever receiving one shilling. Has been as it were disgrac'd, and supplanted in his Royall Masters favour and Business too, by the overbearing power of the Late Vice Chamberlain now Lord President Earle of Burling—h by obtaining Signs Manual privately to the great detriment of your Petitioner, not only in the Kings business, but in all other business both publick and private

4thly, Towards ye latter p't of ye Late Good Kings reign ye Petitioner finding ye Debt increasing faster than discharg'd, was advis'd by his Friends to endeavour to get in the Debt, wch was then £1500, by surrendring his Patent, for fear of accident by Demise: which he accordingly endeavoured to do: But the good nature, and he dare say the inbred Friendship of Rob: Walpole would not permitt, promising he should be made easy &c. & that he would take care: However the thing which he fear'd has falln upon him; and unless he is payd in such a manner as he presumes may be easily done. He will remain a Sufferer instead of receiving such benefit as in some degree he might claim in common with his other fellow subjects under a Prince to whose Augest Family he has long since exerted not a mean Obelisk, and to whose Administration no Englishman wishes better

Many more, and strong Reasons might be urged for ye Petitr: but hopes these are sufficient.

What was the success of the memorandum we cannot tell. George II. was not so fond of Weymouth as George III., and he cared little and knew less about Art and Artists

Autograph collectors should make a point of attending a coming sale, at Sotheby and Wilkinson's, of choice English autographs, and of books that have belonged to eminent men. As the original MS. of "Kenilworth" will be sold on the last day, the possessor of the *unpublished* Life of Sir Walter Scott will have a fine opportunity of verifying his MS. by an undoubted example. Collectors will be there in every way well fitted to assist and determine his inquiries.

ORIGIN OF POTATO OATS.—We have to record the death of Mr. Daniel Jackson, of Greenhill, Arkleby, Cumberland, at the advanced age of ninety-four years. Upwards of half a century since this gentleman, who was a considerable landed proprietor in the county, introduced some potatoes for seed which were supposed to come from abroad; when they came up, amongst them were found a few heads of corn resembling the oats then grown in this country, but of larger growth, and differing in appearance, showing a great superiority over the common oats. The seed was carefully preserved again every year; soon a sufficient quantity was produced to offer for sale to the neighbouring farmers: from the circumstance of having been originally found growing amongst these foreign potatoes, it was called "potato oats."

A WONDERFUL ASSYRIAN OBELISK.—A dealer in curiosities, named Dropsy, of the Quai Malaquais, was on Saturday tried, by default, by the Tribunal of Correctional Police at Paris for an imputed fraud. Knowing that an elderly *savant*, named Barrois, had a great passion for antiquities, and had even written a book on the subject, he proposed to him to purchase an Assyrian obelisk, in the state of preservation, which he said had been sent to Paris by an English company, who had discovered it in some excavations at Babylon. M. Barrois eagerly grasped at the proposition, and finding on investigation that the obelisk was covered with cruciform characters, and bore appearance of antiquity, he paid down "*rond*" for it. But some time after, to his great mortification, he found that it was a perfectly modern production. Having made inquiries, he ascertained that it had been made, by order of Dropsy, by a sculptor named Lebeuf, out of the stone from the quarries of St. Leu; that Dropsy had given him person 2000f. for the work; that Lebeuf, in order to make it as perfect as possible, had gone to the Museum to examine Assyrian antiquities; and had even consulted M. Barrois's own book! The tribunal sentenced Dropsy to fifteen months' imprisonment, 500f. fine, to repay M. Barrois his 5000f., and besides to pay him 1000f. as damages.

EXPENSES OF THE METROPOLITAN PARKS. A return published, on the motion of Mr Locke, M.P., gives the details of the expenditure of the sums voted for the maintenance of the several metropolitan parks and gardens. The gross total expenditure for the keeping up of St. James's, the Green, and Hyde Parks for the year ending the 31st March, 1854, amounted to £15,711; the expenditure for the maintenance of Kensington Gardens to £2111, that for the maintenance of the Regent's Park to £6501; that for the maintenance of the Victoria Park (Bethnal-green and South Hackney) to £2042; and that for the keeping up of Greenwich Park to £1110. These sums are exclusive of the expense of the rangers' departments. Among the items of expenditure of the three parks first mentioned may be mentioned £254 for the watering of the three parks; £4239 for the repair of roads, including the tools and materials; £694 for keeping in order the entrances in St. James's Park, the enclosure in Hyde Park at the back of Hamilton-place, the gardens of St. James's Palace, and other public gardens; £1827 for the salaries of gatekeepers and constables, £107 for liveries, £54 for the food of the aquatic birds, £1189 for lighting, £2659 for the supply of water to the Serpentine, the canal in St. James's Park, &c., and £1067 in aid of the parochial assessments, &c. There is also a special charge of £2474 for draining Rotten-row and the Ladies' Mile on the south of the enclosure in St. James's Park. The receipts of these parks, arising from grazing rents, subscriptions for keys, and sale of timber, amounted to £2649. In Kensington Gardens, among other items, £223 was expended on the nourishment of the water-fowl, £781 for keeping the walks in order and clearing the Serpentine and the Basin of weeds, and £119 on facia and painting the banks of the Serpentine. The receipts in these gardens were £87. As regards the expenditure for the Regent and the Victoria Parks, there appears no item particularly worthy of notice. The receipts from these two parks amounted respectively to £972 and £672. The receipts from Greenwich Park amounted to £74.

CARDINAL WISEMAN IN DANGER.—Cardinal Wiseman arrived in Paris on Wednesday week on his way from Rome to London. In his voyage from Civita Vecchia to Marseilles the Cardinal, and the whole of his fellow-passengers had a very narrow—indeed, an almost miraculous—escape from being lost. When off the Island of Hyères, the passengers were startled about two in the morning by a fearful crash, of such violence that it appeared as if the ship was at once going to pieces. It was evident that either the ship had run aground or that a collision had taken place. The passengers, who were all in bed, immediately rushed upon deck, when it was discovered that the vessel had come into collision with a large sailing vessel, with which she was still in contact, the anchor of the latter having got fixed in the bows of the steamer. A short period of painful suspense ensued. The starboard bow of the steamer had been stove in, the whole of the bulwarks and the paddle-box were destroyed, and for a moment it was thought that the vessel was sinking. On trying the pumps, however, it was found that the leakage was not so great that it could not be kept down. The other ship had also suffered, but not so much as the steamer. After getting rid of the wreck, the engineers set about repairing the damage done to the engines, and in four hours were able to set one to work, which brought the vessel into Marseilles in the course of the day. Fortunately, the disaster was very little or a great loss of life might have been the consequence, for the vessel was in a very crippled state, and the boats would not have contained one-fourth of the passengers. The accident was owing to the carelessness of the Italian officer of the watch, who had neglected to place a watch at the bow of the steamer.

MONEY ORDERS.—The remitter of a money-order will not be required, in future, to state his occupation, nor the payee to furnish any information on that point. Advice are henceforth to be stamped with the dated stamp of the paying-office, instead of being signed as at present.

CHESS.

TO CORRESPONDENTS.

H. TURTON.—Next week, if possible

A. F., Florence.—The additional MSS. will undoubtedly prove of great interest. We shall look for them anon.

A GENUINE INDIGESTIBLE, Saffron Walden.—Yes, unless at the moment of touching the Piece he says, "I admire," or words to that effect.

R. V. M., Lancashire.—We hope to be enabled shortly to give a list of the Matches already arranged to be contested at the Leamington Meeting for the Counties Prize

CANTAB.—No, no. Altogether wrong

CLERICUS.—The Solution you name was destroyed, as we cannot say where the error lay.

A. Z. B. Y.—Thanks. A version is more promising. Let us see another attempt

BRIAN.—Not apparent to be right respecting the Solution of No 570

W. H. (Hull).—Have examined.

F. H.—The key move to Enigma No 916 is—1 Kt to K 4th

G. B. C., Hoboken.—The volume required can be sent, if you will mention the channel through which you wish it to be transmitted

F. T. M.—You will find one of Jaques' "In Statu Quo" chess-boards and Men especially useful when composing Problems. By an ingenious contrivance, the merely touching a spring enables you to fix the men firmly in any position, and by pressing another you release them again instantly

D. B., Hunslet.—A private communication shall be forwarded.

D. R., Paris.—We await impatiently the publication of your programme. Until that is known, no effective steps can be taken by the amateurs of this country in furtherance of the end at issue.

VERITAS.—Certainly not. 2. You must not, at any time, Castle when you are in check

H. C., Llandaff.—It shall be examined. 2. The "Chess Player's Handbook" (second edition), published by Tilt and Co., Covent-garden

E. M. S.—Thanks. Title for publication is not, however, by any means, to be compared with some of the earlier contributions

C. B. FRASER.—The MS. shall be returned immediately

C. L., Cabarrus, North Carolina.—It shall have a place among our Chess Enigmas.

S. S., Cincinnati.—The President, we presume, will be Mr. Cobbett. You must send us full particulars, with the name of the secretary and a list of the prize-members.

A. K., Lambeth.—They exhibit unmistakable marks of improvement.—Nos. 1 and 2 especially.

J. Stonehouse; W. C.; W.—We shall endeavour to find room for them ere long.

SOLUTIONS OF PROBLEM No 570, by H. T. W., Paisley, W. G., E. M., W. P. L. S., Dublin, T. J. of Hawarth, are correct

SOLUTIONS OF PROBLEM No. 571, by P. R., Norwich; Brutus, Strickfield, T. J., of Hawarth, Dereven, E. H., W. C. C. J., Stonehouse, W. O., Delta, J. M. of Sherburn; J. P. C., Dublin; J. P. of Guernsey, are correct. All others are wrong.

SOLUTIONS OF ENIGMAS by F. R., Norwich, Dereven, Stonehouse, Philip, Argus, Mercurius, J. M. P., Villiers, Clerc, P. P., Dun, Punjaub, T. W. S., E. H., W. C. C., Lover of Chess, are correct. All others are wrong.

SOLUTION OF PROBLEM, No 571

WHITE.	BLACK.	WHITE.	BLACK

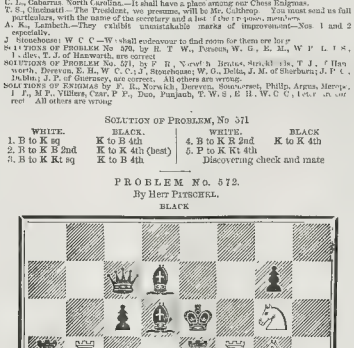
3. B to K Kt sq	K to B 4th	Discovering check and mate	

PROBLEM No. 572.

By Herr PITSCHEL.

BLACK



WHITE.

White to play, and mate in four moves.

CHESS IN SCOTLAND.

In a recent Number we gave a short Game between Mr. G. B. Fraser and another Amateur, illustrative of a somewhat uncommon variation in the *Evans' Gambit*. The following *partie* played by the same opponents may help to throw some additional light upon the point in question.

WHITE (Mr. G. B. F.)	BLACK (Mr. G.)	WHITE (Mr. G. B. F.)	BLACK (Mr. G.)
1 P to K 4th	P to K 4th	14. K Kt to K R 3rd	Q to K R 5th
2. K Kt to K B 3rd	Q Kt to Q B 3rd	15. B takes B	Q takes B
3. K B to Q B 4th	B to Q B 4th	16. K to R sq	P to K Kt 4th (*d*)
4 P to Q Kt 4th	K B takes Kt P	17. P to K B 4th	P takes P (*e*)
5. P to Q B 3rd	K B to Q B 4th	18. Kt takes P	Q to K Kt 5th
6. P to Q 4th	P takes P	19. Kt to K 6th (ch)	K to K 2nd
7. Castles	P to Q 3rd	20. B to K B 4th	Q to K R 4th
8. P takes P	K B to Q Kt 3rd	21. B to K B 5th	Q to K Kt 5th
9. Q Kt to Q B 3rd	Q B to K Kt 5th	22. B takes Kt	P takes B
10. Q to Q R 4th (*a*)	K to B sq (*b*)	23. B to Q R 3rd (ch)	K to B 3rd
11. K Kt to Kt 5th (*c*)	Q R to K B 4th	24. B to K B sq (ch)	K to Kt 3rd
12. P to Q 5th	Q Kt to K 4th	25. Q to Q 7th	
13. K B to K 2nd	P to K R 3rd	and Black surrenders.	

(*a*) In effect, it is this, and not the previous move of Kt to Q B 3rd, which constitutes the novelty in Mr. Fraser's system; and the certainly appears to us to present valid claims to consideration. If, in reply, Black play 10. B takes Kt; or 10 Q to Q 3rd, or 10 B to Q B 4th, Mr. Fraser has formulated with a host of variations to prove that White speedily gets the advantage. His best answer appears to be that in the text.

(*b*) The merit of suggesting the present move has been claimed by two or three players, we find; but, in reality, it is no new discovery, for *K to B sq*, in analogous situations, was proposed years ago in the *Chess-Players' Chronicle*—in the first instance, if we mistake not, by Mr. Von Heydebrand, and it has been recently adopted in games between Messrs. Brien and Wayte, and Brien and Green.

(*c*) In a note to this move, Mr. Fraser remarks that subsequent examination has convinced him *P to Q 6th* is a far more effective mode of continuing the attack than playing K Kt to K Kt 5th. We append a few of the variations which he has favoured us, in support of his assertion

In the first place:

11. *P to Q 5th*	Kt to K 4th	15. P to K R 3rd	Q B to K R 4th
12. Kt takes Kt	P takes Kt	16. Q Kt to Q sq	K to Kt 2nd
13. Q B to Q R 3rd (ch)	Kt to K 2nd	17. P to Q 6th	
14. K to R sq	P to K Kt 4th		

With a winning game.

We must take the liberty of saying that the two or three last moves given to Black appear to us very far from the best)

In the second place

11 *P to Q 5th*	Q B takes Kt	12.	P takes Q Kt P
12. P takes Kt	Q B to K Kt 5th		

And White has a capital game.

In the third place—

11 *P to Q 5th*	Kt to Q 5th	12. B to Q Kt 3rd	Kt to K B 3rd
12. Kt takes Kt	K B takes Kt		

(We are not at all satisfied with the move Mr. Fraser proposes for Black here. It strikes us that by playing his Q to K Kt 4th he would obtain at least as good a game as his opponent has.)

14. K B to Q Kt 3rd	B takes Kt	15. B takes B, with a fine game.	

(*d*) Q Kt to K 2nd seems preferable on many accounts.

(*e*) At this point also, we should have preferred playing the Q Kt to Kt 5th. Taking the Pawn serves only to release the White Kt from a very bad position.

CHESS IN PARIS.

A sprightly little affair between M. DEVINCK and M. DE RIVIERE

WHITE (M. De R.)	BLACK (M. D.)	WHITE (M. De R.)	BLACK (M. D.)
1. P to K 4th	P to K 4th	13. Q to K 2nd	K R to K sq
2. K B to Q B 4th	P to Q B 3rd (*a*)	14. Q B to K 3rd	P to Q B 3rd
3. Q B to Q B 3rd (*b*)	K Kt to K B 3rd	15. K B to Q R 4th	K R to K 2nd
4. K Kt to K B 3rd	P to Q 4th	16. K R to B 5th	P to Q Kt 4th
5. P takes P	Kt takes P	17. K B to Q Kt 3rd	Q to Q B 2nd
6. K Kt to K 5th	P takes P	18. Kt to Q 5th	Kt takes Kt
7. B to Q Kt 5th (ch)	Q B to Q 2nd	19. B takes Kt	B takes P (ch)
8. Kt takes B	Q Kt takes Kt	20. K to R sq	Q R to K sq
9. P to Q 4th	P to K 3rd	21. Q R to K B sq	Kt to K B 3rd
10. Castles	B to Q 3rd	22. R takes Kt	P takes R
11. P to K B 3rd	Castles	23. K takes P	K to Kt 2nd
12. P takes P	P takes P	24. Q to K R 4th (*c*)	Q R to K sq
		25. Q B to K R 7th	P to K Kt 3rd (ch)

And Black resigns.

(*a*) This defence is seldom adopted in our days, although it has been thought deserving of considerable attention by Cozio, Poudrins, Philidor, and later writers. The main defect in it is that it affords the opening player too much facility in bringing his pieces into the field.

(*b*) Philidor commends P to Q 4th at this point, but modern authorities seem to agree in preferring Q to K 2nd. (See the "Chess-players' Handbook," p. 231.)

(*c*) Pretty. If Black take the Rook he is mated in two moves.

On Thursday evening week the Emperor gave a ball at the Tuileries, the last which will take place for some time, owing to the Court mourning about to be ordered for the Sardinian Royal family.

MUSIC.

THE PURCELL CLUB held their anniversary meeting on Tuesday, at the Albion Tavern. This society was founded in 1836, by Mr. Edward Taylor, the Gresham Professor of Music, with the object of doing honour to the memory of the most illustrious of English composers. It is a body of eminent professional musicians and amateurs, who devote themselves especially to the cultivation of vocal music, and who testify their veneration for their great countryman by the study and performance of his works. It is the custom of the club to hold two meetings in the year: the one in winter is of a convivial nature; and the other is in summer, when the members of the club join the choir of Westminster Abbey in performing the cathedral services of the day, which of course are selected from the works of Purcell. Professor Taylor, the founder of the club, is its perpetual president; and to his admirable fulfilment of the duties of his office the great and increasing prosperity of the society is to be mainly ascribed. There was a full attendance of members; the chair being occupied by the distinguished president. The meeting, as usual, was social and cheerful, and the musical portion of the evening's entertainment was even more than usually delightful. The first part of it consisted of sacred compositions, including two of the most beautiful and most celebrated of Purcell's anthems; the one, "Blessed are they that fear the Lord," was composed on the occasion of a public thanksgiving ordered for the supposed pregnancy of the Queen of James the Second; the other, "O give thanks," may probably, from the grandeur of its proportions and the sublimity of its harmonies, be regarded as Purcell's masterpiece in ecclesiastical composition. There was next a selection from the music in "Bonduca," consisting of the grand chorus, "Hear us, great Rugwith," the recitative, "Hear, ye gods of Britain," the duet, "To arms," and the celebrated chorus, "Britons strike home." These pieces, whose warlike character was appropriate to the time, were performed with great fire, and received with enthusiasm. Several miscellaneous songs, duets, and canons, concluded a most interesting evening.

THE HARMONIC UNION have begun their season rather inauspiciously. Their first concert on Wednesday evening suffered from the excess—a severity of the weather—intense cold and a snow-storm—in consequence of which there was a very thin attendance. An unexpected occurrence contributed to mar the performance. A handbill was distributed in the room, in which the directors stated "that but a few hours since they received intelligence from several important and leading members of the orchestra that Mr Gye, of the Royal Italian Opera, late last night, refused permission to them to attend the performances of the Harmonic Union this evening, although those gentlemen had unconditionally accepted the engagement offered them by the directors, and had attended the rehearsal on Monday last." It was added, that "this most unprecedented and arbitrary proceeding has compelled the directors to engage other gentlemen, who have kindly consented to play at a moment's notice, although without the advantage of a rehearsal." We presume that, by the terms of the engagements of the Royal Italian Opera band, Mr. Gye had the power to prevent them from performing on this occasion; though it seems strange that he should have exercised this power at a time when their performing elsewhere could not have in the least interfered with the arrangements of his theatre, which is not yet opened.

The Harmonic Union have removed their concerts from Exeter hall to the Hanover-square Rooms; and they have engaged M. Mollique, instead of Mr. Benedict, as their conductor. The performance of Wednesday consisted of "The Creation," and was less effective than it probably would have been under other circumstances. The orchestra was very imperfect; and the defects of this important branch of the performance were necessarily to be attributed to the whole. The solo parts, however, were very well sung by Miss Stalbuch, Mr Lockey, and Mr Weiss

MR. HENRY RUSSELL has been giving his entertainment and several new songs with deserved success in the provinces. He visits Newcastle-on-Tyne next week, and thence proceeds to Edinburgh, Glasgow, and the north of Scotland

THE forty Chanteurs Montagna, who have been singing with such success at M. Jullien's Concerts at the Royal Italian Opera, will shortly start upon a provincial tour.

THE THEATRES.

SADLER'S WELLS. "The Winter's Tale" was revived on Saturday; the part of *Hermione* being performed by Miss Atkinson, an improving actress. The statue scene, as usual, was well managed. Mr. Phelps, as *Leontes*, has in it a situation of pathos, to which he gave full effect. But the combined recognition of Hermione and daughter evidently copied from *Pericles*, is inferior both in power and art to that single picture of paternal emotion which makes the triumph of the older drama. The actor's skill and passion show, perhaps, more distinctly in that; but the *Leontes* also bears proof of careful study, and is executed with those "fine touches" which bespeak the consummate artist.

MARYLEBONE.—Mr. and Mrs. Wallack reappeared, for the first time since Christmas, on Monday, in the delightful play of "As You Like It." The piece was placed on the boards with taste in costume and scenery unlikely to be surpassed by any theatre, except Drury Lane. The play by Mr. Bayle Bernard is underlined, under the title of "Leon, or the Iron Mask."

HAYMARKET.—Miss Cushman reappeared as *Romeo* on Monday, and acted with her usual power. *Juliet* was performed by a *débutante* (Miss Swanborough)—pretty, but feeble and immature, and not without promise, in less important *rôles*. The appearance of Miss Cushman in the character is always an event on which to congratulate the playgoer. An actress in such a part has an advantage not possessed by its male representative. She may exaggerate the passion without rendering it absurd; whereas masculine violence with the love-sick *Romeo*, however little exhibited, always appears overcharged. This is particularly the case with the scene after the banishment in the cell of the friar; with most actors it is their least efficient situation; it is the best and finest with Miss Cushman. The house was well attended, and applause frequent.

OMNIBUS FARES. At the commencement of the war, when food was unusually high and prices on the rise, the omnibus proprietors of London unanimously raised their fares from 3d. to 4d., alleging as a reason that horse provender was much more expensive than it had been. Experience, however, has led to the conviction, and a public meeting was held during the recent falls of snow to get the fares up to 6d., it was in a very short time abandoned as a losing speculation, and the 4d. fares were again adopted. But within the last day or two the 6d. fare has once more still on the ground, the Hoxton and Old Kent-road omnibuses have recommenced running at the old 2d. fares to or from the Bank to Islington and the Old Kent-road. The deduction has been occasioned in consequence of the proprietors on that line having come to the conclusion that 4d. was too much to charge for so short a distance. The new Peckham omnibuses have followed the example, and the Greenwich omnibuses, it is expected, will shortly do the same.

USE AND WONT. The following singular ancient usage was observed on Monday in the Dublin Court of Exchequer: Three of the oldest boys and one of the clergymen of Christ's Church attended before their Lordships to comply with the terms whereby certain lands are held by the Dean and Chapter of Christ's Church Cathedral, namely, that on specified days they shall render homage to her Majesty, in her Court of Exchequer. A hymn having been sung, and certain prayers recited, the ceremony terminated.

RUSSIAN LOSS IN 1854.—A letter from Warsaw, quoted by the *Cologne Gazette*, says that the loss sustained by the Russian active army (that is the "Grand Army" under Prince Paskiewitch) during the year 1854 has amounted to 111,132 men; of which 29,204 were killed, 55,304 wounded, 6240 deserters and absent, while 16,136 have died of divers diseases.

BETWEEN the 12th and 20th of January the following vessels of war and transports left Malta with troops and stores for the Crimea:—The *Jura*, with 38 officers and 1090 rank and file; *Transport* (150), with 19 officers and 400 rank and file; the *St. Jean d'Acre*, with troops; and the *Foyle*, the *Poictiers*, the *Clyde*, and the *Lady Eglinton*, with munitions of war, huts, and warm clothing; and the *Trent*, with 260 mules and 54 Spanish asses.

LOSS OF THE STEAM-SHIP "MERCURY."—The *Mercury* left Bordeaux on the 10th ult., with a cargo of clover-seed, wine, brandy, &c., for London, and at half-past nine the next evening was run into by a large outward-bound barque, apparently French, which struck the vessel amidships, stopped her engines in ten minutes, and caused her to sink within half an hour. The barque kept her course. The crew, twenty-two in two boats, which were kept afloat with great difficulty, continued in the Bay of Biscay twenty hours without water until relieved by the barque *Johanna*, of Hartlepool, which conveyed them to Gibraltar; the master, four men, and the stewardess, took passage in the *Mauritius*, three hands joined her crew, and thirteen were left at Gibraltar.

BRUNSWICK, SUABIAN, AND SAXON PIGEONS, FROM THE PHILOPERISTERON SOCIETY'S SHOW, IN FREEMASONS'-HALL.

THE PHILOPERISTERON SOCIETY'S SHOW.

Although London cannot apparently maintain an annual poultry exhibition, yet she can boast of her Society of Pigeon Fanciers; for finer specimens are rarely seen than were at the Grand Show of Old Birds of the above Society, in the Freemasons' Hall, on Tuesday week. Almost every variety of the domestic pigeon was represented. The Pouters of Mr. Bult, the Toys of Mr. Wicking (the President), the Carriers of Messrs. Parkinson and Haynes, the Short-faced Tumblers of Messrs. Pyne, Wicking, and Esquilant, attracted and deserved universal admiration. The Foreign Pigeons were collected in a pen by themselves, and comprised varieties of form and colour, some of them being perhaps more curious than beautiful. The Hall was crowded with visitors, some from distant parts of the country, who seemed generally of opinion that this, the eighth annual show, was better than the last; the birds being more numerous and the quality finer, proving the time of the gentlemen amateurs composing this Society has not been lost.

MALE AND FEMALE CHAMOIS, AND ST. BERNARD DOGS, BELONGING TO MR. ALBERT SMITH.

If the movement in aid of the British army now making in Piedmont should cross over to the other side of the Alps, Mr. Albert Smith has only to put himself at the head of his regiment of "Guides," and start off at once from Chamouni to the East; for he knows the way, and they will follow him wherever he chooses to lead them—no less from personal attachment to him than from gratitude for what he has done for them. Not only has he sent so many travellers from London to Mont Blanc, but he has brought Mont Blanc to London; and, not content with that, appears to be gradually collecting around him every animal, vegetable, or mineral peculiarity pertaining to his favourite region that can be imported.

Mr. Albert Smith has favoured us with the following particulars of the interesting Alpine group presented to our readers. The chamois, male and female, were taken last spring, in the vicinity of the Col du Bonhomme, near the pass where the two English tourists, the Rev. Mr Braken and Mr. Campbell, lost their lives in a snow-storm, in September, 1820. They are still young, the horns just budding, and were brought up by a goat, who accompanied them to London, under the care of Jean Tarraz —Mr. Smith's chief guide in the ascent of 1851. The male, "Chap," is the finer of the two; but one of his legs was unfortunately broken at the time of his capture, and, from want of proper attention, a false joint has resulted, so that he walks lame, and it is feared will not entirely recover, although quite free from pain. The female, "Linda," is a very gentle little thing. She lives a little way out of town, in the care of one of Mr. Albert Smith's assistants, Mr. Morley; and sometimes creates a little interest, as she trots, with a little bell hung to her collar, along the somewhat to her strange route of Piccadilly, on her way to the Egyptian Hall, where she, now and then, makes acquaintance with the juvenile visitors

There are chances against the rearing of these little strangers. Mr. Mitchell, the able secretary to the Zoological Society, courteously furnished Mr. Smith with a few particulars respecting their race in England He remembered to have seen four, belonging to the late Lord Derby, on their passage through London. They lived at Knowsley for several years, and had a considerable range there in the paddocks, where the large antelopes and the Wapiti deer were kept. The chamois were able to pass through the dividing fences, and were only confined by the outside boundary. They were fed with hay and corn, as well as grass, and, in fact, were treated just as common goats. Mr. Mitchell doubts whether there is a good chance of keeping them alive in this country without a considerable range, and for that reason has properly hesitated to import any for the Society. At the same time he states that there is an instance of one that has lived a considerable time in the Jardin des Plantes, in a somewhat unpromising enclosure.

The greater part of the chamois, chased on the Alps, inhabit the mountains of the Vallée de Sixt, on the glaciers of Mont Buet, contiguous to Chamouni. As many as 150 have been seen together in a herd. Mr. Bagge, the member for East Norfolk, is an indefatigable chamois-hunter, and his name is as good as a passport all about Sixt, Samoens, and Chamouni. The "professional" hunters are but indifferent marksmen, according to Mr. Prior (who lived fifteen years amongst them), and carry heavy antiquated carbines, which miss or hang fire half the time. This he considers very fortunate, as otherwise the race would soon become extinct, as is the Bouquetin, or very nearly. A stuffed specimen of the latter may be seen in the museum attached to the little inn at Servoz, where the *chars-à-banc* stop to bait on the road from Sallenches to Chamouni.

The St. Bernard dogs are male and female. "Lion" is not pure breed; there is a cross of the English mastiff about him; but he is much the finer animal of the two, and very affectionate and gentle, enjoying a romp amazingly. "Diane" is *pur sang*. She was sent to Mr. Albert Smith as a New-year's gift, by the monks, last year (but could not start in January, for the weather), as an acknowledgment of an increased accession of visitors to the Convent, which they were disposed to think he had induced to go there. The following certificate accompanied her:—

Hospice du Grand St. Bernard, le 5 Fevrier, 1854.

Je soussigné déclare que la chienne Diane, conduite par le nommé Pierre François Favret, de Chamonix, est véritablement de la race des chiens de St. Bernard, et qu'elle est conduite à Londres pour M. Albert Smith.

En foi, MEILLAND, Clavendier.

When Mr. Albert Smith was at the Convent, in October last, M. de l'Eglise, the Prior, expressed to him great anxiety as to the keeping up of the world-renowned breed. The mortality amongst the dogs had been very great There were then only two at the Convent one was a fine light-coloured fellow, very rudely good-tempered, and the other a female, the latter to Mr Smith's Diane, and bearing the same name The dogs are named, either in allusion to the classical localities of the pass—as Jupitre, Mars, Castor, &c.; or to Napoleon's memorable passage in 1800—as Drapeau, Marengo, and the like. Fortunately there has been no fatal accident on the mountain since 1851, when the body of a young man was found at the Vacherie, a quarter of a mile below the Convent. The improving state of the roads, and the establishment of canteens, have increased the safety of the route. It is not improbable that, in a few years, there will be a carriage-way completely across the pass. Mr. Charles Taylor, of Hollycomb, brought a very fine dog direct from the Convent, in 1850, which he gave to Mr. Richard Arabin. In the event of a breed from this dog and Diane, Mr. Smith has promised some puppies to the Monks, a somewhat strange return.

Those of our readers who have been to Chamouni, will recollect the trim obliging Bernese girl, who served in the shop for carved wood-work and bâtons, kept by the brothers Kehrli and Auguste Balmat. She accompanied the chamois to London, and is learning English against her return to the Alps. She belongs to the Kehrli family, from which a great proportion of the beautiful carved Swiss wood-work emanates—there are some specimens of their labours in the Crystal Palace—and lives, in the winter and spring, at Meyringen, in the Oberland, with her relations.

BERNESE GIRL. FROM A PHOTOGRAPH BY KILBURN.

The Bernese, the female chamois, and "Lion," had the honour of being presented to her Majesty, at Windsor Castle, last month. The dog and the chamois had never met before this great event in their lives; and some doubts were entertained as to whether the meeting might not terminate in a somewhat novel variety of coursing over the park; but they instantly became very great friends, and are now never comfortable away from one another. Lion ordinarily carries a *grelot*, or "rumble" of bells round his neck, and as soon as Linda hears these, she makes wonderful leaps on to any projecting ledge that presents itself, and can with difficulty be kept quiet.

MALE AND FEMALE CHAMOIS, AND ST. BERNARD DOGS, BELONGING TO MR. ALBERT SMITH.

"THE EXECUTION OF MONTROSE, AT EDINBURGH, 1650."—PAINTED BY E. M. WARD, A.R.A., FOR THE COMMONS' CORRIDOR, WESTMINSTER PALACE.—(SEE NEXT PAGE.)

EDUCATION IN THE MINING DISTRICTS.

A MUNIFICENT provision for the educational and religious requirements of the numerous persons employed in, and dependent upon, the extensive ironworks of Messrs John Bagnall and Sons, in the neighbourhood of Wednesbury, has just been made by that firm in the erection of a commodious group of buildings, to be employed both as school-rooms and chapel. For a considerable time a clergyman has been engaged to visit the work people at their own homes, and to conduct Divine service on Sundays; but the room hitherto employed for the latter purpose, though spacious, has not afforded adequate accommodation for the congregation. A school-master has also been engaged for the past twelve months, under whose care a flourishing night-school has been formed, numbering about 240 scholars, varying from eight to twenty-two years of age, the entire expense having been borne by Messrs. Bagnall. Anxious to establish a day school on a scale commensurate with the necessities of the district, the present commodious edifice has been erected by those gentlemen, at a cost of £5500. The schools, when thrown open for Divine service, form one large room, 123 feet long, with a depth of 63 feet in centre and 23 feet in the transepts, and 30 feet in height to the point of the roof, which is open. The centre (or, as it may be termed, transept) is divided from the two wings by lofty arches, and is carried backward considerably beyond the line of the building, and the space thus acquired is occupied by a gallery for the Infant School, a small class-room or vestry being placed immediately behind. The Girls' School-room is to the north and the Boys' to the south of the Infants' portion; and large crimson curtains drawn across the arches completely seclude each department from the other. The centre space (or Infant School), where the clergyman will officiate, has been fitted up with a communion-table and rails, a pulpit, and reading-desk, and is ornamented by a large five-light window, filled with stained glass. The building has been adapted for its twofold purpose by the architect with great skill; the officiating minister can see, and be seen by, the entire audience; the desks in the Girls' and Boys' Schools are ranged in three rows, one above the other, and, as the leaves are moveable, are no obstacle on the Sunday. About half of the floor for the whole length of the building is left entirely vacant that space being necessary for the children to be grouped together, and for evolutions. This vacant space, however, is filled with comfortable benches on the Sunday. In school hours 500 children can be accommodated (150 boys, as many girls, and 200 infants), and about 700 worshippers on the Sunday. The building is heated throughout by hot water, and lighted by gas. The style is Gothic, the material is red brick, with stone dressings and copings. At each end of and communicating with the school-room, is a house—one for the master and the other for the mistress. In the rear are large playgrounds. The night schools and lavatory are in progress, and the out-offices.

The building has been erected from the designs of Mr Daukes, of Whitehall-place, London, by Mr. Wood, of Worcester. It is situated within a few hundred yards of Messrs. Bagnall's central office, at the Gold's-hill Works.

The day-school will not be in operation for a few weeks.

The Gold's-hill Schools, being licensed for Divine Service, were opened on Sunday morning, the 7th ult. At the conclusion of the services, the Bishop

MINING SCHOOL BUILDINGS AND CHAPEL NEAR WEDNESBURY.

of Lichfield, with much feeling and emotion, expressed his great delight and satisfaction at having witnessed the good work which is being carried on by Messrs. Bagnall for the moral and spiritual welfare of their workmen in this part of Ir. diocese—an example which, his Lordship hoped, would be followed by others similarly situated

THE "EXECUTION OF MONTROSE." PAINTED BY E. M. WARD, A.R.A.

THIS is the first of a series of eight pictures for the Commons' corridor in the new Houses of Parliament, painted by order of the Royal Commission on Fine Arts—the subjects of the several works being so selected as to illustrate, in equal number, the heroic conduct of the parties—namely, the Constitutional and the Monarchical engaged in the great Constitutional War, which commenced under the reign of Charles I., and which are intended to hang as pendants in the gallery assigned to them. Thus, the "Execution of Montrose" hangs opposite the "Last Sleep of Argyll"—a fine picture by the same artist, which our readers will recollect was exhibited last year at the Royal Academy, and engraved in this Paper.

In the treatment of both these works the artist has shown that he fully appreciates the honour conferred upon him by his selection for the task. He has thrown great fervour of purpose and broadness of treatment into their execution. He has also shown his artistic knowledge of the requirements of the locality in which his works are to be placed. The strongly-marked outline, and the strong contrasts of light and shade, though not pleasing in a gallery picture, are appropriate, not to say necessary, in the peculiar light, as wall decorations, in which the pictures are intended to be seen. With regard to the picture before us, can anything be more dramatic than the whole arrangement? The Marquis of Montrose, though not throughout his career the most consistent, was one of the bravest and stanchest champions of the Royal cause; and, when condemned to an ignominious death, after being taken prisoner in battle, he still exulted in the part he had taken, and seemed to look with pride upon the fate to which it had conducted him:—

Montrose (writes Lord Mahon, in his "Political Essays"), "as proud of the cause in which he was to suffer, had clad him- if in rich attire—" more becoming a bridegroom," said his enemies, "than a criminal going to the gallows!" At the foot of the scaffold a further and parting insult was reserved for him: the executioner brought Dr. Wishart's narrative of his exploits, and his own confession, to hang around his neck; but Montrose himself assisted in binding them, and, smiling at this new token of his enemies' malice, merely said, "I did not feel more honoured when his Majesty sent me the Garter."

The artist has treated the subject in a grand, large style, throwing abundance of action and a great variety of expression into his figures. The features generally are of that strongly-marked order in which Mr. Ward is apt to indulge, and which in this historical picture will be found to be of good effect. He has introduced in the foreground a very touching incident, that of an old man, a Royalist by his garb, who, in spite of the threatening attitude of a pikeman, lifts his bonnet, and utters a parting blessing upon the gallant defender of his King

NATIONAL SPORTS.

The near approach of the racing season has administered a fillip to the steeplechase promoters, and their meetings now stand very thick on paper. Winter has, however, laid his grasp on fixture-cards, and many a good programme runs the risk of a damaging postponement, or of not being run off at all. First and foremost, the Carmarthenshire Hunt have a day on Monday, and Esmeralda heads the list both for the Open Handicap and the Hunters' Stake. Wolverhampton is also re-fixed for the same day. Bandle, which still retains that love of the sport which flourished in Northamptonshire so gaily in the days of "The Marquis" and Yellow Dwarf, holds its gain on Tuesday and Wednesday; and British Yeoman (9 st. 12 lb.) and Harum Day (9 st. 7 lb.) have both accepted in the principal race. Bourton (12 st. 8 lb.) heads the Liverpool weights. This hamper is 10 lb. in advance of that with which he won last year, and he has to give Needwood, the champion of the present season, no less than 20 lb. Miss Mowbray and Peter Simple have each 11 st. 6 lb., and Lord Exeter 10 st. 5 lb., but none of the remainder are likely to repeat their Aintree victories. The acceptances for the great spring handicaps will enliven the dulness of Tattersall's next week, and the law courts will probably furnish some amusing revelations about Monte Moses in the case of Hitchens v. Daly. Mr. Charles Haines, Q.C., is of course retained.

Coursing meetings have fallen so deeply into arrears, and there will be such a sad clashing of fixtures before they make up their frozen leeway, that it is very difficult to give "a true and correct list" for next week. As far as we know, Ammonite (Hampton) stands for Monday; Workington for Monday and Tuesday. Shelthorne for Wednesday, Thursday, and Friday; Baron Hill for Wednesday and Thursday; and Oswestry (Porkington), for Friday.

John Scott has scratched his horses very briskly in the Chester Cup, and published some pungent strictures on the handicap. The acceptances for it number 120, which is rather fewer than last year, while each of the Epsom Handicaps have 46. Mr. Topham resigns Newton to Mr. Bake; Mr. Merry will probably put up Chelsea'en; and the match and the Stockton meeting is to be revived. Mr. Padwick has lost his clever but light-timbered filly Gretna by Surplice, and thus the very good-looking Nettle bids more fair than ever to add a second Oaks triumph to the executchoon of Sweetmeat.

The North Riding has just lost one of its oldest and keenest sportsmen in Mr. Richard Hill. His life had been devoted to horse and hound, and his house at Thornton, which was embedded among grouse-moors and trout-streams, was in the heart of the wolf-haunt. His chronicler in the *Life* dwells with tasteful rapture on "the fox chained at the entrance gate; the eagle on his solitary perch casting a longing eye on the gold and silver pheasants through the lattice which bars approach; the large game piles, the monarch of the fish pond, whose predecessor, stuffed and hung up after being for many years called to his feed by the sound of bell or whistle, now bears company with many a grass-eaten fox, grouse, or ptarmigan, that year of sporting have supplied." Mr. Hill was in his seventieth year, and his memory will long be green among his brother Yorkshiremen, who have seen their ranks of old sporting worthies sadly thinned of late

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The defeat and resignation of the Ministry have had very little influence upon the value of National Securities. The amount of business doing in them, however, is the Money and Time, has been small; nevertheless, the actual decline in the quotations has not been more than one quarter per cent. It is somewhat satisfactory to know that the supply of Stock in the hands of the leading jobbers is comparatively small; that the purchases on account of the public continue to absorb all surplus supplies.

As the foreign exchanges have been more favourable to this country, scarcely any shipments of bullion have been made to the Continent, and a large portion of the gold received last week has found its way into the Bank of England. This week we have had an arrival of £460,000 from Australia, and £1,000 from New York. There has been a plentiful supply on money of offer, and the rates of discount have been unaltered.

On the whole the Consol Market was tolerably firm on Monday, but the business done for Money was small. The Three per Cents Reduced left off at the Three per Cent Consols, 91⅞ to 91½; the New Three per Cents, 91⅝ ⅞, and Consols for Account, 91⅞ ⅝; Long Annuities, 4⅛; India Stock, 226; Exchequer-bills, 4s. to 7s. prem.; Exchequer-bonds, 99¼. On Tuesday considerable flatness prevailed. Bank Stock was 210½ to 212; the Three per Cents Reduced marked 91⅜ ⅝; the Three per Cent Consols, 91⅝ ⅞; the New Three per Cents, 91⅝ ⅞; Consols for Account, 91⅝ ⅞; Long Annuities, 4⅛ 7-16; India-bonds, 1s. to 14s.; Exchequer-bills, 4s. to 7s. prem.; Exchequer Bonds, 99¼. The market on Wednesday was very flat. Bank Stock, 210 to 212; Reduced, 91⅜ ½; New Three per Cent Consols, 91½; New Three per Cents, 91⅝ ⅞; Consols for Account, 91⅝ ⅝; Long Annuities, 4⅛; Exchequer Bills, 4s. to 7s. prem. Quotations on Thursday were heavy, with a dull market. Consols were 91⅜ for Tuesday and Time: the Three per Cents Reduced were 91⅜ ⅝; and the New Three per Cents, 91⅝ ⅞; Exchequer Bills, 4s. to 7s. prem.; Bank Stock, 210½ to 212.

Notwithstanding that the foreign house has been dull, very little change worthy of notice has taken place in the quotations. Chilian Six per Cents have been 102½; Russian Four-and-a-Half per Cents, 89½; Sardinian Five per Cents, 86; Spanish Three per Cents, 36½; Ditto, New Deferred, 17¾; Three Cent Bonds, 76¾; Dutch Two-and-a-Half per Cents, 63¾; Brazilian Five per Cents, 100; Cuba Seven per Cents, 93; Ecuador, 4; and Mexican Three per Cents, 21.

The following statement shows the note circulation of the United Kingdom during the four weeks ending on the 23rd of December:—

Bank of England	..	£19,980,720
Private Banks	..	1,441,052
Joint-Stock Banks	..	1,372,798
Scotland	..	3,136,869
Ireland	..	7,752,459
Total	..	— 37,767,799

Compared with December, 1853, the above return shows a decrease of £1,586,231 in the circulation of notes in England, and a decrease of £1,091,951 in the circulation of the United Kingdom

Joint-Stock Bank Shares have been very firm as to price; but the transactions in these securities have been trifling:—Australasia have marked 81; Commercial of London, 31¼; English, Scottish, and Australian Chartered, 2¾ ⅞; London Chartered of Australia, 21¾; Oriental, 37½; Union of Australia, 89; Ditto, New, 2 shares have met at 51; Asiatic Agricultural, 1¾; Crystal Palace, 3½; Canada Six per Cent Bonds, 108; Crystal Palace of France, 6; Electric Telegraph, 17; Peel River Land and Mineral, 2¾; Royal Mail Steam, 61; South Australian Land, 35; Van Diemen's Land, 25; Palmer's Patent Candle Company, 28; East and West India Docks, 119, ex. div.; Victoria, 1¾ ex div.. Canal Shares have sold heavily:- Ashton and Oldham, 161; Coventry, 209; Derby, 84; Grand Junction, 55; Leicester, 69; Loughboro-gh, 575; Neath, 150; Oxford, 110; Peak Forest, 96; Regent's, 15½; Rochdale, 60; Stafford and Worcester, 425; Stourbridge, 235; Warwick and Birmingham, 20. Water-works shares have been:—Berlin, 2¾; Grand Junction, 79; Kent, 79; Southwark and Vauxhall, 89½; New River Company, 55; West Middlesex, 96 ex div. Gas-light and Coke Companies' Shares have been tolerably firm to-day:—Equitable, 20; Great Central, 11½; Phœnix, 2¾; Imperial, 95 ex div.; Ditto New, 10¾ ex div.; Surrey Consumers', 11; Westminster Chartered, 39¾ ex div. Insurance Companies' Shares have realised the following quotations:—City of Glasgow, 58; Globe, 193½ ex div.; Imperial Fire, 327 ex div.; Law Life, 56; London, 29; Pelican, 46; Provident Life, 39; Sun Life, 57¾; Victoria, 5¾. Bridge Shares have been dull:—Hungerford, 12; Vauxhall, 23; Waterloo, 41. Ditto, Old Annuities of £3, 31; Ditto, New, of £7, 2½.

All Railway Shares have been dull, and prices have shown a tendency to give way. The traffic returns for the present month include £1,762,855 against £1,934,746 in the corresponding month last year. The following are the official closing prices on Thursday:—

ORDINARY SHARES and STOCKS—Caledonian, 65⅞ ex new; Eastern Counties, 8½; South-Western, 70; Great Northern, 89¾; Ditto, A. Stock, 73½; Great South-ern and Western (Ireland), 91¾; Great Western, 68; Lancashire and Yorkshire, 74½; London and Blackwall, 3½ ex div.; London and North-Western, 100½; London and South-Western, 83, Midland, 69½; North-Eastern—Berwick, 76; Ditto, Extension, 14; Ditto, G.N.E. Purchase, 8½; Ditto, York, 63¾; Oxford, Worcester, and Wolverhampton, 31½; South-Eastern, 59½; Stockport and Darlington, 8.

PREFERENCE SHARES—Caledonian, 96¾ ex new; Great Northern Five per Cent, 116; ditto, Seven, 129; Great Western Four-and-a-Half per Cent, 103; ditto, Birmingham Stock, 71; Manchester, Sheffield, and Lincolnshire, 19⅜; North-Eastern—Berwick Four per Cent, 91; South-Eastern (Reading), 24½.

FOREIGN AND COLONIAL RAILWAYS—Buenos Ayres and Ensenada, 4; Canada, Assist., 4¼; Great Central of France, 12¾; Great Luxembourg, 2¾; Rouen and Havre, 29¾; Scinde, 8 prem.

In Mining Shares no new transactions have taken place that the quotations have been almost nominal.

Friday Evening

The market for Consols has been steady to-day, and prices have had an upward tendency. The Three per Cents have marked 91½ ⅜ to ⅝; the Three per Cents Reduced, 91½ ⅜; and the New Three per Cents, 91 ⅞ 92. Exchequer Bills, 4s. to 7s premium. Foreign Bonds and Railway Shares have been tolerably firm

THE MARKETS.

CORN EXCHANGE (Friday).—Very moderate supplies of English wheat have been received into our market this week, and fine and prime samples, as there were a second of Monday's sound samples on offer to-day. Very few buyers were in attendance, and the demand for all kinds of wheat of home produce ruled very inactive, at Monday's currency. The week's imports of foreign wheat have exceeded 22,000 quarters. That grain met a very dull sale, at almost nominal currencies. The barley trade was heavy, and the quotations were barely supported. Malt met a dull, inactive inquiry, at rather decline took place in prices. We have barely supplied with both Irish and foreign oats, which ruled very dull at late rates. Beans, peas, and flour were unaltered

ARRIVALS.—English: wheat, 1870 quarters; barley, 2300; malt, 3210; oats, 980; flour, 1156 barrels. Irish: 10,630 Foreign: wheat, 22,750; barley, 1100; malt, 10,270; flour, 4300 barrels

English.—Wheat, Essex and Kent red, 68s to 70s; ditto, white, 72s to 80s; Norfolk and Suffolk red, 66s to 70s; ditto white, 70s to 74s; rye, 46s to 48s; barley, 34s to 36s; malting 35s to 36s; Lincoln and Norfolk malt, 66s to 70s; brown ditto 60s to 62s; Kingston and Ware, 72s to 75s; ruddies, 70s to 72s. Peas, maples and grey, 38s to 40s; white 38s to 42s; potato ditto 38s to 40s. Youghal and Cork, black 36s to 37s; white ditto, 38s to 40s; fine beans 42s to 44s; small ditto, 38s to 40s; tick beans 36s to 38s; grinding ditto, 34s to 36s; Egyptian mealing, 36s to 38s; per quarter. Town-made flour, 68s to 72s; Essex, 66s to 68s; per 280 lbs.

Irish.—The business doing in our market is very moderate at the annexed quotations:—

Wheat, English, white, 74s to 78s; ditto, red, 72s to 76s; ditto, grinding, 68s to 69s; Mediterranean and Odessa, 66s to 68s; Egyptian, 64s to 66s; per quarter. Barley, 36s to 38s; malting, 38s to 40s; brown mustard seed, 12s to 14s; white, 8s to 10s; tares, 9s to 12s; per bushel. English: flaxseed, 42s to 45s; coarse ditto, 40s to 42s; per last. English, 45 to 47; ditto foreign, 41 to 43; rape cake, 46 to 48; linseed, 46 to 48; per ton; canary, 58s to 56s; per quarter

Bread.—The prices of wheaten bread in the metropolis are from 10d. to 11d. of household ditto, 9d. to 9½d. per 4 lbs. loaf.

Imperial Weekly Average.—Wheat, 68s. 9d.; barley, 32s. 9d.; oats, 26s. 6d.; rye, 45s. 1d.; beans, 40s. 5d.; peas, 41s. 8d.

The Six Weeks' Averages.—Wheat, 72s 8d.; barley, 33s. 8d.; oats, 27s. 3d.; rye, 45s. 1d.; beans, 40s. 5d.; peas, 41s. 8d.

Aggregate Average of the Entire Kingdom for the Week ending December 23.—Wheat, 61s 6d.; barley, 33s 8d.; oats, 27s. 3d.; rye, 45s. 1d.; beans, 40s. 5d.; peas, 41s. 8d.

Tea.—Several public sales have been held this week. They have gone off slowly, with very little change in the prices. The business done is limited.

Sugar.—The demand for most kinds of raw sugar has ruled steady at the quotations. Barbadoes has changed hands from 28s. to 28s., refining, to 28s 6d. Mauritius, 28s. 6d. to 29s.; and Madras, 26s. 6d. to 27s 6d. per cwt. Refined goods have been in good request, at 42s. 6d. to 43s. 6d. per cwt. Up to Saturday last, duty was paid on 66,500 cwts. against 158,404 ditto in 1854.

Coffee.—The transactions are very moderate, yet prices are supported. Good ordinary has realised 48s to 49s 6d. per cwt.

Rice.—Our trade is heavy, and the quotations have a downward tendency.

Provisions.—There is a good demand for Irish butter, the prices of which have advanced fully 1s. per cwt. In the value of English and foreign very little change has taken place. In other kinds of provisions only a limited business is doing.

Oils.—The imports into Hull, for market is heavy, at drooping prices. P.V.C. on the spot 35s 6d. to 36s 6d.; February to March, 36s. 9d.; March and April, 37s. 3d.; per cwt. Rough fat, 3s. 4d. per 8 lbs.

Hay and Straw.—Meadow hay, £2 15s to £4 12s.; clover ditto, 4s to £5 5s.; and straw £1 4s to £1 15s per load.

Wool.—The next public sales, at which about 30,000 bales will be offered, are appointed to commence on the 15th inst. The private market is very dull, and prices are barely supported.

Potatoes.—The supplies are moderate, yet the demand is limited. Yorks have realised from 70s. to 130s. per ton.

Coals (Friday).—This week's imports of foreign hops amount to 1020 bales from New York and 11 from Ostend. The business doing is but moderate, yet we have no change to notice. Kent and Sussex Pockets, £4 £4 15s per cwt.; Weald of Kent, £4 to £5. Yearlings, £4 £5 15s per cwt.

Coals (Friday).—South Yards, 21s 6d.; Hetton, 21s 3d.; Hilda, 21s.; Eden Main, 23s 6d.; Braddyll, 20s.; Hetton, 21s 3d.; Stewart's, 21s 6d.; Caradon, 20s.; Hough Ha..., 22s. 3d. per ton.

Smithfield (Friday).—Although the supply of beasts on offer to-day was not moderate, all breeds moved off heavily, at barely stationary prices. We were generally told that with what which met a dull inquiry, at barely stationary prices. The highest figure was 5s. per 8lbs. The sheep in the market realised full quotations. Poor pigs the sale was slow, on former rates. Milk-cows were in fair request, at late quotations. Calves moved off slowly, at 4s. per 8 lbs. to sale the offals.—Coarse and inferior beasts, 3s. 4d to 3s. 6d.; second ditto, 3s. 8d to 3s. 10d.; Prime large oxen, 4s. 0d to 4s. 2d.; prime Scots, 4s. 4d.; coarse and inferior sheep, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 2d.; prime coarse-woolled ditto, 4s. 4d. to 4s. 6d.; prime southdown ditto, 4s. 10d. to 5s.; large calves, 4s. 8d. to 5s. 4d.; prime small ditto, 5s. 6d to 6s. 0d.; large pigs, 3s. 4d to 3s. 6d.; neat small porkers, 4s. 2d to 4s. 4d.; sucking calves, 21s to 28s.; and quarter-old store pigs, 21s. to 27s. each. Total supply: beasts 960; cows, 150; sheep, 3300; calves, 60; pigs, 280. Foreign: beasts, 100; sheep, 600; calves, 30.

Newgate and Leadenhall (Friday).—The supplies were seasonably good, and the trade was fair from active as follows:

Per 8 lbs. by the carcase:—Inferior beef, 3s. 2d. to 3s. 4d.; middling ditto, 3s. 6d. to 3s. 8d.; prime large ditto, 3s. 10d. to 4s. 0d.; prime small ditto, 4s. 2d. to 4s. 4d.; large pork, 3s. 4d. to 3s. 8d.; inferior mutton, 3s. 2d. to 3s. 6d.; middling ditto, 3s. 8d. to 4s. 0d.; prime ditto, 4s. 2d. to 4s. 4d.; veal, 4s. 4d. to 5s. 4d.; small pork, 4s. 0d. to 4s. 6d.

THE LONDON GAZETTE.

TUESDAY, JANUARY 30

ADMIRALTY, JANUARY 29.

In consideration of the services performed by the officers of the Navy, in co-operation with the Army, on the trenches before Sebastopol, the following promotions have taken place, dated November 13, 1854:—Commanders W. H. Barnett and H. S. Pullen to be Captains. Lieuts. H. Burke, J. J. Cooper, J. D. Wilson, J. Bythesea, and T. Pullen to be Commanders. A. Wilmshurst, E. G. Hicks, G. A. Hamilton, W. M. Dowding, ... Holder, W. G. Caulfield, and W. D. Sadler to be Lieutenants. Mr. J. Ward (2d), Dr. J. Cotton, and J. W. Elliott, to be Surgeons; J. R. G. Browne to be Paymaster. The Board have also directed that the undermentioned officers, mentioned in their despatches, dated ... be promoted to the rank of Captain:—Commander A. C. Mitchell and Lieutenant W. Peel to be Lieutenants. The latter provision he shall pass the necessary examination, and not before he shall have attained the age of twenty years.

BANKRUPTCY ANNULLED.

C. BRADLEY, late of Gornal, near Dudley, now of Tipton and Great Barr, Stafford, iron master and coal-master and dealer.

BANKRUPTS.

R. H. SULIVAN, late of Woodford and Royston, Essex, now of Great Yarmouth, Norfolk, ship-wright.—G. BOYS, Bedford-place, Russell-square, Middlesex, wine merchant.

DANIEL Bagbrook, Northampton, coal merchant and licensed victualler.—W. H. H. SIMMONDS, Union-court, Old Broad-street, City, stockbroker.—W. HUGHES, Selborne, Stafford, builder.—J. LATIMER, Sowerwood-grove, Stafford, draper and tea dealer.—G. BAILEY, Walsall, Stafford, innkeeper.—W. GRAINGER, Dudley, Worcester, builder and licensed victualler.—E. L. OWEN, Albert-house, Tettenhall-road, near Wolverhampton, mineral merchant.—J. Phillips, Brompton Parva, Salop, innkeeper.—J. HARRIS, Lower Union-street, Torquay, Devon, grocer.—T. RANSDEN and W. R. BAXTER, Bailiff-bridge, York, worsted spinners and manufacturers.—T. H. HODSON, Victoria-road, Preston, Chester, cattle and sheep dealer and cow keeper.—W. HENRY JOHNSON and W. RANKIN, Liverpool, shipwrights.—J. SHEDDEVILLA, Manchester, grocer.—J. and J. H. HARRISON, Green street, Manchester, umbrella manufacturers

SCOTCH SEQUESTRATIONS.

J. M'DASHAN, Union-street, Glasgow, merchant and ... [illegible] M'KAY, Lanark, Oban baker.—W. and J. H. LOW, Arbroath, drapers

FRIDAY, FEBRUARY 2

WAR OFFICE, FEB 2

4th Dragoon Guards: H. T. Rowlandson, to be Cornet

7th Fusiliers: Lieut. and Major G. Gillam to be Quartermaster

9th Regiment: Ensign C. D. North to be Lieutenant

11th Regiment: Cornet P. C. G. Webster to be Cornet

11th Hussars: Lieut. and Adjutant W. Lamb to be Captain and Adjutant

12th Regiment: Major D. O'Hara to be Quartermaster, W. Gavin to be Veterinary Surgeon

13th Regiment: Lieut. J. Morgan, M.D., A. Rock, and J. Gibbons, to be Assistant-Surgeons

71st Regiment: Ensign H. King to be Lieutenant, Ensign G. Colt to be Ensign.

73rd: Lieut. W. H. Jones to be Captain; Ensign H. L. Fitzgerald to be Lieutenant. A. Sadler to be Ensign.

79th: Brevet Major J. A. Cole to be Major, Lieut. A. J. Cowper to be Captain; Ensign R. H. Fry to be Lieutenant.

88th: Lieut. A. Carlisle to be Lieutenant

89th: Capt. G. Hilliard to be Captain, Ensign W. H. Peyton to be Ensign.

97th: Lieut. J. Sparkes to be Lieutenant.

2nd Royal Major S. R. Redmore to be Major; Lieut. W. H. M'Neil to be Captain; Lieut. Lutyens to be Lieutenant; Ensign W. Lieut. Lockhart Ensign W. Wyndham to be Lieutenant.

2nd Lieut. L. Appleman to be Captain; Lieut. J. Wilson to be Captain.

7th: Ensign J. R. Frideaux to be Lieutenant

At Cheltenham, Colonel S. Coppage unattached, late of H.M. 39th Regiment, aged 62.

On the 26th ult., at Padworth Rectory, near Reading, Caroline Georgina, the wife of the Rev. G. W. Curtis, aged 40

ACCIDENT TO THE "PERSEVERANCE" TROOP-SHIP.

On the afternoon of Saturday, the 20th ult., a scene occurred in Woolwich Dockyard which will not soon be forgotten by those by whom it was witnessed. The *Perseverance*, iron-screw troop-ship, Commander W. J. S Pullen, had just completed her rigging and a great part of her fittings. The vessel was built by Messrs. C. J. Mare and Co., it was said on similar lines to the *Prince*, lost off Balaclava, and purchased by Government for the purpose of conveying her to Sheerness, to be shortened and rigged at that port. A subsequent order was issued that she should be masted and rigged at Woolwich: the masts were, consequently, sent from Sheerness to Woolwich, and, on their being put in under the shears, she was taken into the east dock to be completely fitted for sea. The carrying out was proposed, it was noticed that the masts and rigging were more suitable for a frigate than a long, narrow iron screw-steamer, and it was remarked that she would, probably, prove so topheavy as to upset on her entering the water. Unfortunately the surmise proved too true. On letting water into the dock, as the tide rose on Saturday afternoon, for the purpose of taking her out to be placed alongside the coal dépôt-ship, she was scarcely floated, and the shores taken away, when she gave three or four sways from side to side, and turned completely over in the dock: the beam ends in the dock, the foremast resting on the roof of the chapel over the saw-mills, knocking down between twenty and thirty feet of the parapet, which, however, assisted to break her fall. The foremast falling on the roof of the chapel broke it in: and the mainyard and fore-yard were both broken. It was a fortunate circumstance that she turned over in the dock, as there were about 150 persons on board at the time, several of them at work in the cabin: some were thrown into the water, and three injured. The *Perseverance* has had her rigging all stripped, and her fore, main, and mizen mizenmasts taken down—a number of relays of workmen, and of the crews of the *Fingard* and of the steam-vessels at Woolwich, being at work all next day (Sunday) upon her. She had her engines of 300-horse power on board; and some idea of her position may be formed when it is stated that the funnel is within four or five degrees of being in a horizontal line. The engines have sustained no injury

We regret that one of the blocks upon which the vessel rested has penetrated her side, and the ship is at every tide half full of water. She now lies with her lower mast nearly horizontal: and a spectator standing upon the edge of the dock can see almost down the funnel. During the past week workmen have been engaged night and day, without intermission, constructing a dam across the entrance to the dock. This work will be completed to-day (Saturday), when, from the water being kept out of the dock, the vessel may be repaired so as to float temporarily, prior to her thorough repair upon the injured side

AMUSEMENTS, &c.

THEATRE ROYAL HAYMARKET.—On Monday, Wednesday and Friday, ROMEO and JULIET. Romeo, Miss Cushman. Juliet, Miss Swanborough. Tuesday, Paul Pry. Thursday, postlit is the Last Juvenile Night. Saturday, the Measuring, Mrs. Merrifies, Miss Cushman. The Pantomime every Evening

UNIVERSAL LIFE ASSURANCE SOCIETY, 1, King William-street, City London, Established 1834. Empowered by Special Act of Parliament 6 William IV. cap. 54. Sir HENRY WILLOCK, K.L.S., Chairman; JOHN STEWART, Esq., Deputy Chairman. The annual operations of the Society have enabled the Directors for the last twelve years to reduce the premiums on policies entitled to participate in profits on an average more than Twenty-four per cent, and during the last four years a reduction of forty-five per cent has been declared. Weekly Boards, Thursday, one o'clock. RICHARD ELLIOTT, Secretary.

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL, CHARING-CROSS.

The Governors of this Institution are most anxious to appeal to the benevolent, which is open to all indigent persons suffering from Diseases of the Eye, the funds of which are wholly inadequate to meet the increasing demands upon them. Six Thousand poor persons are annually admitted on their own recommendations; there are thirty beds for in-patients, the wards are large and airy, and it is deeply to be regretted that the pressing means for their support precludes the admission of only half that number.

Contributions will be thankfully received by Messrs. Coutts and Co., Bankers, Strand, by Messrs. Drummond, Bankers, Charing-cross, by the Secretary, Mr. G. C. Farmer, or the Housekeeper, Mrs. Silvers, at the Hospital.

MILLINERS' and DRESSMAKERS' PROVIDENT and BENEVOLENT INSTITUTION, 32, Sackville-street

The Directors have great satisfaction in announcing that their FIFTH ANNUAL EXPERIMENT in the Month of February will commence at Eight o'clock precisely on which occasion the following distinguished Ladies have kindly promised to appear:—Madame Anna Thalberg, Miss Birch, Madame Weiss, Miss Messent, and Miss Lascelles. Mr. Aguilar, Mr. Weiss, and Mr. Frank Forgeot Mr. Distin, Instrumental Performers.—Pianoforte, Mdlle Coulon; Harp, Mr. T. H. Wright. Conductor, Mr. George Case; Bass, Messrs. the Messrs. Telephiam Conductor, Mr. Lindsay Sloper

Reserved seats, [illegible] each, to be obtained on and after Monday, at the Institution, 32, Sackville-street; Mr. Mitchell, 33, Old Bond-street; Mr. William Smith, 2, Sackville-street; Hunt's

PROVIDENT CLERKS' ASSOCIATION.

TRUSTEES.

Thomas Barlow, Esq., M.P. | W. G. Prescott, Esq.
Thomson Hankey, Jun., Esq., M.P. | Baron de Rothschild, M.P.

MUTUAL ASSURANCE DEPARTMENT.

Particular attention is directed to the very favourable Report and Balance-sheet for the past year, which for every class of assurance may be had at the Office of the Association, or of any of their Agents. The Compensation and Bonuses issued during the last Five years shows the progress made by the Association

Policies Issued	Sum Assured	£77 150
1851	200	72 87
1852	478	170 00
1853	491	96 25
1854	512	98 00
The total amount	Compensated in the past five years is	£2,000

BENEVOLENT DEPARTMENT.

An Anniversary of Assistance will be elected in May next, to all persons becoming Members, either as Assurers or Subscribers, Five in the Year, and will be entitled to vote

By order of the Board, WILLIAM THOMAS LINFORD, Secretary.

15, Moorgate-street, 29, 1855

Established 1841

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 23, Pall-mall

At the THIRTEENTH ANNUAL MEETING, held on the 30th November 1854, it was shown that there had been issued no less than 2150 Policies, covering Assurances to the amount of £1 027,500, and yielding an annual Premium amounting to £30,146

By the Annual Report for 1853 it appeared that the number of Policies then in force was 6,189, assuring £1,357,566, and yielding an income of £35,207

The Number of Policies now in force is ... 5245
The Amount Insured is ... £1,296,027 3s. 2d
The Income from Premiums is ... £100,000 0s. 0d

Two Bonuses have been declared in 1848 and 1853, adding nearly two per cent per annum on the average to sums assured, and by which a Policy of £1000 issued in 1842 on a healthy life is now advanced to £1200

Profits divided every five years.

Assurances are effected at home or abroad on either healthy or diseased lives, at rates moderate as the most recent data will allow.

Policies issued free of stamp duty, and every charge but the premium.

Agents wanted for vacant places

Prospectuses, Forms of Proposal, and every other Information, may be obtained at the Society at the Chief Office, or on application to any of the Society's Agents in the country

J. D. P. NIXON, Actuary
CHARLES SPARKS, Secretary

NEWFOUNDLAND COD-LIVER OIL.—Messrs. CHARLES FOX and COMPANY personally prepare annually this valuable medicine with great care. Its use in the medical profession will find to be the very best. It is perfectly sweet, creates an heat in the throat or sicken—and is therefore preferable to other livers for making it but those of the true cod. In six years C. F. and Co. have made and sold upwards of 135,000 gallons. It may be procured from every respectable chemist.—Cliff House, Scarborough

DR. DE JONGH'S LIGHT BROWN COD-LIVER OIL, PREPARED FOR MEDICINAL USE IN THE [illegible] PARIS, NORWAY, AND PUT TO THE TEST OF CHEMICAL ANALYSIS.

Is pale and nearly tasteless, transparent. Light Brown Cod Liver Oil, long known and highly appreciated on the Continent, has now acquired the general confidence of the Medical Profession in this country, by whom it has been extensively and successfully prescribed and with almost immediate and remarkably beneficial results—in many instances where Pale Cod-Liver Oil had been employed without benefit.

It is to be supported not only to its method of preparation, but is clearly established by chemical analysis and therapeutic experimentation that the active principles of Cod Fish from which it is exclusively procured naturally contains a larger quantity of Iodine the elements of the Bile, and other essential remedial properties, than is found in the pale oil. Dose, a tea-spoonful to a dessert-spoonful, free from any admixture, or the usually repulsive, sickly, and nauseous flavour of other kinds of Cod Fish Oil, or of the coarse Brown Oil, commonly sold, though totally unfit for medicinal purposes

Being quite tasteless, it is as low as price per ounce as any other genuine Cod-Liver Oil, whilst its regular and speedy effects render it decidedly cheaper. Sold only in Imperial Measures of the highest character delivered or forwarded, Carafs, on application to Dr. De Jongh's Agents and Consignees, ANSAR, HARFORD, and CO., 77, STRAND, London; by whom the Oil is sold wholesale and retail, in bottles, Capsuled and Labelled with Dr. De Jongh's Stamp and Signature, in the Country by respectable Chemists and Venders of Medicine. Where difficulty occurs in procuring the Oil, Four Half-pint Bottles forwarded to any part of England, Carriage Paid, on receipt of a remittance of Ten Shillings

Half-Pints (10 ounces), 2s. 6d. Pints (20 ounces), 4s. 9d.; Quarts (40 ounces), 9s

DEAFNESS.—New Discovery.—THE ORANIC VIBRATOR, an extraordinary powerful, small, newly-invented Instrument for Deafness, entirely different from all others, it surpasses anything as yet known, and is now, or probably ever can be, used. Being of the same colour as the skin, it is not perceptible. It enables deaf persons to hear distinctly at church and at public meetings. The unpleasant sensation of singing noises in the head is entirely removed. Any child can use it. The assurance that possibly could be desired.—35, Albemarle-street Piccadilly.

BY HER MAJESTY'S ROYAL LETTERS PATENT for a valuable and extraordinary improvement in the most powerful and brilliant TELESCOPES, Comp. Sea-glasses, Opera, and Perspective Glasses, to know the distances, at Messrs. S. and H. SOLOMONS' Establishment, 23, Albemarle-street, Piccadilly, opposite the York Hotel. They possess such extraordinary power that some, from 3½ to 6 inches, will bear to open with any Achromatic Glass in the hemisphere with his six satellites, Jupiter's moon's, Saturn's ring, and the Nebulæ in Orion. At same Telescopes can be seen a person's countenance from three and a half to six miles distant, and an object from sixteen to twenty-five miles. The Royal Exhibition Field-Glass, valuable newly invented very small powerful waistcoat-pocket glass, the size of a walnut, by which a person can be seen and known one mile and a half distant, country scenery and ships are clearly seen at twelve to fourteen miles. They are invaluable for shooting, deerstalking, yachting, to sportsmen, gentlemen, gamekeepers, and tourists. Only a limited number leases of the greatest transparent power. The valuable advantage derived from this invention is, that vision becoming impaired is preserved and strengthened, and very aged persons are enabled to employ their sight at the most minute of occupation—can see with these lenses of a much less magnifying power—and they do not require the frequent changes to the dangerous effects of further powerful assistance

NEW BOOKS, &c.

The Glass Department is replete with every article of elegance that Europe can produce together with a large assortment of the more useful and stronger Goods required for the table or for ornament.—49 and 50, Oxford-street; and Portland Basket, Langham-place.

BURNING OF THE THEATRE OF LA MONNAIE, AT BRUSSELS.

BURNING OF THE BRUSSELS THEATRE.

On Sunday week the splendid theatre of La Monnaie—one of the great attractions of the city of Brussels—in less than two hours was reduced to ashes. The fire is said to have been caused by an escape of gas which took place near a stove. The flames broke out with great intensity; and some men who were employed over the stage among the scenery, preparing for the representation of the "Prophète," which was to take place the same evening (Sunday), had barely time to descend from their perilous position, and make their escape. It is supposed from the statement of these men that the flames burst out in the room appropriated to the *figurantes*, and in which a stove was lighted. The alarm being given, the firemen hastened to the theatre from the Hôtel de Ville and other parts of the city. It was then about nine in the morning; and, although the flames had not been perceived more than half an hour before, it was at once seen that all efforts to extinguish the fire would be fruitless. Just as the engines arrived, an immense mass of red, green, and yellow flames burst from several parts of the roof, and rose in the air to a height of upwards of a hundred feet. The fire soon after found its way through the principal entrance, and the spectacle then was a terribly grand one. In a few minutes the flames rushed out from all the windows above, and the roof seemed on the point of falling in. The firemen meanwhile had penetrated inside, and by great exertions had contrived to save some articles of furniture and some dresses from the performers' rooms. The money-box and the books of the establishment were also saved: but the scenery, costumes, and all the properties of the theatre were completely destroyed. At one moment it was feared that the fire would spread to the surrounding houses, to prevent which the fire-engines were kept constantly at play. So imminent, indeed, was the danger considered, that the principal articles of furniture in these houses were removed to a place of safety. An immense crowd was collected in the front of the theatre, but the best order prevailed, the ground being occupied by detachments of carbineers and grenadiers. The civil and military authorities were also on the spot, but without being able to afford the slightest assistance. The fire continued burning most fiercely until nearly eleven o'clock, when it began to subside. The grand entrance, owing to a strong arch built over it, will be preserved. Of the rest of the building the walls alone remained standing. The main part of the building was erected in 1819; but the handsome front was only finished last year, on the plans of Mr. Simonis, so that this noble edifice, which was worthy of being an ornament to any city, has been destroyed just at the moment when it had been entirely completed.

The accompanying Engraving of the catastrophe is from a sketch by an artist of Brussels

ACCIDENT TO H.M.S. "PERSEVERANCE," IN WOOLWICH DOCKYARD.—(SEE PAGE 110.)

A KHAN OR INN IN SMYRNA, FROM A DRAWING BY JAMES ROBERTSON (SEE NEXT PAGE)

KHANS IN SMYRNA.

The picturesque scene which is depicted upon the preceding page was sketched by one of our Artists [illegible]. It portrays the usual life of a Khan, or Caravanserai: the camels at rest, the Turks at their pipes, and the east[illegible] still life of [illegible] of the khan of [illegible] ing buildings, have a certain [illegible] fine old trees, makes a really [illegible].

The Khans of Smyrna are altogether superior to those of Turkey in Europe: In the former good accommodation may be found for a night or two.

The inns of all countries present [illegible] variations of the manners and customs of the people [illegible] of Turkey were erected by the [illegible] of former Sultans, by the [illegible] ence of private persons, or from motives [illegible] guests of devotees, for the accommodation of travellers. They [illegible] buildings surrounding a court, in the centre of which is usually [illegible] or fountain. The rooms are small, generally opening upon a gallery above, or sometimes into an arcade or colonnade. Though these Khans are chiefly occupied by travelling merchants, and the rooms are used by them as a dépôt for their merchandise, still strangers from all parts of the world, of every religion, profession, rank, and quality, may lodge in these [illegible]ories, and nothing is expected on their departure but a small present to the Khanji, or innkeeper. On the traveller's arrival a key of the bare and unfurnished apartment allotted to his use is delivered to him. The gate of these Khans closes soon after sunset; a traveller, therefore, who intends to pass the night in one of them endeavours to arrive before that hour; and it is not always easy to procure admittance when once the gate is shut. Several Khans include stalls for horses, camels, and animals of all descriptions.

THE LOSS OF THE "WILD WAVE."

To the Editor of the ILLUSTRATED LONDON NEWS.

Balaclava, January 7, 1855.

Sir,—As I see by the Sandwich Islands papers that a long account of the wreck of the *Wild Wave* has appeared, and as I have myself been the only survivor of those who left Honolulu, No. 64, I beg to state (as I am unable to write to all my friends) that, if you have any room to spare, I should be much obliged by your inserting the following account of the loss of that vessel, which is correct in every particular.

We were [illegible] there were hundreds of spectators on the heights [illegible] where she struck. Seeing three people on her decks, Captain Prahn, of the *Star of the South*; Mr. Rivers, chief officer of the *Tanning* steamer; a young man whom I did not know (apparently a sailor), and myself, after procuring some ropes, scrambled down the face of the precipitous cliff, and after some difficulty succeeded in getting to a steep ring almost immediately over and within forty feet of the devoted ship. The first that left the ship (a mere youth) was jammed between the wreck and the rocks, and literally cut in two; the next, more fortunate, succeeded in clearing a footing on the rocks, and scrambled up out of the reach of the waves, where he remained until, after several trials, we succeeded in throwing a rope to him, when he made it fast around his middle, and we got him up in safety without his receiving a single scratch. I say after several trials, for the wind was blowing with such violence that repeatedly we threw the rope downwards with our whole strength, but instead of reaching him as where the poor fellow was hanging on to the face of an almost perpendicular cliff, it was blown back on our heads.

After getting the one up, he told us there was another down below, close to the wreck. We again got the rope down as far as possible, and called out as much as we could with our combined voices, but I am sorry to say without avail, for, after staying there for upwards of an hour (after rescuing the first) without seeing or hearing anyone below us, we were reluctantly obliged to retrace our steps and regain the summit of the heights. I may add that the whole of the crew, except the three mentioned, got into one of the ship's boats in the early part of the day to try and get to the harbour, but she had scarcely left the ship's side when a wave upset her and all perished.

In consequence, I will say that I have often heard the Captain of the *Wild Wave*, as well as others who were lost on that voyage, of the insecurity and danger of keeping ships in such an exposed place at that time of the year.

Yours, &c., RALPH R. LIDDLE,
Commander *Bride* transport (No. 27).

WASTE OF FUEL WOOD IN THE CRIMEA. Outside of the harbour still lie the wrecks of the vessels lost in the gale of the 14th of November, and on the beach which fringes the cliffs around is piled a sufficiency of wood to serve the English army with fuel for at least a year, which now is no means taken to get up this blessing to the Camp. The system is a most shameful and wasteful one. No department considers it its duty to assist in this particular. The navy will not lend their boats or men to bring in firewood for the army, and, most strange to say, they will not let the transport service do it. Several ship-masters of transports have applied for permission to bring in some of the wood thus lying useless, the play of the waves, and they have been refused, for fear of their using it themselves. One ship sent its boat out, and, without permission, brought in a small portion of wood, which was immediately seized upon by a certain naval authority, and deposited for safety upon a pier called Vesuvius-pier, belonging to the man-of-war steamer of that name. Down this pier, from above some 200 feet, a poor old man quietly collects half a-dozen sticks, then composedly trots up the hill again, whilst vain calls to come back—which are Greek to him—are hurled after him from the quarter-deck of the *Vesuvius*. In ten minutes a half starved Englishman makes his appearance, and stealthily lays his hand on a piece of wood, when somebody calls from the poop of the said ship, and the poor fellow has to "Go to the devil, and drop that stick of wood." For what purpose, then, is that pile of wood on Vesuvius-pier? It is of no use to the vessel, and it is of no benefit to the army, destitute as it is of such a necessary article. And why, I ask, do the naval authorities of Balaclava act thus? There is, certainly, nothing to be gained by it, save opprobrium and censure. *Letter from Balaclava, Jan. 12.*

THE SAILOR AS THE FRENCH CAMP.—I yesterday paid a visit to our soldiers of the Camp. The joviality and good humour of these gallant fellows are proof against all sorts of misery. Those are the men, who, when wood failed, disinterred the vine stocks, which are very abundant round Sebastopol, but, alas! those vine stocks have been consumed as well as the wood, and in truth I scarcely know where we can get means of warming ourselves if the cold lasts; but what do I say? Is not our splendid fleet our constant inexhaustible resource? It willingly gives us with coal—it has supplied us all with everything else. The army yesterday wanted biscuit, flour, rafia, and firewood. Where did we get all? Why, from the fleet to be sure. What answer did the worthy Admiral Bruat give to our application? Why, by ceding to us instantly the entire cargo of the *Licorne* corvette, and which was principally composed of firewood, rafia, flour, and biscuit. The *Licorne* arrived just at the moment we wanted it. I mention that fact because it is the first that occurs to me; but it is one of a kind that occurs very often. The whole matter is that the Government and the army are like two fingers of the same hand. Speaking of coal, we have been in want of it for some days past. Some deserters told us there were mines near Balaclava, which were worked by the Government when the Russians arrived here; and the consequence is that we are scratching and examining the ground in every part where there appears a chance of a vein. Here at Canrobert is very fond of the sailors: he has a number always attached to him, and they always call him Admiral. The "Admiral" has a high idea of their services, and, as a proof of it, he has just asked from his colleague Bruat a reinforcement of 1,000 men. We are to have, in addition, one captain, one lieutenant, four midshipmen, seven volunteers, one commissary, 122 petty officers and sailors, and 26 subofficers and men of the Marine Artillery—and in connection with the 24-pound guns and 20 80-pound mortars. In a word, the navy will have at the siege a powerful armament of [illegible] nearly equal to that of the land service. [illegible] and [illegible] are [illegible] despair at not having [illegible]. We constantly receive from France, and always at the right moment, all that we want in provisions, ammunition, *matériel*, resources of [illegible]. We are [illegible] including men. Owing to these punctual arrivals, and the incessant vigilance that watches over us, the vacancies caused by sickness or by the[illegible] men of the Marine Artillery—and in [illegible] nine 24-pound guns and 20 80-pound mortars. In a word, the navy will have at the siege a powerful armament of [illegible] nearly equal to that of the land service. [illegible] and [illegible] are [illegible] despair at not having [illegible]. We constantly receive from France, and always at the right moment, all that we want in provisions, ammunition, *matériel*, resources of [illegible]. We are [illegible] including men. Owing to these punctual arrivals, and the incessant vigilance that watches over us, the vacancies caused by sickness or by the[illegible] men of the Marine Artillery—and in connection with the [illegible] of the activity displayed in the Mediterranean, the Archipelago, the Bosphorus, along the whole line to the Crimea, and on the coast of our lines of attack. Steamers of all sorts and sizes, transports of all dimensions, take their departure or cast anchor, at every moment. I counted yesterday in Kamiesch Bay, 286 ships of all sorts [illegible] under the Marine or War Department, for the service of the army and the squadrons, independent of our numerous men-of-war. In the number are four dispatch steamers, viz., the *Prophète*, the *Edimbourgh*, the *Litcorne*, and the *Henri IV*. It is impossible to speak too highly of the order and regularity which prevail in the service of the Bay of Kamiesch. There is besides a gaiety, a good humour on every face, which strikes every new-comer on entering this hive of men. Do you want a helping hand?—any work to be got through? twenty hands are instantly at your service. Our marine infantry keeps its line well, in trenches as in [illegible] and reconnaissances [illegible] where in fact, so well [illegible] Norbert has added some rewards to those previously accorded by him to the noble corps.—*A French Letter from Sebastopol, Jan. 12.*

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

LORD LYNDHURST'S MOTION.

Lord LYNDHURST postponed the motion of which he had given notice, regarding the military policy of Government, from Friday to Monday next.

NEW ORDER OF MILITARY MERIT.

The Duke of NEWCASTLE announced that it is the intention of the Government to institute a new order of military merit which shall be attainable by every man, from the highest general to the humblest private. The principle of a jury of soldiers will be adopted in selecting those worthy of decoration.

ADMINISTRATION OF THE ARMY.

Earl GREY moved the following resolution:—

That great evils have arisen from the present division of authority and responsibility in the administration of the army, and that the whole of the business connected with this important branch of the public service, which is now distributed among different offices, ought, therefore, to be brought under the direct control of a single and well-organized department.

The Duke of NEWCASTLE, in reply, showed that he had often cast off the trammels of routine where he thought the interests of the country demanded it, and instanced the case of Mr. Nasmyth, as well as the course of conduct he pursued with reference to the loss of the *Prince* steamer. His Grace pointed out that to the transport system was to be traced many of the misfortunes connected with the carrying out of the instructions given at home, and he demonstrated that, with respect to the army, separation was more required than consolidation.

After a few words from Viscount HARDINGE with respect to promotion in the army,

The Earl of ELLENBOROUGH expressed his regret that the motion had been brought forward, and trusted that the noble Earl would not press it.

Earl GREY then withdrew his motion, and the house adjourned.

HOUSE OF COMMONS. MONDAY.

THE PATRIOTIC FUND.

Mr SHAPTO ADAIR, a member of the finance committee of the Patriotic Fund, stated, in answer to Colonel North, that the question of allowing foreigners to participate in the fund had not yet been decided. With regard to English officers, it was proposed that the widows and orphans of such officers whose pensions exceeded £60 should be allowed one-third of that amount—where the pension was below £30, one-half would be given; but in every case this was to be subservient to the requirements of the private soldiers.

THE LIGHT CAVALRY CHARGE AT BALACLAVA.

Mr SIDNEY HERBERT having declined to give any explanation as to the order for the Light Cavalry charge at Balaclava,

Mr. HENRY BERKELEY gave notice that he would move for a Select Committee to inquire into the conduct of the Earl of Lucan with respect to that order.

THE "TIMES" CORRESPONDENT.

In answer to Mr. Beresford, Mr. SIDNEY HERBERT said, the permission of the *Times* correspondent to draw rations was given by Sir Charles Trevelyan, but was disallowed when it came before the Audit Board. He also read a letter from Sir Charles Trevelyan, who explained that the permission was only to purchase rations at regulation prices.

THE ADJOURNED DEBATE.

The adjourned debate on Mr. Roebuck's motion was resumed by

Mr. SAFFORD, who said his only claim to attention was, that he would tell the House what he had himself seen. The radical defect of the hospitals both at Scutari and at Abydos was, the unhealthiness of the sites. That objection applied to all the district between the two seas; and, therefore, he was rejoiced to hear that the Government were about to open a new hospital at Smyrna. Other defects in the hospital at Scutari were pointed out by him. But matters were not at the Barrack hospital, where the bedclothes had never been washed, and where men sick of one disease had caught another disease by being put into the place where a man had just had the chief of fever. In one room he found fourteen, in another nine, men lying on the floor; while in the passage between them were excellent bedsteads, which might have been put up on an average of three minutes each. The hon. member went at great length and minuteness into specific cases of neglect, and concluded by observing that the soldiers, the general officers, and the navy in the East, in fact, were unanimous in reposing confidence in Lord Raglan. In fit of his words addressed by a French officer to himself—"You seem, sir," said he, "to carry on war according to the system of the middle ages; and," he added, "our regret for your backwardness is increased because we see the noble lives you are losing." In the greatest difficulties he found Miss Nightingale and her nurses, the attachment of the soldiers to their officers, and especially to the Duke of Cambridge, and, most of all, the effect produced upon them by the Queen's letter. He concluded by urging upon the House to appoint the Committee, as the only means of saving the army.

Mr. B. OSBORNE attributed all the evils which had been exposed to the state of the Horse Guards. A mere consolidation of offices would not do; the whole system must be altered at the Horse Guards. He particularly denounced the system of staff appointments, which was the purchase of commissions, and it was unfair to blame the Duke of Newcastle for the faults of a system which the House had over and over again sanctioned. He deplored the secession of Lord John Russell, which he admitted had destroyed the Government; but, for his part, he would stand by the crew and the ship.

Mr. HENLEY said, the question was not whether the system was bad, but whether the present Ministers had made the best of it. He blamed the Admiralty for the defects that had attended the transport service, and supported the motion.

Admiral BERKELEY defended the Admiralty from the charge of neglecting the transport service.

Mr. BERESFORD defended the army against the charges of Mr. Osborne. He also repelled the charge of neglecting his soldiers, brought against Lord Raglan, and asserted that the expedition to the Crimea was undertaken in opposition to the wishes and advice of that Commander.

Mr. RICE opposed and Mr. HUME supported, the motion.

Sir F. BARING opposed the motion, on the ground that a Committee would only aggravate the evils it professed to cure. He severely censured Lord Aberdeen for not listening to Lord John Russell's suggestions in November, and for allowing private affection to outweigh his regard for the interests of the country, the safety of our army, and the honour of our allies. Under these circumstances, his vote must not be taken as expressing confidence either in the past or the future management of the war by the present Government.

Mr. BENTINCK objected to the motion that the first part of it was impracticable, and that the second part intimated a doubt which no one felt—whether there had really been gross incompetence in the conduct of the war. But he would support it, as a vote of no confidence in the present management of the war.

Mr. RICE supported the motion for inquiry.

Sir E. B. LYTTON contended that the justification of the motion was to be found in the extremity of the case. The noble Lord the member for London had left his colleagues rather than resist it, notwithstanding the pain which such an abandonment must have given to so gallant a mind; and he gave the noble Lord the more credit for his pain because of the more than spartan fortitude with which he had concealed the fact. The expedition to the Crimea had been undertaken in utter ignorance of the country they were to invade, the forces they were to encounter, and the supplies which they might expect; and it was this ignorance, and not the petty collateral causes which the Secretary at War had cited, to which the deaths were to be attributed. It was said the people were equally ignorant. He thought so, but the ignorance which was excusable in a people was a crime in a Ministry. But the people did not deserve this censure. The people looked to triumphs on the sea rather than on the land; but when merely the whole Black Sea lay defenceless before them, the fleet contented themselves with an ineffectual bombardment of Odessa, for which in consequence, he was sure, of private instruction the Admiral afterwards made an apology. It was said that the destruction of Odessa would have been an act of inhumanity. Why, Odessa was the feeder of Sebastopol, and spare it was the closest inhumanity to our soldiers. The whole campaign was mismanaged. Of the whole year, the Government had chosen the two unhealthiest months to send the army to Varna; and they had chosen the winter as the time to attack the Gibraltar of the East. He did not blame the Government because the army had been exposed to wind, and rain, and mud; but he did blame them for not taking those precautions against the Crimean winter which any traveller could have told them were necessary. He traced many of the evils to the fact of a coalition Government, in which everybody's principles agreed with nobody's opinions. It was said that the noble Lord the member for Tiverton was likely to be advanced in position as the result of these disputes. He regarded that noble Lord with feelings of the greatest admiration; and he felt [illegible] greatest danger [illegible] arise from the armed neutrality of his unsuccessful advocate and friend, the noble member for London. He referred to one parallel to the present crisis in our history, when a former Duke of Newcastle was in office during a period of war, and when our army was in a state of peril. The remedy adopted then was open to the House now. The people rose as one man—they dismissed the Ministry and they saved the army.

The CHANCELLOR of the EXCHEQUER commenced his speech by thanking Lord John Russell for the eulogium pronounced upon him by the noble Lord on Friday night. At the same time he stated that the noble Lord had not urged his remonstrances from November up to his resignation. Now, in November there were no complaints against the conduct of the War-office; nay, in October he wrote to the noble Duke, stating his belief that he had done in his office all man could do. More than this, the Earl of Aberdeen, being doubtful of the intentions of the President of the Council, asked him, on the 16th of December, whether he still adhered to his intention of pressing changes in the War Department; and the noble Lord stated, in reply, that, on the advice of a friend of his own, he had abandoned the views he pressed in November. Therefore, up to Tuesday night, when the noble Lord sent in his resignation, his colleagues did not know that he was dissatisfied, or that he meant to press his former views as to the reorganisation of the War Department, and it might be thought that, after losing the services of the noble Lord, the Government ought not to have met the House, or, at least, not to have met them without some reorganisation. But he felt it was not for them either to attempt it to make terms with the House by a reorganisation, or to shrink from the judgment of the House upon their past acts. If they had shrunk, what sort of opinion would have been written over their remains? He himself would have written it thus:—Here lie the dishonoured ashes of a Ministry which found England at peace and left it in war—which was content to enjoy the emoluments of office, and to wield the sceptre of power so long as no man had the courage to question their existence. They saw the storm gathering over the country, they heard the [illegible] sounding accounts which were almost daily received of the state of the sick and wounded in the East. These things did not move them. But so soon as the honourable member for Sheffield raised his head to point the thunderbolt, they became conscience-stricken with a sense of [illegible] to escape punishment, they abandoned duty. With regard to the motion now before the House, he would be himself the first to vote for it if it could be proved that it would benefit the army. He believed it would aggravate, rather than alleviate, the evils complained of. The last accounts represented matters as improving. The whole army was improving—warm clothing had been served out to the whole army—the huts were in course of being set up—the railway would be finished within three weeks of its commencement—and, what was of greater consequence, an arrangement had been effected between the generals, by which 1000 Frenchmen would be permanently in the trenches, relieving to that extent the same number of Englishmen. Further, great exaggerations had been used as to the state of the army. According to the latest returns there were at present 28,000 English troops under arms before Sebastopol, and to these were to be added from 5000 to 6000 seamen and marines; thus bringing up the whole English force now in existence to more than 30,000 men. It could not be said, therefore, that the British army before Sebastopol was extinguished. He insinuated that these were points in which the English military system would bear a favourable comparison with that of the French, though honourable members would see that this was not a matter for public discussion. The honourable Baronet (Sir E. Lytton) condemned the Government for not destroying Odessa. Why, Odessa was an open town, with 100,000 inhabitants, and with an army of 300,000 men within easy reach. Would that have proved comfortable quarters for the British army? He admitted that the administration of the War Departments at home was defective, but he did not admit that they were not much improved, or that they continued as defective as to call for censure. As a proof of the improvements that had been effected, he instanced the employment of the Minié rifle, the reconstruction of our field artillery, and the securing of ground for training the army to camp service. But the censure was intended to be cast upon the Duke of Newcastle. If they thought that his noble friend had neglected the duties connected with his office, they were in a mistaken; and, however they might vote to-night, he was quite sure that a twelvemonth hence, if the real state of the facts should then be known, there would be a reaction among the just and generous people of England. The complaints of the state of the hospitals, and of the army before Sebastopol, had only become clamorous since the middle of December. What would the House have had his noble friend do? Was he to recall Lord Raglan? Why, the House had just voted their unanimous thanks to the gallant commander! Was he, then, to recall the subordinates of Lord Raglan? Before doing that, his noble friend had called for a report from Lord Raglan as to his subordinates, and they had received a statement from Lord Raglan, giving hope that the evils complained of would be remedied. It was for the House to say whether they would censure the Government for trusting to the representations of Lord Raglan. It was admitted that the appointment of this Committee was improper and impracticable, and was avowedly supported by many members of it as a means of driving the Ministry. The country would not understand this. If the House voted a Committee, the country would expect that that Committee should be appointed, and if it was not, the character of the House itself would be damaged; and he reminded the House that there were other questions to be immediately brought forward, on which the House would have ample opportunity to express its judgment as to the conduct of the Government. If this motion were to be carried, he should ever rejoice that his lot was to be a member of Lord Aberdeen's Government, and he should protest against a measure useless to the army, unconstitutional in its nature, and fraught with danger to the honour and the interest of the Commons of England.

Mr. DISRAELI said, his first impression, on seeing the honourable member for Sheffield sit down on Friday night, after simply reading his motion, was, that the honourable and learned gentleman, as a consummate rhetorician, had done so as the most effective mode of supporting his motion. He might well, indeed, dispense with a speech in support of his motion, for that had been made for him by the noble Lord, who but a few hours before was the first Minister of the Crown in that House. It was said that this motion implied a vote of want of confidence. He would ask, in what Government did it imply a vote of want of confidence? Was it in the Government which existed forty days ago, or was it in the Government as it now existed? Why, they had themselves admitted that they required reconstruction. Or was it want of confidence in the Government as it was to be? The House of Commons had often before voted confidence in a Government whose principles they did not know, but now they were called upon to vote confidence in an Administration with whose very persons they were unacquainted. He denied that this motion was directed exclusively against the Duke of Newcastle. His own colleagues had described him as able in energy and experience; but the Duke ought not to be made the scapegoat for a policy for which the whole Cabinet were responsible. Neither would he consent to throw the blame upon a system which, whatever might be its faults, when in the hands of able men, had accomplished great ends. It was the Cabinet as a whole that must be held responsible for the evils that existed. Recurring to the explanatory speech of the noble Lord the member for London, he said it reminded him of a page from the "Life of Bubb Dodington," in the unconscious admission it contained of what, in the eighteenth century, would have been regarded as profligate intrigue. These dissensions would prove most injurious to the character of England. Two years ago, England was the leading Power in Europe; would any man say that she now occupied that position? Under these circumstances, he felt that, being called upon to give a vote on this question, he could not refuse to give it against a deplorable Administration.

Lord J. RUSSELL entered into some explanations with respect to the resignation of the Chancellor of the Exchequer and himself. If the whole of what he had said between himself and Lord Aberdeen and the Duke of Newcastle were laid before the House, the transaction would have a different complexion. He would not enter further into that question, however; but he could not so easily pass by the expression of the right hon. gentleman opposite, characterising his conduct as a political intrigue. He repelled that charge, and, as a precedent for what he had done, he referred to the substitution of Lord Stanley for Lord Goderich as Colonial Secretary, in Lord Grey's Administration. No man would characterise that as a profligate intrigue, and he hoped Lord J. Russell had proposed no more than was done there. There was no concealment in the matter. He requested the Earl of Aberdeen to show his letter to the Duke of Newcastle, and that, he was informed by Lord Aberdeen in his next letter, was done. In his anxiety to keep clear of everything like a political intrigue, he had, unadvisedly for himself perhaps, not communicated his intention of resigning to any one of his colleagues.

Lord PALMERSTON accepted the issue of this question as the right Honourable gentleman opposite had put it—as a censure, not upon the Duke of Newcastle, but upon the whole Cabinet. He defended the principle of coalition Governments, as unavoidable in the present state of parties in the country. He condemned the motion, because it would set a precedent, dangerous if ever carried out, and disparaging to the country if it were not. If it were only intended to overthrow the Government

there were many other courses which might have been adopted with as much convenience or injury to the interest of the country. He hoped these unhappy dissensions would be confined to the overthrow of the Government, and that the House would follow the example of the country, which was unanimous in its determination to carry on the war with vigour. Having settled what Government they would support, he hoped the House would not discredit Parliamentary Government in the face of Europe by continuing these dissensions, and showing that a Constitutional Government was not so able to carry on war as Governments framed on other principles.

After some remarks from Mr Muntz and Mr. Horsman,

Mr. DUNCOMBE asked whether Mr Rochuck meant to carry out his Committee if it were granted?

Mr ROEBUCK said he did, and in a few words he replied to the objections which had been urged against his motion.

The House then divided—For the Committee, 305; against it, 148: Majority against Ministers, 157.

The amount of the majority seemed to take all parties by surprise, and instead of the usual cheering there was a murmur of amazement, ending in general laughter.

The other orders of the day were postponed, and the House adjourned.

HOUSE OF COMMONS.—TUESDAY

The Speaker took the chair at four o'clock.

NEW MEMBER.

Captain Pakenham took the oaths and his seat as member for the county Antrim.

ARMY PROMOTION.

Major REED gave notice, that on Tuesday, the 13th of February, he would move for a Committee to inquire into the system of promotion by purchase in the Army, with the view of substituting a more effective system of promotion by merit and long service.

THE MINISTERIAL INTERREGNUM.

Lord PALMERSTON, who rose amidst loud cries of "Hear, hear," said: Sir, I am anxious to propose to the House that, in the present state of public affairs, to which I need not more particularly advert, and considering that the House of Lords has adjourned to Thursday, and that no statement can be made in that House by the head of the Government till that day, this House, at its rising, shall adjourn to Thursday next. I therefore hope that those gentlemen who have notices on the paper will have the kindness to postpone them till that day, and that they will not propose anything that will lead to discussion. My right hon friend the Secretary of State for the Colonies has a bill to introduce for carrying into effect a reciprocity treaty between her Majesty and the United States, which, as it is of great and pressing importance to the Colonies, it is desirable that no time should be lost in introducing.

The motion for the adjournment of the House, at its rising, till Thursday, was then agreed to

(*Continued on page 106.*)

DURATION OF LATE MINISTRIES.—The following account of the names and the duration of the various Administrations which have governed England since the passing of the Reform Act of 1832 may at the present moment be interesting to all parties. The Ministry of the late Earl Grey held office from November, 1830, to August, 1834, and was instrumental in carrying the bill for the reform of the representative system. On the resignation of Earl Grey, in August, 1834, the Whig Ministry was modified, and Viscount Melbourne was raised to the office of First Lord of the Treasury. This Ministry was dissolved by William IV. in November, 1834, when Sir Robert Peel was summoned by the King from Rome to form a new Government on moderate Conservative principles. Sir Robert came into office, however, was briefly for in the following April [illegible] right honourable Baronet was defeated on the famous "Appropriation clause" of the Irish Tithe Bill, and Lord Melbourne once more [illegible] reinstated in power. This, the second Melbourne Ministry [illegible] Again, in August, 1841, after upwards of six years, existing [illegible] with an interregnum in 1839, when Lord Melbourne temporarily [illegible] were reinstated on the resignation of Sir R. Peel to take office under certain circumstances which need not now be reverted to. In [illegible] the Whigs were defeated in two Parliaments [illegible] their own measures, and Sir R. Peel formed [illegible] Ministry, which carried the principle of Free-trade, and was [illegible] in 1846 by the secession of its "Protectionist" [illegible] from John Russell's Administration, which succeeded. [illegible] 1846, to February, 1852, when a defeat on the [illegible] Militia Bill led to the resignation of Lord John Russell. [illegible] about two months [illegible] the Earl of Aberdeen succeeded as the head of a Coalition Ministry, which Administration has lasted little more than two years. It will be seen that the second Ministry of Viscount Melbourne held office for upwards of six years, that of Sir Robert Peel the second Ministry for nearly five years, and that of Lord John Russell for nearly two years. During the period in question—viz., from 1834 to 1854 three appeals were made by existing Ministers to the public upon one of the most constitutional questions of a general election after the [illegible] Peel dissolved Parliament in Dec., 1834, and the result was a [illegible] but not adequate majority of Parliamentary support. Lord Melbourne dissolved in 1841, but the country returned a majority of the [illegible] and in 1847 the Earl of Derby appealed to the people in [illegible] was, as I [illegible] from it, similarly, the almost equally unsuccessful.

CONVICTISM IN AUSTRALIA.—The new bill of Sir Charles Hotham, regulating the admission of convicts with conditional pardons into Australia, has excited popular opposition. Sir Charles's plan is to establish agents or commissioners at Launceston, Hobart Town, Perth, Adelaide, and Sydney, who are to inquire into the characters of persons, and give passports. Any persons bearing a certificate of good character, signed by magistrates or others named in the Act, are to be entitled to a passport. Such as land without passports are to be arrested. The colonists wish to carry out the former Convict Prevention Act, to which the home Government refused the Royal assent. Public meetings have been held to express opposition to the new bill. In Van Diemen's Land the people have petitioned for the discontinuance of all "conditional" pardons.

PUBLIC INCOME AND EXPENDITURE IN 1854.—An account of the net income and expenditure of the country for the year ended the 5th of January, 1855, &c., was issued on Saturday. It hence appears that the gross total income amounted to £56,757,122, and the expenditure to £52,966,121; thus exhibiting an excess of expenditure over income amounting to £3,790,999.

WASTE AND WAR.—Yesterday being favourable weather, I went through the town or rather village of Balaclava, to a distance of two or three miles inland. My impressions were what must, I think, be the impressions of any person who has had a healthy curiosity, but a great want of management here. Of course there are extenuating circumstances; but when one lands on a hundred bags of bran, placed on the water's edge with the bottoms to form a pier, when mules, horses, and cattle there are bones strewing, and around one are the carcases of horses that have died on the road, one must come to the conclusion that there is want of thought, hurried though the time may have been. Again, within a few yards of the shore are strewn fifty or sixty bed valises, belonging to officers, that would be invaluable in the Camp, but have lain there for three weeks exposed to the rain, and to the mercies of the passers by. As to the clothing of the troops, one cannot regret to see a soldier, who has been roughing it for months, on account of his dirty appearance. It were unfeeling and unjust to do so. It is hideous as to avoid comparing the ragged, dirty appearance of our soldiers, and the ill-make and fit of their grey coats, with the neatness and stand out up of the French soldiers when marching to Balaclava to carry up shot and shell into the Camp; their blue cloth great-coats fit them like the coats of London footmen, and they all have warm hoods attached to them. Their sleeping gear and comfortable-faced, large [illegible] down over the cars, excite the envy of our soldiers. I know that those for whom they are fighting would be guilty mortified if they knew how inferior in things comfortable they are to their gallant allies. We are slow in everything. Now that the snow has left upon the ground, a few wooden huts are beginning to make their appearance; and this very day, through some mismanagement, a small steamer containing these huts has run on the rocks at the entrance of the harbour. However, she is not damaged, and may be got off to-morrow. The force of taking levels for the railway is proceeding, though it is to be hoped that Sebastopol will be taken before that is finished. I heard it said to-day that almost every man would join the French hope rather than remain to run the risk of dying of disease.—*Letter from Balaclava, Jan. 12.*

THE WAGGON SERVICE.—When, about a year or a year and a half ago, Austria, in order to keep Montenegro in order, thought of sending a corps of 60,000 men into the Herzegovina and Turkish Croatia, and from [illegible] horses and waggons [illegible] the Council under the expedition. Would it not be possible to [illegible] a sufficient number of beasts of burden in the Crimea by the spring, so that, when the time for operations in the open field comes, the army may not be obliged to remain inactive for want of the means of conveying their baggage and supplies?

A NEW ALLY.—The *Freeden Blatt* has learned from Varna that the vast quantity of snow which has fallen at Sebastopol is of advantage to the besiegers, who have shovelled it up into a kind of wall, which so completely conceals their operations that the Russians are obliged to reconnoitre continually. Thanks to this new ally, the English and French have also been able to push forward their trenches.

OPINIONS OF THE SILENT MEMBER. (No. II.)

MONDAY'S division decided not only that the House of Commons had no confidence in the Government, but the debate showed also that the members of the Ministry had no confidence in themselves, or in each other. Each Minister who spoke confessed the incapacity and pleaded the inexperience of himself and his colleagues. They had all done their best, which they all allowed had been very bad; but then "they had never tried their hands before at the conduct of a war;" and they seemed to think they ought to be excused for sacrificing the army and perilling the honour of England because they were merely amateurs in the business they had undertaken. If they felt their incompetency, they should have come to the country at once, and requested to be released from their engagements, instead of going on drawing their salaries for services they were incapable of rendering. They have been found unequal to the task of conveying stores a distance of six miles; and, with all the resources of the country liberally placed at their disposal, they could not perform a task that Pickford and Co. or Chaplin and Horne would have readily accomplished. They have cared little about their inability to carry the stores and provisions from Balaclava to the Camp, so long as they were enabled to carry their measures in the House of Commons. The plea of inexperience comes with a bad grace from those who, in the absence of original genius, have had no other guide but precedent, and who have literally broken down in the ruts of routine out of which they have not dared to attempt to travel.

The House of Commons could not do otherwise than show its want of confidence in the Ministry, for any other result would have caused the country to have no confidence in the House of Commons. People are asking, "What are we to get by it?" and some blame the majority for passing an honest vote; but, surely, when we find that our servants are bringing us to ruin, we are not to continue them in our employ merely because we may have some trouble in finding others to take their places. We had better have a change of Ministry once a month than permit our public servants to feel that, however incompetent they may be, we shall allow them to keep their places. The "man" is always to be found for the situation; but the situation must be relieved from the presence of the unworthy holder of it before it can be available for the fitting occupant. The official sewers must be flushed; and there can be no objection to begin by adopting the suggestion of Mr. R. Osborne—himself a member of the Government—who proposed that the Serpentine should be turned on to the Horse Guards, for the purpose of clearing its system of its confessed impurities. At all events, if there is nothing to be gained, there is certainly nothing to be lost, by getting rid of the Ministry. If it leads to nothing but the shuffling of the cards, let us hope that the trumps may be brought into immediate contact with the Queen, and that the knaves may be thrown out altogether The great "Pam" seems to be the card on which the country is disposed to rely, and he is, undoubtedly, enough of himself to make a strong hand when the game is to be played with boldness. Whoever may take the lead will do well to avoid trying to win by tricks, and to take all the care he can of his honours.

The Ministerial crisis will, probably, give the deathblow to much that is of more importance than the Ministry itself, and all idea of useful legislation will be put off under one or more of the various pretexts that are always available to a new Government. It matters little how necessary or desirable a measure may be, if Ministers have either just come in or are just going out there is always an excuse for legislation being neglected. It sometimes happens that the more a thing is wanted by the country, the less likely is it to be obtained, for it is either in the position of everybody's business, and is accordingly neglected as "nobody's business;" or it is taken up so generally as to share the fate of the broth that too many cooks have been employed in spoiling.

One of the admitted evils of [illegible] constantly complained is the state of the law which renders it necessary for a grand jury to find a bill, a petty jury to try, and a judge to pass sentence, in the case of stealing a turnip. The whole of the massive machinery of justice has to be set in motion to deal with an offence against property which is worth only twopence, and the stealing of which may be admitted before the magistrate, who must, nevertheless, *send* the offender before a grand jury, who will hand him over to the petty jury, who will leave him to the mercy of the judge, who will, in passing sentence, say less of the loss of the prosecutor than of the expense to the country

Such a state of things would seem to be too palpably unsatisfactory to remain long without a remedy; but as the affair is now in the hands of Lord Brougham, who has "put a bill on the table;" of Lord Palmerston, who has "got a bill at the Home office;" of the Lord Chancellor, who has "heard of a bill having been prepared;" and of Lord Campbell, who has "long had a bill in his eye" the chances are that, between these numerous bills, the subject may be allowed to drop altogether.

Talking of the administration of justice leads one to reflect on the unseemly collision that took place the other day between the Coroner and the police authorities over the Italian who stands charged with the crime of murder. An alleged assassin would not appear to be a very desirable acquisition, but had he been a most precious and valuable prize he could not have been more stoutly contended for than he was by the police-inspector on the one hand, and the Coroner on the other. It is time that the vexed question of the right of the Coroner to withdraw persons charged with homicide from the custody of the police should be set at rest. for when the foreman of a Coroner's jury is found pulling an inspector from the box of a cab, and a Coroner is heard appealing to the bystanders, "in the Queen's name," to aid and assist a beadle in opposition to the regular police force, the scene is too scandalous to render a repetition of it desirable. The alleged assassin was surprised, as well he might be, at the eagerness displayed by the rival authorities to have the privilege of conducting him to gaol; and it is just possible that while the foreman of the jury was collaring the police inspector, and the beadle was "engaged" with the constable, the accused might have escaped from the hands of both parties.

SUPPLY OF COAL ON THE EUXINE.—A Parliamentary paper published on Saturday supplies some useful information relative to the nature and quantity of coal derivable from the mines near Heraclea on the Euxine. These mines are situate thirty miles eastward of Heraclea (Eregli), and within half a mile of the sea. The coal crops out from the sides of the mountains, forming the deep narrow ravine in which the mines are situate. The Admiralty, in April last, instituted inquiries respecting those mines, so important for supplying coal to her Majesty's ships in the Mediterranean and the Black Sea. The result of the local investigations being satisfactory, both as regards the quality and quantity of the coal, an agreement was made with the Turkish authorities for the transfer of these mines to our own Government. It was estimated that the mines of Kosloo would yield 90,000 tons per annum, and Rear-Admiral Boxer, writing to Sir J. Graham, on the 29th of November last, saw no difficulty (if a sufficient supply of workmen were sent out) in the mines being regularly worked throughout the year, and producing about 9000 tons per month. He also expressed an opinion that if the war were protracted it would be necessary to work the new mines of Zangledh. This hint was acted on by a Treasury minute of the 8th of December, in accordance with which the directors of the works would lose no time in placing the Zangledik mines in efficient working order, and it is estimated that 30,000 tons of coal will be extracted from the district conceded during the six summer months commencing from the 1st April, 1855.

DISCOVERY OF ANCIENT BRITISH REMAINS.—A day or two since, as some men were digging in a field belonging to Lord Poulett, at South Chard, Somersetshire, in the occupation of Mr. William Deane, when they had got about three feet and a half below the surface, one of them came in contact with an earthern urn or vase, the top part of which was found to be made of clay, and to contain a number of beads of amber, varying from the size of a pea to about an inch and a half in diameter, many of which fell to pieces on being touched The beads are supposed to have been a necklace of the ancient Britons, and were possibly deposited where they were found at least 2000 years ago. The parts preserved are now in the possession of Mr. Arthur Hull, of Chard, a well-known collector of curiosities.

ARRIVAL OF THE DUKE OF CAMBRIDGE

On Tuesday his Royal Highness the Duke of Cambridge disembarked at Dover, from the *Princess Alice* steam-packet, which had been dispatched to Calais expressly to convey the noble and gallant Duke to these shores. A guard of honour of the Staffordshire Militia, under the command of Major Inge, was in attendance. On the arrival of the *Princess Alice* at the place of landing, Captain Herrick, Colonel Streatfield, Colonel Cator, Major Inge, the Mayor, and some of the members of the Corporation, proceeded on board, and shortly afterwards his Royal Highness appeared upon the deck. The interchange of civilities between his Royal Highness and the gentlemen assembled was the signal for a shout from the multitude who had now congregated, and most vociferous cheers, the booming of a Royal salute from the Drop Redoubt, and the strains of military music, the gallant and Royal Duke set foot again upon the soil of England

A post-carriage had been provided to convey his Royal Highness to Birmingham's Ship Hotel, but it was not brought into requisition, and his Royal Highness proceeded on foot towards that establishment, accompanied by the Mayor and the other authorities, and followed by a large crowd of persons, who continued cheering till his Royal Highness had arrived at the steps of the hotel.

The Duke of Cambridge was accompanied by the following members of his staff: the Hon Colonel Macdonald and Colonel Tyrwhitt; and Dr. Gibson (his Royal Highness's physician) and suite were also in attendance upon his Royal Highness. The Duke having been ushered into one of the state apartments of the Ship Hotel, the Mayor and Corporation, accompanied by some of the leading residents of the town, proceeded thither for the purpose of offering his Royal Highness an address congratulatory of his return to England. They were very courteously received by the gallant Duke; and the Town Clerk (T. B. Bass, Esq.) then proceeded to read the following address:—

May it please your Royal Highness,—We, the Mayor, Aldermen, and Burgesses of Dover, hasten to testify our unfeigned gratification at the safe return of your Royal Highness to your native country, after the arduous and dangerous service in which your Royal Highness has so much distinguished yourself in the Crimea. Deeply regretting the cause which has for a time deprived her Majesty of your Royal Highness's presence in the field, we earnestly pray that it may please Almighty God that you may soon be restored to health, so that our beloved Queen and country may again enjoy the advantage of the valuable services of your Royal Highness, and that our soldiers may be stimulated by your brave and glorious example.

The address was followed by loud cheering; at the conclusion of which his Royal Highness replied to the following effect:—

Mr. Mayor and Gentlemen,—I thank you for the gratification you have rendered me in presenting me with the present address. I assure you that any inconvenience or discomfort which I have experienced in the Crimea has been amply repaid by the bravery of the troops All in general can do is to lead, and my humble services have been given cheerfully, but it has not been a war of generalship—the campaign has been a soldiers' and nothing but a soldiers' campaign. Led on as they have been by their indomitable courage, these troops have performed prodigies of valour. And I can assure you a finer set of fellows do not exist in the world than the men who are fighting the battles of Britain in the Crimea, and who have done everything in their power to sustain the honour of their country. Mr. Mayor and gentlemen, I again thank you (Loud cheers)

The deputation then withdrew. After partaking of a cold collation, his Royal Highness left for London by the two p.m. train of the South-Eastern Railway His Royal Highness was accompanied to the railway station by the officials who received him on landing Mr. Way, the superintendent of the station, received his Royal Highness and staff with every possible attention, and the train left Dover amid loud cheers.

A THOROUGH BLOCKADE.—No apprehension need be entertained of Russian ships getting out, or, if out, of their getting into port again until spring. According to recent letters from rivers places in Russia, the thermometer was down as low as 24 degrees Reaumur under zero (37 under 0, or 47 below freezing-point Fahrenheit). The Russian fleet is therefore fast bound, and will be fast found if the Allied squadrons return to the Baltic at the end of March.

THE EXPENSE OF CONVICTS.—A Parliamentary blue-book has just been published, from which it appears that the cost of convicts in 1853 was £7384, and in 1854-5, £8359. The high price of provisions was one cause of the increase.

"THEY MANAGE THESE THINGS BETTER IN FRANCE."—In the French army one soldier cooks for twelve, instead of each man, as with us, preparing his own dinner by rotation. Amongst other advantages gained from this arrangement is a large *marmite* given for a mess, instead of every man being cumbered with his particular pots and pans. But above all, by its means a more palatable and wholesome dinner than the troops is secured. So it might be with us; for instance, nothing can be better than our ration pork when it has been well soaked for two or three hours before being dressed, nor anything more salt, and time enough to aggravate the disease in camp, than the same pork when cooked without the imitatory process in question. It is, of course, impossible for each of our soldiers, amidst the various call on him to prepare for the time coming for seeking this pan, but one man in twelve might, I suppose, very easily do so.—*A Month in the Camp*

A PRECIOUS RELIC.—Sergeant-Major L—, of the Algerine Rifles, having advanced far in front, found himself surrounded by Russians, ready to attack them and put them to the sword in the twinkling of a moment. Having thus relieved himself from troublesome company, he was about to advance when the bugle sounded the recall: these well-known notes somewhat calmed him, and as he was looking among the dead and dying, his eye was caught by a large medal which lay shining upon the breast of a dead man: he drew near, and, on examination, found that it appeared to be an officer, clad in a private's great-coat. At first he had some compunction as to taking the treasure from the neck, but seeing an inscription upon it his curiosity was excited, he raised the treasure, and returned to his camp, there to examine it at leisure. The medal was an octagon of thick chased silver, worth intrinsically about forty francs. On one side was an inscription in Russian, of which the following is a translation:—"*A mother's blessing upon Stephan Dolivn Dobrovolskii, 1847, 14th October*" On the other side, in a frame, was a picture of the Virgin Mary holding an infant Jesus, painted upon glass, under the plate of glass was a satin rose-coloured bag, containing a letter with an engraving glued on to the corner of it, upon which were inscribed the following words: "The highest nobility is to serve the Lord" As the letter was written in an angular style and highly perfumed, it was deemed the production of a lady The large medal was suspended on a double silver chain, upon which were hung a smaller medal, having on one side a figure of the Pope, on the other a St. Nicholas, and beneath could be seen a painting of exquisite beauty, and further, across, representing a crucifix, with the year 1844 thereon. The large gem was found suffered for this curious treasure.—*Letter from a French Officer in the Crimea.*

THE BATTLE-FIELD OF INKERMAN.

THE scene which our Artist has here depicted is one which he witnessed in crossing the battle-field on the 5th of November, at the time when the Russians were retreating. On horseback or on foot it was impossible to pass along without treading on the wounded or the dead, so thickly was the ground covered with them. A sergeant who had been in the very midst of the deadly struggle thus described how he felt when he went home to the Camp and found none of his comrades there:—

The worst I felt was, when I came home and found all my comrades missing, and did not know whether they were dead or wounded; but had to go amongst the dead and wounded in the dark to see whom we could find. I was passing, with some more of my comrades, with as many of the wounded as we could carry on our backs, and there was one of our poor fellows lying on the ground beside some that were dead, with both his thighs shot through, one of which was fractured very much. He did not even utter a groan, but simply said "Sergeant, is there any chance for us to-night?" I said, "We will come back for you;" but the night was so dark that we could not find him, neither did anybody else, so he had to lie all the next day; but the poor fellow has since died of his wounds . . . . .

Another soldier gives the following description of the battle-field, a few days afterwards:—

I have just been over the ground on which the battle of Inkerman was fought. Many inches of this day's all remain—Russian cartridges not yet broken—ramrods—Minié-balls—Russian pouches—belts—old gun-barrels doubled up—fragments of clothing, &c., but, above all, some hundreds of round shot and shells unburst lay about in all directions. The graves of our brave men who fell on that day are also to be seen, their heads marked by pyramids of the deadly missiles by which so many fell. The graves of the enemy are still more conspicuous. From the number left dead on the field, it was found impossible to dig a grave for each; so that their last resting place is known by the dimensions of the earth thrown up—a piece about eight feet wide and as many yards long, containing, perhaps, some twenty or thirty of these poor fellows. Twice has the ground been fought over; twice have the enemy been repulsed; twice have we toiled to bury their dead. Thus

OUR ARTIST ON THE BATTLE-FIELD OF INKERMAN.

I went musing on, until a shell burst in the air some hundred feet over my head. This broke my reverie, and caused me to look around, when I discovered that the shot was intended for a working party at a redoubt, now nearly finished, which overlooks the mouth of the Tchernaya, on its entrance to the harbour. Many minutes had not elapsed before up came others, which, at first, fell harmless, but I afterwards observed some fall among the works. These shots were fired from the mud tower—from the steamer which moves up and down the harbour, and from a three-gun battery on the Inkerman opposite

The Russian wounded and ours are equally taken from the battle-field and conveyed to the hospitals. They have an equal share of attention: and, if the Russians are neglected, so are our own countrymen. The first thing we do with the Russian prisoners, when they are taken to head-quarters, is to feed them, even though they come in the middle of the night; and while in the keeping of Captain Macdonald, the Provost-Marshal, they have a dry floor to lie on, and a roof to protect them from rain, and their rations are better and more abundant than ever they had before.

The following extract is from the letter of a servant, whose master, an officer in the British army, was killed at the battle of Inkerman:—

I was with my poor master in all his engagements, attending him as near as possible. We lay down together at night in his tent, and the same blanket covered us. It took me eight hours to pick him out from the dead, and when I found him his rough coat had been stripped off him. He had five bayonet wounds, and his under-coat was riddled with shot. I wrapped him up in his cloak and two blankets, and carried him over the dead to his tent, laid him out, lit a fire outside of his tent, and watched over him all night. The next morning I got stubborn jibbing mule and a gun-carriage, and laid him thereon, to take him down to Balaclava to his brother, who had arrived out to see him about three days before. With difficulty I got along the road, about eight miles, when I met some blue-jackets—four. I told them what I was doing, and asked their help. "Ay, ay, my lad, we'll help you." They went into a field, got two bullocks and a cart, put the body on it, and most carefully conducted it to Balaclava, and when I offered to reward them not a farthing or a drop would any of them accept. Brave fellows, those blue-jackets! I then went on board one of the ships, had a coffin made, put the body into it, and buried it in the churchyard of Balaclava. Then I raised a headboard and planted his grave with cypress, and whenever after I went there, there I found the younger brother of my late master, Sir R. N——. I sailed with him from Balaclava in the *Medway*, and came overland to England. No tongue can describe the horrors of the battle of Inkerman. I was there waiting for my master, having his telescope slung round me, with a bottle of water, two potatoes in my pocket, a bit of ham and a biscuit, and a small bottle of rum

As a great deal has been said about the way in which the ambulance corps neglected its duty, the following letter from James M'Devitt, of the battalion of enrolled pensioners, who went out as a volunteer to serve in the ambulance corps attached to the army in the Crimea, will show that one member of that corps, at least, did his duty at Inkerman. M'Devitt, writing on the 1st from the Scutari Barracks, where he lay wounded, tells how he volunteered at Varna, sailed to the Crimea, and was present at Alma, and proceeds:—

I was then told off to the Second Division, and joined the same on the heights of Sebastopol. I was present at all the little affairs that happened; I moved out with skirmishers on the 26th October, but did not get hit. I saw that affair over, and nothing happened until the 5th of November, when the enemy appeared in massive columns in the morning at about a quarter to six o'clock. I then moved up to the heights and attached myself to an artillery gun, which I saw was deficient of men, and served ammunition until it was all done. I then descended from the heights, and placed myself on the right of No. 4 company of the 89th Regiment. The officer commanding the company was Mr. Browne. I asked his liberty to fall in, and he said, "Certainly, old fellow." It was a 95lb firelock and ammunition that I got from a wounded man in rear of the company. I remained on the right of the company doing duty until I got hit by a musket-ball in the centre of my left arm. I was then compelled to fall to the rear from excessive loss of blood, and was in a fainting state when I reached the hospital, from which I was compelled to retire, for the enemy's shell and shot were surrounding it on all sides. I got my arm bandaged up, and went on board ship at Balaclava along with the wounded for Constantinople. I arrived here on the 9th of the month. I do not know whether I shall have the use of my arm again or not.

DR. BRETT'S HOSPITAL AMBULANCE.

During the past year Dr. Brett, a retired surgeon of the Bengal Medical Staff, was selected for a particular service with the army in Turkey under the command of Lord Raglan; when, by the wish of the Director-General of the Army Medical Department, the Doctor was instructed to organise a native Hospital Corps of Palanquin or Doolie Bearers and attendants on the sick and wounded. The Commander of the Forces did not, however, avail himself of Dr Brett's services; but, on his departure for England, he received Lord Raglan's thanks, as well as the acknowledgment of his "praiseworthy and patriotic exertions" from Mr. Sidney Herbert, Secretary-at-War. The Doctor then laid before the Medical Department—

1st. A report on the climate and diseases of Turkey, and on the means of preserving the health of the soldier in that country; every word of which has been verified by the result.

2nd. Hospital doolies on an improved plan, for the conveyance of the sick and wounded, submitted, with a specimen and drawings.

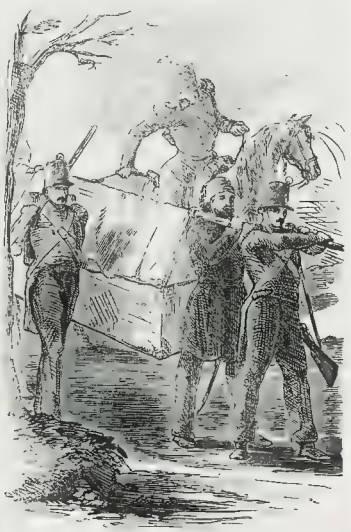
3rd. A model camel-litter, constructed with improvements on the plan of my camel-litters invented in India for the troopers of the Governor-General's body-guard, to which regiment I belonged

Sick officers (writes Dr. Brett) were daily being brought in from Devna, eighteen miles off, in carts, thus proving how valuable would have been the establishment of an efficient set of doolies and doolie-bearers, as intended to have been formed by the Director-General.

Notwithstanding these acknowledged special services, they were dispensed with, as Dr. Brett complained in a letter to the Duke of Newcastle, in a manner injurious to him professionally amongst his relations and connections. His main proposition was the formation of a Hospital Corps of Turkish subjects. This was, however, rejected; and upon his return to England Dr. Brett published his plan, wherein he states that—

Eight hundred hardy enduring Turks (the ordinary porters of the country) would have done the work well. It was intended that each man should carry a light water-bag (Musauk) and a drinking-cup. The roads of the country of Bulgaria were so very bad, that carts could be with difficulty drawn, and the cattle broke down. Hark to that sigh of exhaustion from a fine young officer the descendant of an illustrious family. He is in the last stage of a Bulgarian fever. But there is still hope. The ambulance arrives and receives his shattered frame; the horses, however, break down on the wretched road, and he is in despair of reaching the transport which is to convey him for change of air to the Bosphorus—by chance a fatigue party arrives—he is lifted out of the ambulance, and carried on their shoulders; but it is now too late—he expires on the shore. The litters, or palanquins, would have saved many lives, much agony to the soldiers, and many a heart-rending pang to their bereaved friends and relatives in England

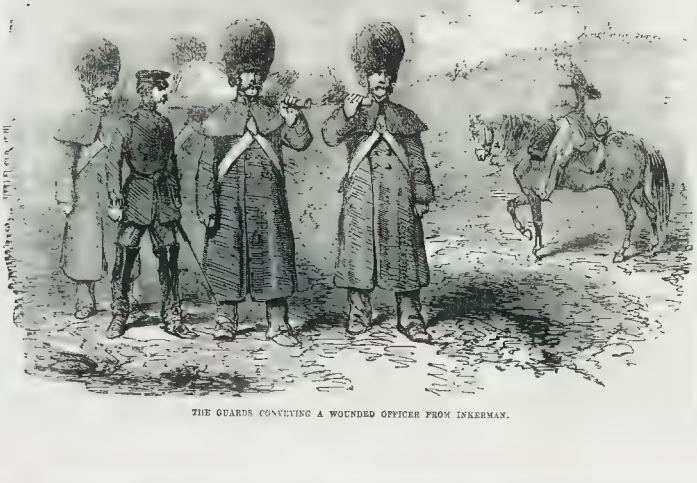
The ambulance-waggons were well constructed, but they were left behind at Varna. My litters were so light and portable that they would have occupied scarcely any space (inflated indiarubber cushions and pillows),* and, I doubt not, would have been of great use at the battle of the Alma.



DR. BRETT'S AMBULANCE LITTER.

I have seen (adds Dr. Brett) the advantages of my own doolies and doolie-bearers, of my camel-litters, as well as of the French mule-litters, and I have great pleasure in adding that one of the most distinguished and talented general officers of the present day, Sir Harry Smith, whom I knew in India, and whom I had the pleasure of meeting last week at Downing-street, remarked that the "Director-General's idea of forming a hospital corps of palanquin and doolie bearers was an excellent one, and would have proved a boon indeed to the sick and wounded of any army."

It may not be yet too late for the Medical Department to avail itself of the above plan for the abatement of human suffering.



THE GUARDS CONVEYING A WOUNDED OFFICER FROM INKERMAN.

* Inflatable at pleasure, and the whole apparatus could have been taken to pieces, and several litters carried with ease by one man. It is computed that the transports alone in the Black Sea cost the Government £45,000 a day. An ambulance establishment of 400 hardy Turks, who live upon a loaf of bread stewed beans, and a pipe of tobacco, would cost about £16 per diem.

THE GUARDS PRACTISING AT THE VICTORIA RIFLE-GROUND, KILBURN.

DRILL OF THE GUARDS AT THE VICTORIA RIFLE CORPS GROUND.—NEW DRESS.

A convenient space of ground to the left of the village of Kilburn, on the London and North-Western Railway, has lately been appropriated to the exercise of the Victoria Rifle Corps. Here, also, the Guards have been exercised for some time past; one party practising in the morning, and another in the afternoon. Our Artist's Sketch shows the practice.

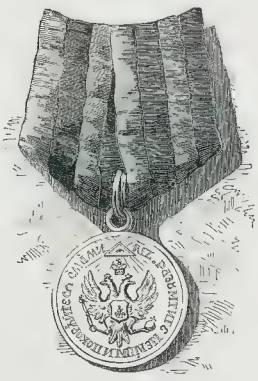
NEW DRILL DRESS FOR THE GUARDS.

In another column we have engraved the New Dress to be provided for all the Infantry Regiments in the service before April next, as well as for the recruits who are now admitted. The new dress is a red coat, with white cuffs and brass buttons. The trousers are black cloth for winter; in the summer they will wear white, as usual. When in full dress there will be, in addition to that sketched, one cross-belt and a waist-belt. The men approve of them as being more comfortable than the present dress, and are glad to get rid of the quantity of white and epaulettes which their present coat bears.

We may here add that it is stated to be the intention of Government to increase the strength of the three battalions of Guards in the Crimea by 1000 bayonets—viz., 3rd battalion of Grenadier Guards, 300 men; 1st battalion of Coldstream Guards, 350 men; and Scots Fusilier Guards, 1st battalion, 350 men. The Household Brigade of Infantry is in a position to spare nearly double that number, having obtained large reinforcements of volunteers from the militia, and also been very successful in obtaining recruits; the volunteers, being mostly well disciplined, could at once be sent to the seat of war, if required; but it is believed that no further reinforcements will be sent out to the Crimea before the latter part of the next month.

RUSSIAN MEDAL.

We have been favoured by a Correspondent with the accompanying sketch of a Medal taken by an officer of the 63rd Regiment just returned to this country) from a Russian, killed by him in the battle of Inkerman, 5th of November, 1854. The Medal is of silver. Over the Russian Arms is the triangle, representing the Deity, with the eye of Providence enclosed, shedding rays of glory on the outspread double-headed eagle. "Hear, O ye heathen, and submit, for God is with us!" is in the old Sclavonic, while the inscription on the reverse is in the modern Russian characters. ("For the Pacification of Hungary and Transylvania, 1849.") The red and black colours of the ribbon represent the Order of Vladimir. In the small shield on the breast of the eagle is St. George killing the dragon.



RUSSIAN MEDAL.

ROYAL POLYTECHNIC INSTITUTION.

For the last half-year, and since the new management, the rallying cry at this well-established and popular place of amusement and instruction has been "*advancement*;" and, judging from the thousands of the industrial classes who attend the regular courses of lectures, now delivered every Monday evening, the management have cause to congratulate themselves on this extension of the benefits of the Institution. The lecture last Monday evening was by the Rev. B. Power, M.A., Principal of the Diocesan Schools, Norwich, "On Electro-Magnetic Instruments, and their remarkable Applications." This gentleman inaugurated the Monday evening lectures in August last, and was most warmly received by the audience, whom he afterwards delighted with a review of the general facts in Electro-magnetism, taking his hearers gradually to the newest improvements, and ending with many anticipations of the probable advantages of this application of Electricity to the human race.

We cannot altogether pass by the new and beautiful optical Diorama of Sinbad the Sailor, which appears to delight both old and young, and is certainly one of the best dissolving views and phantasmagoria results ever produced by the aid of the oxy-hydrogen light.

In catering for the peace-loving part of the community, the manage-

THE STEAM-GUN, AT THE POLYTECHNIC INSTITUTION.

ment has not forgotten the weak points of the other; and in due commemoration of some of England's proudest deeds projects those aerial harmless images of wars alarms and horrible deeds; on the passive screen thus depicting the famous Alma, Inkerman, and Sebastopol; and, as if "to drink full deep of horrors," even arms Mr. Johns, the lecturer on Mechanics, with terrible Lancasters. Rifle rifles, and the various improvements in fire-arms. But the great gun is decidedly that which works by steam, viz., our old friend of Adelaide Gallery standing, with a new and most improved countenance; for, whilst the old form of the steam-gun professed but 60 bullets per minute, the new one at the Polytechnic discharges no less than 250 balls in the same period of time. To effect this enormous increase in the vomiting powers of the apparatus certain improvements have been effected by Mr. Perkins, the son of the original inventor, of which we give an engraving. Supposing that the generating apparatus, which produces the steam at a pressure of from 200 to 600 lbs. per square inch, to remain as in the old steam-gun, Mr. Perkins has facilitated the discharge of the bullets by the improved feeding apparatus shown in our sectional drawing.

A Hopper in which the bullets are placed; they fall into tube K, and are then supported by a reciprocating plug
B Extension of the steam escapes
L Point to which the bullets drop by an eccentric, marked E, connected by means of a rod e reciprocating motion in the plug, C, thus permitting the gunner by one movement of the handle to drop a bullet in the steam passage A, and discharge it almost instantaneously through the barrel

SECTION OF THE STEAM-GUN.

The bullets, as discharged against the target at the Polytechnic, are completely reduced to their *tinsiere*; and if the discharge is made in a darkened room, many of the bullets, as they flatten against the target, emit a light sometimes blue and at others red, thus realising to a certain extent the new theory promulgated by a philosopher in the North, that the light of the sun is produced by the collision of so many miles of asteroids continually against the body of that vast luminary.

Besides the steam-gun, there are the beautiful experiments of Professor Wheatstone, explained by Mr. Peppers, by which four of Erard's harps play most beautiful melodies, without visible hands, as the sounds are conducted to them by rods from instruments played upon by performers who are placed several floors beneath the lecture-room. Altogether, such a spirited and really good assemblage of sterling novelties cannot fail to attract the public attention.

SOME OBSERVATIONS ON THE ORIGIN OF CHESS.

BY DR. DUNCAN FORBES.

CHAPTER VII. ON THE INVENTION OF CHESS IN INDIA, ACCORDING TO THE ARABS AND PERSIANS.

(Continued from page [illegible])

"The elder brother, being the more humane and intelligent of the two, used every exertion in his power in order to restore peace and reconciliation. He said to the younger, 'Let our mother's kingdom, in the first place, be divided into two equal parts, [illegible] that half which may best please you.'" To this fair and generous proposal, the younger brother would by no means listen; for he attributed the elder's forbearance and moderation solely to his timidity and cowardice. In short, Takhand openly took the field with such forces as he could assemble; and Gur, however peacefully inclined, was compelled to go to war with his own brother in [illegible] In the very first engagement Takhand's forces were [illegible] defeated, and he himself, mounted on a superb white elephant, was hurried from the field in the midst of the fight. The victorious [illegible] mounted on swift horses, gave instant pursuit, with strict orders to make him prisoner, but not to hurt one hair of his head. At last the victors [illegible] surrounded the young Prince, and [illegible] plants from the white elephant [illegible]. The agonised wounded nobleman [illegible] a statue, and as [illegible] at the Prince to alight, they found that his heart had been [illegible] proud spirit had departed. Thus died Takhand, without any wound from his adversaries, but solely because he could not survive the utter ruin of his army, the triumph of his conquerors, and the humiliation he must have to undergo in the presence of his brother.

"When the mournful tidings reached the Queen-mother, she became inconsolable for the loss of her younger son. She even upbraided the survivor, Gun, as the cause of his brother's death. In vain did the Prince assert his innocence, and offered to prove, by numberless witnesses, that he was in no ways accountable for the death of his brother. The mother disbelieved them all, and refused to be comforted; nor would she even suffer her surviving son to appear in her sight. On this occasion it was that Sassa, the son of Dahir, modified the ancient game of Chess, as we have already stated in our 'first account.' He brought the board and pieces into the presence of the Queen, both as the means of distracting her sorrow, and with a view to explain to her how the battle had been conducted on both sides. He showed her how the two forces stood on the field, and how at length Takhand, surrounded by his opponents, died of a broken heart, on which occasion those around him cried out 'Shâh-mât,' or 'Shah-mâd,' which signifies 'the Prince is dead,' or the Prince is reduced to the last extremity." The Queen felt a mournful interest in this rare game, which so sadly played with Sassa, and at length she became convinced of her son's [illegible] and innocence."

In concluding this chapter, I may briefly state that Sassa and Dahir were real personages, both having figured in history as Princes of the Brâhman dynasty that reigned in Sind about the commencement of the Muhammadan era. In fact Sassa was the first Indian Prince with whom the Arabs came in contact, when, in order to propagate their newly-adopted religion, they carried their victorious arms towards the banks of the Indus.

Hence, without much examination, they conferred on Sassa the honour of having invented Chess, or (as our anonymous scribe would have it) of having modified the older game. It so happens also (as we know from Indian histories) that Sassa was the elder, and Dahir the son, or nephew; though this point is of very little importance, as both of them lived nearly a century after Nausheravan.

The three accounts of the invention of Chess given by our anonymous author are in fact examples of the traditions on the subject current among the Arabs and Persians, a people exceedingly fond of inventing, which is entirely his own, and not mentioned by any other writer. He repeatedly asserts that Sassa was not the inventor, but merely the improver of an older game of the kind; nor is he very scrupulous on the score of perverting his authorities in order suit his own purpose. For instance, in the third account, which, as he says, he has abridged from the poet Firdausi: he, with the coolest effrontery, falsifies that eminent author's statement. The great poet says not a word about Sassa, nor of the game of the Greeks. He merely states that Gun summoned into his presence all the wise men of his kingdom, and desired them to draw up a plan of the battle, that it might be shown to his mother the Queen. The wise men sat in deliberation for a day and a night, and the result was the invention of the game of Chess. He mentions no name in particular, as he attributes the invention to the collective wisdom of the Indian sages. The story of Sassa is a more recent legend of the Arabs, devised merely to give the invention a sort of local habitation and a name."

I believe, however, with the anonymous author, that what the writers of Western Asia considered as the original invention of Chess, really meant the change of the Chaturanga into the Shatranj. The existence of the game of Hermes the Grecian sage, played by Alexander the Great, his officers and soldiers as ready to battle, deserves a moment's consideration; as every one conversant with Greek literature and the game of Chess will readily admit. To those not so qualified to judge, one story is just as good as another; so I make them hearkily welcome to their own opinions. At the same time, I think it is not altogether impossible to account for the anonymous author's perversions and falsehoods. He apparently lived at Timur's Court; for in a book he gives eighteen problems or positions that occurred in actual play to Ali-Shatranji—the first player of that period, as I probably one of the best that ever lived. He not only gives the problems, but a great number of moves or variations respecting them, such as the odds given, the party who was the opponent, and whether Ali played with or without seeing the board—all of which particulars could have been noted only by one who was present. Well, the great Timur was fond of chess, as no doubt our author tells it, that is the board of ten squares by eleven—of which more hereafter. Timur detested the Hindûs because they were idolators, and despised them because they had allowed him to overrun their country. Hence our author, in order to gratify his patron's humour, gives out that the Great Chess was the original, and patronised by Alexander the Macedonian, who introduced it into India; and that, after all, the Hindûs were "too stupid to comprehend it," till Sassa simplified it so as to make it square with their weak capacities. Such a gross fabrication would easily pass current with Timur, who was more conversant with arms than with books; and the obsequious courtiers would readily confirm such doctrines as appeared to gratify their Sovereign.

CHAPTER VIII.—ACCOUNT OF ORIENTAL MANUSCRIPT WORKS ON CHESS IN THE BRITISH MUSEUM, AND IN THE LIBRARY OF THE ROYAL ASIATIC SOCIETY.

BEFORE we come to discuss the principles of Mediæval Chess, it may be well to give a brief account of the manuscript works which I follow as my authorities. These are three in number; and, fortunately, they are public property, easily accessible to those able and willing to examine their contents. The first is an Arabic manuscript (No. 7516) in the British Museum. It is a quarto volume of 132 leaves, and averaging 16 lines to each page—that is, where no diagrams occur. It was written, or, more properly speaking, copied, in A.D. 1267; and, consequently, is now nearly 600 years old. The author's name is not given; but, from circumstances to be mentioned, we may safely infer that he lived within a century previous to the above date. The authorship of the volume is absurdly attributed to "Hasan or Hasan, [illegible] Muhammadan doctors, who died A.D. 728. [illegible] in the preface there is a [illegible] Basra," the principal people "whose pursuit [illegible] has been fatigued with care or much study," which pithy advice will be found to apply as much to leap-frog or to blindman's-buff, as to Chess. On this slender foundation, however, the knavish booksellers entitled the work "Shatranj al Basri," which they construe into "a treatise on Chess by Hasan of Basra." Yes, further; in order to conceal the trick, they had the precaution to erase from the preface the name of the Prince to whom the book was dedicated. However, we know from the titles employed in the dedication, that the Prince was one of the Ayûbite dynasty, that ruled for a brief period over Egypt and Syria; that is, he was either the renowned Saladin himself, or one of his immediate successors. In the East, as of late among ourselves, the Princes of certain dynasties were addressed by certain titles and epithets which they might be known, just as we used to read of "His Most Christian Majesty of France," or "His Most Catholic Majesty of Spain," or their "High Mightinesses of Holland." With regard to the contents of this volume, they may be briefly described, because a large and valuable portion of it is missing. The first seven leaves may be passed over as containing nothing of importance. The eighth leaf commences the main business by enumerating the five classes into which Chess-players may be divided; of which very sensible division, more hereafter. Between the 8th and 46th folio there is what the learned call a *hiatus valde deflendus*; the 9th and 10th tenth of the equality of force at the end of a game [illegible] gether with the relative values of the various pieces; and, from the minuteness and fullness with which the author explains this part of his subject, we may infer that the missing portion contained an account of everything relating to the theory and practice of the game on the same ample scale. The rest of the work consists of some 200 diagrams, containing "openings of games" (eleven in number), and positions or [illegible] problems, in which either mate is forced in a certain number of moves, or the weaker player, by skilful play, draws the game. These are accompanied with solutions at full length, and would have sufficed, even if we had no other work on the subject, to give us a fair idea of the manner in which Chess was played 600 years ago.

My next authority is a Persian manuscript (No. 16,896), in the British Museum. It is an octavo volume, containing sixty-three leaves, ten lines to the page. It was copied A.D. 1612, and the author lived in the time of the Emperor Humâyûn, of Delhi, to whom it is dedicated, somewhat more than 300 years ago. It is a translation and abridgement of an older work in the Arabic language, entitled "Mushi al fâma al Shatranj," or the "Chess-player's Monitor." It has been already fully described by my friend N. Bland, Esq., in his essay, entitled "Persian Chess," 8vo. 1850, and since then published in the "Journal of the Royal Asiatic Society." It is divided into twelve chapters, of which the first and last are mere pleasantries. The 6th and 7th treat of the morals and amenities of Chess, together with a few judicious advices to the players; the 8th, on drawn games; the 9th, on the openings; the 10th, on trifles, such as the well-known feat of the Knight in covering the sixty-four squares in so many moves, &c.; the 11th is a valuable as it gives an excellent selection of end-games on diagrams, together with their solutions. The 12th contains directions for playing without seeing the board.

My third authority is a Persian manuscript (No. 260), belonging to the Library of the Royal Asiatic Society. This MS. has been very fully described by Mr. Bland, in the Essay above mentioned, to which I refer the reader. I may mention, however, in passing, that Mr. Bland and myself differ, *toto cœlo*, on the subject of Oriental Chess—but is it not proverbial that "doctors disagree?" The MS. consists of 64 leaves, quarto size, finely written, 15 lines to the page. One-half consists of diagrams of very interesting positions, without any solutions; and the other half of descriptive writing. The work is both imperfect and disarranged, there being scarcely one leaf placed where it ought to be. On careful perusal, however, I have found that twenty-eight of the leaves, if properly arranged, would form a complete sequence without any break, and the other four are uncertain. The following is the order of the subjects as intended by the author: 1st, a detached leaf, forming part of the preface, the purport of which is to convince the reader of the author's prodigious merits especially in Chess. Then follow 12½ folios on the beneficial effects of Chess: this subject is complete, with the exception of a few lines at the commencement. Then 7½ folios on the complete account of the "Perfect Chess," or "Timur's Great Game." This chapter is, fortunately, entire, and it is, probably, the only account we have of that monster game. Then we have 7½ folios on the invention of the common game in India. This chapter also is complete, and the substance of it has been already given in our Chapter VII. Two chapters on the relative value of the pieces, and on the gradations of odds, are also complete as to the subject, though they do not, apparently, contain all that the author wrote them on. Lastly, a folio and a half on drawn games, &c., incomplete, and partly illegible.

The diagrams are sixty-four in number, and consist chiefly of end-games won by mate. The first two diagrams are illegible; but, fortunately, they are [illegible] contained openings, of which we have abundance in the two preceding MSS. Of the end-games, the most valuable are the eighteen positions of Khîja Ali Shatranji—which, as I have already stated, are from actual play. All the rest are said to have been invented by various eminent players (whose names are given), from the Caliph Al-Mamûn Billah, downwards. It is a curious fact, however, that [illegible] that is not one of the author's own invention; although in his preface he boasts of having made wonderful improvements in every department of Chess. In truth, the author must have been a singular character, and, had we received his book entire, it would undoubtedly have proved an extraordinary production. In justice to this writer, I shall here give a literal translation of what remains of his own preface, which, it must be confessed, is a very *promising* one. It may also lead to the discovery, in India or Persia, of a complete copy of the work. The author seems to have (on the missing portion) been recommending Chess as an excellent medicine both for body and mind; and then he gives a wonderful account of his own life, which we leave the reader what he has himself done in Chess, and also what he is going to write thereon. There is a quaint vein of godliness that runs throughout the fragment, such as to command our belief in the good man's sincerity, although the style does occasionally approach that of the Baron Munchausen:

"* * * And many a one has experienced relief from sorrow and affliction in consequence of this magic recreation; and this same fact has been asserted by the celebrated physician 'Muhammad Zakaria Râzi,' in his book entitled, 'The Essences of Things;' and such is likewise the opinion of the physician, 'Ali bu Firdaus,' as I shall notice more fully towards the end of the present work, for the composing of which I am in hope of receiving my reward from God, who is Most High and Glorious.

"I have passed my life since the age of fifteen years among all the masters of Chess living in my time; and since that period till now, when I have arrived at [illegible] age, I have travelled through Irâk Arab and Irâk Ajam, and Khurâsân, and the regions of Mawarau'n Nahr (Transoxiana), and I have there encountered many a master in this art, and I have played with all of them; and, through the favour of Him who is Adorable and Most High, I have come off victorious.

"Likewise, in playing without seeing the board, I have overcome most opponents, nor had they the power to cope with me. I, the humble sinner now addressing you, have frequently played with one opponent over the board, and at the same time have carried on four different games with as many adversaries without seeing the board, whilst I conversed freely with my friends all along, and through the Divine favour I conquered them all. Also in the great Chess I have invented sundry positions, as well as several openings which no one else has imagined or thought of.

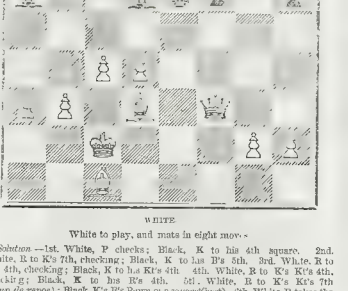
"There are a great number of ingenious positions that have occurred to me in the course of my experience, in the common game, as practised at the present day, and many positions given as won by the older masters I have either proved to be capable of defence, or I have made the necessary corrections in them, so that they now stand what they were originally intended to be. I have also improved and rendered more complete all the rare and cunning stratagems hitherto recorded or invented by the first masters of Chess. In short, no one has ever laid before the public at large all that I have myself discovered from experience, as well as whatever I found to be rare and excellent in the labours of my predecessors.

"In the first place I will make clear to you that the 'Perfect Chess' is the original; I will then inform you who invented it, and where it was invented, and on what occasion the invention took place. I will also detail to you in full how it found its way into India, and at what period they abridged it there, so that all men may know that the people of India are not the inventors of Chess, for they have not in them sufficient knowledge and wisdom to have done so, and they never had. I will also present you with the best modes of opening the game, for therein consists the very root and foundation of good play; and I will instruct you how to conduct your game after it is opened, and I will lay before you a great variety of the most rare and ingenious stratagems, whereby you may be enabled either to win or draw in situations which to the unmitated might appear desperate. I will also instruct you as to the exact value of the pieces, without knowing which you cannot be a player. I will tell you too, the various grades of odds which people give and receive; and, finally, I will unfold unto you the nature of such situations as lead to a drawn game, which may occur towards the end of a contest."

Here follows one sentence more, of very little importance, about the well-known tour of the Knight round the board; and thus ends all that we possess of the author's preface.

I conclude this chapter with one of the Khîja Ali Shatranji problems given by the anonymous author as those by Khîja Ali Shatranji. It will be found in fol. 11, b, and is said to have occurred to Ali when playing against an opponent to whom he had given the odds of the Queen's Rook. The position is both simple and unusual. Ali had the White, and we see that already he has gained two Pawns of his opponent. There must have been a good deal of manœuvring with the Knights and Rook on the part of Ali so as to have brought the game to this state. It is now White's move, and we see that his Rook can take the Black Queen at once, for the Black Bishop does not command the square she is on—but Checkmate is much better. The reader will bear in mind that in the mediæval game the Queen commanded only the four diagonal squares next to her, and the Bishops, the four diagonal squares next to them but one; in short the Bishop was the weakest of the pieces, as there were only eight squares on the board on which he could leap, backwards and forwards, without any change.

POSITION BY ALI SHATRANJI



WHITE

White to play, and mate in eight moves.

Solution.—1st. White, P checks; Black, K to his 4th square. 2nd. White, R to K's 7th, checking; Black, K to his B's 5th. 3rd. White, R to K's 4th, checking; Black, K to his K's 4th. 4th. White, R to K's K's 4th, checking; Black, K to his K's 3rd. 5th. White, R to K's K's 7th (*coup de repos*); Black, K's B's Pawn or Square(best). 6th White B takes the Pawn (being on one of the squares which he commands). If either of the Black Rooks now move to their K's K's square, with a view to exchange or drive away the White Rook then, 7th. White, Queen to K's K's 4th, checking. Black, K to his B's 5th; and 8th. White, K's Pawn mates. If for 5th move, Black K moves to his B's 6th—then 7th. White, Queen to K's K's 4th; and let Black play as he may, the Knight's Pawn gives mate next move.

WORKING OF THE INDIAN RAILWAY.—The first train started from Howrah, opposite Calcutta, on the 15th of August last, and we have now the experience of sixteen weeks to assist us in forming some estimate of the prospects of the rail at this Presidency. It was confidently asserted that no return of any importance was to be expected from passengers, that the cost of [illegible] would be [illegible] and the opposition of boatmen [illegible] such a state of distress that they could not afford this mode of conveyance [illegible] believed that their habits were too inflexible [illegible] would induce them to adopt a mode of conveyance unknown to their ancestors, and that the rail must depend for its dividends solely on the transport of goods. The result of the 16th week's working proves all these suppositions. The line for the first twenty-five miles runs along the banks of the Hoogly, lined with villages and towns, and the rail had, in a few days to maintain a competition with scores of boats which conveyed passengers that distance every day for 2d. Yet the number of passengers of the third class amounted at first weekly to 2400. Then it was said that this was only a metropolitan traffic, made up of men who lived out of Calcutta, but transacted business in it, and that as soon as the line began to run into the country, apart from the river traffic, the number of passengers would fall in a prodigious degree. In the first week of September the line was opened from Hooghly to Pundooah, an insignificant town, without manufactures, or wealth, or population, and at night jungles with the river. To the surprise of all, the traffic immediately doubled, and it has steadily increased since that time, and the average number of third-class passengers in the last three weeks has been 6700. No one was now so blind as to suppose a running train. No one ever dreamt that the middling classes and the upper section of the lower classes would take to the rail with so much animation and delight. The inveterate habits of twenty centuries had produced a strange disparity between the progress of this great instrument of civilisation. For the first time in the history of his native land is the Hindoo beginning to learn [illegible] so simple a truth that time is money. The rail is also the most important educational punctual. The Railway Company which [illegible] under the entire control of the Government, has wisely fixed the charge for third-class passengers at a piece a mile. No one ever dreamt that the middling

LITERATURE.

THE FORMATION AND PROGRESS OF THE TIERS ETAT, OR THIRD ESTATE, OF FRANCE. By AUGUSTINE THIERRY. Translated by the Rev. F. B. WELLS. Two Volumes. Bosworth.

This little book—the summary of long labours on the part of its learned author—has been produced under circumstances as remarkable as progressive. Intended as "an introduction to a collection of unpublished records of the history of the Tiers Etat, one of the publications of historical documents ordered under the last reign," M. Thierry, after deep research and mature deliberation, had fully possessed himself of the beauty, unity, and simplicity of his theme: and was prepared to evolve it, in continuous unbroken order, from the point of departure in the tenth century to the day of writing in the nineteenth. According to this view, the Tiers Etat had always borne an important part, "in a slow but always progressive influence, upon the social life of the country;" or, going only back over the space of six centuries, one circumstance which especially struck the author was that, "from the twelfth to the eighteenth century, the history of the Tiers Etat and that of the Royal power were indissolubly bound together in such a manner that, in the eyes of him who really understands them, one is, to use the expression, the counterpart of the other. From the accession of Louis le Gros to the death of Louis XIV. each decisive epoch in the progress of the different classes of the nation in liberty, prosperity, enlightenment, and social importance, corresponds, in the series of the reigns, with the name of some great King or of some great Minister." The eighteenth century for the first time saw an interruption of the alliance between the first and the third estates (to the exclusion of the second, the continuance of which M. Thierry considered the "national development," and the establishment of a system of civil and political liberty, of "a Government at once free and monarchical," depended. There was in 1789-93 a temporary divorce between the Crown and the people; and "the work of the Constituent Assembly of 1791, badly put together, crumbled to pieces almost immediately, and the Monarchy was destroyed."

Not so, however, the faith of M. Thierry in a great principle,—that of "the all-prevailing and all-efficacious influence of a Tiers Etat acting in partnership with Royalty. Twenty-two years elapsed, during which "it seemed that every tie was broken between New France and the Royalty of former days." But it only seemed so; the bonds of union were only buried beneath a surface of agitation, not broken. In the words of M. Thierry:—

> But the result of the Constitutional Governments of 1814 and of 1830 was to join anew the chain of time and of ideas, to resume under fresh forms the attempt of 1789—the alliance of the national tradition and of the principle of liberty. It was at this point of view, presented to me by the very course of the events themselves, that I took my position; *fixing my attention on that which seemed to me the path traced out for the future, and believing that I had before my eyes the providential termination of the labour of the centuries which had elapsed since the twelfth.*

In other words, the historian ruminating, and constructing his work under the influence of the *doctrinaires* of Louis Philippe's school—had arrived, in his own mind, at the conclusion that under the reign of the King of the Barricades the great work of national organisation was to be completed; and that henceforward, under the guardianship of a constitutional Crown, in alliance with an enlightened Tiers Etat, liberty and order should reign undisturbed. How brief the delusion, and how perplexing the author's position on awaking from it, shall be told in his own words:—

> Entirely devoted to my task, which I was slowly pursuing as far as my abilities enabled me, I dispassionately approached the much-controverted period of the eighteenth century, *when the catastrophe of February, 1848, burst suddenly upon us.* I have felt the result of it in two ways, both as a citizen and also as an historian. By this new Revolution—full of the same spirit and the same threatening appearances as the worst times of the first—*the history of France appeared to be thrown into as much disorder as France herself.*

Now we know not what the reader will think of this candid confession, which, apart from the more serious reflections associated with it, deserves to be preserved in some future edition of "Curiosities of Literature." For our own part, as far as the author is concerned, we think it highly creditable to him, and for the reading public we consider it of value, as an example of the fallacy of human calculations, and a warning against placing too much confidence in that most favourite of modern idols, the "Philosophy of History." We consider it, further, creditable to M. Thierry that, when he found the ground thus suddenly cut from under him, he did not make any attempt to bolster up his position, to reconcile difficulties, and to "philosophise" on under-current influences, as philosophers of history too generally attempt to do, often at the cost of making the "worse appear the better cause." Neither did he in pique cast his MSS into the fire, and deny the world the advantage of studying the materials and reflections he had accumulated upon a most important period of history. No—without altogether abandoning the idea that one day, as the result of future social changes, his cherished theory may yet be realised he, for the present, gave up the task of developing it. "I suspended my work," he says, "from a feeling of despondency easy to be understood; and the history, which I had carried down to the end of the reign of Louis XIV., stops at that point."

Carried down to the period indicated, the History is a most interesting one; the ripe result of deep study, and conveyed in a manner at once perspicuous and striking. In his selection of materials the author, whilst sometimes purposely omitting facts which are already generally known, has drawn attention to many of no mean importance which have been but slightly noticed by other historians.

A passage from the character of that extraordinary despot, Louis XI., may be taken as a fair sample of the author's calm but eloquent style. After stating that the reign of Charles VII. was a period of national increase, and that the new powers and new system established under it required, "in order to be saved from ruin, to be committed to the hands of an individual," goes on as follows:—

> That individual, that personality, jealous, active, self-walled, was Louis XI. If any passages of history seem marked by the seal of Providence to perform a mission, the son of Charles VII. was one of them: he seems to have acted as King under a conviction of a duty superior, in his case, to all the duties of humanity—of no object to which he was obliged to advance without interruption, without having had time to choose his way. He who had raised the standard of opposition in concert with the aristocratic interests against his father made himself the guardian and allottor of all that was odious in the aristocratic system. He applied all the energies of his extraordinary mind, all that kind of intellect and passion, of virtue and vice, to this purpose. His reign was a daily struggle for the cause of many of power, and the cause of social equality: a struggle carried on after the manner of his age, by cunning and cruelty, without courtesy, and without mercy. Thence arises the mixture of interest and repugnance which is excited in our minds by a character so strongly original. The deepest hatred of the class of egotistical tyrants, but to that of merciless innovators; before our revolutions it was impossible to understand him. The condemnation which he deserves, and with which he will remain charged, is the disregard which the human conscience throws on the memory of those who have thought that all means are justifiable by which they can bend circumstances to the yoke of their own ideas.

This King, who affected to be one of the people by his tone, dress, and manner—who [illegible] with all sorts of persons, and wished to know, see, and do everything by himself—has some features of character which are only to be observed in the same degree in democratic dictatorship. The spirit of the commonality appeared in him even in the height of his power: he had a kind of presentiment of our modern civilisation: he divined all its tendencies, and aspired towards it without troubling himself about the possibility, without asking himself if the time were come.

The translation has been carefully executed by Mr. Wells, who has avoided those awkward gallicisms too common in bad translations.

MEMOIRS OF ANNE, DUCHESS OF BRITTANY, TWICE QUEEN OF FRANCE. By LOUISA STUART COSTELLO. W. and F. G. Cash.

The part which ladies bear in English literature is very honourable to them; and, indeed, it always was characteristic of Englishwomen to be either generous admirers and encouragers of meritorious authorship, or themselves even aspirants to its distinctions. The work before us if written by a lady who disputes even with Miss Strickland for a high place in the estimation of critics; and it is dedicated to the present lady in the land, "by especial permission." It is, moreover, the life of a great lady, remarkable for her qualities, remarkable for her position—the last Sovereign Duchess of an ancient dukedom, and twice a Queen of one of the greatest kingdoms in the world. In very many respects with great pleasure vindictiveness the fair sex retaliates upon men the masculine character of ninety nine per cent of books; almost all the books by women being about women. Of course such subjects of biography are also the most suitable to such biographers. The selection is generally excellent: it is what the writers can best treat, best understand; and the result is, a graceful, respectable, and delightful contribution to the intellectual treasury of the public.

In the present historical performance we have the lie of Anne of Britanny. Already the same authoress has given us "Mary of Burgundy," "Memoirs of Eminent Englishwomen," and a host of other productions,—the memories of which, like a cloud of shadowy witnesses, introduce and recommend the new presentment.

Louis the Eleventh, a character so deeply graven in the apprehensions of this country by the sombre and mighty hand of Sir Walter Scott, had just reigned in France. What have we said? We should speak of something more than either a reign or a Government, to borrow the famous distinction of M. Thiers. Louis both governed and reigned, but his place in history is due to something else. He also consolidated and absorbed the various elements of what Providence intended to be one mighty nation into their first real domestic amalgam. He has been harshly painted by the brush of history, for he had defects peculiarly calculated to arouse the indignation of humanity. But his abilities and his persistent energy were nearly unparalleled; and if he was a bad man, we doubt much whether he was a bad King; if he was a bad man, he was one of those bad men the fruit of whose careers is good. He was thoroughly devoted to his country, thoroughly subservient to his high post.

He discharged his mission in no slovenly manner. He found France a congregation of petty principalities, and he left it a Power of Europe.

Obviously, to say that such a man as Louis had just lived, is to say that the separate and provincial dignity of rural Brittany was about to expire. The great sorcerer of centralisation had breathed upon it; and that is all. For us intelligent readers more is not necessary than what Lord Bacon writes in his beautiful essay on "Faction" to comprehend the strange and mixed character of Louis XI., who took advantage of the factions everywhere surrounding his throne:—

> Many have an opinion not wise, that for a Prince to govern his estate, or for a great person to govern his proceedings, according to the respect to factions, is a principal point of policy; whereas, contrariwise, the chiefest wisdom is either in ordering those things that are general, and whereon men of several factions do nevertheless agree, or in dealing with correspondence to particular persons, one by one; but in the other, that popular consideration of factions is to be neglected. Mean men in their rising must adhere; but great men, that have strength in themselves were better to maintain themselves indifferent and neutral; yet, even in beginners, to adhere so moderately as to be a man of the one faction, which is most possible with the other, commonly giveth best way. The lower weaker faction is the firmer is conjunction, and it is often seen that a few that are stiff drive out a great number that are moderate. When one of the factions is extinguished, the remaining subdivideth; as the faction between Lucullus and the rest of the nobles of the Senate (which they call *Optimates*) held out awhile against the faction between Pompey and Cæsar; but when the Senate's authority was put down, Cæsar and Pompey soon after brake. The faction or party of Antonius and Octavius Cæsar against Brutus and Cassius held out likewise for a time; but when Brutus and Cassius were overthrown, then soon after Antonius and Octavius brake and subdivided. These examples are of wars, but the same holdeth in private factions; and therefore those that are seconds in factions do many times, when the faction subdivideth, prove principals; but many times also they prove cyphers and are cashiered: for many a man's strength is in opposition, and when that faileth he groweth out of use. It is commonly seen that men once placed, take in with the contrary faction to that by which they enter; thinking, belike, that they have the first sure, and now are ready for a new purchase.

This quotation speaks for itself. From the year 1476 to the year 1614, Louise Stuart Costello gives us, in the life of one illustrious lady, the history of a nation, and, indeed of a continent and a world. She appears to have taken conscientious care in collecting her materials and in authenticating her statements. This is a great merit. As to style, our reverence is not very perfect. But may be the pardon of the ladies, no woman writes in a finished manner. There is elegance of expression; there is a certain eloquence even of a detached and fragmentary nature; but there is not good composition; much less is there composition of that highest kind in which no trace of labour can be detected. However, the work is an honourable work to its writer, and will prove agreeable to all who read it.

WILL MY READERS GO TO SPAIN? Brighton: W. F. King

Such is the quaint title which a lady-author gives to her journal, "day after day for two months," in the Peninsula. The answer she implies to the question, judging from the *petits maîtres*, the discomforts of hotels, and of public vehicles, and the annoyances of the constantly recurring customhouse, would be in the negative. But then it should be borne in mind that the tour was a hurried one—only two months for scampering over the principal parts of Spain and the period of the year (from the latter part of October till Christmas) unpropitious for travelling. Nevertheless, though the authoress does not treat her subject in inviting style, her narrative is sometimes amusing, and is interspersed with occasional pointed remarks which relieve the monotony of a tedious and fatiguing journey. Upon her own sex she is not very lenient. She remarks how few of them are ordinarily abroad; and learns that "Spanish ladies never go out if there is the slightest cloud in the sky, or if the weather is the least damp or cold." Inquiring of a French refugee as to their accomplishments and education, the reply is little flattering:—"He says that they are scarcely educated at all in any way, and that they possess no accomplishments whatever." Possibly some authoress is capricious in the amount of attention bestowed upon different places and objects. Whilst Madrid is dismissed very cursorily, a tolerably full note is given of the Alhambra. It appears that the Emperor of Russia has been employing two artists here for twelve months past, making drawings of the old Moorish palace in all its details. The volume is illustrated with two or three views, executed in lithography, from sketches by the authoress

TONGA AND THE FRIENDLY ISLES. By SARAH S. FARMER. Hamilton, Adams, and Co.

This volume contains a sketch of the history of the South Sea Islands, from their first discovery to the present time; and more particularly of the labours of the Missionary Society in respect to them. Upon the whole the report is satisfactory and encouraging. In the island of Tonga, within the last thirty years, idolatry has been abolished; Christianity established in its stead; the Sabbath kept with the strictest observance; the practice of polygamy given up; and schools established, at which parents are obliged to send their children; and amongst the population 8000 can read the Scriptures, and 5000 can write

PARIS RESTAURANTS. Not the least remarkable feature of Paris at this moment is the enormous number of *restaurateurs*. It is a regular invasion, more agreeable than one of Cossacks to be sure, but still one which menaces a formidable revolution in domestic habits. The rage for building—the beautiful structures that have risen on the ruins of gloomy and tottering edifices—and with such rapidity that after an absence of six months you scarcely recognise the quarter you were long familiar with the large space produced by the sweeping away of filthy lanes and alleys, at once the hotbed of disease, the repair of crime, and the centre of insurrection,—but, above all, the coming Exhibition are the causes of this extraordinary movement in the victualling department. You can hardly discover a passage in the "good city of Paris," as the Kings of France loved to call their very troublesome capital—in which there are not two, three, or four *restaurants*, and you may traverse the Boulevard les Italiens and Montmartre without seeing a single house in which the *rez de chaussée* has not been converted into an eating-room. It seems actually the premature advent of the happy days predicted by Fourier, when the domestic hearth, or rather the domestic dining-room, was to be substituted one general refectory, at whose tables were to partake of equal rations the happy citizens of Harmony. As he passes along about five o'clock on a raw evening, it is as much as a hungry man can do not to grow ferocious in the delicious odour from the subterranean kitchens sent up through the iron grating. A stranger would suppose that from the establishment of so many eating-houses the domestic hearth was but poorly provided, or that a total change had taken place in the habits of the people. All this, however, is explained by the great hopes founded on the Exhibition, and on the vast number of strangers that will be attracted to Paris by it; and we shall, no doubt, soon feel the effect in the greater activity of commercial affairs. *Letter from Paris.*

THE MARKET AT BALACLAVA.—Only fancy a vagabond buying a cargo of geese and turkeys at Sinope and Samsoun; the former cost him there 6d. each, and the latter 1s., he charged at Balaclava, on the 20th turkeys 15s., geese 8s.; on the 23rd turkeys 20s., geese 10s.; and on the 24th (all the turkeys being sold), geese 22s. each, skinny fowl 5s. each, and everything in proportion extortionate.

WAGES IN VICTORIA.—The state of the labour-market may be ascertained from the rates of wages quoted from the advertisements of "Wanted" which appear in the local papers.—"500 pick and shovel men, 10s. to 12s. per day, tent, tools, wood, and water;" "500 stonebreakers, 6s. to 8s. per yard—tents, &c. Such advertisements appear daily, and, taken in connection with the fact that tolerable workmen can break from two to three yards every day, indicate the attainment of a really comfortable maintenance, and a respectable weekly balance, at even the least skilled and simplest kind of labour.

DUCK-HUNTING with dogs was a barbarous pastime of the last century in the neighbourhood of London, happily put an end to by the want of ponds of water. St. George's Fields were a notorious locality for this sport: hence the infamous Dog and Duck tavern and tea-gardens, from a noted dog which hunted ducks on a sheet of water there. Hannah More makes it a favourite resort of her "Cheapside Apprentice." The premises were afterward let to the School for the Indigent Blind, and were taken down in 1812, when Bethlem Hospital was built upon the ground. In its front wall is preserved the original sign stone of the tavern—a dog with a duck thrown across his back. Ingenious lesson this, of setting up a memorial of profligacy and cruelty upon a site devoted to the restoration of reason.—*Curiosities of London* (just published.)

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

It is the intention of the Emperor of the French to invite most of the Crowned Heads of Europe to the Exhibition. The Emperor of Austria is said to have already accepted.

The Duke and Duchess of Brabant arrived at Trieste on the 23rd from Venice, and were received on landing by the Archduke Ferdinand-Maximilian. They were, after a short stay, to proceed on their way to Greece [illegible] under the incognito of Viscount and Viscountess Ardenne.

Duke George of Mecklenburg-Strelitz, who is married to a Grand Duchess of Russia, and who has several times fulfilled missions to the German States in the interest of Russia, has lately quitted St. Petersburg, and is daily expected at Berlin.

On the 25th ult. the Bishop of Lincoln delivered his fifth of a series of lectures to the working classes of Nottingham on the evidences of Christianity.

M. de Saint Amant, the well-known chess-player, who was governor of the Palace of the Tuileries after the revolution of 1848, and who recently published a very interesting work, entitled "Voyage en Californie et dans l'Oregon," has just been unanimously admitted, in consequence of that work, member of the Société des Gens de Lettres.

The Grand Dukes Michael and Nicholas arrived on the 9th at Nicolaieff, and proceeded for Sebastopol, without stopping at Odessa.

Marshal Radetzki gave the first grand ball of the Carnival in the palace at Verona, on the 18th. It was attended by their Royal Highnesses the Duke de Brabant, and the Princes of Hesse Darmstadt, Wiemar, and Wurtemberg.

The Polish General, Count Bystrzonowski, who distinguished himself in the Hungarian war, [illegible] has arrived privately in Paris on leave of absence.

The Emperor of the French has promoted Brigadier-General Bizot (Michel Bizot) to the rank of Commander of the Legion of Honour. That officer has seen forty-eight years' service, and has assisted in ten campaigns.

General Count de Resneville is designated by the Emperor of Austria for a military mission to the Emperor of the French.

The *Piedmontese Gazette* announces that the health of the Duke of Genoa is improving.

Mr. Carden's health has been seriously impaired by the imprisonment which he has already undergone for the attempted abduction of Miss Ambrose.

Lord Stratford de Redcliffe has postponed indefinitely his intended journey to England.

The Solicitor-General for Scotland, Mr. Thomas Mackenzie, will succeed to the vacant seat on the Scottish bench, caused by the death of Lord Robertson.

There is no truth whatever in the Parisian report of M. d'Usedom being destined to replace Count Bernstorf, or of the latter being recalled.

In the case of the South-Western Railway *v.* the *Times* (legally the Queen *v.* Harrison), the printer of the *Times* was sentenced to £300 fine, or to be imprisoned until the fine was paid. The fine was paid.

The partisans of the Count Montemolin pretend that they have contracted a loan of 44,000,000 of francs with a wealthy Amsterdam firm; of which half is to be paid immediately, and the other half as soon as some fortified town on Spanish territory is got possession of.

The Emperor of Austria's conferring the Grand Cross of the Hungarian Order of St. Stephen on the French Minister for Foreign Affairs makes that gentleman, according to the statutes of the Order, an Austrian Grandee of the first class, with the title of Count.

It is reported that there will be about the 12th or 15th instant a concentration of all the troops will take place in the plains of Marengo, where they will be reviewed by the King of Sardinia.

Some excitement has been created in ecclesiastical circles in Paris by the announcement that the Prince de Canino has resolved to take orders, in the expectation of becoming a Cardinal, and perhaps of attaining higher honours.

The French Emperor has ordered that, in compliance with the prayer of the Prefect of the Gironde, a bust in marble of Marshal St. Arnaud shall be executed at the expense of the Ministry of State, and be placed in the hall of the Council-General of that department.

The Hon. Pierre Soulé has resigned his office as United States Minister to Spain, and John C. Breckenridge, of Kentucky, has been appointed his successor.

A decree, dated Paris, January the 17th, nominates the Swiss General Ochsenbein a French General of Brigade on foreign service.

The family of Marshal St. Arnaud is about to publish a volume of his private letters. This collection, certain to be interesting, independent of its literary merits, will commence with La Vendée, and terminate with the war in the Crimea.

The German poet Hauenschild, known by the pseudonym of Max Waldern, died recently in Silesia.

Miss Catherine Hayes has been giving concerts in Sydney with great success.

The connection of Derry with Enniskillen by means of the magnetic telegraph has been completed.

A letter from Belgrade states that by the end of this month the electric telegraph between that place and Austria will be completed, when the conveyance of intelligence between Paris and Constantinople will be reduced thirty hours.

Genoa was visited by a marine earthquake last week. It set in with a heavy swell (with [illegible] wind, and consequently without warning), which did a good deal of mischief among the shipping, and was popularly supposed to [illegible] some extraordinary disturbance of the earth's surface underneath the sea.

Recent advices from the Pacific mention a further discovery of [illegible] on the [illegible] Peninsula, on an apparent group of [illegible] Islets.

An American lady, Miss Sarah Pellett, has declared her intention of [illegible] 7,000 respectable New England girls to California.

A bill has been introduced into the Legislature of Pennsylvania granting political and civil [illegible] to persons of colour now residing, or who may hereafter reside, in that State.

The Government of Rome is augmenting its military strength, particularly its Swiss regiments and its gendarmerie.

It is calculated that 14,000 persons emigrated from the Duchy of Baden in 1854, and that upwards of 40,000 have left within the last eight years. The population of the Duchy is now less than it was in 1846, and only amounts to 1,369,000.

At the sitting of the Glasgow High Court of Justiciary, out of a calendar of twenty-seven, fewer than three were ticket-of-leave convicts.

On the demand of the Mayor of Valenciennes, supported by M. Nieuwerkerke, Director of the Imperial Museums, the French Government has just accorded to the town of Valenciennes a fine block of marble for the statue of Froissart.

An attempt was made last week to shoot Mr. Henry Bevan Slator, while standing at his own hall door at Ballymalone, in the county of Westmeath. Mr. Slator was the purchaser of some property of late in the Encumbered Estates Court, and found it necessary to eject some of the tenantry.

A house, altogether of cast iron, four stories high, is about to be erected in Paris, on the plans of two engineers, one French and the other English.

There has been a strike among the dock labourers of New York, who refuse to work at 6s. 3d. per day. Meetings of the unemployed, at which large numbers of persons attended, has been held.

There are living in the small village of Leyton, Essex, four persons of the name of John Swan, not at all related, and all with wooden legs, although not one has been in the Army or Navy.

A demonstration of unemployed workmen took place in New York on the 15th ult., and they sent a deputation to the Mayor, who assured them he was unable to grant them any relief.

Some exertions are making for the discovery of a gold field in South Australia, with a reward of £10,000 to the finder, and it is mentioned that three have had been claimed for gold discovered in quarts about fifty-five miles from the city of Adelaide.

The total amount paid during the present war for naval stores, their conveyance, prisoners of war, and packet service, up to the 1st of December, has been over three millions and a half—£3,387,000.

The Second Prussian Chamber has adopted a very important resolution, namely, to call on the Government to prepare as promptly as possible a bill for the suppression of the privilege of exemption from the land-tax, which certain property of nobles still enjoys.

The late tempestuous weather has caused serious damage to the shipping on the French coast. A letter from St. Raphael states that on the night of the 20th ult. such a hurricane was experienced there as had not been known for forty year.

A special convention has been entered into between France and Baden for regulating the interchange of telegraphic despatches.

ESTABLISHED in 1841.—
By Appointment
To Her MAJESTY the QUEEN,
GENERAL MOURNING WAREHOUSE,
256, 257, and 258, Regent-street.
The Proprietors of this Establishment deem most respectfully to submit that, from their having been so many years engaged in the exclusive
SALE OF MOURNING ATTIRE,
and from the numerous business transacted in their warehouse, and from the numerous commands they receive to attend
in various parts of the country,
they are enabled to sell their goods on more advantageous terms
Messrs. JAY have ever pleased it unnecessary to quote prices, from a conviction that it only tends to embarrass the purchaser; but they beg to offer the strongest assurance that whatever may be purchased at their establishment will possess the value that is paid for it; and that, in addition to their
COURT,
FAMILY and
COMPLIMENTARY MOURNING,
they have every variety of quality and price, and suited to any grade or condition of the community

London: Printed and Published at the Office, 198, Strand in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 1855, Strand, aforesaid.—SATURDAY, FEBRUARY 3, 1855.

THE ILLUSTRATED LONDON NEWS

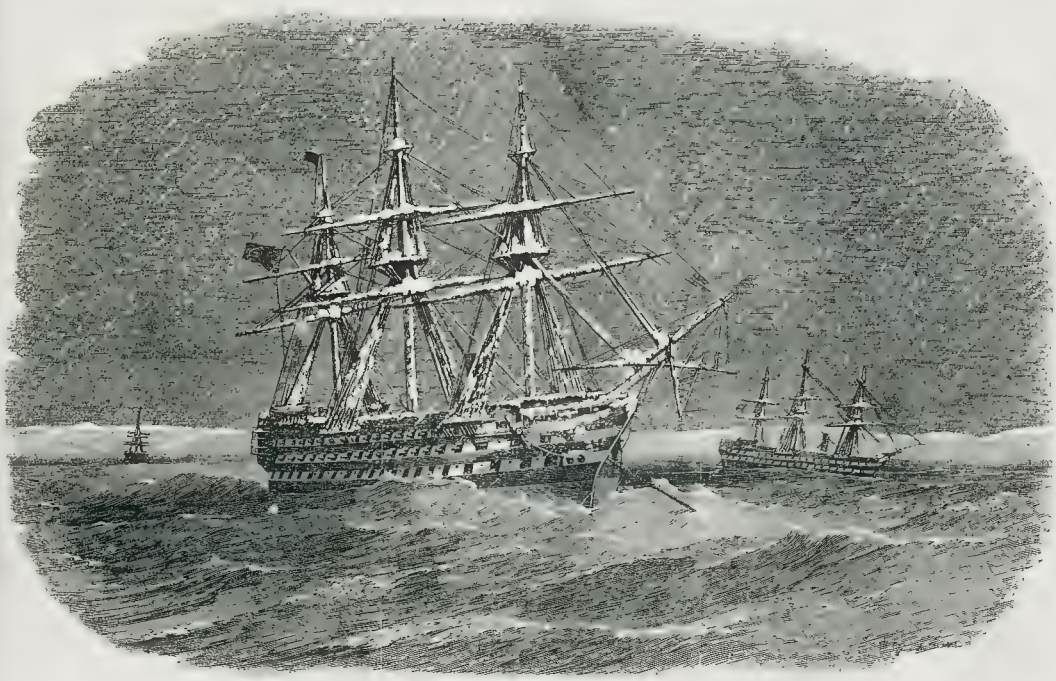
No. 727.—VOL. XXVI.] SATURDAY, FEBRUARY 10, 1855. [WITH A SUPPLEMENT, SIXPENCE.

THE LORDS AND GENTLEMEN OF THE "DEADLOCK."

It was scarcely to have been anticipated last week that of the three courses left open to her Majesty in the formation of a Government the second could ever be tried. Between Lord Derby, comparatively strong in Parliament, but weak in the country, and Lord Palmerston, strong in Parliament, and supported by the almost unanimous voice of the people, stood Lord John Russell, the self-damaged head of a moribund party, without moral support either in or out of Parliament, or among the former adherents of his policy and participators in his ambition. Yet on the failure of Lord Derby, and with the result, though not with the object, of making the triumph of Lord Palmerston more complete, Lord John Russell, the author of the crisis, and he who expected to galvanise dead Whiggery into life by it, was allowed to try his hand at the formation of a Ministry. The result was an ignominious failure, such as was universally predicted, if by any turn of the wheel it was sought to form a purely Whig Ministry under such auspices. Notwithstanding the urgency of public affairs, the several parties, or tails of parties, which still exist, and all impartial politicians in the country, were satisfied and delighted at the failure; for Lord John Russell's success would have entailed disgrace, if not calamity. Lord Palmerston, the man who commands the confidence of the nation whose name is synonymous all over Europe with the power, the dominion, and the glory of England, and which has been heard and feared in the wilds of Asia and of Africa, where the name of no other European statesman has ever penetrated—whose advent to power rings ominously in the ears of the enemies of liberty and progress in every State, barbarian or semi-barbarian, in Europe—stepped into the position, which was his from the first, and undertook the construction of a Government. On Wednesday the names of the Administration then formed were announced; and will be found in another portion of our journal.

Lord Palmerston will have a difficult task to carry on his Government with the vigour and efficiency demanded of him. The opposition arrayed against him will be of that formidable kind which springs from hostile or envious parties in the Legislature, and of that still more formidable kind which springs from the secret sympathies of many intangible and invisible friends of Russia and the Russian system. In addition to all these sources of difficulty, if not of peril, it must be remembered that he steps into power at a period when the very marrow of our institutions seems to have been dried up, and to have left nothing behind it but a residuum of Parliamentary incongruities and effete pretensions. His Lordship has a great work to do, and a magnificent opportunity, not simply of serving but of saving his country, and of entitling his name to the gratitude of the present and all future generations. But the people must enable him to be bold as well as wise. If he grasp, as we have no doubt he does, the full magnitude and significancy of his task, he must be aided by the people to inaugurate a social change which will involve infinitely more than the safety of our army in the Crimea, essential as that is. It has become his duty and privilege to prove to the world that popular freedom is even more necessary in war than in peace; and that the forces of a constitutional Government can be more wisely and effectively directed than those of a despotism. In addition to this it is his business to conquer the Czar, and restore peace to Europe, by the coercion and punishment of him who broke it.

The question of questions which Lord Palmerston and the country have to decide resolves itself into this—can a reformed Parliament act in war as vigorously as in peace? The question, if not entirely new to modern civilisation, is new to this country. The early heroes of the French Revolution solved a similar question with triumphant success. Hitherto, since the occupation of the Crimea by the Allied armies, such experience as we have had has been rather Governmental than Parliamentary; but our Parliamentary system has shared in the opprobrium of the failure. The liberties of the country have been endangered. The factions who have looked, and still look, upon the right to govern as an inheritance of which they cannot be rightfully or safely deprived seek to throw the blame and the disgrace from their own shoulders to those of the people, and loudly assert that with a free press, with the right of discussion in public meetings, and with a popularly-elected Parliament, it is impossible to carry on so gigantic a war. Let the people look to it in time. Let them not trust even to Lord Palmerston to see them safely through the impending crisis. The Lords and Gentlemen of the "Deadlock" have not lost the power of obstruction. The national fortunes are menaced. There are dangers ahead which the people alone can avert. The present Parliament is too evenly balanced to be depended upon, unless there come a pressure from without to strengthen the hands of an honest and courageous Minister. A dissolution of Parliament would be an evil; but there are evils fifty thousand-fold worse in prospective, if the nation does not demand and compel an efficient and successful prosecution of the business in hand. The business is War—war to the last extremity—war to its legitimate issues, whatever they may be. A series of splendid, if not unparalleled, victories proves that our soldiers can fight; and the enthusiasm of the public shows that, while our soldiers do their duty, the people are ready to do theirs. With men and money, and a good cause, it is impossible that this country can fail, unless from the incapacity or treachery of its rulers. This is the consummation to avert which Lord Palmerston requires support more earnest, continuous, and powerful than ever before was given to a Minister in this country. Without such sup-



H.M.S. "ROYAL ALBERT," IN A SNOW-STORM, BLOCKADING SEBASTOPOL.—(SEE NEXT PAGE.)

port he cannot equal public expectation, or, if he be the man we believe, satisfy his own conscience. Without the people at his back he cannot revolutionise the aristocratic system of the army; he cannot, like Carnot, "organise victory;" he cannot remove the incapable from high places, whomsoever and wheresoever they may be; he cannot wield the mighty physical as well as moral forces of the empire, and maintain us in our proud position in the very front of civilisation, but must fail with the best of intentions and the best of causes.

"The state of the nation" in the bygone days when we were at peace used to be a favourite topic on the platform and in Parliament. There was not a bread riot in a remote district that did not call up some Boanerges of the Tribune, to inquire into the condition of the people, and demand a remedy for countless grievances. A mill shut up, a strike of workmen, the riotous demolition of a tollbar, the imposition of a new tax, a monster meeting of Celts to inveigh against the misgovernment of the Saxon, the cruelty of a Poor-law official, or the attempt of some exclusive and sour religious sect to prevent all education among the children of the people, lest education should be provided on too broad a basis to be consistent with sectarianism:—all these and a thousand other questions stirred the energies of the people, and brought the weight of opinion to bear on the opposition or the inertia of the Legislature and the Government. And is this wholesome state of supervision to be annulled by the first blast of the war-trumpet? Is the public energy as defunct as Whiggism, Toryism, or Cobdenism? Or has the national character been so deteriorated by money-grubbing and commercial gambling that men are calmly to resign themselves to national disgrace, without an effort to wipe it off? The memories of Alma and of Inkerman belie the supposition. The popular approval of a war undertaken in pure defence of right and justice contradicts and disproves it. Then why do the people not move? Are they so bewildered at the unexpected result that they stand open-mouthed and gape at the calamity? Perhaps so. But in this case the moment of their awakening is at hand, and new leaders will be found, in default of the old ones, to organise their opinions, and arouse the country from end to end in support of a truly national and vigorous policy.

HER MAJESTY'S SHIP "ROYAL ALBERT" BEFORE SEBASTOPOL.

WE have been favoured with the Sketch engraved upon the preceding page by an officer of the British fleet at the Crimea. It portrays the magnificent ship *Royal Albert* in a snow-storm, while blockading Sebastopol. This is a fearful picture of the severity of a Crimean winter, however the accounts of the climatology of the country may differ.

The snow-storms by land have been destructively severe. A medical officer writing from the Camp before Sebastopol on Jan. 16 describes "the snow lying two or three feet on the ground, and a bitter north wind blowing that will send many a fine fellow to his last home. Anything to equal our discomfort and wretchedness no language can describe. * * * The cold was so intense in my tent that I could not sleep, or rather was afraid to go to sleep, for fear I should never wake again. One of these nights it snowed heavily; and an unfortunate officer lost his way in the snow in returning to camp from Balaclava, and perished miserably from cold: his body was found by the French next morning. Two men perished in the snow, and the sick are dying fast."

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

THE decision respecting the fêtes at the Tuileries has been taken, and a certain number are to be given before the conclusion of the season. Of these the first takes place to-day (Thursday), the second on the 16th, these, of course, will be all that can be given until after Lent, unless, indeed, a relaxation of the *mi-carême* may allow of another. Paris has rarely been gayer, in the way of Ministerial and official fêtes, than it is at this moment. The Minister of State, the Prince Murat, M. de Cambaceres, the Turkish Ambassador, the Préfet de la Seine, &c., vie with each other in the splendour of their receptions. Those at the British Legation, held on four successive Saturdays, were most numerously and brilliantly attended by both French and English, besides the various members of the *corps diplomatique*, and other foreigners of distinction.

A story, which excites a good deal of curiosity, is going the rounds here, the truth of which we do not pretend to affirm. It is related that at a fancy *fête intime* given by one of the principal members of the Imperial household a number of masks and dominoes made their appearance together; that among them were recognised two *peculiarly*-distinguished personages, who mingled with the crowd, entered fully into the spirit that the privileges of the incognito afforded to such fêtes, and retired highly amused with the adventure.

The Prince Napoleon's appearance, altered so very materially by his illness, attests its severity; there was a question of his proceeding to the Iles d'Hyères for the recovery of his health, but his wish to return to Paris overruled the advice of his medical attendants. Since his arrival he has had a slight return of the malady which so painfully affected him in the late campaign, but it is hoped when he has recovered from the fatigues of the journey, and that his strength becomes re-established, he will be no longer subject to its recurrence. The Prince has been to visit his sister the Princess Mathilde, and a complete reconciliation of the differences which so long divided the members of this branch of the Imperial family has taken place. It is said that the Prince Pierre Bonaparte is likely to have a command entrusted to him in the Foreign Legion.

Great esteem and sympathy has been expressed here for the Duke of Cambridge, though, as he remained nearly *incognito* during his visit, no opportunity occurred of openly demonstrating the feeling.

The arrival of a magnificent map of the Crimea from London, executed by Major Jervis, from the original Russian chart, with the dedication, "Hommage à l'Armée Française," has been extremely well received here and has entirely fulfilled the intention of gratifying the allies to whose bravery, cordiality, and good-fellowship our troops in the East owe such a debt of goodwill and gratitude.

The intense cold of last week has, we trust, finally given way, and is succeeded by very mild weather, and in consequence a thaw so complete that the ice and snow which abounded in and about Paris, and indeed all over the country, have disappeared with marvellous rapidity, but with the effect, as may be supposed, of nearly flooding town and country. The streets in many parts of Paris are nearly ankle-deep in mud and water, and in some places the gutters have to be traversed with planks, to enable foot-passengers to cross them, despite the constant operations of some hundreds of extra scavengers employed to clear away the snow and ice before they melted.

The new opera at the Italiens, "Gli Arabi nelle Gallia" (the music by Pacini, the libretto drawn from the work of the Vicomte d'Arlincourt), is well received, though the story is much criticised. It is said that the admiration of the Emperor for a duo in the work (which he had heard years ago at Rome, and which he often hummed) gave the idea of bringing out the opera here. The Emperor and Empress were present at the first representation. At the Gaîté, "La Masque de Poix;" at the Gymnase, "Ceinture Dorée;" at the Porte St. Martin, "Jane Osborn," are the most attractive novelties.

THE WAR IN THE CRIMEA.

By the steam-packet *Ganges*, which sailed from Constantinople on the 29th, we have news from the Crimea to the 25th ult., at which date the weather was described as much improved. Every night there was a hard frost, followed next day by a bright sun. This is the description given by a French soldier, who was probably looking only at the bright side of the picture. The letters from the English Camp are chiefly filled with the old complaints of endless disorder, waste, want, and mortality. The general impression in the Camp was that no serious operation will take place for a few weeks. Nothing has transpired as to what the next step will be. The prevailing notion is that the Allies will give battle to the enemy, and, having beaten them, return and take up position on the Belbek, so as to complete the investment of Sebastopol on the north as they do now on the south side. Thus hemmed in on all points, it is the opinion of military men that the city would be utterly unable to hold out for any length of time. This plan is approved of by many professional persons. It would have the advantage of enabling the Allies to make use of their most powerful instrument, the French and English infantry, while with the system of assault the enemy is confessedly more than a match, his artillery being of so much greater calibre.

The letters received from the Crimea by the *Ganges* are dated the 24th of January. They give an unfavourable account of the sanitary condition of the Allied armies. The French were still under tents, except the sick who have wooden houses. They have suffered much from the inclemency of the season. The officers best qualified to give an opinion on the subject, express fears that the siege will be still protracted, and that an assault is not practicable without a tremendous sacrifice of life. General Canrobert had ordered all the correspondents of the French press to quit the Crimea, even one who had brought a letter of introduction from a Minister holding a high position in the councils of the Emperor Louis Napoleon. He had likewise published an order of the day, commanding the officers who should write to their friends to desire them not to give their letters for publication. The following extract from a private letter, written by a French officer, draws a gloomy picture of the British camp:—

The English army is no longer an army. It only bears the name. Of the 50,000 men, which the British Government sent to the East there remain at this moment not more than 10,000 to 11,000, and even those are not all able to carry arms. I must add that there are, moreover, about 10,000 in the hospitals of Constantinople, and 1000 in the ambulances at Balaclava: the remainder are gone to their long home. As a result of the two principal vices in the English army—the officers, with few exceptions, have forgotten how to conduct a campaign, and the administration for the supply of provisions is absolutely null. Several transports had been laden at Genoa and Trieste with planks for constructing wooden huts for the troops. When they arrived at Balaclava the English had no horses to carry them to the camp. The unhappy men, the mud until the snow fell, when the soldiers burned it to warm themselves. The following is the result of the neglected state of the English army. The French have nearly completed their siege works; their trenches have been carried to within a few yards of the walls of the town. The Russians, on the contrary, are far behind; and a few days ago the [illegible] General Canrobert that his effective force was not sufficient to continue their works. Some days previously the French had been compelled to occupy the batteries erected by the English at their extreme right, which command the mouth of the Tchernaya and the high road to Simpheropol, which they were no longer able to defend. General Canrobert has given orders to the Third Division to continue the English trenches.

Another letter of the 24th ult. says:—

The Russians make frequent sorties, which are always repulsed, and cost them a number of men. An aide-de-camp of the Emperor Nicholas was killed during a sortie made on the 23rd. That sortie revealed a curious fact. The Russians have become hunters of men. They ensnare their victims with the lasso. On that occasion they captured a French officer, whom they carried off from among his men.

The following particulars of a sortie, made on the night of the 13th ult., are communicated by a French officer holding a high position on the Staff:—

The Russians paid us the compliments of the new year after their fashion on the night of the 12th, which corresponds with their New Year's Eve. Although their cannonade, from its violence, reminded me of the end of the world, it providentially neither killed nor wounded one of our men. The Russian soldiers, however, were assured by their priests that they should find us all dead in the trenches. They had the folly, consequently, to rush on our lines to the number of 300 or 400 men, where they were received to their great astonishment with a fire of musketry and thrown back on the English lines. Our overworked and over-fatigued allies were unfortunately surprised, and with great difficulty repulsed the Russians, but not without a loss of several men.

A telegraphic despatch from Vienna, on Thursday, states that the Grand Duke Michael is lying ill of ague at Cherson, that the Grand Duke Nicholas is at Sebastopol, and that the Russian army is in want of supplies. If the *Times* could persuade Nicholas to allow one of his own aides-de-camps to take up his quarters in Sebastopol and the Russian camp for a week or two he would, no doubt, be able to give us a picture of the sufferings of the Russian army which would match the worst accounts from Balaclava, so far as disease and mortality are concerned. The following passage from a French letter shows that the besieged are heartily tired of the affair. After giving an account of the sortie on the 14th ult., he says:—

The next morning a flag of truce presented himself with a letter from General Osten-Sacken to General Forey, in which he expressed his deepest regret for the death of "a most distinguished officer," and requested the Commander of the besieging corps to give up his body to him. General Forey immediately acquiesced in his desire, and by the same opportunity delivered to the Russians the bodies of twenty-six of their comrades who had not yet been interred. This delivery took place within the buildings of the Quarantine, in the presence of an officer of an eccentric character, who spoke French very fluently, and said to us, "This is a shocking work we are engaged in! What hinders you from taking the town? All the cannot amuse you. For our part, we are heartily tired of it." What did he mean by putting to us such questions? I cannot tell; I merely repeat his expressions verbatim.

Letters from Eupatoria state that on the 23rd ult. Omer Pacha had landed there with 30,000 or 40,000 Turks. This army is to occupy the road to Simpheropol preparatory to the investment of Sebastopol. Every day parties were sent out to reconnoitre the position of Prince Menschikoff's army, but they generally returned without having met the enemy. The latter, however, must show themselves in order to relieve Sebastopol, when a serious conflict may be anticipated.

PRUSSIA AND THE WESTERN POWERS.

Two diplomatic circulars from M. Drouyn de Lhuys on the Prussian isolation within a week show that the crisis, so far as Frederick William is concerned, rapidly approaches a termination. The French Minister is clear and decisive in his language. In the first despatch he points out the absurdity of the statements made by Prussia regarding the pacific disposition of the Czar:—

Is it not true that a considerable Russian army is ready to enter on a campaign in Transylvania? Is it not true that a mere incident menaces to place the Austrians and Russians at variance on the banks of the Pruth or of the Lower Danube? Is it not true that the intercourse between the Cabinets of Vienna and of St. Petersburg is of the most delicate nature? Can it be said, in fact, that the opinion of the prompt re-establishment of peace is generally believed in? Is it even certain that the acceptance mentioned by Prince Gortschakoff is such as was at first supposed? To ask these questions is, in fact, to answer them; and, at the same time, to justify all the applications which Austria is sending in to her confederates.

As regards the isolation of Prussia he shows that it is her own act. She cannot demand the privileges of a Great Power without fulfilling the duties of a Great Power. "What is the position of Prussia?" says M. Drouyn de Lhuys. "Has she made a choice between the belligerent parties? Has she entered into an alliance with Russia or with us? Until she has decided for one side or the other she leaves room for every kind of supposition, and closes against herself, by her own conduct, the door of the conferences."

In his second circular the French Minister says:—

The result of the treaty of the 2nd December is that the three Cabinets which have contracted this alliance have pledged themselves, in the hypothesis of the failure of any future negotiations, to make common cause against Russia. That means that first of all they will use the same language, and afterwards pass on to the same acts. The notes of the 8th of August and the treaty of the 2nd of December are the results of these preliminary deliberations, which were prescribed by the protocols of the Conference, and in which, as has been shown, Prussia refused to take part. In order to be present at the negotiations, it would be necessary for her to place herself on the same line as France, England, and Austria, and that there should not be any uncertainty either as to the intention which she displays in the matter, or as to her interior conduct.

The Cabinet of Berlin cannot suppose that, by its language and its attitude in Germany, it gives to the Allies, in that double aspect, all the guarantees which are desirable: and it must not, consequently, be astonished if, until such time as it has responded to the overtures which have been made, and has accepted, with respect to France, the same position as Austria, the Cabinet of the Tuileries, in accord with its allies, the settlement of an affair which it does not appear to consider in the same light, but in which, if its co-operation be wanting, the fault does not certainly rest with the Allies.

The whole effect of the French Note is to remind Prussia that if she is sincere in desiring to establish the same relation with the Western Powers that Austria has secured for herself, it is even now not too late. After so distinct a warning, it will be impossible for the Government of King Frederick William to say that it has been precluded from joining in the alliance (which promises to embrace all the principal part of Europe concerned in the question, from Holland to Piedmont), by want of an explicit communication of the views, the engagements, and the proceedings of the Three Powers. In the meanwhile, M. Drouyn de Lhuys distinctly states to the Prussian Government, that, although it is not yet too late to join the alliance, the Powers already allied do not, as they have not heretofore, intend to suspend their own proceedings in order to wait for the slower movements of Prussia. Should that Power protract its delays to too late an hour, the responsibility must lie with itself.

Should diplomatic arguments not prove strong enough for the Prussian Royal Intellect, there are indications of sharper logic in the background. The *Augsburg Gazette* repeats the announcement that a French army will traverse Austria, in order to operate against Russia. It says:—

We learn that in the best-informed circles at Vienna it is positively affirmed that the military convention with the Western Powers, provided for in Article V. of the treaty of December, is now ready for signature. It contains the stipulation that French troops shall be brought up to the Russo-Polish frontier to occupy that position which Prussia has renounced. The French army will march by way of Milan and Laybach, and be thence conveyed by the southern and northern railroads. The French corps will have arrived at the southern extremity of the Austrian railway system about the beginning of March. General Crenville, it is believed, carries the convention with him to Paris.

AUSTRIAN MILITARY PREPARATIONS.

Judging from the whole accounts received from Austria, a few weeks only separate us from the active co-operation of the armies of that country. Every preparation has been made by the Cabinet of Vienna to ensure success in the coming campaign. The entire forces of the empire, including the reserves, are at present on foot prepared to take the field at a moment's notice. According to the *Augsburger Zeitung*, the military forces of the Austrian empire now on foot amount to 549,000 bayonets, with 686 cannon, exclusive of the reserve, which, in the space of two months, will, including the frontier regiments, exceed 700,000 men. Allowing for a certain exacerbation, this force, divided into four armies, will be intensely powerful, and, as an offensive element, irresistible. Should the rumour be confirmed, which is current in the political *salons* of Paris, and which we have elsewhere noticed, that a French army, exceeding 100,000 men, will co-operate with the Austrian arms, the war will be speedily decided, and the operations in the Crimea will sink into insignificance compared with the campaign on the Vistula.

A Bucharest letter says, that, in consequence of disorders in that city, two companies of Austrian gendarmerie are to be sent thither to maintain order. The Russians still hold the bridge over the Danube at Ismail.

The following despatch has been received from Bucharest, dated Feb. 7:—

Jussuf Pacha arrived at Braila on the 31st ult. Soon after his arrival he issued a proclamation, as Commander-in-Chief of the Danubian army, in which it was announced that a great contest would probably take place on the Lower Danube.

Letters from Frankfort say that it is not unlikely that in the course of a month Austria will propose at the Diet her proposition for mobilising the Federal contingents. By that time the military preparations ordered by the recent resolution will have been completed, and hopes are entertained that the missions of General Wedell and Herr Von Usedom at Paris and London may possibly have restored the harmony between Prussia and the West, and so have prepared the way for communication between the Courts of Vienna and Berlin. The probability of such an arrangement is not very great. We see that Count Esterhazy, Austrian Ambassador Extraordinary at the Prussian Court, arrived at Vienna on the 2nd from Berlin. The *Vienna Presse* connects the Count's return with the recent rejection of the Austrian proposition at Frankfort, chiefly through Prussian influence, and, from the fact of the Countess accompanying him, thinks the Ambassador will not go back to Berlin.

PACIFIC ARRANGEMENT WITH GREECE

The latest authentic accounts from Constantinople represent the affairs of Greece as in course of arrangement. It will be remembered that, after the invasion of Thessaly and Macedonia by the Hellenic bands, the Porte demanded an indemnity in two forms: the one was to be a national compensation for the expenses of the war, the other a payment to the inhabitants of the border provinces to make good their losses during the invasion of the Greeks. In the meantime all diplomatic communication was suspended, the Hellenic inhabitants of the Turkish Empire had been expelled, and the commerce of Greece seriously impaired. With the obstinacy of the national character the Greeks refused to pay any indemnity, urging that they had no money. This argument seems to have had its effect on the Western Governments, and at length the Porte was persuaded to desist from its claim. How far any remains of the old Philhellene feeling may have dictated this lenience, it is hard to say, but in all these cases the Greeks generally make a stand, through a confidence that the civilised nations of the West will never be too hard on the supposed descendants of the Athenians and Spartans. They are said to have gained their end, and the question is to be arranged in a manner satisfactory to all parties. There was an old commercial treaty negotiated between Greece and the Porte some time after the establishment of Hellenic independence. This treaty Otho rejected, and it has not since been heard of. Now it has been proposed to recur to it, and to give Turkey some advantage in the trade with Greece as a compensation for her pecuniary losses and the insult offered to her territory. A meeting took place lately on the subject between the special Greek Envoy and the Turkish Commissioners, acting under the advice of the Ministers of the Western Powers. The result is, that the matter is concluded, and the Greek flag will once more be seen in the Bosporus and Euxine. The Greeks are much the gainers in the whole transaction, for, as the commerce of both countries is in their hands, they are as much benefited by concessions from Greece to Turkey as by concessions from Turkey to Greece.

AMERICA.

The steam-ship *Baltic*, which left New York on the 24th ult., arrived at Liverpool on Monday afternoon. The news is not of much interest.

In the Senate a Message had been received from the President urging the adoption of measures to suppress the hostilities of the Indians along the overland route to California, and submitting to the Military Committee, who would report a bill without delay, organising a force of 3000 mounted men. A bill remitting penalties incurred by emigrant ships in certain cases has been passed. The Judicial Reform Bill was postponed until December next. A joint resolution to establish a lighthouse at Cape Race has been passed. A resolution calling upon the State and Treasury departments for information relative to pauper and convict emigration from foreign countries, and the agency those countries had in the matter, and directing an inquiry into what legislation was necessary to prevent such emigration, voluntary or otherwise, was introduced. In the House of Representatives a similar Message to that sent to the Senate, relative to the depredations of the Indians, had been read, but leave to report a bill for raising an adequate force was objected to. The third reading of the Pacific Railroad Bill was passed by a large majority. An ineffectual effort was made to procure a resolution providing for an expedition to search for Dr. Kane. On the 21st the Pacific Railroad Bill was placed in charge of the Select Committee. The French Spoliation Bill had been reported to the House. The amount claimed was estimated at from 10,000,000 dols. to 40,000,000 dols.

Advices from Washington state that Secretary Guthrie does not design leaving the Cabinet, as reported. No changes are likely to take place in the Cabinet.

The Captain of the *New Era* had been censured by the United States Grand Jury for the loss of that vessel. A disastrous fire had occurred at New York. The boiler of the steam-ship *Great Republic*, loading at Brooklyn, had exploded, and severely injured the engineer and several labourers.

About twenty participators in the last revolutionary intrigues of Mazzini have been arrested in Verona.

Some Kabyle chiefs, having learned that donations would be received for the French army of the East, have forwarded to the Governor-General of Algeria a sum of 5400f. for the relief of the troops there.

PARIS UNIVERSAL EXHIBITION.

(From our Special Correspondent.)

PARIS, Feb. 6.

THE Exhibition mania, with its attendant extravagances, has now fairly seized upon the population of Paris. Everybody is to make a fortune during next summer The three millions of people who entered the Great Exhibition of 1851 were a mere handful of visitors when compared with the incalculable throngs that in the heat of midsummer will block up the broad thoroughfares of the French capital. We are reminded that Paris is more accessible than London; that there is more to see upon the banks of the Seine than upon the banks of the Thames; and, moreover, that the Paris Universal Exhibition will far surpass the Great Exhibition of Hyde-park in effect and in excellence. Our Exhibition is regarded here simply as an experiment, by which our neighbours intend to profit. "You see," said a Frenchman to me the other day, "the English initiate; but it is the mission of the French to perfect." Against prejudices of this stamp it is in vain to argue. We must be content in the presence of Frenchmen to allow that their Exhibition will almost obliterate the memory of ours, and to reserve criticism for the fireside on our return to England

In the first place, any candid man who inquires into the method which the Imperial Commissioners have adopted for the conduct of their Exhibition—although he may admire the liberality of some of its provisions—cannot fail to be struck, also, with its general weakness. The operations of the Commissioners are as secret as the most cautious diplomacy; so that in Paris much less is known of the promises of May next than may be learned in London. For instance, it was announced in the early part of last month that on the 15th of the same the Commissioners would have the Palace under their control, and from this date exhibitors were at liberty to send in their contributions. On the first of the present month I visited the Exhibition building. The scaffolding still blocked up the grand entrance, and the principal staircases were impassable. The design over the entrance (a colossal figure of France extending her patronising hands over Art and Industry) has, I believe, retarded the completion of this part of the Palace. I made my way through builders' rubbish into the Great Hall: here I found that not one-third of the flooring was laid, and the few men employed upon the work indicated no very keen anxiety on the part of the Commissioners or the contractors, or the company, that the building should be placed at the disposal of exhibitors at once. Should some unfortunately forward country send its contributions *en masse* at the present moment, it would puzzle the Commissioners Low to dispose of them. They would certainly create great confusion in the Palace

At the two extremities of the Great Hall painted windows are to be placed. The scaffolding is constructed for the insertion of these works of art. At the southern extremity about one-third of the window was fixed, and workmen, as I stood there, were winding themselves up from the ground in swinging platforms, resembling horse-boxes, to resume their labour near the roof. The Hall, spanned by bold, uninterrupted arches, will be the most striking part of the Exhibition; it has but one fault—the greenness of the glass by which it is covered. Of course a tricolor flag is now the most prominent object within this vast space. "They must have a flag and a bunch of flowers up when they have finished any part of their work," said an English gentleman connected with the works, when speaking of French workmen. Let me add that he gave these workmen an excellent character. Not a single foreign hand, he declared, had worked upon the Palace; and for the artistic parts of the building he had found Frenchmen unrivalled. As the corners of the building there are chambers, the interior of which is of elaborately carved stone here, according to my informant, the genius of French workmen had been displayed to the best advantage.

Remarkable also are the broad arched galleries—wide as a transept of the Crystal Place, and floored with solid oak! These galleries are reached, not by little corkscrew staircases, but by steps of solid stone, protected by walls of carved stonework. From the galleries the view of the interior—painted grey throughout—is very fine. This grey is relieved by the painted windows, and by the delicate-coloured scrollwork which borders the galleries. The monotony of the exterior has also been relieved, by painting the iron-work before the windows the colour of chocolate, pointed with gold: Under the windows, cut deep into the stone, are the names of men illustrious as discoverers or manufacturers. They are, however, oddly jumbled together. Roger Bacon and Franklin elbow Rennmur and Oberkampf! The front of the building is, however, disfigured by lozenges, inserted at regular intervals, upon each of which the name of a French manufacturing town is obliquely scrawled: The wonderful gallery that stretches along the back of the Seine, and is a conspicuously ugly object seen from the Pont de la Concorde, admits of little or no description. Its greatest claim to attention is, that it is said to be the longest gallery in the world. It is wide and lofty, built chiefly of wood and zinc, and glazed only over a wide gap at the top. A narrow gallery is to be erected at each side, to afford more room for exhibitors; this, however, will certainly detract from the effect of the interior. At each extremity will be elaborate plaster designs. The entrance to it, in the corner of the Place de la Concorde, is rapidly approaching completion. The Picture Gallery also is, I believe, advancing rapidly. But still the Imperial Commissioners meet, or have their place of meeting, near the Invalides: Hence to the building is a good walk. Crowds of Exhibition officials will, of course, spring up, to read the *Presse* and talk about business. People complain loudly of the utter want of attention with which applications for instruction are met; and he who writes a letter in the hope of getting an answer is regarded as a rather unreasonable fellow. The vice of all Government offices in France, viz.—an utter disregard of letters—is unfortunately carried, with all its inconveniences, into the *bureaux* of the Exhibition. However, Prince Napoleon, the President of the Imperial Commission, is now in Paris; and he will perhaps infuse a more active spirit through these sleepy offices.

It may interest your readers to learn that the catalogues of the Universal Exhibition have been made over to Emile de Girardin; and that the right of engraving views of the building has been sold to a particular firm. Thus it is pretended that no person save the purchaser of this right has the power to publish a representation of the exterior of the Palace. This is said to be the act of the company to which the Palace belongs, and not of the Imperial Commission. Its absurdity is obvious, since it restricts the publicity upon which the after success of the Palais de l'Industrie must depend. An instance of this occurred lately. A gentleman was preparing an illustrated journal of the Exhibition: he proposed to engrave the front of the Palace as the heading of his paper, but he was stopped by the information that he had no right to make such an engraving!

Still, the people of Paris believe in a summer of wonderful fortune. Hotel-keepers positively refuse to engage with visitors for their apartments, preferring to wait for that rush which will enable them to ask exorbitant prices. Wonderful projects, all pointing to the Exhibition, are on foot. There is the Dîner de l'Exposition, with its waiters in plush and its gaudy salons; there are Hôtels Meublés springing up in every street; there are other Universal, European, Great Parisian, &c., Dinners—all waiting for the rush in May. Let us hope that all this speculation will not be overdone. The experiences of Londoners in 1851 should warn our excitable allies against similar disasters. In April, 1851, London lodging-house keepers dreamt of fabulous prices, and of turn-up beds in their wine-cellars; in August of the same year they were forced to be content with fair prices for their accommodation. The same disappointment probably awaits Parisian speculators, so that it is well to warn them in time.

W. B. J.

HUTS FOR THE CRIMEA.

To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—I presume that it may be admitted that the miserable remnant of one of the most gallant and heroic armies that ever left the shores of England, now in the Crimea, must be sacrificed to the grossest incompetence and most culpable negligence of all parties and all departments whose duties it was to have produced a very different result

This is certainly bad enough; but it would be taking a very limited view of the melancholy case to suppose that the loss of the gallant survivors of Alma, Inkerman, and Balaclava, is the only evil likely to result from the unfortunate mismanagement connected with the whole operations and arrangements of the campaign. The character of the country is at stake. Englishmen will no longer be considered capable of making arrangements on a great scale to meet the commonest emergency.

The excellence of the arrangements of the great civil establishments of the country have been considered as models worthy of imitation by many foreign countries in the formation of similar establishments. But it may now be questioned whether the recent blundering so ably exposed and so extensively circulated by the press will so far damage the national character as to prevent the employment of Englishmen abroad as civil or mechanical engineers, or even as contractors

Constitutional government may also be considered as having been brought into very great disrepute, its many checks and counterchecks, and the chicanerious if not antagonistic tuggings of the several Government departments, having resulted in the merest chaos of confusion, and supplied the advocates of despotic government with arguments in favour of the unity of action which they claim as peculiar to their own cherished system of rule

It appears that the huts sent out to the Crimea are each two-and-a-half tons in weight, and this, in the absence of an efficient system of transport, will render them useless to the present wants of the army if the railway about to be constructed do not afford timely aid

It is quite hopeless to suppose that the several departments of the Government will reform themselves, and, consequently, reform must be forced upon them by public opinion, acting through the energetic efforts of the public press

The introduction of steam, and its almost universal application as a powerful mechanical agent, not only in connection with locomotion by sea and land, but also as affecting almost every application of human labour, has so completely changed the structure of society as a great operative and productive machine, that any one unacquainted with the improvements of the last twenty or thirty years can hardly carry on the ordinary mechanical operation with advantage

The operations of war cannot with impunity claim an exemption from the onward march of improvement, as it is quite clear that, if the present war is continued for many years, it will, to a very great extent, become a contest of mechanical skill, and may ultimately become too destructive a game to be played at all.

The Government such rules have hitherto succeeded in setting at defiance almost every attempt to improve the efficiency of the military system. That, however, will not long be tolerated, as it is quite clear that there is ingenuity enough in the country to devise means and appliances for the equipment of our troops and the preservation of their health to enable our compatriots to send armies to defeat the more numerous hosts of our enemies. Our soldiers are said to be fit only to fight, and that they can neither hut themselves nor cook their food. This is a very unjust accusation, when it is well known that the means of doing neither the one nor the other is placed within their reach

If the Government were to calculate even the money value of a soldier before Sebastopol, they would most assuredly work him less, feed him better, and protect him from the inclemency of the weather The huts sent out by Government are no doubt substantial and serviceable, but simpler and more expeditious modes of obtaining shelter for the troops under existing circumstances ought to have been adopted, and these modes ought to vary according to circumstances

The following are a few sketches in section of a simple construction:

Fig. 1 consists of two turf parallel side walls, about two feet high, and twelve feet long, the gable ends being built up to four feet high in the centre, and sloping down to the walls, leaving an entrance on one side of the centre of the gable. The roof could be composed of a ridge pole, with hurdles for the sloping sides of the roof, made from brushwood, and sufficiently close to admit of being covered with thin sods lapping over each other It would be necessary to lash the hurdles to the ridge with cords or bines, which are found of great length and tenacity in some countries This hut would give ample space for eight men, but would hold sixteen on an emergency; and could be sufficiently completed in one day to afford shelter, and on the following day could be completed, which would always include a thorough drainage

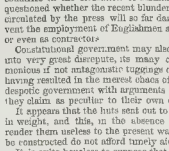


FIG 1

Fig. 2 is the same as Fig. 1, with the addition of being sunk into the ground from two to three feet; and when the ground is not sufficiently strong to stand upright it must be faced with sods, which ought to be carefully cut from the surface of the area of the hut, and from the drain, so as to preserve the ground around the huts from being broken up.

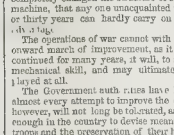

FIG. 2.

Fig. 3 is substantially the same as Fig 2, with the exception of the roof, which is composed of three-quarter inch board, firmly lodged on the inside, and the joints of the boarding secured by thin narrow slips on the outside. The two sides are hinged together along the whole ridge. These portions of roof are twelve feet long by five feet six inches broad, and when folded up the outsides would be placed towards each other. There would be no ridge pole necessary, as the eaves, or lower part of the roof, would be built into the upper part of the side walls. This would also be necessary to prevent the light roof from being blown away. This must, however, be done so as not to prevent the water from running freely off the roof, and finding its way into the drain. This roof, if made of white pine, would weigh about three hundred weight. By adding to this hut, when practicable, a raised wooden floor placed sloping, as a guard-bed for the men to sleep upon, it would be tolerably comfortable. Boards one inch thick, well battened, would be sufficiently strong if supported upon dwarf sod wall, not very distant from each other. It would be twelve feet long by six feet broad, and would be conveniently divided into two portions longitudinally, as one portion could then be laid upon the other in the day time. The weight would be nearly two hundred and a half.

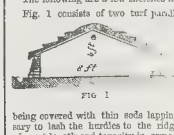

FIG. 3.

Whatever may be the fate of the present campaign, which appears to be disastrous in everything but the mere fighting part of the business, it appears very evident that the pickaxe and spade, however unchivalrous it may sound, must play an important part in all future campaigns; and, if soldiers have too much purely military duties to perform, there must be an auxiliary band of navvies, with a proportion of mechanics, to form intrenched camps, and to perform all the laborious duties not immediately under the fire of the enemy, and which they would perform much more expeditiously, and with greater economy, than the same duties can be performed by soldiers of the line

A rifle regiment behind a loopholed parapet, which could be constructed by a gang of navvies in ten or twelve hours, armed with the most improved rifles and an ample supply of ammunition for distant firing, and each man supplied with two six-shot revolvers for close quarters previously to having recourse to bayonet, should that be necessary, would most assuredly do more execution than five or six regiments, standing up to be shot at, without cover, in the ordinary unscientific way. Balaclava and Inkerman are cases where the above suggestion would have been eminently successful, and with comparatively trifling loss.

In the present siege in the Crimea the soldier has as much need to be protected from the inclemency of the weather when on night duty in the trenches as when in camp, and this may be accomplished with equal facility.

Fig. 4 is a sectional sketch of a trench sunk for example as a portion of the first or second parallel, or any portion of the more advanced works. The portions of the trench intended to be thus covered in could be left somewhat higher in the bottom of the excavation than the other portions of the trench, so as to ensure a good drainage. But, under all circumstances, an efficient drainage ought to be considered of vital importance

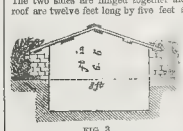

FIG 4

These portions of the trenches would be covered in by hurdles and sods, or by battened boarding of convenient-sized portions, as above explained in connection with the huts. The windward end of each portion could be closed so as to prevent draught, and fires could be used without attracting the notice of the enemy

The whole of the guard of the trenches, with the exception of the sentries who could be relieved every hour, would thus be protected from the inclemency of the weather, and ready at a moment's notice to turn out in a comfortable and effective state, with their arms dry and fit for use.

It is very true that thus mode of butting and taking care of the soldier would be expensive; it would probably cost, even if executed by some rational business man, two or three pounds for every soldier's life that it would save, and the mere money value of a soldier before Sebastopol, taking into account the many millions spent by mismanagement, must be put down at several hundred pounds.

Having trespassed too much upon your valuable columns, and trusting to be permitted to resume the subject next week,

I am, Sir, your obedient servant, A CIVIL ENGINEER

NAVAL AND MILITARY INTELLIGENCE.

DESPATCHES FROM LORD RAGLAN.

(From Tuesday Night's extra *Gazette.*)

War Department, Feb. 7.

His Grace the Duke of Newcastle received last night a despatch, of which the following is a copy, addressed to his Grace by Field-Marshal the Lord Raglan, G.C.B

Before Sebastopol, Jan 2:

My Lord Duke, Nothing has occurred of importance in our front; but the enemy has occasionally opened a fire upon our left attack. and Mr Spalding, a fine young man, an acting mate of her Majesty's ship *London*, and in charge of the battery, was unfortunately killed by a round shot the day before yesterday. His loss is deeply deplored.

I enclose the return of casualties to the 21st instant

The weather has become milder, but the country is still in a dreadful state from melted snow.

The Army is well supplied with warm clothing, and if the Commissariat were adequate to provide with transport and the roads could be at once brought up, there would be no other cause of suffering than the severity of a Crimean winter, and the duties imposed of carrying on a siege in such a climate at this season of the year. I have, &c., RAGLAN

His Grace the Duke of Newcastle, &c.

WAR-OFFICE, Feb. 7

The Right Hon. the Secretary-at-War has received from his Grace the Duke of Newcastle the following list of casualties amongst the non-commissioned officers and privates, in the forces under the command of Field-Marshal the Lord Raglan, G.C.B., from the 15th to 21st January, 1855, both days inclusive.

NOMINAL RETURN OF NON-COMMISSIONED OFFICERS AND PRIVATES KILLED FROM 15TH TO 21ST JANUARY, 1855, INCLUSIVE

KILLED.

1st Battalion Rifle Brigade: Private James [illegible]. 89th Foot: Private Henry Wardrobe.
Light. 44th Foot: Private Matthew Clarke.

WOUNDED.

89th Foot: Private William Houston, slightly.
2nd Battalion Rifle Brigade: Private Walter Newman, slightly.
